I feel that those who oppose the creation of such a general staff for national resources do so by reason of a failure to appreciate what could be accomplished by proper investigation and coordination. They hesitate because of a fear of interference with executive duties and functions. That is, of course, a mistaken notion which will soon be abandoned if this amendment is enacted into law.

Mr. VANDENBERG. May I renew my question addressed to the Senator from New York?

Mr. COPELAND. Mr. President, being of Yankee stock, having been asked a question, I desire to ask one. I wish to ask the Senator from Wyoming if it is his purpose to take this meritorious proposal to the Committee on Public Lands and Surveys in order to bury it in a pigeonhole?

Mr. O'MAHONEY. I am sure the Senator will give the Committee on Public Lands and Surveys credit for being an active committee, and not one where measures are customarily buried. I know it is the intention of the committee, if I could judge from what was said this morning when the subject was considered, to give sincere and earnest attention to this measure. Of course, I cannot speak for the chairman of the committee in his absence, in response to the inquiry of the Senator from New York, but I will say that I shall urge that the matter be taken up at the very next meeting.

Mr. COPELAND. I thank the Senator. We have no more important subject before us as a Senate than this one. I saw in last Sunday's New York Times a very remarkable article, with a chart showing wartime self-sufficiency of the great powers in raw materials. There are possibilities in the United States for the development of raw materials to the extent of almost 100 percent of those needed. To show what I have in mind, I ask unanimous consent to have inserted in the RECORD at this point the article by Harold Callender entitled "Raw Materials Issue Grows More Insistent."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of May 17, 1936]

RAW-MATERIALS ISSUE GROWS MORE INSISTENT—YET NO COUNTRY, EVEN WITH COLONIES, IS SUFFICIENT UNTO ITSELF IN THE ITEMS ESSENTIAL FOR A WAR

By Harold Callender

LONDON.—Two nations, Japan and Italy, have recently gone to war to obtain colonies; and a third, Germany, has made her demand for colonies one of the conditions of a European agreement for the maintenance of peace. All three support their claims to colonies by pointing to their lack of raw materials.

Their access to these primary commodities, which are necessary for their industries, is hampered both by restrictions and taxes in the producing countries and by the difficulty of obtaining foreign currencies with which to buy them.

Acquisition of colonial empires might reduce these difficulties, if the acquired colonies contained substantial amounts of raw materials; but it would be impossible for any of the three aggrieved nations to gain in this way an adequate supply of all the raw materials they needed. Moreover, their access to these materials, even if they obtained colonies, would still be subject to interruption in case of war—unless they attained command of the seas as well. There is thus no conceivable colonial adjustment which could insure to Japan, Italy, or Germany, in peacetime and in wartime, all the raw materials necessary for its industry and defense.

THE BRITISH ATTITUDE

Yet the raw-material problem plays a vital part in all schemes to remove grievances in order to prevent wars; and the British Government has committed itself in principle to the thesis that access to raw materials should somehow be facilitated, if not guaranteed, for those countries notably lacking them. The aspiration to national economic self-sufficiency—unattainable as the goal is for most countries—has accentuated the demand for assured supplies of raw materials.

Some of these materials are foodstuffs, like wheat and meats, without which no nation could survive if blockaded by sea or land. Others are raw materials, like wool and cotton and iron and coal, which are required in large quantities for industries making both consumers' and producers' goods. But most of them, in this age of mechanization, are minerals essential to the manufacture of both peaceful machinery and warlike equipment. Many, like manganese, are required in only small quantities, but are as essential to industry as steel or coal.

It is sometimes said, as in a recent article by H. R. G. Greaves, that there are 25 materials which are indispensable to advanced countries; that the British Empire possesses an adequate supply of 18 of them, Germany of only 4, Italy of 4, Japan of 3.

HOLLAND LIST OF MATERIALS

Mr. Greaves does not name the 25 materials. It would be a somewhat arbitrary list in any case. But Sir Thomas H. Holland, of the University of Edinburgh, in his book the Mineral Sanction, discusses the distribution of 21 mineral substances of special importance in war—and, he might have added, in peace as well. These minerals are aluminum, antimony, cadmium, chrome ore, copper, fluorspar, graphite, iron and steel, lead, magnesia, manganese, mica, molybdenite, nickel, petroleum, platinum, quicksilver, sulphur, tin, tungsten, and zinc.

Germany is dependent upon foreign sources, wholly or largely, for 14 of these 21 minerals which are so vital to industry and war; Italy is similarly dependent for at least 10 of the 21; Japan must import some 8 of them from areas distant from China. Japan is particularly short of iron, petroleum, lead, and phosphate; as regards oil, she is almost as vulnerable as Italy.

Even the United States, which is regarded as a fortunate power and is better supplied than any other nation with minerals needed in wartime, is almost entirely dependent upon foreign sources for 10 of the 21 minerals listed; though Sir Thomas considers that in an emergency she would face a serious deficiency in only 5—antimony, chromite, manganese, nickel, and tin.

EMPIRE NOT SELF-SUFFICIENT

The British Empire, which includes the largest collection of territory under one flag and excites the envy of colonyless powers, would be well supplied so long as the sea communications with its scattered territories were maintained; but it, too, would be incomplete from the point of view of minerals, for it would have to look to foreign sources for antimony, petroleum, quicksilver, and sulphur.

It is clear then that even the richest colonial powers still fall short of the absolute economic self-sufficiency of which smaller powers dream. From this point of view, it might be said that even Britain had not yet acquired enough colonies.

The question of potential self-sufficiency in raw materials in time of war—which, after all, is the essence of the raw-material demands of the discontented nations—is examined in an illuminating manner by Brooks Emeny, in his book, The Strategy of Raw Materials. His list of 22 essential industrial raw materials includes some nonmineral substances. The items on his list are strategic materials in the sense that no nation could long live or fight if it did not possess a supply of them.

Their distribution is very uneven. In manganese, necessary for making steel, Russia is the only country which is self-sufficing. Southern Rhodesia is the luckiest spot as regards chromite. Canada has the greatest supplies of nickel. China is especially rich in tungsten and antimony. Spain and Italy, so short of other materials, are the principal sources of mercury.

AMERICA'S POSITION

The United States has adequate supplies of at least 7 of these 22 raw materials, and by increasing domestic production, could obtain from its own soil, if necessary, adequate supplies of others; but if cut off from foreign sources it would be short of rubber, chromite, tin, antimony—and Sir Thomas would add nickel and manganese. From 4 to 6 of the 22 materials thus would be unobtainable or obtainable with great difficulty if America were at war.

The British Empire would be in a similar predicament, for it would need petroleum, cotton, mercury, antimony, potash, phosphates, and sulphur from foreign sources—7 of the 22 materials.

Germany would lack some 18 of the 22; Italy would lack 15; Japan 14. Russia would be in the class of the United States and Britain, for she would lack only 6, on Mr. Emeny's estimate.

It is interesting to note that France, though the second greatest colonial power on the basis of the area of her possessions, nevertheless would lack 14 of the 22 raw materials if deprived of sources outside her territory. Thus France, in spite of her vast colonial domain, is in a class with Japan, Italy, and Germany as regards her resources in raw materials. Consequently, if the need of raw materials justifies colonial claims, France would have about as good a case for additional colonies as the three discontented and colony-seeking powers.

UNITED STATES AND BRITAIN

Students of the question are invariably impressed by the oddly complementary character of the British and American wealth in raw materials. Britain produces within her empire less than 2 percent of the world's output of petroleum and must import more than nine-tenths of her oil, but the United States produced last year 58 percent of all the oil of the world and is more than adequately supplied. Britain, though her empire with Egypt produces about one-fourth of the world's cotton, is inadequately supplied as to variety; but America produces about half the world's cotton, including the type Manchester uses most. The British Empire grows very little corn (maize), but the United States grows about 55 percent of the output of the world.

On the other hand, the United States produces no rubber, but British territories produce some 58 percent of the world's output of it. The United States has very little nickel, but the British Empire (chiefly Canada) produces 94 per cent of the world production. In wheat output the British Empire is far ahead of America; it produces about half the world's wool and 99 percent of its jute.

Pointing out that between them the British Empire and the United States produce about two-thirds of all the minerals the world consumes, Sir Thomas Holland concludes that they are the only two nations that could fight for long on their own natural resources. Thus they are well equipped for war or for preventing war. If they should unite in refusing mineral products to countries that violate the Kellogg Pact by making war, "no war can last very long", says Sir Thomas.

As Mr. Emeny puts it, speaking not only of minerals but of all essential raw materials: "The United States and the British Empire—and to a lesser extent Russia—are outstanding in potential wartime self-sufficiency. It should be noted that in the case of all commodities, with the single exception of antimony, the domains of the United States and imperial Britain form together a perfect unity in supply. * * *

"The richest raw material regions of the world are in great part under the dominance of the Anglo-American powers. These two national groups, which account for over 60 percent of the world's industrial output and exercise financial or sovereign control over 75 percent of the mineral resources, hold the balance of power so far as the essential commodities of peace and war are concerned."

This dominance does not please but rather irritates the crowded nations which seek colonies, and Britons and Americans recognize that there are advantages in political control of raw materials. For example, it makes possible restriction of output and control of prices.

ADVANTAGES DIVIDED

America has the advantage over Britain and her raw materials are assembled on one compact continent, while Britain's are scattered over the earth and are available to Britain only so long as she controls the seas.

It is the peacetime availability of raw materials which the British have offered to discuss and to facilitate. Their availability in wartime is quite a different question. The dream of the Nazis and the Italian Fascists of making their countries self-sufficing in both peace and war is obviously fantastic—short of world conquest.

Mr. COPELAND. Mr. President, we had before the Appropriations Committee and the Naval Affairs Committee last year and this year the question of raw materials. To me it was most gratifying to find that a governmental body has in the short time of 2 years brought together a dozen reports like the large volume which I hold in my hand, showing the resources of the Government and the possibilities of our country. The National Resources Committee has had a program to provide for the systematic development of our water resources for the purposes of sanitation, power, industrial uses, transportation, recreation, domestic consumption, and other collateral uses on a far higher level than ever before. It has studied the question of flood control. It proposes to reduce the heavy losses of soil caused by uncontrolled erosion.

No better argument is needed for the board than the magnificent speech made yesterday by the Senator from Minnesota [Mr. SHIPSTEAD]. If before yesterday I had known

nothing about what this board had done, I would have been amply enlightened by the speech he made, with his diagrams, rather diagrammatic in some respects, which did more to enlighten the Senate on the possibilities of the preservation of the soil than any other Senator has done, and I say that without disrespect to others. He said throughout his speech that the material he was presenting had been obtained from the national resources board.

He pointed out the progressive loss of the topsoil and the ultimate destruction of the fertility of our country by soil erosion. There is a great problem which someone must study and to which must be given a great deal of thought from now on.

The commission had a human side to its work. Of course, I am frank to say that I interpret the words "natural resources" to include the relation of our physical surroundings to human needs and to scientific methods of making our resources more useful to our people. The National Resources Committee, I am informed, is now engaged in studies of "stranded" populations where abandoned mines have left miners without occupations. They are working on scientific inventions which may affect our use of natural resources or change our methods of conservation and development of those resources. These related activities should be continued.

There should be the continued assembling of basic data as regards the matter, and provision for continuation of long-range planning, of land, water, and mineral resources. It means much to the various States. It means much to my native State of Michigan. It means much to my adopted State of New York and its forest resources.

There are tremendous responsibilities resting upon an organization of this character, the possibility of making contributions to the welfare of our people, not for next week or next month but for next year and for the years to come, and to benefit generations yet unborn. That is the reason why I asked the Senator from Wyoming [Mr. O'MAHONEY] if it means simply the graveyard and an end of the project. The Senator has assured me that such would not be the case.

Now to reply to the Senator from Michigan [Mr. VANDENBERG]. It is true, as stated by the Senator from Missouri [Mr. CLARK], that this particular matter had no hearing before the full committee. There was a very full hearing before a subcommittee on a bill which is now upon the calendar. We spent a long time listening to Mr. Delano and other members of the Board and to Secretary Ickes, but the full committee had the benefit of those hearings. The Senator from California [Mr. JOHNSON] and I were there several hours. It must be admitted that the vote of the committee to report the bill was very close. It was really swamped, except for the vote of the chairman.

Mr. President, I think the Senate is in no mood to go forward with this matter. I do not want to break the heart of my friend from Arizona [Mr. HAYDEN], but his heart and mine will be broken in the same way if we do not get this proposal through in some form. Let me ask the Senator from Arizona if he thinks we had better make a battle for it now?

Mr. HAYDEN. Mr. President, the Senator from New York is as good a judge of the present sentiment of the Senate as anyone who could be found to pronounce judgment on what should now be done. Under the circumstances, if he feels that there are not votes enough available to have the amendment adopted, I think it would be an advantage to have the Public Lands Committee promptly consider the entire question. The Committee on Public Lands and Surveys would have before it, under the motion made by the Senator from Wyoming, only the text of the proposed amendment, but not in a form upon which any action could be taken. If there is to be something before the committee upon which it can act, it would seem to me to be the part of wisdom to recommit Senate bill 2825, now upon the calendar, to the Committee on Public Lands and Surveys.

Mr. O'MAHONEY. Mr. President, I will accept an amendment to that effect to my amendment.

Mr. COPELAND. Also, that the Committee on Commerce be invited to transmit to the Committee on Public Lands and Surveys the record of the hearings which our committee had on the subject.

Mr. O'MAHONEY. Very well.

Mr. HAYDEN. I ask unanimous consent that Senate bill 2825, Calendar No. 1020, be recommitted to the Committee on Public Lands and Surveys.

The PRESIDING OFFICER. Is there objection?

Mr. AUSTIN. Mr. President, reserving the right to object, I wish to understand just what the request is. I ask the Senator from Arizona if that bill is similar to committee amendment no. 6?

Mr. COPELAND. Yes.

Mr. HAYDEN. Committee amendment no. 6, otherwise known as title II, consists of the text of the bill, introduced by the Senator from New York [Mr. COPELAND], to provide for the establishment of a national planning board, with certain modifications made by the Senate Committee on Commerce.

Mr. AUSTIN. Does the bill create a board whose function is predominantly political as this amendment does?

Mr. HAYDEN. I have not considered either the amendment or the bill to be of a political nature except in the broad sense of that term.

Mr. COPELAND. Mr. President, if the Senator will bear with me——

Mr. AUSTIN. Let us not get away from the intent of the question. I am not talking about politics; I am talking about administrative and legislative policy. As I interpret amendment no. 6, the predominant function of this board would be to make investigations for the purpose of advising the Chief Executive and the Congress regarding the policy that should be pursued in legislation. Is that the purpose of the bill?

Mr. HAYDEN. The bill and the amendment cover the same field in practically the same way. My proposal is to recommit the bill S. 2825 to the Committee on Public Lands and Surveys. It has been upon the Senate Calendar without action for about a year.

Mr. AUSTIN. Very well, Mr. President; I have no objection.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arizona? The Chair hears none, and it is so ordered.

Mr. COPELAND. Mr. President, I think now we are all through the bill. I ask unanimous consent to withdraw amendment no. 6, which is title II, and which we have just discussed.

The PRESIDING OFFICER. Without objection, the amendment is withdrawn.

The Chair is of the opinion, and is so advised by the parliamentary clerk, that there still remains the passage of the bill as such. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time, and passed.

REGULATION OF COMMODITY EXCHANGES

Mr. ROBINSON. Mr. President, I move that the Senate proceed to the consideration of House bill 6772, Calendar No. 1489, known as the commodity exchange bill. I will state that if the motion is agreed to, it is my purpose to move a recess until Monday next.

The PRESIDING OFFICER. The question is on the motion of the Senator from Arkansas.

The motion was agreed to; and the Senate proceeded to consider the bill (H. R. 6772) to amend the Grain Futures Act to prevent and remove obstructions and burdens upon interstate commerce in grains and other commodities by regulating transactions therein on commodity futures exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes, which had been reported from the Committee on Agriculture and Forestry with amendments.

PRINTING OF COURT OPINION ON CONSTITUTIONALITY OF EMERGENCY RELIEF APPROPRIATION ACT, 1935 (S. DOC. NO. 242)

Mr. HAYDEN. From the Committee on Printing I report back favorably, without amendment, Senate Resolution 302, and ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. The resolution will be read.

The Chief Clerk read the resolution (S. Res. 302) submitted by Mr. STEIWER on yesterday, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the opinion of the United States Court of Appeals for the District of Columbia, no. 6619, in the case of the Township of Franklin, etc., et al., appellants, against Rexford G. Tugwell, Administrator, Resettlement Administration, et al., appellees, involving the constitutionality of the Emergency Relief Appropriation Act of 1935, approved April 8, 1935, as abridging the reserved rights of the States, be printed as a document, and that 1,000 additional copies be printed for the use of the Senate document room.

HERNANDO DE SOTO'S EXPEDITION

Mr. BARKLEY. From the Committee on the Library, I report back favorably, without amendment, House bill 11747 and ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill (H. R. 11747) extending the time for making the report of the commission to study the subject of Hernando De Soto's Expedition, which was ordered to a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That the commission to study the subject of Hernando De Soto's Expedition, appointed pursuant to the joint resolution entitled "Joint resolution pertaining to an appropriate celebration of the four hundredth anniversary of the expedition of Hernando De Soto", approved August 26, 1935, may make its report to Congress on or before January 2, 1939.

FEDERAL HOUSING ADMINISTRATION ACTIVITIES

Mr. KING. Mr. President, I have had prepared a statement concerning the activities of the Federal Housing Administration, one of the agencies of the Government which has done and is doing a splendid work for the entire country. I ask permission to have the statement printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The statement is as follows:

FEDERAL HOUSING ADMINISTRATION ACTIVITIES

For the past 2 years the Federal Housing Administration has served as a powerful and growing force for recovery in the building and allied industries. Through that agency, at a minimum of expense to the Federal Government, idle men, idle plants, and idle capital have been put to work on a vast scale throughout the Nation, serving the owners of homes and other properties.

Business transacted through the Federal Housing Administration plan is in excess of $800,000,000. By the middle of the summer it will cross the billion-dollar mark. Let me emphasize, gentlemen, this is all private capital—all private money. The Federal Housing Administration lends no money, it insures private lending institutions against loss.

Under the modernization credit-insurance plan established under the National Housing Act of June 27, 1934, more than 1,000,000 properties have been improved with the proceeds of insured loans which, by April 30 of this year, amounted to more than $365,000,000. These loans of private capital have been made by over 6,000 banks and other financial institutions.

Over and above these results, an immense volume of modernization and repair work has gone ahead on a cash basis or has been financed in other ways, bringing the total volume of modernization and repair work generated to more than $1,500,000,000. This large total has been built up through the activities of some 7,000 local better-housing committees and related agencies, cooperating with the Federal Housing Administration and covering most of the cities and towns in the United States. In the main, their programs have been carried on by voluntary workers, who have thus contributed their time, energy, and money in the interest of recovery.

Altogether, many thousands of business firms, and millions of wage earners, have profited. The recovery evident during the past 18 months in practically all lines of industry related to housing indicates that the modernization credit plan of the Federal Housing Administration has acted as a substantial force.

The impetus gained as a result of this emergency measure is being enlarged and carried forward by increased home-building activity, which was given a start and has been greatly accelerated by the timely inception of the mutual mortgage insurance plan of the Federal Housing Administration. New residential building commenced during the first quarter of 1936 was substantially greater, as indicated by building permits, than during the first quarters of the three preceding years combined.

This revival of home-building construction has resulted in the rapid reemployment of building-trades workers, to such an extent that in many areas there are no idle skilled craftsmen available.

The Federal Housing Administration's contribution to this revival represents a phase of the great movement which it is leading to reestablish home-mortgage lending on a new and sounder basis. In this movement it has obtained the cooperation of 47 States, which have enacted necessary enabling legislation, and of more than 8,000 lending institutions, which have been approved as mortgagees under the plan.

Although the single insured mortgage system came into active operation only a little more than a year ago, owing to the time required for enactment of the State laws just mentioned, more than 64,000 mortgages with a principal value of $260,000,000 have been accepted for insurance. Far more significant than this total are the indirect effects.

The mutual mortgage insurance plan makes amortized mortgages up to 80 percent of the value, and for terms up to 20 years, available to borrowers whose property and whose income fairly warrant such obligations. It has also given long-term, amortized home mortgages a form and standing that makes them most desirable as investments for banks and the leading types of thrift institutions.

Among the achievements of this new device may be listed:

The firm and universal establishment of the long-term, monthly amortized mortgage in the home mortgage lending practice of the Nation.

The free flow of mortgage money from centers of supply into communities where funds are normally scarce.

The reduction in mortgage financing charges for large sections of the country due to the uniform interest rate established by the Administration.

Improvement in construction practices influenced by standardized appraisal methods based on minimum property standards.

Increased safety to both the home buyer and the mortgage lender throughout the life of the mortgage as a result of the insurance protection and the safeguards attending it.

The insured single mortgage stands as the one active safeguard which may be used to discourage the revival of the vicious type of second mortgage, which, with its high charges and inflated values, was in large measure responsible for the great number of foreclosures during the recent depression. The new system, with its emphasis on sound appraisals and careful investigation of the borrower's capacity to pay, makes for sound lending at the same time that it is assuring ample credit for the healthy revival of home building, which is the greatest single force making for continued and rapid recovery.

All in all, the mutual mortgage insurance program in most districts of the country, has made home-mortgage money, which has been frozen almost solid for several years, generally available to home owners on the most attractive terms in the history of the Nation.

The application of the mutual mortgage insurance plan to large-scale housing projects is not spectacular in its approach, but it does carry a fine promise of effecting a real revolution in the field. The financing of apartments and other rental quarters, as has been shown again and again, by investigations in the District of Columbia and elsewhere, has commonly involved abuses of the gravest character. These abuses have lead to the fleecing of investors, incompetent planning and poor quality of construction, and high rentals for the poor quarters provided for the tenants. Such conditions have discouraged the entrance of conservative capital, except up to a relatively small percentage of appraised values, and appraisal practices have all too often been lax.

Several large-scale projects in different parts of the country, financed with insured mortgages, have already been completed or are under construction, and the financial arrangements for several others, involving a total cost of approximately $25,000,000 have been determined recently. Many more are under consideration, a substantial number of which probably will be approved, and new applications are being received from day to day. In all these projects there is emphasis upon sound planning and financing, and upon efficient management, all of which are subject to competent review in connection with the mortgage insurance. Limitation of return on the capital investment is also a feature.

Thus the insurance of mortgages on large-scale housing projects in bringing capital in accordance with sound practice into a field that in the past has been left too largely to a hit-or-miss type of speculative development.

It is not surprising to find that the activities of the Federal Housing Administration have received the most whole-hearted endorsement from groups having widely varying interests. For example, a report approved by the Chamber of Commerce of the United States at its latest annual meeting stated:

"The elimination of the second mortgage by the mutual insurance of first mortgages up to 80 percent of the value of the property is an experiment which is worthy of further trial. Accompanied as it is with the assumption of a contingent liability on the part of the Government, there are reasons to believe that this experiment will become an increasingly important factor in the next 2 years in the recovery of small-house construction. The plan definitely reduces the costs of home ownership to the consumer or purchaser who is not in a position to make a down payment of more than 20 percent; that is, to the buyer who ordinarily would need a second mortgage in order to acquire a home. Since second-mortgage financing facilities are not at present generally available the plan provides an immediate means of obtaining such funds as a part of a single mortgage."

Again, the president of the American Bankers Association, Mr. Robert V. Fleming, stated to a group of bankers:

"I desire to call your attention to first-mortgage amortized loans on real estate which can be made under the provisions of title II of the National Housing Act. This type of loan is particularly desirable as there is no industry which can do more to stimulate employment and help in the stability of the country than the construction of homes. Furthermore, title II loans assist in making unimproved real estate liquid, thus supplying an additional purchasing power. I believe the campaign of education which is being carried on in connection with the provisions of the National Housing Act, as to the principles of amortization and standardization of appraisals, will be most helpful."

A prominent building and loan association official stated: "The Federal Housing Administration loan is really the 1935 model of the building and loan mortgage. * * * Our association is well satisfied with the reception of the Federal Housing Administration insured-mortgage plan by the prospective borrowers. We intend to make just as many loans on this plan as our funds will permit. Our association is quite willing to make loans on the 20-year plan, backed up by the Federal insurance, giving further protection to the investments of its savings shareholders."

Mr. William Green, president of the American Federation of Labor, in a message addressed "to the men and women of labor", has stated:

"The American Federation of Labor, ever anxious to provide employment for the workers and to improve the conditions under which they and their dependents live and labor, unequivocally endorsed the program of the Federal Housing Administration in its recent convention in San Francisco.

"The Federal Housing Administration has now made effective those provisions of the National Housing Act under which loans for new construction and the purchase of existing homes may be insured, thereby making possible the freeing of billions of money so long withheld from the building industry on terms fair to the borrower and safe to the lender, and opening the door of employment to millions long idle.

"In conformity with the action of the San Francisco convention, I now urge all of our people to get squarely behind the Federal Housing Administration and the building trades in their efforts to revive building and to provide better and healthier housing under these provisions of the National Housing Act.

"The ramifications of the better-housing program are almost infinite. Directly the millions employed in building and in the production and transportation of building materials will benefit. Indirectly those normally engaged in the production and sale of all types of goods and in services will benefit.

"The building dollar is a busy dollar. It is not 'hidden in a bush' or buried in a vault. From the pay envelope it speedily finds its way into the purchase of clothing, of food, of the one thousand and one things and services we all require or wish in our daily lives. In turn it makes it possible for those producing, transporting, and selling these goods and services to satisfy their own wants and needs and give employment to others."

EXECUTIVE SESSION

Mr. ROBINSON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDING OFFICER (Mr. DUFFY in the chair) laid before the Senate messages from the President of the United States submitting several nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF A COMMITTEE

Mr. HAYDEN, from the Committee on Post Offices and Post Roads, reported favorably the nominations of sundry postmasters.

The PRESIDING OFFICER. The reports will be placed on the Executive Calendar.

If there be no further reports of committees, the clerk will state the first nomination in order on the calendar.

BOARD OF TAX APPEALS—SAMUEL B. HILL

The legislative clerk read the nomination of SAMUEL B. HILL, of Washington, to be a member of the Board of Tax Appeals for a term of 12 years from June 2, 1936.

Mr. SCHWELLENBACH. Mr. President, I desire very briefly to say that the President has sent to the Senate the nomination as a member of the Board of Tax Appeals of SAMUEL B. HILL, who has been a Member of the House of Representatives for many years.

Mr. HILL is recognized, not only in the House but in this body, as one of the most energetic, brilliant, and sincere Members of the Congress of the United States. On behalf of my colleague [Mr. BONE] and myself, I ask the Senate to confirm the nomination.

Mr. ROBINSON. Mr. President, I should like to add to what has been said by the Senator from Washington [Mr. SCHWELLENBACH] that this appointee to the Board of Tax Appeals is generally regarded as one of the best-informed authorities in the United States on questions pertaining to taxation.

Mr. COUZENS. Mr. President, I wish to endorse what has been said by the Senator from Washington and the Senator from Arkansas with respect to Mr. HILL, with whom I have served as a conferee on tax and tariff matters.

Mr. KING. Mr. President, the chairman of the Committee on Finance, the Senator from Mississippi [Mr. HARRISON], is absent. As the ranking member of the committee, I take this opportunity of saying a few words in behalf of Mr. HILL. I know that the chairman of the committee, if he were present, would heartily endorse the nomination.

I have known Mr. HILL for many years. I have been a member of the Finance Committee, and he has been a member of the Committee on Ways and Means of the House. He is one of the outstanding figures in Congress; and I know no man in public life who is better equipped than is Mr. HILL to discharge the duties of the important position to which he has been nominated.

Mr. BONE. Mr. President, my colleague [Mr. SCHWELLENBACH] has very generously spoken my own attitude of mind toward the able Member of the House from my own State. I am voicing not only my own regret but, I think, the regret of the great mass of the people of the State of Washington in seeing Judge HILL pass from the House as one of its able and outstanding Members. I feel that the State of Washington has lost a very valuable Representative in Congress.

The PRESIDING OFFICER. Without objection, the nomination of Mr. HILL to be a member of the Board of Tax Appeals is unanimously confirmed.

DIPLOMATIC AND FOREIGN SERVICE

The legislative clerk read the nomination of Stuart Allen, of Minnesota, to be a secretary in the Diplomatic Service.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The legislative clerk read the nomination of Harold M. Collins, of Virginia, to be a secretary in the Diplomatic Service.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

POSTMASTERS

The legislative clerk proceeded to read sundry nominations of postmasters.

Mr. ROBINSON. I ask unanimous consent that the nominations of postmasters on the calendar be confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations of postmasters are confirmed en bloc.

That completes the calendar.

RECESS

The Senate resumed legislative session.

Mr. ROBINSON. I move that the Senate take a recess until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 5 o'clock and 50 minutes p. m.) the Senate took a recess until Monday, May 25, 1936, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 21 (legislative day of May 12), 1936

RURAL ELECTRIFICATION ADMINISTRATION

Morris L. Cooke, of Pennsylvania, to be Administrator of the Rural Electrification Administration for a term of 10 years, pursuant to the act of Congress approved May 20, 1936.

REGISTER OF THE LAND OFFICE

William Riddell, of Montana, to be register of the land office at Billings, Mont., vice Harry W. Hill, term expired.

CONFIRMATIONS

Executive nominations confirmed by the Senate May 21 (legislative day of May 12), 1936

BOARD OF TAX APPEALS

SAMUEL B. HILL to be a member of the Board of Tax Appeals.

DIPLOMATIC AND FOREIGN SERVICE

Stuart Allen to be a secretary in the Diplomatic Service.

Harold M. Collins to be a secretary in the Diplomatic Service.

POSTMASTERS

NEW YORK

Wilmarth J. Tuthill, Goshen.

NORTH DAKOTA

Eureka H. McDougall, Cleveland.
Lloyd Lapic, Lankin.

PENNSYLVANIA

Norman B. Gregory, East Stroudsburg.
Christian A. Jansen, Essington.
Charles C. Bernd, Red Hill.

TENNESSEE

George N. Fuller, Collegedale.
John O. Bennett, Troy.

TEXAS

Louise W. Fisher, Burton.
Andrew F. Hester, Donna.
Arthur B. Hobbs, Edgewood.
John Richard Folkes, Giddings.
Norman Charles Schlemmer, Kyle.
Andrew B. Johnson, Marlin.
Rudolph J. Marak, West.

VERMONT

Alice G. Sheehan, North Troy.
James P. Gilfeather, West Rutland.

HOUSE OF REPRESENTATIVES

THURSDAY, MAY 21, 1936

The House met at 12 o'clock meridian.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Merciful Lord and our God, we are glad of life because it gives us the joyous privilege of loving, of working, of playing, and of looking up at the heavens, which declare the glory of our All-Father. We pray Thee to let us feel that there is in the heart of the Almighty One a place for every human experience and for every wandering, wavering, and unstable child of earth. Do Thou pour Thy redemptive energy into the hearts of men; quicken their intelligence, deepen their understanding, and stimulate their habits. As we go forth to duty, let our hearts know no fear but that of wrongdoing and our minds no anxiety but an earnest desire to toil faithfully for the good of our country. Through Christ our Redeemer. Amen.

The Journal of the proceedings of yesterday was read and approved.

COLLECTION OF REVENUE ON INTOXICATING LIQUORS

Mr. SNELL. Mr. Speaker, the Chair yesterday, on the bill H. R. 9185, appointed on the minority side as conferees Mr. TREADWAY and Mr. CROWTHER. The gentleman from Massachusetts [Mr. TREADWAY] is obliged to be out of the city on important business, and he requested me to suggest to the Chair that the gentleman from Ohio [Mr. JENKINS] be appointed as a conferee on the minority side.

The SPEAKER. Without objection, the resignation of the gentleman from Massachusetts [Mr. TREADWAY] will be accepted, and the Chair will appoint the gentleman from Ohio [Mr. JENKINS] as conferee on the minority. The Clerk will notify the Senate thereof.

THE UNITED STATES CONSTITUTION—IT CANNOT SAFELY BE SUPERSEDED, AVOIDED, OR DISREGARDED

Mr. PLUMLEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an address which I delivered before the Vermont Association in Boston on February 8, 1936.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. PLUMLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD I include the following address which I delivered before the Vermont Association in Boston February 8, 1936:

(NOTE.—In the matter of change the people must be consulted. The Constitution should not be changed by the Supreme Court. It should not be changed in Washington. The people made it. They and they alone can unmake it. They can create; so also they can destroy; but I insist that the creation, the destruction, or the alteration must be the work of the people. It must be an expression of the will of a steadfast and decisive majority which has had ample time for full consideration of all that the destruction or alteration or amendment does involve.)

Responsibilities are privileges. It is a tremendous responsibility that rests on the shoulders of the American people and their representatives—this job of making the world safe for democracy. The fundamental article in the creed of American democracy, call it the fundamental dogma if you like, is the unchanging and unchangeable resolve that every human being, every individual shall have his opportunity for his utmost development—his chance to become and to do the best he can. Democracy is not only a system of government—it is a scheme of society.

Upon those of us who comprehend just the beginnings of all that democracy stands for, and may mean, rests the responsibility of bringing our neighbors to a realizing sense of the blessings that are theirs and an appreciation of the fact that there are commensurate responsibilities for each one to assume.

"Liberty," said President McKinley, "is responsibility, and responsibility is duty; and that duty is to preserve the exceptional liberty we enjoy within the law and for the law and by the law. God grants liberty only to those who love it and are always ready to guard and defend it."

Responsibilities? Yes, but they are not burdens! They are privileges to be enjoyed with a deep sense of satisfaction and appreciation of what it means to be and to exercise the prerogatives of an American citizen. We count our blessings too lightly, underestimate the value of our citizenship, and take too much for granted.

St. Paul said he was a citizen of no mean country. The Romans challenged the world with the slogan, "I am a Roman." What then should be the attitude and state of mind of every American when he takes time to consider the vastness of the domains, the type and multitudes of peoples, and the wealth of all kinds over which fly the Stars and Stripes of his country today. To no man or woman in the long history of mankind and the story of the world conquest in the rise and fall of nations has it ever meant so much as it now means to you and me to be able to say, "This is my own, my native land."

The greatest problem of the day and generation in which you and I live, the greatest question that confronts us, or has confronted us for some time, perhaps since slavery; the question before which all others shrink into insignificance is this: What shall we do with the indifferent citizen? Or to put it another way: What will the indifferent citizen do to the Republic? America has settled some tremendous questions, but as she settles this one, right or wrong, so shall the future of the American Republic be determined, so shall it stand or fall.

"These are altogether extraordinary years", says Mr. Martin, "years of preparation for a new era toward which we grope more or less in the dark. We do not know what it will require of us. We do know out of our experience that we should go armed to meet it, but armed not so much with martial weapons, though they may still be needed, as with faith in humanity, consecration on our report to the cause of all mankind. We are working in these days partly, no doubt, to save our our own skins, but chiefly for posterity. The world that is in the making now is the world of generations to come. Those of us whose years are fairly full will be lucky if we see even the beginning of it. How long it will take to get it going is guesswork, but we think that if we do not dissipate it all the little children of our day have a prospect of coming into a great inheritance.

So, ladies and gentlemen, fellow Vermonters, and friends, here in that cradle of American liberty eternally made unforgettable by Lexington and Bunker Hill and Faneuil Hall, in the time that is left me I propose as a Vermonter and an American citizen vitally interested in the welfare of my State and country and its people, concerned with respect to the record of accomplishment our generation shall leave for posterity to ponder, impressed with the

thought so aptly expressed by Homer that "He serves me most who serves his country best"; conscious of the responsibility that rests on us to make the most of our opportunities and to do the best we can in no partisan spirit (although it is true that he serves his party best who serves his country best), but with all the seriousness and power I can command I propose to direct your attention to the heritage that is ours, to your ideals as true Americans, to the end that we may renew our faith in the fundamental principles of American Government, recognize our duties and obligations to ourselves and our Nation, and show the respect that is overdue to those who gave our Nation its very life.

Probably the wisest group of men who have gathered in modern times met in the Constitutional Convention that drafted the Constitution of the United States. They knew their times. They knew the history of the era upon which the times were founded. They knew their country and dictatorship, with which they were altogether too familiar; and on the other to protect themselves against anarchy and a disorderly government, thus to secure the blessings of liberty for themselves and their posterity.

Over and over again they wrote into their fundamental laws and declarations, as did our Vermont forbears, the challenging statement that frequent recurrence to fundamental principles, a strict adherence to justice, moderation, temperance, industry, and frugality are absolutely necessary to preserve the blessings of liberty and keep government free. The checks and balances they made a part of the governmental structure they erected, if observed and followed, will continue to guarantee the perpetuity of the Nation they created and will preserve the safety of the countless millions who now and in the days to come shall seek and be entitled to the protection it affords.

I am not an alarmist, but I am concerned that the permanency of our national life and its integrity are involved in some of the governmental policies we are asked to countenance and approve. I am sure that the preservation of our liberties and the perpetuity of our form of government is the tremendous stake at issue, and which must be met. The questions confronting us are too momentous and serious to be the football of partisan politics. They transcend all questions of tariff or trade agreements; strike at the very root of all our American institutions. They are steps toward a change in our form of government. Do not minimize or forget it. This is the issue involved. The vibrant issues of the present, whatever they may be, can be faced to better advantage by us if we have, in good faith, studied how the people of the Nation and their chosen leaders faced the so-called dead issues of the past.

Those wise men, the makers of our Constitution, called their new government a republic, and were correct in so doing, for such, of necessity, was its form. Let us not forget for a moment, however, that they knew they were establishing a democracy and an independent nation. This fact was constantly and everlastingly present in their minds.

If you will study the Constitution and the debates which led up to its adoption, you will find that these forefathers of ours did not attempt to set any barrier in the way of the popular will. They sought to and did put effective obstacles in the path of sudden action impelled by popular passion, whim, or the excitement of the moment.

Every end they sought to accomplish or had in view was for the establishment of a democracy with a strong government, but of paramount importance was that it must be safe as well as strong—freed from the peril of lapsing into autocracy on the one hand or into disorder or anarchy on the other. They came here to undertake to do just what they did, and that was to establish a government in which the will of the people must be supreme. They made it so.

One of the fundamental rules and guides they followed was to make sure that it was the real will of the people that ruled. To this end they undertook to make it certain that there should be abundant time for discussion and consideration of measures, means, and policies in order that the public mind could and should be thoroughly and well informed.

Of course, we must idealize the real if we would realize the ideal, but facts must be faced as facts. We may well keep our wagon hitched to a star, but we must keep our feet on the ground. The times call for practical men; practical ideas.

Times change and conditions with them. New times and new conditions must be met by and with the action and legislation they demand. As all wisdom did not die with our forefathers, so also it is true all wisdom was not born yesterday. Yet not a single new question arises but involves some one or more of the oldest theories of government. History repeats itself, and the experience of the ages is always a safe guide.

It has been well said that never before in the history of our country has it been so necessary for every citizen to exercise intelligently the rights of citizenship. Our country is faced with a crisis more serious than any depression; by a question more basic than unemployment, prices, or heavy debts. The continuance or the discontinuance of the freedom we have enjoyed, the loss of liberties that are ours, the abolition of the traditional American order, the absolute change in form of our established Government under our written Constitution and our laws is the issue that confronts us.

The next time we as citizens cast our votes in a national election we shall be voting not for a man, not for a party, not for a remedy nor any group of remedies, but for or against the American form of government. The sooner we realize this the better it will be for all concerned.

We shall have to decide whether our political procedure is to rest upon a basis of democracy or dictatorship; whether our economic order is to rest upon private enterprise or political management; upon a basis of broadly balanced powers or of highly centralized bureaucracy.

It has been aptly stated that no price we may be called upon to pay to prevent the death of democracy will be too high a price, for with all its weaknesses, which are admittedly many and manifest, democracy is, in the long run, both safer than and superior to a socialistic or communistic state or to dictatorship. We should think twice before we follow the lead of Soviet Russia, Fascist Italy, and Nazi Germany. They have made no progress comparable with that which we have accomplished. Centralization of authority in the government never has been durable and never will be. Let us make no mistake. The charter of our Government has not been invalidated by the changed circumstances the years have brought. Grounded on sound principles of government, it may be adapated to changing circumstances but cannot safely be superseded, avoided, evaded, or disregarded. In it is found the result of mankind's attempt to find a workable compromise that will keep power centralized enough to achieve efficiency without tyranny and keep power decentralized enough to achieve freedom without anarchy.

It is a far cry back to the days of the Plymouth Colony, and Jamestown, but the fundamentals have not changed; fads and fancies have danced their little day on the stage and made their exit into oblivion. The realities remain. The early settlers of America bequeathed to their descendants certain institutions, customs, manners, and opinions which are essential to and have contributed most successfully to the permanency of our democratic form of government.

De Tocqueville says that when he contemplates and reflects upon the consequences of their primary acts he "sees the destiny of America embodied in the first Puritan who landed on these shores." These hardy pioneers out of their experience proclaimed principles undoubtedly scorned, rather than unknown, by the nations of Europe, which were and have been accepted as the creed of a great people.

Whatever history may teach with respect to the beneficent effects of paternalism and centralization in other countries and under other forms of government, we of the United States of America must oppose the further extension of both; must rely for the perpetuity of our institutions upon the functioning of the local governmental unit, for if experience teaches us anything, we must already have learned that John Fiske spoke truly when he said that "the preservation of local self-government is of the highest importance for the maintenance of a rich and powerful national life."

The centralization tendencies in government, ever growing more pronounced, have fastened their tentacles around the surviving representative of the most nearly perfect democracy ever created. The paternalistic state is cooperating to help strangle its child. The question which confronts you and me is, Shall we stand idly by as accessories both before and after the crime?

During recent years there has grown up a theory wholly at war with American principles of constitutional government, and that theory is: When an emergency exists, or when Congress and the President declare an emergency to exist, this in some way enlarges the power of the Congress and the Executive under the Constitution. It is further contended that the courts are justified under such circumstances to consider matters other than the terms of the Constitution itself. This theory has been argued and urged in several cases, but the Supreme Court has held that it was bound by the terms of the Constitution. It has declared again and again, in effect, that it would sustain in the fullest measure all powers which the people had written into the Constitution, but the Court has repeatedly declared that it did not feel justified in wholly disregarding the language of the Constitution. A decision of the Court based upon the theory that the Court could consider anything other than the terms of the Constitution itself would create a complete judicial oligarchy. It would leave the question of the extent of power to the determination of those exercising power—a complete definition of despotic power.

In rejecting the doctrine that an emergency justifies a disregard of the plain terms of the Constitution, the Supreme Court announces no new doctrine. Sixty-nine years ago a man, a civilian, as you and I, was tried by military court and sentenced to death. He appealed to the Supreme Court, claiming that under the Constitution he was entitled to be tried by a jury. The argument was made that the great Civil War was an emergency of such a nature that the Court would be justified in disregarding the provisions of the Constitution which guarantees the right of trial by jury. The Court rejected this vicious doctrine, saying: "No doctrine involving more pernicious consequences was ever invented by man than that any of its provisions (the Constitution) can be suspended during any of the great exigencies of the Government. Such a doctrine leads directly to anarchy or despotism."

If any such power is to be given the Court or to the Congress or to the Executive, let those who urge that such powers be given, come forward with a proposal in the way of an amendment to the Constitution. A change of this stupendous moment should not be made by the Court through strained and unnatural construction, or by the Congress through disregard of its constitutional obligations.

In the matter of the change the people must be consulted. The Constitution should not be changed by the Supreme Court. It

should not be changed in Washington. It should be changed by the people alone. You and I, our family, our friends—we, the people—in this country of ours are more important than our instrument, Government. Government should be made to serve us rather than dominate us. The State, which is man's own creation, exists for the sake of us, of our people, rather than as some would have us believe, that we exist for the sake of the State.

The people made the Constitution, the people can unmake it if they so see fit; they can create, so also they can destroy, but I insist that the creation, the destruction, or the alteration must be the work of the people. It must be an expression of the will of a steadfast and decisive majority which has had ample time for full consideration of all that the destruction or alteration or amendment does involve.

If all the checks and balances, all the carefully devised safeguards to protect us are to be swept away, disregarded, discarded, or suspended by dictatorial decree or nonobservance, or lack of respect, then we need no Constitution at all!—This instrument acclaimed "the greatest charter of liberty ever drawn."

We need to wake up! And we may as well be told first as last that our lives, our liberties, and our property are at stake, and upon us rests the responsibility for the final decision with respect to what we shall do to protect them all.

Constitutional government moves too slowly to suit some people who wish to convert it into an instrument for the quick satisfaction of their own desires, or to attempt to legalize operations which may be either beneficial or harmful to the people. This subject of the liberty which was granted to us under the Constitution, is one which whatever people may say is not to be treated lightly. The Constitution is a declaration of principles, not to be altered by the whim of a moment or suspended or circumvented by executive, bureaucratic, judicial, or legislative act. Any other attitude with respect to the Constitution of the United States may and will lead to nothing less than a complete revolution in our system of government.

President George Washington, in his Farewell Address, said: "If, in the opinion of the people, the distribution or modification of the constitutional power be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this, in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil any partial or transient benefit which the use can at any time yield."

You cannot make me believe that when they see where they are headed even the stress of economic necessity or any alleged emergency will ever induce the American people to consider any proposal insidiously designed eventually to destroy completely the American form of government.

As a Vermonter, speaking to Vermonters, I do not need to reassert that all governments derive their just powers from the consent of the governed; that sovereignty resides in the people; how well we Vermonters know that governmental power originates in the people, and a government, therefore, can have and exercise only such powers as the people yield.

So, beside the question of the maintenance or destruction of the Constitution of the United States, all other questions of law and policies sink into utter insignificance. In its presence party lines should disappear, all sectional differences melt away like the early mists of dawn before the rising sun. The Constitution is our fundamental law. Upon its provisions rests the entire fabric of our institutions. It has disappointed the expectation of those who opposed it, convinced those who doubted, and won a success beyond the most glowing hopes of those who put their faith in it.

Whatever the adventures we undertake, the goals we seek to reach, we are trustees for the future of America, and in our responsibility we must not fail. We have an inheritance to safeguard, to transmit; a system of ordered liberty in which statutes and theories of social experimenters must yield to the Constitution, in which the people are governed by law and not by man, and in which human rights are deemed to be sacred and inalienable. Many free countries have lost their liberty, and ours may lose hers, but, if she shall, let us as Vermonters join together in spirit with Lincoln when he says: "Let it be my proudest plume, not that I was the last to desert, but that I never deserted her."

VOCATIONAL EDUCATION

Mr. GREENWOOD, from the Committee on Rules, by direction of that committee, presented the following privileged resolution, which was referred to the House Calendar and ordered printed:

House Resolution 520

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 12120, a bill to provide for the further development of vocational education in the several States and Territories, and all points of order against said bill are hereby waived. That after general debate, which shall be confined to the bill and continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Education, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the reading of the bill for amendment, the Committee shall rise and report the same to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit, with or without instructions.

BONDED INDEBTEDNESS, MUNICIPAL CORPORATIONS, ALASKA

Mr. DIMOND. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H. R. 8766, an act to authorize municipal corporations in the Territory of Alaska, to incur bonded indebtedness, and for other purposes, and concur in the Senate amendments.

The SPEAKER. The Clerk will report the Senate amendments.

The Clerk read the Senate amendments, as follows:

Page 1, line 4, strike out all after "authorized" down to and including "not" in line 8, and insert "to construct, improve, extend, better, repair, reconstruct, or acquire public works of a permanent character and to incur bonded indebtedness and issue negotiable bonds for any or all of such purposes: *Provided, however*, That no municipal corporation shall incur a bonded indebtedness or issue its negotiable bonds under this act to an amount which, including existing bonded indebtedness shall."

Page 1, line 10, strike out all after "municipal" down to and including "Territory" in line 2, page 2, and insert "corporation. Such public work shall include but not be limited to streets, bridges, wharves and harbor facilities, sewers and sewage-disposal plants, municipal buildings, schools, libraries, gymnasia and athletic fields, fire houses, and public utilities."

Page 2, line 18, strike out all after "SEC. 3." down to and including "may" in line 20, and insert "Bonds issued pursuant to this act shall."

Page 2, line 24, strike out all after "private" down to and including "and" in line 1, page 3, and insert "sale, may be redeemable (either with or without premium) or nonredeemable."

Page 3, line 2, after "only," insert: "and may be executed by such officers and in such manner."

Page 3, line 4, after "bonds.", insert: "In case any of the officers whose signatures appear on the bonds or coupons shall cease to be such officers before delivery of such bonds, such signatures, whether manual or facsimile, shall, nevertheless, be valid and sufficient for all purposes, the same as if such officers had remained in office until such delivery."

Page 3, line 7, after "annum", insert: ", payable semiannually."

Page 3, line 18, after "conflict", insert: "; but nothing contained in this act shall affect any bonded indebtedness heretofore incurred or heretofore authorized by law. The powers conferred by this act shall be in addition and supplemental to and the limitations imposed hereby shall not affect the powers conferred by any other law."

The SPEAKER. Is there objection?

Mr. SNELL. Reserving the right to object, this seems to be important and far-reaching legislation. I understand from the Delegate from Alaska that it pertains only to cities in Alaska and that they have agreed upon this legislation and want it.

Mr. DIMOND. The gentleman is correct.

Mr. SNELL. I have no objection.

The amendments were concurred in.

The SPEAKER. Under the special order, the Chair recognizes the Delegate from Alaska for 15 minutes.

Mr. DIMOND. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include therein a brief statement about farms in the Matanuska Valley made by a resident therein, and a short letter.

The SPEAKER. Without objection, it is so ordered.

ALASKA—FACT AND FICTION

Mr. DIMOND. Mr. Speaker, in the issue of the Washington Sunday Star of April 19 appeared an article concerning the Matanuska Valley, Alaska, farm settlement, by W. Pledge Brown. Similar articles by the same author have been published a number of times in newspapers in various parts of the United States. Some months ago—in fact, last January—a friend of mine sent me a copy of substantially the same article which had been published in Capper's Weekly, and I have been informed that at least a dozen newspapers in the United States have published, and presumably bought and paid for, articles differing little, except in arrangement of paragraphs and transposition of language, from each other and the one which was so published in the Washington Sunday Star.

While I realize how futile it is to endeavor to answer all of the untrue statements which are made orally or appear

in the newspapers or in other publications about a man, a project, or a policy, yet, to my own personal knowledge, the series of articles written by W. Pledge Brown and published in the newspapers over the country about the Matanuska settlement are so almost wholly untrue that it seems some effort should be made by those of us who have accurate information on the subject and are interested in having the truth known to state the facts. Hence, with the consent of the House, I have obtained time today to tell the Members of this body something about the Matanuska Valley farm settlement and its prospects for success and something of farm lands and farming in Alaska.

As a preliminary, however, and since in the course of what I have to say it will be necessary to show as untrue, and perhaps false, many if not most of the statements so made by the author of the article in the Star and of the other similar articles mentioned, it may be well to find out who W. Pledge Brown is.

During the winter of 1934–35, a W. Pledge Brown spent several months in Alaska, principally in the cities of Ketchikan and Juneau. He claimed to be a newspaperman and appeared to have some newspaper experience. I have made careful inquiry concerning W. Pledge Brown's journeys in Alaska and, although he claims to have been editor of the Ketchikan Daily Chronicle, and in the article appearing in the Star he says that he has lived in the Territory for more than 5 years and has covered news from Ketchikan to Nome and from Nome to Point Barrow, in truth and in fact, he was never an editor of the Ketchikan Daily Chronicle or employed by that paper, and his very limited experience in Alaska has been confined largely to the cities of Ketchikan and Juneau and never, so far as I can ascertain, has he been in the Matanuska Valley or in Nome, nor has he ever visited Barrow; accordingly when he writes of farming in Alaska, he is writing of something concerning which from personal observation and experience he knows precisely nothing.

W. Pledge Brown—his full name was there given as Wilbur Pledge Brown—however, while he was in the city of Ketchikan, Alaska, did have one experience somewhat out of the ordinary. In that city on December 24, 1934, he was charged with larceny in a dwelling house, the allegation being that he had stolen a woman's purse at a party. Hearing on the charge was held before Judge E. C. Austin, United States Commissioner at Ketchikan, on January 11, 1935, and at that time Mr. Brown pleaded guilty to petit larceny and was fined $25. On this sentence he served 1 day and thus received a credit of $2 on his fine under the laws of Alaska, and paid the remaining $23. When Mr. Brown left Ketchikan he failed to pay a number of debts which he owed and, so far as I have been able to learn, these debts have never been paid.

The illuminating incident just mentioned in the life of W. Pledge Brown, who visited Alaska as above stated, and the claim of the author of the article which appeared in the Washington Star and of similar, and indeed almost identical, articles which have appeared in a number of newspapers in several cities in the United States, led me to make further inquiry about W. Pledge Brown, and as a result of such inquiry it appears that the W. Pledge Brown who pleaded guilty to petit larceny in the city of Ketchikan, Alaska, on January 11, 1935, is identical with the following: One William P. Brown who was investigated by the police department of Phoenix, Ariz., on or about September 3, 1929, concerning the issuance of checks, one Wilbur P. Brown who was subject to a like investigation by the police department of Los Angeles, Calif., on or about September 10, 1930, on a charge of issuing a N. S. F. check, and who was convicted of petit theft and sentenced to 180 days' imprisonment—suspended; one Wilbur Pledge Browne who was investigated by the police department of Pasadena, Calif., on or about January 28, 1931, on a charge of grand theft involving a motor car, which charge was later dismissed; one Pledge Brown, alias Wilbur Pledge Browne, who was charged in Los Angeles, Calif., with grand larceny involving an automobile on or about January 31, 1931; one William Pledge Brown, alias W. P. Brown, who was investigated by the police department of Washington, D. C., on or about March 20 to March 23, 1936, on a charge of grand larceny. Further inquiry discloses that the records of the city prison of Columbus, Ohio, show one W. Pledge Brown on June 16, 1932, to have taken a Buick car from the U-Drive-It Co. of Columbus and departed; that the company caused a warrant to be issued for his arrest on June 22, 1932; that on June 16, 1932, W. Pledge Brown cashed a worthless check at the Deshler-Wallick Hotel in Columbus, and as a result thereof on June 22 the hotel management caused a warrant for his arrest to be issued; that on the same day, namely, June 16, 1932, W. Pledge Brown received his final check from the Ohio State Journal and left, taking with him a typewriter which belonged to that newspaper, but in his generous attempt to make a fair exchange he left something—he left numerous small debts owing to other employees of the paper. The theft of the typewriter was reported to the police, but no warrant was issued.

But perhaps the most despicable thing which has come to my attention concerning W. Pledge Brown is revealed in a letter written to the Ketchikan Chronicle by a lady in Kansas. This letter bears every sign of truth, and it reveals more clearly than the mere conviction of a petty thief just what the manners and morals of W. Pledge Brown are. The letter mentioned is dated December 10, 1935, and reads as follows:

KETCHIKAN CHRONICLE,
Ketchikan, Alaska.

DEAR SIR: I am enclosing in this letter to you a letter addressed to Mr. W. Pledge Brown, of the Ketchikan Chronicle.

I met Mr. Brown recently while he was in Topeka, Kans., at which time he wrote an article on Alaskan conditions for the Topeka Daily Capital (Nov. 24, 1935, issue). The paper states that W. Pledge Brown is staff writer for the Ketchikan (Alaska) Chronicle, and he had returned to the United States as one of the Alaskan delegation to the national convention of the American Legion in St. Louis. They also state that Mr. Brown will return to his duties in Alaska in December.

It seems that during Mr. Brown's stay in Topeka that he became temporarily financially embarrassed. At his request, in writing, and over the signature of the Ketchikan Chronicle, Ketchikan, Alaska, I loaned Mr. Brown $5, which he promised to return to me not later than the following Tuesday noon, November 26, 1935, when he was supposed to receive a sum of money by special delivery. Tuesday night I found out that he had checked out of the Throop Hotel in Topeka, Kans., and had left, forgetting to extend me the courtesy of returning the $5 I loaned him.

Mr. Brown went from Topeka to Kansas City, and I am informed through correspondence with Mr. Jerome Walsh, a lawyer in the Bryant Building, Kansas City, Mo., whose acquaintance Mr. Brown had made, that Mr. Brown had checked out of the Ambassador Hotel in Kansas City, Mo., leaving no forwarding address.

A feature article by Mr. Brown appeared in the Kansas City Journal-Post about December 2.

If in any possible way you can deliver the enclosed letter to Mr. Brown, will you kindly do so at once for me?

I am sorry to cause Mr. Brown any unnecessary embarrassment, but it was not without considerable sacrifice that I granted his request to lend him this amount. Or if you can collect this for me you may keep $1 for your trouble and mail me the $4.

May I hear from you by return mail?

Sincerely,

——— ———.

I will not reveal the lady's name because it might cause her embarrassment and undeserved shame. It is a pity and a tragedy that men like W. Pledge Brown are permitted to roam the country fleecing people, and it is surprising that editors are so credulous and so gullible as to accept and publish, without adequate question or examination, the mendacious articles furnished, and, I suppose, really sold to the newspapers by Mr. Brown.

And that is not all. A letter which appears to be authentic gives the information that W. Pledge Brown, subsequent to his visit to Alaska, left the city of Bay City, Mich., owing his hotel bill, a clothing bill of nearly $10 and a "check that bounced back from a Seattle bank for $25." Further similar details of his scoundrelly record are available, but surely that is enough. I could forgive him for everything except his cheating the Kansas girl out of $5. We have a word for men of that type in Alaska.

Now let us for a moment analyze, paragraph by paragraph, the article written by W. Pledge Brown which appeared in the Washington Star. As I observed a moment ago, so much of it is untrue that it is hard to find anything material in the entire article which is really correct or accurate.

Mr. Brown says that to date the Government has expended approximately $18,000 per family. That statement is untrue. The Government has expended approximately one-half of the amount stated by Mr. Brown, but a considerable part of that expenditure has been made for necessary roads which should have been constructed whether the 200 families were settled in the Matanuska Valley with the aid of the Government or not. Before the establishment of this colony was ever thought of, the Federal Government and the territorial government of Alaska, and the municipal government of Anchorage had spent substantial sums of money in the building of roads in the Matanuska Valley and to connect that valley with the city of Anchorage, some 40 miles away. This connecting road has long been recognized as a real necessity for the development of the region, not only for its farms and for the expansion of farming, but for the mines which lie just beyond the edge of the valley in the Willow Creek region. It would be unfair and unjust to charge against the colonists or against this particular settlement project all of the sums that have been so spent in road building, since the object of building the roads was not only to serve the Matanuska Valley settlement but also the other farmers already living in the valley and those who in the future will, on their own initiative, undoubtedly settle there.

Moreover, the money so spent in road building should have been and would probably have been spent anyhow as a part of the relief work in the Territory of Alaska; and, surely, it is much better to put men to work on economically useful projects such as public roads than it is to give them the money for doing work which is not so valuable to the public and to posterity. The roads being built are really a sound contribution to the development of that region, and so to the development of Alaska, and the only pity is that three or four times as much money has not been expended in Alaska during the past several years for building roads that are equally needed in other parts of the Territory.

Mention is made in this article of the number of colonists who returned to the United States. Let me state the facts: Of the 897 colonists who went to Matanuska, approximately 750 remain there and are quite content to remain, and thankful that they have this outstanding opportunity to make themselves self-supporting and successful. I have been furnished with a copy of a telegram, dated April 14, 1936, from Col. Otto F. Ohlson, general manager of the Alaska Railroad and chairman of the Alaska Rural Resettlement Corporation, the Government corporation having charge of this project, addressed to Col. Lawrence Westbrook, Assistant Administrator of the F. E. R. A., saying that with the exception of two families, the colonists then—April 14, 1936—in the Matanuska Valley, embracing 158 families, report they are glad to be there and that they intend to remain. One man remarked, "You could not drive me away"; and another, "The soil and climate conditions here are far better than where we came from." Similar statements were made by other colonists, indicating that they are not only willing but eager to undertake the hard work which confronts them, for they believe they are bound to succeed and to make eventually not only a living but a competence.

In this article Mr. Brown proceeds with his misinformation, talking about the "long night", as he says the winter is known in the north country, and then goes on to say, "The only thing the colonists could do was to stay in their cabins and take it on the chin" during the winter. Arrant nonsense! Official records show that the average temperature in the Matanuska Valley during the month of January 1936 was plus 12.9° F.—remember that is 12.9° above zero. Anyone who has ever lived in the Northern States knows perfectly well that, with proper food and clothing and shelter, a temperature of 12.9° above zero causes no suffering, and in fact it is admirable weather for hard outdoor winter work, such as cutting down trees and clearing the land so that in the spring, when the frost goes out, the stumps may be removed and the land readily plowed.

In the Matanuska Valley the shortest day of the winter gives at least 8 hours of daylight. And a man who works out of doors steadily for 8 hours will do a fair day's work; and, so far as the work is concerned, he does not really need any more daylight, though a longer daylight period would undoubtedly be a comfort and a convenience. But even if the winter days are short, the briefness of the light of those days is made up to the fullest extent in the summertime, and it may be well here to remind ourselves that every part of the earth has the same amount of sunlight during the year. True, the days in the Matanuska Valley, which is a little farther north than the parallel of 61° north latitude are short in the wintertime, but in midsummer the valley is bathed in approximately 20 hours of sunlight each day and enjoys daylight for the full 24 hours.

One statement contained in Mr. Brown's article which appeared in the Star is so grossly untrue that it calls for special comment. The same statement occurred in the almost identical article which appeared in Capper's Weekly months ago. I refer to that part of the article which reads as follows:

> First of all, there is no topsoil, so important to farming, to be found anywhere in Alaskan territory. Alaskan soil is covered with tundra and moss, under this a sandy gravel, and under the gravel a rich black loam. The "farmer" must dig for the soil needed.

There is simply not a word of truth in all of that. The fact is that there is ample topsoil on those lands of Alaska, more than 40,000,000 acres in extent, which are considered to be agricultural and grazing lands. It is true, of course, that in the northern half of the Territory there is plenty of moss and tundra and no farming soil in the common meaning of that term. But we are not now speaking of the reindeer ranges or the barrens, but of the farm lands of Alaska, and particularly those of the Matanuksa Valley. In that valley the surface is covered with rich black loam, varying from 3 to 10 feet in depth. I personally have seen test pits dug in the valley to a depth of 6 feet without getting through the loam. Underneath this loam gravels are usually found, thus affording excellent drainage.

Later in the same article Mr. W. Pledge Brown contradicts himself when he says "with little or no drainage in the Matanuska Valley the water from the melting of the winter snows and the rains of the summer months seeps directly into the ground, making the valley a sea of mud and the soil too rich for productive farming." It will be observed that in one paragraph he says there is no top soil in Alaska and that immediately under the moss and tundra a sandy gravel is found, and then further along in another paragraph he talks about the valley being a sea of mud and says "the soil is too rich for productive farming." One wonders how any editor, no matter how careless, would pass such a plain contradiction on a very important point.

Mr. Brown tells about the annual rainfall of approximately 164 inches in southeastern Alaska. That happens to be correct and is, in fact, one of the few accurate statements in the entire article. But he fails to say that the average annual rainfall in the Matanuska Valley over a period of years has been exactly 14.80 inches. The explanation is that the Matanuska Valley is far enough in the interior of Alaska to be out of the region of heavy rainfall which bathes the coast.

The article further states that "prior to the coming of the new colonists there was not such a thing as a farm in Alaska." That statement is so foolish that even the most casual inquiry would have revealed its falsity. Actual farming has been carried on in Alaska and in the Matanuska Valley for many years and, where undertaken energetically and intelligently, it has been generally successful.

Mr. Brown further states, with the same disregard for fact, that the potatoes grown in the Matanuska Valley are unfit for human consumption; that the berries are tasteless and stringy; that the lettuce, cabbage, rhubarb, tomatoes, and other vegetables look beautiful in a crate or box, but when cut into they are rotten in the core. All untrue. The fact is

that the potatoes and other vegetables are of first-class quality. I have eaten potatoes grown in the Matanuska Valley (grown, in fact, on one of the bars of the Matanuska River) as fine and dry as any potatoes I ever ate, and I know that the lettuce, cabbage, rhubarb, tomatoes, and other vegetables are of first-class quality, sound and firm throughout.

It has been said that when new soil anywhere is first plowed up it will not produce crops of good quality the first year, perhaps due to a lack of nitrogen in the soil or to some other cause. But the Matanuska farm lands which have been under cultivation for several years produce crops that, in my judgment, cannot be surpassed in quality anywhere in the world.

Mr. Brown, in writing this series of articles, appears to rely on the general theory that as long as something bad or discreditable is said about a man, or a country, or a project, or a community, or a region, the statement may be sold as news, whereas if the truth is told it is so lacking in interest that no publisher would pay for it or print it. That, of course, is not always correct, but it seems to work sometimes. Many articles giving the truth of the situation in the Matanuska Valley have been published in newspapers and magazines over the country, and the writers did not find it necessary to depart from the truth in order to secure sale and publication of their statements.

If I were to point out every incorrect or untrue statement contained in Mr. Brown's article, these remarks would be carried to undue length, but in passing I must give a few more examples of what appears to be either gross exaggeration or absolute mendacity. Mr. Brown, in this article, has halibut swimming up the rivers of Alaska to spawn. If any halibut has ever entered a river of Alaska to spawn, certainly no one except Mr. Brown has ever before heard of it. As a matter of truth, the halibut spawn in the ocean and not in the rivers. Mr. Brown says that a $5 bounty is paid on eagles; the truth is that the bounty is $1. He has the eagles in this article picking the eyes out of the halibut and salmon. In order to pick the eyes out of a halibut, an eagle would have to dive deep into the salt water, and no one in Alaska has ever seen an eagle do that.

The article contains the statement that an 8-cent bounty is paid on trout regardless of size. The fact is that in a few restricted areas of Alaska a bounty of 2½ cents apiece is paid for the Dolly Varden variety of trout because this variety is especially destructive of salmon spawn. Further reference is made to the packs of wolves which roam Alaska in groups of 20 to 50. I have lived in Alaska more than 31 years, and during a substantial part of that period I was engaged in prospecting and thus had occasion to observe the habits of the wildlife of Alaska. I never saw a pack of wolves above five in number (probably a family, not a pack) and never knew of anybody who claims to have seen such a pack. Dr. Vilhjalmur Stefansson, the famous scientist, author, and Arctic explorer, includes the wolf-pack fable in what he satirically refers to as standardized misinformation. It is true that wolves are destructive of game, and the Territory pays a bounty on them. But not a wolf has been killed in the Matanuska Valley in 5 years. Wolves do not frequent the region in which the colonists are situated. The Territorial bounty on wolves is $20, not $15, as stated by Mr. Brown.

Mr. Brown would have you believe that disease in the Matanuska settlement was rife and the death rate terrible. The truth is that the health of the people in the settlement has been excellent. There has been sickness in the valley, but I do not know of any community in the United States where all illness has been banished. At Matanuska, some of the settlers have suffered from measles, chickenpox, and scarlet fever, but such diseases are not confined to Alaska. Mr. Brown graphically describes the sad death of a 4-year old boy. Death is always tragic, and the sight of a cheerful, happy child taken from his loved ones is particularly so. Doubtless it cast a pall over the entire colony, as such misfortunes always do. Death, as we well know, is not restricted to the aged and infirm nor to the youthful—death strikes at all ranks and all classes, and while we may deeply sympathize with the loved ones of this young boy, the first of the colony to go, we must remember that death comes to happy, loving children all over the world even where every medical facility is available. The truth again is that from the very beginning of the settlement, the colonists were amply taken care of with the services of a physician and nurses, and one of the first things that was done in the colony was the construction of a hospital. As a result of that care, the death rate of the colonists has been only about one-half of the death rate in the continental United States. I much doubt if any of the colonists who have remained in the country would say that their health has not been amply and adequately taken care of.

My mind goes back to the early days of Alaska, when sometimes sick or injured people would be obliged to travel hundreds of miles to reach a physician, provided they were able to travel at all; and in some of the outlying parts of the country, at the present time, where as many people live as reside in the Matanuska Valley, there is no physician within 100 miles, and no hospital and no nurse. The colonists who have settled in the Matanuska Valley are much better cared for with respect to health and medical service and hospital facilities than many other of the permanent old-time residents of Alaska. Mr. Brown's inference to the contrary is simply 100 percent untrue.

In this article, mention is made of the establishment of the colony and the "able direction" of Don L. Irwin, first director of the colony. But, acording to Mr. Brown, this "able direction" should be understood with reverse English, because a little further along he talks about the advent in the colony of Colonel Hunt, who "soon established order out of chaos." If the direction of Mr. Irwin was able—as it unquestionably was—how did the chaos arise? In fact, the "chaos" is simply a figment of the imagination of the author.

It is true, of course, that in the establishment of the colony mistakes were made and everything did not move as smoothly at first as a perfectly coordinated engine. The transportation of 200 families with their supplies and equipment to one place within a short time resulted in some confusion, but it was not long until good order was evolved. Upon their arrival the colonists were accommodated in comfortable tents. I have lived in tents for years, and I know there is no hardship in so living. The permanent houses were constructed and the colonists were in them before winter came. They have really suffered no substantial hardship when one considers the care and protection and thought given to the establishment of the colony and the resultant comfort and convenience, and then considers the condition which confronted the early settlers at Plymouth, and at Jamestown, or in Kentucky, or Colorado, or anywhere else during pioneer days. It almost makes one smile to hear it said, as Mr. Brown says in words or by inference, that the Matanuska colonists were exposed to hardship and suffering and sickness and danger and death.

Colonization schemes have always been laughed at until they have succeeded. The bold adventurers who left Europe to settle in the wilderness of America in the seventeenth century were ridiculed by those who stayed at home, and I have no doubt that among the settlers themselves after they arrived in America there was considerable grumbling and discontent, and that if telegraph communication had been available, some of them would have wired back home and told their friends and the members of Parliament how tough things were in the New World, and how badly they had been misled, and how much they wished they were back. But the great majority of the settlers would have stayed in America, anyhow, and they would have made the country what they have made it and what we see today.

Then in conclusion, in order to give his article a romantic scund, Mr. Brown talks about the wilderness of the Territory "as it was in the days of '98." He says:

> Trappers, loggers, prospectors, and miners still blow into the coastal towns with thousands of dollars in their poke and cash in across the bars and call on drinks for the house.

The poor man does not know how to write simple English language, and apparently the proofreader was no better informed.

Again the truth is the exact reverse of what Mr. Brown tells us. The truth is that Alaska is a sedate, peaceful, and quiet country. When the average miner brings his gold into town he promptly takes it to the bank and has the proceeds deposited to his credit. After all, most miners and prospectors have some sense and judgment, just like the remainder of the people of the country. This conclusion shows how totally unfamiliar everything in Alaska is to W. Pledge Brown, or else that his mind is of such a type that he blends fact and fiction indiscriminately and does not know or care which is which.

While it would not be becoming or in accordance with the rules and dignity of this House to use any harsh term about the veracity, or lack of it, of W. Pledge Brown, or to speak what has been called the "short and ugly word", perhaps I may be justified in adopting with respect to Mr. Brown a statement once used in a lawsuit concerning a patently untruthful witness by one of the ablest lawyers of Alaska, Mr. Joseph H. Murray. And so I suggest of W. Pledge Brown, that if you should happen to see him walking down the street with Ananias on one side and Sapphira on the other, you might be certain that he was in the bosom of his family.

The need of telling the truth about the Matanuska settlement has just been brought powerfully to my attention by an article appearing in the issue of the Literary Digest of May 9, 1936. It appears to be based very largely, if not entirely, upon the numerous statements made by W. Pledge Brown and printed in newspapers over the country. While the Literary Digest does not name Mr. Brown as the source of its information, it has adopted so much of Mr. Brown's language and solemnly repeats so much of his misinformation that the internal evidence of the Literary Digest article shows, I think, beyond dispute that it is largely based upon the articles of W. Pledge Brown. The Literary Digest echoes Mr. Brown in the incorrect statement that the bounty on eagles in Alaska is $5 and the bounty on wolves $15, and no one but Mr. Brown, writing of Matanuska, could be so ignorant as to make those statements. No one but this "expert" on Alaska could have written the fantastic paragraph, followed almost verbatim by the Literary Digest, to the effect that the farmer must dig to get at the soil; that the Alaska ground is covered with moss and tundra under which is gravel, and under the gravel the needed loam. The Literary Digest simply must have swallowed this whole upon the authority of W. Pledge Brown.

Mr. Brown also tells us gravely that the Alaska strawberries are tasteless and stringy. The Literary Digest's editor varied the language by saying that they are "stringy and tasteless." Before the advent of Mr. Brown no one in Alaska ever heard of the Alaska strawberries as "stringy", because they are the very reverse of that. I greatly fear that the editors of the Washington Star and the Literary Digest yielded to the charm of alliteration in connecting the word "stringy" with the word "strawberries." It is a wonder that they did not go further and say "stringy, slinking strawberries." Mr. Brown was remiss in not suggesting that. If a charge of plagiarism were made by Mr. Brown or the Washington Star on account of the article appearing in the Literary Digest, the "deadly parallel" might be invoked to sustain the charge.

The Literary Digest has gone W. Pledge Brown one better in expanding the packs of wolves which are said to roam Alaska. Mr. Brown was content to place the number of the largest pack in his article which appears in the Star at 50, but the Literary Digest evidently consulted Mr. Brown again, or else took a deep breath before speaking, because the wolf packs, according to the Literary Digest, number from 50 to 200. Really, Baron Munchausen was never able to do much better than that. The Literary Digest follows Mr. Brown in reversing the laws of nature by having halibut swim up the rivers, where their spawn is eaten by trout. This statement exhibits the Brown touch—no one else could have done that job. The Digest goes on to say that the salmon and halibut fishing is worth $2,000,000 a year to Alaska. Possibly the editor of the Digest, or Mr. Brown, or both, were here engaged in an adventure in using the emphasis of understatement, for the records show the yearly value of salmon and halibut fisheries to Alaska to be many, many times that sum.

The Digest also refers to "Alaskan agricultural engineers." Judging by the extent to which the article appearing in the Digest is apparently based upon the statements made by W. Pledge Brown, one naturally arrives at the conclusion that Mr. Brown has been promoted by the Digest and that he is now, in the estimation of the editors of the Digest, an Alaskan agricultural engineer. Mr. Brown's creditors in Ketchikan, Alaska, and the law-enforcement officials at that place will doubtless take interest in his change of status.

There is another unhappy circumstance concerning the article which so appeared in the Literary Digest, and that is the melancholy conclusion which one must draw therefrom—the conclusion that the editors of such a great publication did not make a sufficient, if any, investigation to determine the accuracy or lack of accuracy of the matter which appeared in that particular article. After all, the Literary Digest, unlike many newspapers, claims to be nonpartisan, and that it attempts to present the facts fairly. While I do not challenge or deny the truth of that claim, it is particularly painful to have the magazine give the persuasive force of its columns, reaching, as they do, into every part of the United States, as to matters upon which it is apparent no fair investigation was ever made and which are evidently based upon the statements of a man who is not only entirely ignorant of the subject but whose character is such as to render him unworthy of belief. The least that the Literary Digest could have done before printing this alleged "news" was to have made some sort of an effort to determine the facts; but apparently such a course of action never occurred to the person responsible for the printing of the article. After reading that story, Alaskans, at least, will wonder how much reliance can be placed on other matter appearing in the Digest.

It is difficult for truth to overtake or correct error once the error is spoken. Many newspapers in the United States, including the Washington Star and now the Literary Digest, have printed a series of statements which give a totally false picture of the Matanuska Valley settlement and of Alaska generally, and which are, as a matter of fact, almost entirely untrue based upon the authority of W. Pledge Brown. It is likely that millions of people have read or will read these statements, and it is further likely that not a hundred people will read the truth of the matter, either embodied in what I have to say here today or otherwise, and that every newspaper and magazine which without investigation published Mr. Brown's statements will take no notice of the correction here or elsewhere made or of the facts here or elsewhere presented.

Now, it seems too bad that time must be used up in denying such groundless statements, but it seems to be my duty to deny them, because if not denied many people, including Members of Congress, may believe them to be true. Moreover, the statements of Mr. Brown have had such wide publicity as to possibly give a large number of our citizens an entirely erroneous idea about the Matanuska Valley farm settlement and about Alaska generally. In fact, one Member of Congress recently asked me if I had read Mr. Brown's article, which appeared in the Star. I replied that I had, and that there was little of truth in it. But this Member looked at me in astonishment, and from further remarks which he made he very evidently had been impressed by the article.

Perhaps this inclination to misunderstand conditions in Alaska goes back to the ancient fiction that Alaska is a land of ice and snow and polar bears and glaciers and very little else. It is indeed difficult to make the people of the United States know what Alaska really is. Even to this day, occasionally the shipment of merchandise to Alaska is refused in winter upon the alleged ground that the Territory is frozen in and that nothing can be transported by sea to any part of Alaska in the wintertime. It is particularly difficult to make people understand and know the truth about the farm lands and grazing lands of Alaska. Occasionally people who have

visited the southeastern part of the coast of Alaska have erroneous impressions about farming in the Territory. I once talked with a Member of Congress who had sailed along the coast of Alaska and seen the rugged mountain chain which fronts the coast for hundreds of miles, with here and there a glacier breaking through. He has decided upon that inspection alone that there is no agricultural land in Alaska and no possibility of successful farming in the Territory.

Somehow, I cannot understand this attitude. If I should desire to know anything about Texas, or Colorado, or Florida, or Maine, or any other State, I think I should inquire of the Members of Congress from the State about which I desired information, and I know that I could justly rely upon the accuracy of what they told me. And yet, when I tell people about Alaska, particularly about farming in Alaska, it seems to me that many of them are under the impression that what I am telling is just some kind of pleasant fiction. Yet even brief reflection and a knowledge of geography and climate should convince the people of the United States that Alaska is valuable for something besides its extensive stores of gold and coal, and copper, and oil, and its even greater resources in fish, and that there is in Alaska possibility for development of very large farming areas capable of supporting several millions of people.

So let us put out of our minds everything about W. Pledge Brown and rise into a purer and cleaner atmosphere. Let us see what Alaska really is. As I have told this House before, Alaska is in many respects the greatest resource which the United States possesses. In order to understand the value of the Territory, we only have to make a few comparisons.

Alaska lies, roughly speaking, between the fifty-third and the seventy-first parallels of latitude, stretching through the vast distance of 18°. The main body of it lies between 130° and 168° west longitude, though the Aleutian chain and some other islands extend out into the Pacific almost 8° further, reaching nearly to 172° east longitude. In Europe the nations which lie within the same latitude as Alaska embrace Norway, Sweden, Finland, Denmark, Latvia, Esthonia, and, of course, all northern Russia and Siberia.

We shall confine our comparisons to Norway, Sweden, and Finland alone. We find by such comparison that Alaska exceeds in area the combined areas of Norway, Sweden, and Finland, which now support in comfort more than 12,000,000 people. Once each year we have occasion to remember Finland, because that valiant country is the only one of our national debtors which pays its debts when due and which is not in default. Yet an examination of the geography shows that the total area of Finland is only 144,250 square miles, as compared with approximately 589,000 square miles in Alaska. We find that Finland has no natural gold reserves of any kind; has very little copper; that its iron reserves are much less than those of Alaska; that its total water power is less than that of Alaska; that its fisheries are only a fraction of the value of the Alaska fisheries; that its agricultural and grazing lands are approximately one-sixth of the area of the farming and grazing lands of Alaska; that it has no coal reserves, no petroleum reserves; in reindeer pasture Finland has 8,000 square miles, Alaska 240,000 square miles. And yet this country not only sustains a cultured as well as a rugged population of 3,500,000 people but it alone of all the European nations meets its national indebtedness promptly on the dot.

A comparison of Alaska with Sweden, which has a population of 6,000,000, is equally favorable to the Territory. Sweden has an area of 173,550 square miles; its farming and grazing lands do not in area exceed one-half of that of Alaska, and yet its agricultural population comprises approximately 2,700,000 people. Sweden has in reindeer pasture about 40,000 square miles, as against 240,000 square miles in Alaska; it has in woodlands 2,000 square miles as against 181,000 square miles in Alaska. Sweden, like Finland, has nothing in the way of natural gold reserves, and its copper reserves are very small indeed as compared with the very large copper reserves of Alaska. It may be that in iron reserves Sweden surpasses Alaska, because we find its iron resources listed at 442,000,000 tons, while no survey has ever been made, so far as I am aware, of the iron reserves of Alaska. We know Alaska contains considerable iron, but it would be rash for anyone to try to compare it with Sweden in that respect. Alaska has large deposits of marble, Sweden little. Alaska, so far as known, contains 40 times as much coal as Sweden. Alaska apparently has large reserves of petroleum, and Sweden is entirely without this resource. Sweden surpasses Alaska, but not very much, in total water power, the figures being Sweden, 3,500,000 horsepower, and Alaska, 2,800,000 horsepower. The fisheries of Sweden, although extensive, do not amount in value to half of those of Alaska. Now, in this connection let me point out once more that Sweden and Finland lie in the same latitude as Alaska. Finland touches the Arctic Ocean on the north and the Gulf of Finland on the south, and it is cut off from Sweden by the Gulf of Bothnia. Both of these countries are far enough removed from the Atlantic Ocean to be measureably deprived of the warming and moderating influence of the gulf stream. The climate of these two countries is, taken by and large, approximately the same as that of Alaska. So when I conclude, as I do, that the Territory of Alaska is capable of supporting in comfort a population of several millions, I am not drawing at all upon my imagination but basing it upon what has been done in the old world and upon an impartial consideration of geographic and scientific facts.

The late great Dr. Alfred H. Brooks, former Director of the Alaska Division of the United States Geological Survey, once made the following observation:

> Had the Pilgrim fathers settled at Sitka, Alaska, instead of at Plymouth, they would have found milder climate, better soil and timber, and more game, furs, and fish. Indeed, pioneer life in southeastern Alaska was so much easier than that on the New England coast, the question might seriously be raised whether the hardy enterprise of the Puritan stock would have developed under these more favorable conditions.

May I digress here for a moment in order to pay deserved tribute to this really eminent scientist and distinguished man? It is from his compilation that I have secured readily the data-making comparisons between the resources of Alaska and those of Sweden and Finland.

One who really desires to find out the farming possibilities of the Matanuska Valley has only to consult the records of the Department of Agriculture, which for many years maintained an experiment farm in the Matanuska Valley. From a reference to those records we find that the yield of oats on the valley farms is from 51 to 87.5 bushels to the acre; that peas yield heavily; that root crops yield abundantly and that they are of good quality and keep well; that cereal crops, such as spring wheat, oats, barley, grow well; that potatoes yield more than 200 bushels per acre in good soil; that winter rye can be grown successfully and that it is sown the latter part of July in one year and matures in August of the following year.

The question is, Which are we going to believe, the reports of responsible agents and scientists of the Department of Agriculture or the statements made by W. Pledge Brown and by others who are little, if any, better informed?

Of course, we all know that the Matanuska Valley is not a northern paradise where ravens bring food to the needy and manna simply falls down from heaven. The Matanuska colony is not a get-rich-quick scheme nor a lazy man's heaven. Resources are plentiful and opportunities abound, but work, hard work, is required to succeed there as elsewhere. No lucky strike of gold or diamonds or pearls is going to make everyone there rich. Most of the settlers who now remain in the valley are, I believe, of the type who are willing to work and who do not demand that opportunity knock a dozen times or more at their doors before they will open. There have been difficulties and discomforts in the Matanuska Valley, the same as there have been elsewhere in any new country, with any new settlement, but those difficulties and discomforts are, I am confident, less in the valley than in almost any other pioneer country of which any of us ever heard. There is difficulty in clearing the land, which is covered with timber; that is not a job for a man who does not care to work. The trees must be cut down and dragged off and the stumps pulled and the land placed under cultivation; all this means long days of really hard

work, but it is the type of work that has been done by the pioneers since the earliest days of this country, the pioneers who moved into the Atlantic seaboard, into the Mississippi Valley, and into the forests of the Northwest.

Considerable criticism has been voiced of the Matanuska Valley farm project. It is my considered judgment that the project is not only fundamentally sound but has been well administered. I do not mean by this that the administration has been perfect or that no mistakes have been made. As was said the other day by the distinguished gentleman from Virginia [Mr. WOODRUM], it is not claimed that the administrative officers are infallible, for we realize that they are human and, being human, they are liable to err. But it is only an unfair critic who would unduly exalt and magnify the relatively few errors made in the establishment and carrying on of the Matanuska colony. It must be remembered that it was necessary to take these settlers from the relief rolls. They were so taken from the relief rolls of the States of Michigan, Wisconsin, and Minnesota because, in going to Alaska, settlers from those States would experience little change of climate. Now the Government has the alternative in treating relief of either keeping on providing people with food and clothing indefinitely or of helping them to get into circumstances where they will be able to help themselves. With respect to the Matanuska Valley settlers, the latter alternative was chosen, and, while I realize it cannot be extended universally to all who are on relief, surely this venture was worth while when we consider its importance in the development of a great country.

Claim has been made that the settlers will never sustain themselves and that, having been on relief, they are incapable of any prolonged or self-supporting effort. Information reaching me indicates that that criticism is entirely unfounded, and that by far the greater portion of the colonists chosen for this settlement are sturdy, upright, industrious people, many of them, before the depression, in good circumstances. They went on relief not through any fault or omission of their own, but because of adverse economic conditions, and that with few, if any, exceptions the families embraced in the original colony now remaining in Matanuska Valley will measure up in mental, moral, and physical stamina to the standards of other citizens of the United States on or off the relief rolls, in any part of the country.

Let me give you briefly the testimony of a man who has lived in the Matanuska Valley since a date prior to the arrival of the colonists in the spring of 1935, that of the Reverend B. J. Bingle, who is a Presbyterian minister and pastor of the Community Church at Palmer, Alaska. Mr. Bingle recently visited Washington en route to attend a general assembly of his church at Syracuse, N. Y. He has had the widest opportunity to observe conditions in the Matanuska Valley, and has been with the settlement from the beginning. He says, in part:

I went into that valley before any of the colonists or construction workers arrived. I had lived in the Territory already 7 years prior to that move. I knew what the country could do across that range of mountains to the north and east, but I had an open mind as to what this valley could do and what success could be made of it. I am now 100 percent with all my might back of that project. Here are some of the things I have seen that bring me to my conclusions:

Oats growing on ground that has not been fertilized for 10 years, standing as high as my head, heavy oats, well filled out kernel, and when cut for hay or threshed, make the best kind of feed for cattle, horses, or sheep.

Wheat grows very well. The superintendent of schools owns a farm on which was raised, last year, wheat that ran 43 bushels per acre.

Other grains are now being tried, except corn, which cannot grow that far north, and they have given evidence of good success.

I have seen those much-discussed and cussed Alaskan potatoes. They are supposed to be wet and soggy, not fit for man or beast. I have eaten those spuds for 1 year. I have personally boiled them, fried them, baked them. I have eaten them French fried or made into potato chips, and they are not only good, but very good. There is a different taste to them, but there is no greater difference between them and the potatoes grown in the Western States than there is between the potatoes grown in the Middle West and those grown on the Pacific coast. One notices a difference in taste between western-grown and eastern-grown apples, too. As to their lasting qualities, I had western potatoes and Alaska potatoes side by side—not in a cellar, but in a warm upstairs room all last winter—right in Matanuska Valley. My Alaska potatoes were more solid when I left 4 weeks ago than my western ones. They looked better every way and were better.

I have seen and eaten all winter other Alaskan vegetables such as carrots, peas, and rutabagas. They were equal to outside grown ones in every way, in taste, and keeping qualities. My experience with Alaskan-grown vegetables is that they keep better than those shipped in. Cabbages and lettuce are excellent.

I have helped my wife pick, can, make jelly and preserves from the various wild berries—and they are there in large amounts—and I find I eat them no less readily than the outside tame berry. The tame berry transplanted to Alaska is better than that berry produced in the States and bigger.

As for feed for cattle, I have stood many times on the beaches looking out toward the Knik Arm on the Pacific Ocean and seen stretches of wild hay on those beaches that are many miles long and from 2 to 3 miles deep in spots. The hay in most places was about 5 feet tall. The Elicksons of Knik have lived at their same location for 25 years at least. They have sheep, goats, Guernsey cattle, and a horse. They have cut that hay year after year and fed it to their stock. Their stock is rolling in fat, and the milk and butter the cows produce compare favorably with that from the western half of the States.

I could go on indefinitely and tell what that land can do. I will conclude. We have:

(1) Soil. It is first class, from 2 feet to 8 feet in depth, underlain with gravel.

(2) Climate. It was warmer there than in New York last winter.

(3) Market. It only awaits food to be produced and shipped to it.

(4) People. With few exceptions they are a high-class people—capable, intelligent, thrifty, and energetic. You could not ask for better than those that are remaining.

Mr. Bingle also definitely commends the government of the colony and those who are now in charge of it.

This is convincing evidence, coming as it does from a man who not only is of high character and possesses marked intelligence, but who has closely observed the matters of which he speaks and who is devoid of bias, prejudice, or partisanship.

In conclusion, let me point out that the Matanuska Valley is not the only farming region of Alaska. Indeed, it is only a very small part of the farming and grazing lands of Alaska, and in the grazing lands I do not include the reindeer range. I have in mind one small island embracing about 100,000 acres off the coast of Alaska, which, in the judgment of an experienced stockman, will support 10,000 head of cattle on the natural range and without supplying any winter feed whatever other than that which can be obtained on the range. We have the great Tanana Valley, a large part of which is suitable for agriculture. We have the lower Kenai Peninsula region, in some respects the best of Alaska farm lands, which needs only roads to insure its rapid settlement and cultivation; and, according to the reports of the Department of Agriculture, approximately 750,000 acres of the best agricultural land in Alaska is absolutely inaccessible to farmers. I refer to the region lying north of the Tanana River, between the Tanana and the Forty Mile, and more particularly along the south fork of the Forty Mile River.

People who know the facts about Alaska realize that the Territory is capable of supporting in comfort a population approaching that of Norway, Sweden, and Finland. Italy has just waged a desperate and costly war to gain dominion of a country not half as valuable. And Japan is sending armies to Asia to conquer lands not as well suited to colonization.

We have eaten fiction long enough; let us change to a diet of facts. [Applause.]

The SPEAKER. Under the special order the Chair recognizes the gentleman from New York [Mr. REED] for 20 minutes.

Mr. REED of New York. Mr. Speaker, the interest people are manifesting in the Federal Constitution is one of the encouraging signs of the times. The confusion and chaos which have prevailed in Washington during the past 3 years have bewildered the people and obscured from them the extent to which arbitrary government has encroached upon their individual liberties.

One assault after another has been launched by the New Deal forces against the Constitution. These attacks against

the supreme law of the land, which after all are blows directed at the expressed will of a sovereign people, have at last aroused the public to the gravity of the situation. Every thoughtful person now knows that the United States is in a critical phase of its existence, the most dangerous in all its history in time of peace.

The solemn covenants entered into by the New Deal administration with the people have been disregarded, broken, and dishonored by those who have taken a sacred obligation to preserve and protect the constitutional rights of every American citizen.

While it has been known by some of the people, it has not been generally known that working within the Government, employed by the Government, are officials who scorn the doctrine of individual liberty as proclaimed in the Declaration of Independence, and as reaffirmed in the Federal Constitution. Not until one barrier after another had been thrown across the path of the advancing and destructive forces of communism and socialism by the Supreme Court of the United States were the people made fully aware of the purpose that the leaders of the New Deal had in mind.

This great tribunal of justice, the people's Court, did not falter in the performance of its sworn duty. It erected not only a barrier to prevent the spoliation of the supreme law of the land but it struck back at the despoilers and it struck hard.

What has been the program of the New Deal officials who from the first have attempted to destroy individual liberty? The method of destruction adopted by the New Dealers is not new but old. A century ago William Tudor wrote:

> Whenever any set of men shall entertain designs against the Constitution, either to overwhelm it in the anarchy of simple democracy or to found on its ruins a usurpation of monarchial power, they will commence their operations by open or insidious attacks to weaken and overthrow the judiciary.

Such has been the procedure of this administration during the past 3 years. The first step taken was to formulate legislation in which benefits were promised to certain minority groups, which the authors of the legislation knew to be beyond constitutional scope and power of Congress to legally bestow. It was known, of course, by the authors of the legistion that the Supreme Court, when the issue was presented, could not do otherwise under its sworn duty but declare the legislation unconstitutional. The proponents also knew that an adverse decision of the Court would naturally arouse resentment on the part of the minority groups to whom illegal benefits were promised. To be more specific in regard to the attempt to destroy public confidence in the Constitution and judiciary, let us reduce the plan now being pursued to plain everyday language.

Various pieces of legislation have been formulated by this administration and presented to Congress in which money payments have been promised to various groups. As I have stated, these legislative proposals and the promises of benefits which each contained were known when formulated and presented to be unconstitutional, beyond the powers of Congress to legally enact; but it was also known by the authors of this legislation that the Supreme Court, under its sworn duty, would be compelled to hold these acts illegal, void, and of no effect.

What, then, was the purpose and motive in presenting such legislation for the pretended benefits to farmers, miners, wage earners, and others?

It was to arouse the hopes and expectations of these groups, once the legislation was enacted, that they would receive money from the United States Government. It was known to those who prepared the legislation and by the Congress at the time it enacted it that when the Court did render adverse decisions, as it was bound to do, then the Court, and not the administration, would be blamed; that prejudice and resentment would be visited upon the Court by the mouthpieces of the administration; that by official jabs and slurs, prejudice would be aroused to the point where, in the white heat of passion, the disappointed groups would be willing to support any plan to take from the Court the right of judicial review.

These are the political aspects of the case. Such has been the motive of those who have framed these illegal legislative measures. Aside from the reprehensible character of such a program, the cost to the taxpayers has already been stupendous. We need only consider the hundreds of millions of dollars raised by the processing taxes. Now, since the Court has performed its sworn duty and has done precisely what President Roosevelt and his officials knew it would have to do, he recently presented to the Congress a message asking for more funds to replace the money which the New Deal administration has illegally collected and spent and which President Roosevelt now says is "made necessary by the decision of the Supreme Court." He goes out of his way to blame the Supreme Court.

The real blame, as he knows, and as all thoughtful people must know, rests with President Roosevelt and the "hot dog" lawyers who have deliberately set about to destroy the confidence of the people in the judiciary—and all for political purposes.

The next move, once the disappointed groups are sufficiently aroused and mobilized, will be to appeal to them to support a program to take from the Supreme Court the power of judicial review of legislation passed by the Congress. This plan, if carried out, will take from the Supreme Court the power to uphold the Constitution and, by decision, prevent its violation. Furthermore, it will change not only the Constitution of the United States but the constitutions of each of the 48 States comprising our National Union.

Under this plan, if adopted, anarchy will be substituted for order, passion for moderation, all without any restraining judicial action. The proposal, whether called "the more abundant life" or "the new order", when reduced to everyday language, means that an Executive with a lust for power, assisted by a rubber-stamp Congress, once given the power requested, could thrust individual liberty into the background and supplant it with tyranny, bigotry, and intolerance every bit as intolerable and insufferable as that to be found under any dictatorial regime in existence, and with the same tragic consequences to mankind here as now exists abroad.

It is time for self-respecting, freedom-loving men and women to realize that under the new order proposed President Roosevelt and the New Deal Congress, without any legal restraint whatsoever, would be permitted to destroy every right now guaranteed to an American citizen by the Federal Constitution. But while an effort is being made by this administration to destroy confidence in the judiciary, the proponents of unlimited national legislative power seek to persuade the people to place full faith and confidence in the wisdom and self-restraint of the Congress. This is not the philosophy taught by the great apostle of democracy, Thomas Jefferson. His answer to the sophistry that the people should have confidence in the Congress to protect their individual rights was this:

> It would be a dangerous delusion if our confidence in the men of our choice should silence our fears for the safety of our rights. Confidence is everywhere the parent of despotism. Free government is founded on jealousy, not in confidence. It is jealousy and not confidence which prescribes limited constitutions to bind down those whom we are obliged to trust with power. Our Constitution has accordingly fixed the limits to which, and no further, our confidence will go. In questions of power, then, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution.

The Federal Constitution is the expressed will of a sovereign people. The representatives in Congress are not general agents of the people but special agents whose powers are set forth, defined, and limited by the Constitution. They are enjoined not to transgress the limits of the special authority granted to them by the people whom they represent. Out of an abundance of caution, and as an added safeguard against encroachment, each Member of Congress is required to take an oath of office to support and defend the Constitution and to bear true faith and allegiance to the same.

The President of the United States is required by the Constitution itself, in prescribed language, to take a similar oath as a covenant with the people that he will not usurp powers

forbidden by the supreme law of the land. Our Government has been conducted for almost a century and a half upon the theory that the Chief Executive and each Member of Congress would observe his oath of office. This rule, until recently, has been faithfully observed, except when there has been an honest mistake of judgment as to the constitutionality of proposed legislation.

President Lincoln, when urged to exercise powers not granted, replied:

> It was in the oath that I took that I would, to the best of my ability, preserve, protect, and defend the Constitution of the United States. I could not take office without taking the oath, nor was it my view that I might take the oath in order to get power and then break the oath in using the power.

One of the chief functions—the most vital function—of the Supreme Court is to keep the executive branch and the legislative branch of the Government from usurping powers not granted to them, respectively, by the Constitution. The Supreme Court is the tribunal that guards from encroachment or destruction the liberties guaranteed to the people by the Constitution.

What do these rights mean to the individual? I want to impress upon every Member of the House that if and when court review of legislation is abolished, the Congress in any one session can take away any one or all of these rights or liberties enumerated and guaranteed to every American citizen in the Bill of Rights. What are these cherished and time-honored individual rights?

Religious liberty, freedom of speech, freedom of the press, the right of peaceful assembly, the right of petition for redress of grievances.

The right of State militia to bear arms.

No soldier shall be quartered in time of peace in a house without consent of the owner.

Unreasonable search and seizure.

No arrest, except upon probable cause supported by oath or affirmation, describing the place and the persons or things to be seized.

Capital offenses must be found by a grand-jury indictment.

No person shall for the same offense be twice put in jeopardy, compelled to testify against himself, nor be deprived of life or property without due process of law; no private property taken for public use without just compensation.

In criminal prosecutions the accused shall enjoy a speedy and public trial by an impartial jury in the district wherein the crime is committed, to be informed of the nature of the accusation; to be confronted by witnesses; to have compulsory service for obtaining witnesses and the assistance of counsel for his defense; the right of trial by jury where the sum exceeds $20.

Excessive bail shall not be required nor excessive fines imposed nor cruel and unusual punishment inflicted.

These individual rights are now guaranteed to every American citizen by the Federal Constitution, and each of these individual rights is guarded by the Supreme Court of the United States. The average man and woman finds in these provisions their sole protection against executive and legislative abuse and tyranny. Remove the right of judicial review and all of these rights, the heritage of an heroic past, can be swept away, leaving the individual a helpless victim of either Executive tyranny or the mob rule of an irresponsible Congress. The Supreme Court is the last line of defense for the individual citizen in the maintenance of his liberties.

There is still on the way to the Supreme Court a long parade of must legislation enacted by the Congress under the pressure of the Executive.

The Guffey coal bill has just been declared unconstitutional. When this measure was before a subcommittee of the Ways and Means Committee the members of the committee hesitated to report it to the full committee because of doubts entertained as to its constitutionality. It was at this juncture that the people were startled and stunned to have their Chief Executive, in a letter to Hon. SAMUEL B. HILL, the chairman of the subcommittee, urge that the bill be favorably reported, notwithstanding doubts as to its constitutionality. The intent of President Roosevelt is clear and unequivocal:

"I hope", said President Roosevelt, "your committee will not permit doubt as to the constitutionality, however reasonable, to block the suggested legislation."

Under the lash of the President this legislation was driven through both branches of the Congress and promptly signed by him.

Attempts to create resentment toward the Supreme Court with the sole and determined purpose of creating a political issue is reprehensible, and unless this attempt to do so is met with firm resistance by patriotic citizens, mob rule will replace orderly government. I may say, in this connection, that an eminent authority on constitutional law makes the comment:

> Those legislators * * * who vote for a measure without being honestly convinced of its constitutionality and excuse themselves upon the ground that if their action is not valid the courts have the opportunity to so declare, are recreant in their duty. * * * No popular government can successfully endure in which the decisions of its courts do not receive the general approval of the citizen body. But if legislatures recklessly pass measures ostensibly for the benefit of the masses but invalid when tested by the fundamental law, the odium of defeating these measures is thrown upon the courts, and a popular objection to and distrust of these courts created.

I may say in passing that out of the 24,000 Federal laws passed by the Congress since our Government was organized, the Supreme Court has held only 69 of them unconstitutional. Ten of these cases have been so held under the New Deal, and other cases arising out of the New Deal are now on the way to the Supreme Court. Three cases have been withdrawn by the Government to avoid adverse decisions.

Just how far arbitrary Government dare go, unless restrained, needs no better exemplification than the A. A. A., especially the Potato Control Act. Once the right of court review is destroyed, there will be established a centralized government that will make every citizen subject to bureaucratic control. If this happens, the people will find that the clock of progress has been turned backward, not forward. First, there will be communism, then the dictator. Such has been the history of every government, ancient and modern, whenever and wherever the people have bartered away or surrendered their liberties. [Applause.]

A BILL THAT SHOULD PASS

Mr. LUDLOW. Mr. Speaker, I ask unanimous consent to extend my own remarks briefly in the RECORD.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. LUDLOW. Mr. Speaker, the American War Mothers are intensely interested in a bill that has passed the Senate and which I fervently hope will pass this House of Representatives and become a law before the present session of Congress adjourns sine die.

I refer to the bill introduced by Senator SHERMAN MINTON, of Indiana, a distinguished veteran of the World War, which provides that unexpended balances of the "Stars and Stripes" fund, and other special funds, in the custody of the Treasury shall be invested in interest-bearing Government securities and that the sum of $20,000 shall be allotted every year from this source to the American War Mothers to carry on their humanitarian activities.

These special funds, aggregating $294,852.97, now lie idle in the Treasury. Not a dollar of this money was appropriated, so that it is not and never has been a charge on the taxpayers. It represents in the main the contributions of American soldiers in France to carry on the Stars and Stripes, the doughboys' official publication. The cessation of the war left an accumulated balance on hand and it was covered into the Treasury where it has remained inactive in a special account ever since.

This fund ought to be doing some good for humanity's sake. I cannot imagine any better or more appropriate use for it than the purpose provided for in this bill. Surely no group in this country is more entitled to the benefits of this fund than the mothers who endured the heartaches of the

World War, when their sons fought on foreign soil, some to return with shattered minds and broken bodies, and others never to return at all.

We should show our love for the American War Mothers by passing this bill unanimously, just as soon as it can be reported out of the Judiciary Committee and brought to a vote. Certainly we owe them that tribute. We repeatedly exhaust the beauties of language in rendering lip service to the War Mothers; every Decoration Day and oftener we lay our linguistic garlands at their feet. Here is an opportunity to do something really worth while for them—something they will appreciate.

If we make it possible for them to receive $20,000 a year to carry on their humanitarian work, it will be like sending their ship home to them—a ship laden with rich blessings. No one not a member of their organization can visualize all the good they will be able, with careful management, to do on $20,000 a year. The organization of War Mothers provides medical and hospital care for needy War Mothers, maintains homes for those without a home or means of support, carries on child-welfare work, and renders assistance to the poor and needy in many ways. Every dollar that is made available to the American War Mothers will go forward among the poor and needy and sorely afflicted to render a blessed, humanitarian service.

As a Hoosier, I feel especially interested in this bill because it was an Indiana war mother, Mrs. William E. Ochiltree, of Connersville, Ind., who first proposed this use of the idle funds in the Treasury and who has labored incessantly, in season and out of season, to make her dream a reality. Mrs. Ochiltree was national president of the American War Mothers from September 1933 until September 1935. No organization of women in America ever has had a more forthright, able executive than Mrs. Ochiltree proved to be. Her unflagging devotion, accurate judgment, and magnificent energy soon won for her a place of the highest distinction among the American War Mothers and the loving esteem of every soldier who fought for his country in the dark days of 1917 and 1918. Her administration as president will be remembered as one of the brightest eras in the history of the organization.

Mrs. Ochiltree, 76 years young, now in retirement at her hospitable home in Indiana, is confidently expecting this House to pass the Minton bill before the gavels adjourn this Congress, and thousands of war mothers all over the country are watching and waiting. As the session rushes toward its close, let us not permit this measure, so dear to the hearts of the war mothers, to become lost in the shadows of more important matters. Let us think of the war mothers and all they suffered and endured, and, remembering them, let us fan the spark of sentiment to a brighter glow by passing this worthy measure in their behalf.

WHITMAN NATIONAL MONUMENT

Mr. DEROUEN. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 7736) to provide for the establishment of the Whitman National Monument, with Senate amendments, disagree to the Senate amendments, and ask for a conference.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana? [After a pause.] The Chair hears none, and appoints the following conferees: Mr. DEROUEN, Mr. KNUTE HILL, and Mr. ENGLEBRIGHT.

TRADING IN UNLISTED SECURITIES UPON NATIONAL SECURITIES EXCHANGES

Mr. RAYBURN. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (S. 4023) to provide for the continuation of trading in unlisted securities upon national securities exchanges, for the registration of over-the-counter brokers and dealers, for the filing of current information and periodic reports by issuers, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. SNELL. Reserving the right to object, Mr. Speaker, I have consulted with the minority members of this committee and I have been informed that there was no one who appeared in opposition to this bill. As a matter of fact, personally I feel it is a very important bill to pass by unanimous consent. At least I think the chairman of the committee should make a statement to the House and tell us exactly what we are doing in this proposed legislation.

Mr. RAYBURN. I will be glad to do that as nearly as I can.

At the time we passed the Stock Exchange Act in 1934 there were traded in on the exchanges of the country, if the exchanges would allow it, unlisted securities. We did not go into that in the act at that time for the reason that we felt we had hardly sufficient information with reference to it. We therefore asked the Commission to make a study of this matter and submit a report to Congress. The Commission made that study, and on the 3d of January their report was submitted to Congress. In that report they recommended that the trading privilege in unlisted securities on stock exchanges be continued. That is what this bill does.

I may say to the gentleman that this is more or less an emergency piece of legislation, and that is the reason I have asked unanimous consent to consider it at this time. There are today traded in on the exchanges of this country securities on an unlisted basis amounting to 1,875,000,000 shares of stock. Those shares of stock comprise 1,370 separate issues. There are today traded in, in unlisted securities, on the exchanges $6,800,000,000 worth of bonds, comprising 564 separate issues. If this bill is not passed before the 31st day of May, the trading in those securities on the exchanges will be illegal.

Mr. SNELL. Will the gentleman explain why it would be any different than before the original security law was passed? That is, before that time they traded over the counter, so to speak, in unlisted securities. As I understand the gentleman's explanation, this allows them to continue doing that exactly the same as they did before the original act was passed. Is that true?

Mr. RAYBURN. That is correct, under certain supervision of those things, as there is supervision of the exchanges in the trading in listed securities.

Mr. SNELL. I have hastily glanced through these hearings, and I notice that the president of the American Bankers Association appeared and said he had no objection to it.

Mr. RAYBURN. Let me say to the gentleman there was a provision in the Senate bill which we have stricken out. The American Bankers' Association said they thought that would bring them under the Securities and Exchange Commission. Their attorneys had said that it would. We told them frankly that we did not want to do it because they were already regulated by enough agencies. We, therefore, struck out the provision to which they objected and inserted a new provision at the top of page 12, known as section C, that entirely satisfied them that their transactions would not come under this bill.

Under section C of the Senate bill, also, municipalities raised a question, especially some municipalities in the State of New York. As this section is now worded, they say it is entirely fair to them and allows them to go on and do their trading just as they have in the past.

Mr. SNELL. Then there is no objection, so far as the gentleman knows, from any of these various classes affected by the bill?

Mr. RAYBURN. Not that I know of. I may say to the gentleman from New York that when Mr. Landis closed his statement with reference to the bill I asked whether representatives were there from any of the exchanges who wanted to be heard. Mr. Lockwood, of the Curb, was there. He said, speaking for the Curb, that this amendment suited him; that the situation was serious but that this met it in a constructive way. Then I called Mr. Fleming, president of the American Bankers' Association, and some representatives of municipalities. They all say they are satisfied.

Mr. SNELL. I would expect this would pertain more to securities sold on the Curb Market, to over-the-counter securities.

Mr. RAYBURN. That is probably true. Mr. Lockwood said that so far as the Curb was concerned he thought it met the situation in a very constructive manner.

Mr. SNELL. I have not changed my view that this is very important legislation to go through by unanimous consent, but if no member of the committee is opposed to the bill, and if those most affected by the bill are agreeable to it, then I ought not to object, and I have no objection to it.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. WHITE. Mr. Speaker, I object.

STEAMBOAT INSPECTION SERVICE

Mr. BLAND. Mr. Speaker, I call up the conference report on the bill (H. R. 8599) to provide for a change in the designation of the Bureau of Navigation and Steamboat Inspection, to create a Marine Casualty Investigation Board and increase efficiency in administration of the steamboat-inspection laws, and for other purposes, and ask that the statement may be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The Clerk read the statement of the managers on the part of the House.

The conference report and statement are as follows:

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8599) to provide for a change in the designation of the Bureau of Navigation and Steamboat Inspection, to create a marine casualty investigation board and increase efficiency in administration of the steamboat inspection laws, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendment numbered 7.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 3, 5, 6, 8, and 9, and agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

"SEC. 4450. (a) The Secretary of Commerce shall prescribe rules and regulations for the investigation of marine casualties involving loss of life in order to determine whether any incompetence, misconduct, unskillfulness or willful violation of law on the part of any licensed officer, pilot, seaman, employee, owner or agent of such owner of any vessel involved in such casualty, or any inspector, officer of the Coast Guard, or other officer or employee of the United States, or any other person, caused, or contributed to the cause of such casualty. For the purpose of investigating such a marine casualty, the Secretary of Commerce shall appoint a marine casualty investigation board or boards consisting of a chairman and two other members; the chairman shall be an officer or employee of the Department of Justice (learned in maritime laws) designated by the Attorney General; one member shall be a representative of the Bureau of Marine Inspection and Navigation designated by the Secretary of Commerce; and the other member shall be an officer of the United States Coast Guard designated by the Secretary of the Treasury. All reports shall be made to the Secretary of Commerce and such reports shall be public records and be open to inspection at reasonable times by any persons. Copies of such reports shall be sent to the Attorney General and to the Secretary of the Treasury."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment as follows:

On page 5 of the Senate engrossed amendments, line 3, after the comma insert "any owner, licensed officer, or any holder of a certificate of service, or any other person whose conduct is under investigation, or any other party in interest, shall be allowed to be represented by counsel, to cross-examine witnesses, and to call witnesses in his own behalf, and".

And the Senate agree to the same.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8599) to provide for a change in the designation of the Bureau of Navigation and Steamboat Inspection, to create a marine casualty investigation board and increase efficiency in administration of the steamboat-inspection laws, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

On amendment no. 1: This amendment eliminates the House provision authorizing the appointment of supervising inspectors by the Secretary of Commerce to be made without regard to civil-service rules and regulations. The House recedes.

On amendment no. 2: This amendment substituted for the House provision relating to the investigation of marine casualties involving loss of life, provisions for the creation of a marine casualty investigation board consisting of Government officers or employees. The House provision provided for the appointment of an investigation board for each casualty. The House recedes from its disagreement to the Senate amendment and agrees to the same with an amendment which authorizes the Secretary of Commerce to prescribe rules and regulations for the investigation of marine casualties involving loss of life, and authorizes the Secretary of Commerce to appoint a board or boards consisting of Government officials to investigate any such casualty or casualties.

On amendment no. 3: This amendment substituted for the House provision relating to the investigation of marine casualties not involving loss of life provisions authorizing the Secretary of Commerce to establish rules and regulations for the investigation of such casualties, for the classification of such casualties, and for investigation by a marine board consisting of inspectors of the Bureau of Marine Inspection and Navigation designated by the Secretary of Commerce. The House provision authorized the appointment of marine boards for such investigations. The House recedes from its disagreement to the amendment.

On amendment no. 4: This amendment substituted for the House provisions relating to the conduct of investigations into acts of incompetency or misconduct or in violations of law or regulations by officers and seamen and by Government employees charged with duties in the premises somewhat broader provisions directing investigation of all such acts and of all marine casualties and accidents by the appropriate boards created by the act, and also provided for the submission of complete records to the Director of the Bureau of Marine Inspection and Navigation. The House recedes from its disagreement to the amendment with an amendment inserting in the Senate amendment a provision authorizing the owner, officer, any holder of a certificate of service, or other person whose conduct is being investigated, or any other person in interest to be represented by counsel at the investigation, to cross-examine witnesses and to call witnesses in his own behalf.

On amendment no. 5: This amendment limits, in connection with the issuance of certificates of inspection of passenger vessels, the acceptance of plans and certificates of the American Bureau of Shipping as evidence of structural efficiency, etc., to provide that such acceptance shall not be applicable where existing law places definite responsibility on the Bureau of Marine Inspection and Navigation. The House recedes.

On amendment no. 6: This amendment, in connection with the matter referred to in amendment no. 5 above, strikes out provisions in the House bill authorizing the acceptance of certificates of the American Bureau of Shipping certifying as to the adequacy of subdivision arrangements. The House recedes.

On amendment no. 7: This amendment provided for a flat fee for overtime work of an inspector, in lieu of the House provision for additional pay based on the daily pay. The Senate recedes.

On amendment no. 8: This amendment added a new section to the bill authorizing the appropriation of sums necessary to carry out the provisions of the act. The House recedes.

On amendment no. 9: This is a clerical amendment making the necessary change in section numbers to complement the addition of a new section made by amendment no. 8.

S. O. BLAND,
WILLIAM I. SIROVICH,
ROBERT RAMSPECK,
RICHARD J. WELCH,
Managers on the part of the House.

Mr. SNELL. Mr. Speaker, I would like to ask a few questions about this report. I think the gentleman from Virginia should explain it. I notice the Senate added nine amendments and that the House receded on all except one, which was to put the inspectors on flat pay instead of extra daily pay, very unimportant. It seems to me if the House had any bill at all, the conferees should have stood up for it a little. I would like to have the gentleman from Virginia explain why the House conferees receded on amendment no. 1.

Mr. BLAND. Mr. Speaker, amendment no. 1 was a provision that the seven supervising inspectors should be appointed by the Secretary of Commerce without regard to civil service. At that time it was considered by the House that in order to get men of the technical experience necessary we would have to go outside the civil service. The Senate

thought they should be under civil service and we concluded that efficient men could be gotten through the operation of the civil service.

Mr. SNELL. Will the gentleman from Virginia tell the House one possible argument anybody could put up to support the contention that steamboat inspectors could not best be selected by the civil service?

Mr. BLAND. We came to the conclusion that that would be the best way, so we receded.

Mr. SNELL. What reason supported the original House provision, just a purely political reason, or some other reason?

Mr. BLAND. The reason for the House provision was that we felt the men should have particular skill and qualification.

Mr. SNELL. They should have that, should they not?

Mr. BLAND. Yes.

Mr. SNELL. So we are in agreement on that.

Mr. BLAND. And we thought possibly they could be selected better without regard to civil service. That was the argument originally presented to the committee.

Mr. SNELL. Will the gentleman tell the House what argument was presented to the committee originally why you could possibly do it better by making a purely political appointment than by a selection based on experience and education along this line?

Mr. BLAND. The argument at that time made was not a political argument. The argument was that in the particular case of Captain Fried, who is one of the inspectors, that he could not be gotten through the civil service.

Mr. SNELL. There is one exception, and in the case of Captain Fried I presume the gentleman is right, although I do not know Captain Fried; but, as a matter of fact, there are thousands of these steamboat inspectors. I know men who have taken the examination, men who were experienced engineers and were qualified to do this kind of work.

Mr. BLAND. This amendment puts these supervisory inspectors under the civil service.

Mr. SNELL. If there is one service in the United States that should be under the civil service it is steamboat inspection. I do not believe anybody, anywhere, can give a good and sufficient reason for not taking them from the classified service.

Mr. BLAND. This amendment does not take them out of civil service. If the gentleman will read the section as it was originally reported he will see that it referred only to the seven supervisory inspectors, the men who were to be at the head of and in charge of these districts.

Mr. SNELL. The head men, the men in charge, should be more carefully selected than any other member of the whole service.

Mr. BLAND. I am delighted that the gentleman agrees with the managers on the part of the House in their recession.

Mr. SNELL. I agree with that position, but I do not agree with the way the gentleman is getting at the matter. He has not given any excuse to the House or any real reason why it should be done that way, and considering that the President has made the statement on several special occasions that the only way to get real efficient Government service is through the civil service, I do not see why you on that side of the aisle should continually come in here and make exceptions to the civil-service requirements.

Mr. BLAND. I am not aware that the gentleman who has charge of this bill did that.

Mr. SNELL. Does not Mr. Roper agree with your President with regard to that matter?

Mr. BLAND. Yes.

Mr. SNELL. Why not carry out what your President says to the people of this country is the only way to get efficient service?

Mr. BLAND. We are carrying it out on the representation of the civil service that they get sufficiently qualified men.

Mr. SNELL. No; because they are to be excepted from the requirements of the civil service.

Mr. BLAND. The recession on the part of the managers for the House puts them under the civil service.

Mr. SNELL. Oh, no.

Mr. BLAND. But it does. That was the very question in issue. When the bill was originally passed by the House it had language "without regard to the civil-service rules and regulations", and the section which would have excepted them from the civil-service rules and regulations was stricken out in the Senate; consequently they do come under the civil service.

Mr. SNELL. The gentleman stated he receded from his own position.

Mr. BLAND. We receded.

Mr. SNELL. Then the civil-service requirements will be strictly applicable to every one of these appointees?

Mr. BLAND. This only relates to the seven supervisory inspectors and the civil service applies to them.

Mr. SNELL. It applies to all of these employees clear down through the list then?

Mr. BLAND. It does not apply to the traveling inspectors.

Mr. SNELL. That is exactly what I say. It does not apply to the entire list, and according to the gentleman's own statement, he says it should be applied to all of them.

Mr. BLAND. Where exceptions have not been made.

Mr. SNELL. Those exceptions seven times out of eight are political exceptions. If there is one service in the United States where we should give careful, strict attention to the appointees, it is in the Steamboat Inspection Service.

Mr. BLAND. Mr. Speaker, I move the previous question on the adoption of the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

CHARLESTON ARMY BASE TERMINAL, CHARLESTON, S. C.

Mr. BLAND. Mr. Speaker, I call up the conference report on the bill (S. 3789) authorizing the Secretary of Commerce to convey the Charleston Army Base Terminal to the city of Charleston, S. C.

The Clerk read the conference report.

The conference report and statement are as follows:

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 3789) authorizing the Secretary of Commerce to convey the Charleston Army Base Terminal to the city of Charleston, South Carolina, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows: That the House recede from its amendment numbered 2.

That the Senate recede from its disagreement to the amendment of the House numbered 1, and agree to the same.

S. O. BLAND,
WILLIAM I. SIROVICH,
RICHARD J. WELCH,
Managers on the part of the House.

ROYAL S. COPELAND,
HIRAM W. JOHNSON,
MORRIS SHEPPARD,
Managers on the part of the Senate.

STATEMENT

On amendment no. 1: This amendment, inserted by the House, provides that the deed authorized by the bill to be executed by the Secretary of Commerce shall include a provision prohibiting the city of Charleston from transferring the title to the property conveyed in said deed to any person, firm, or corporation. The Senate disagreed to this amendment. The House insisted upon its amendment, and the Senate recedes.

On amendment no. 2: This amendment, inserted by the House, provide that if the property authorized to be conveyed by said bill should be taken over by the United States, with all improvements placed thereon, for the period of the national emergency, the taking over should be "without cost to the United States." The Senate disagreed to this House amendment, and the House recedes.

S. O. BLAND,
WILLIAM I. SIROVICH,
RICHARD J. WELCH,
Managers on the part of the House.

Mr. BLAND. Mr. Speaker, I move the previous question on the adoption of the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

PERMISSION TO ADDRESS THE HOUSE

Mr. WOOD. Mr. Speaker, I ask unanimous consent to address the House for 15 minutes.

The SPEAKER. Is there objection to the request of the gentleman from Missouri [Mr. WOOD]?

Mr. SHORT. Mr. Speaker, reserving the right to object, I would like to have 5 minutes following the address of my colleague, the gentleman from Missouri [Mr. WOOD].

The SPEAKER. Is there objection to the request of the gentleman from Missouri [Mr. WOOD]?

There was no objection.

Mr. SHORT. Mr. Speaker, I ask unanimous consent to proceed for 5 minutes at the conclusion of the remarks of the gentleman from Missouri [Mr. WOOD].

The SPEAKER. Is there objection to the request of the gentleman from Missouri [Mr. SHORT]?

There was no objection.

Mr. WOOD. Mr. Speaker, I desire to address myself this morning to the question of farm-tenant legislation. In the Seventy-third Congress I introduced a bill providing that the Government shall finance farm tenants in the acquisition of farms. I am told that was the first bill of this kind introduced in the Congress since the passage of the homestead law. The bill was introduced on June 4, 1934, and on February 12, 1935, I introduced a similar bill. On June 26, 1935, Senator BANKHEAD also introduced a farm-tenant bill, as did the gentleman from Texas [Mr. JONES], chairman of the House Agricultural Committee. The gentleman from Texas [Mr. JONES] introduced a companion bill to the Bankhead bill on March 26, 1935.

The Bankhead bill passed the Senate in the last session and has been pending in the Agricultural Committee of the House for just about a year.

Mr. Speaker, I care not who gets credit for the passage of this legislation. I think my bill is superior to the Bankhead bill, but in view of the fact that the Bankhead bill has passed the Senate and that the chairman of the Agricultural Committee of the House has introduced a similar bill, I am heartily in favor of the passage of the Bankhead bill. I think this type of legislation should be passed by the Congress before the adjournment of the present session.

Recently we had before the House the Frazier-Lemke bill, and the reason for objection to that bill by those who voted against it was that it provided for an expansion of the currency. Nothing like that is involved in the Bankhead bill or in my farm-tenant bill. This bill provides for expansion of the credit of our Government and, Mr. Speaker, when we consider that in the past 5 years there have been some seven or eight hundred thousand or 1,000,000 farmers who have lost their homes and farms under foreclosure we must realize that they have now joined the ranks of the farm tenants.

In 1935 some 54 percent of the farm acreage of the Nation was farmed by tenants. Needless to say, this percentage has greatly increased since 1928. In my own State some 39 percent of the farm acreage is farmed by tenants.

I am mighty proud of the fact that this administration, under the leadership of Franklin D. Roosevelt, has made a heroic effort for national recovery, but there is one element that has been entirely forgotten, and that is the farm tenant. Never has there been any legislation proposed since the enactment of the homestead law that directly affected the farm tenant or that gives him any chance to acquire a farm and a home of his own. Certainly, they have been the recipients generally of relief legislation, but there has never been passed any legislation that directly affects the farm tenant.

Mr. MOTT. Mr. Speaker, will the gentleman yield?

Mr. WOOD. I wish the gentleman would wait until I get through with my remarks.

Mr. MOTT. I will defer my question.

Mr. WOOD. All right; go ahead.

Mr. MOTT. Is it not true that the Frazier-Lemke farm-mortgage refinancing bill proposed to help the farm tenant who had lost his farm by foreclosure when he was an owner? He came directly under the bill.

Mr. WOOD. Yes.

Mr. MOTT. The gentleman's statement was that no legislation had been proposed with that purpose in view up to date.

Mr. WOOD. Of course, my bill was proposed at about the same time the Frazier-Lemke bill was introduced in the Seventy-third Congress, and it is very true that under the Frazier-Lemke bill the farmers who had lost their farms in the past 3 or 4 years could reclaim them through the provisions of that measure, but originally it was designed to help the farm owner who was in debt, and that is perfectly all right. I was heartily in favor of that bill and did everything I possibly could to help pass the measure, but now that bill has been defeated.

Mr. COLDEN. Mr. Speaker, will the gentleman yield for a question?

Mr. WOOD. Yes.

Mr. COLDEN. In order to rehabilitate our population, not only on the farms but in the cities, should not any bill of the character of the bill the gentleman has introduced provide that people who have been lured from the farm to the city be included in the provisions of such a measure?

Mr. WOOD. Certainly. Of course, the Frazier-Lemke bill, as well as the Bankhead farm-tenant bill and my own bill, provides for the acquisition of homes for farmers, and the very foundation of our Republic, as well as the safety of our American institutions, depends upon the principle that every man should have a place he can call home.

I hope the Committee on Agriculture will report out the Bankhead bill and give the House an opportunity to vote on that most important piece of legislation. Certainly, in the light of the decisions of the Supreme Court on the National Industrial Recovery Act and the Agricultural Adjustment Act and the Guffey coal-stabilization measure, it is pretty hard to tell what Congress has the authority or the power now to do in the way of enacting remedial social legislation, but there is one power we still hold and that is to expand our credit—borrow money and lend money through the R. F. C. and the other agencies of the Government. So there can be no question about the constitutionality of this farm-tenant legislation, and while it provides for an expansion of the credit of the Nation, it likewise provides that the amortization of this credit shall be borne by the farmer who receives the benefit. So while it is expansion of the credit, it in no wise increases our obligation to pay interest or principal upon expanded credit or upon bonded indebtedness.

So there is no reason why we should not give these millions of farm tenants an opportunity to own their homes and farms which they are tilling. This makes for better citizenship and makes for a more secure Republic.

No one can talk communism or any of these new theories of government to a man who owns his home and is making a comfortable living. This is not the element that the "reds" and the Communists feast upon. The unfortunates who are without means of livelihood and without homes and without some security in their homes represent the type they can influence with their various types of radicalism.

So I think the most important piece of legislation now pending before the Congress is the farm-tenant measure, and I do hope that the Committee on Agriculture that has been holding this bill for a year, will report the measure to the House and give the House an opportunity to decide, one way or the other, whether we should give to these tenant farmers, by a proper measure of financing, an opportunity to own their own homes.

We have refinanced business. Oh, they say, that if the Government furnishes $5,000 to refinance or purchase a farm that that is not good security. I say that a farm that a tenant purchases for $5,000 refinanced by the Government is a better security than nine-tenths of the millions of dollars

that have been loaned by the Reconstruction Finance Corporation to business.

They have loaned money to business institutions that had no value; their stocks and bonds are nil. They were bankrupt.

I do not criticize the refinancing of industry. That was the proper thing to do. But we ought to relieve the farmer, especially the unfortunate farm tenants who are performing the majority of the great portion of tilling the soil and producing the necessary commodities of life.

Mr. MORITZ. Will the gentleman yield?

Mr. WOOD. I yield.

Mr. MORITZ. Take the man who owns 20,000 acres of land and farms it out to the tenants. Are those tenants being protected under your bill?

Mr. WOOD. The Bankhead bill provides that the Government can loan the farm tenants the amount necessary to purchase a farm of the average size of farms in that State. What that may be in the gentleman's State would be, perhaps, a different size in my State. The farms in Missouri average about 125 acres.

Mr. MORITZ. Does it affect people who own too much land?

Mr. WOOD. My bill provides for a maximum of 80 acres. Under the Bankhead bill, in Missouri the tenant could acquire a farm of 125 acres. That is all right. Notwithstanding the provisions of the Bankhead bill, most Missouri tenants would acquire farms of not more than 80 acres.

Mr. MORITZ. Does your bill provide a strangle hold for those who own too much land?

Mr. WOOD. Neither my bill nor the Bankhead bill contain any provision whereby a man owning 10,000 acres could borrow any money. I think the Bankhead bill takes care of that matter in a very efficient way. I do not think it is possible for them to traffic under the Bankhead bill or my bill.

If there are any such loopholes in this legislation, we will have an opportunity to correct it in a few months when Congress meets again in January.

Certainly no initial legislation is ever perfect, but I do know that the Bankhead bill is a fine beginning, and I hope and trust that the very distinguished chairman of the Committee on Agriculture, the gentleman from Texas [Mr. JONES] will see to it that the Bankhead bill or his companion bill, or whatever they may work out as a substitute for the Bankhead bill, will be presented to this House so that we may get a vote on that legislation before the session closes. [Applause.]

The SPEAKER pro tempore (Mr. FLANNAGAN). The gentleman from Missouri [Mr. SHORT] is recognized for 5 minutes.

TRADING IN UNLISTED SECURITIES

Mr. RAYBURN. Mr. Speaker, will the gentleman from Missouri yield to me for a moment?

Mr. SHORT. Certainly.

Mr. RAYBURN. In order to make a short statement. The gentleman from Idaho [Mr. WHITE], who objected a moment ago to the consideration of the bill S. 4023, to provide for the continuation of trading in unlisted securities upon national securities exchanges, and so forth, has withdrawn his objection. Therefore, Mr. Speaker, I ask unanimous consent for the present consideration of the bill S. 4023, to provide for the continuation of trading in unlisted securities upon national securities exchanges, for the registration of over-the-counter brokers and dealers, for the filing of current information and periodic reports by issuers, and for other purposes.

The SPEAKER. The gentleman from Texas asks unanimous consent for the present consideration of the bill S. 4023, the gentleman from Idaho having withdrawn his objection. Is there objection to the present consideration of the bill?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That subsection (f) of section 12 of the Securities Exchange Act of 1934 is amended to read as follows:

"(f) Notwithstanding the foregoing provisions of this section, any national securities exchange, upon application to and approval of such application by the Commission and subject to the terms and conditions hereinafter set forth, (1) may continue unlisted trading privileges to which a security had been admitted on such exchange prior to March 1, 1934; or (2) may extend unlisted trading privileges to any security duly listed and registered on any other national securities exchange, but such unlisted trading privileges shall continue in effect only so long as such security shall remain listed and registered on any other national securities exchange; or (3) may extend unlisted trading privileges to any security in respect of which there is available from a registration statement and periodic reports or other data filed pursuant to rules or regulations prescribed by the Commission under this title or the Securities Act of 1933, as amended, information substantially equivalent to that available pursuant to rules or regulations of the Commission in respect of a security duly listed and registered on a national securities exchange, but such unlisted trading privileges shall continue in effect only so long as such a registration statement remains effective and such periodic reports or other data continue to be so filed.

"No application pursuant to this subsection shall be approved unless the Commission finds that the continuation or extension of unlisted trading privileges pursuant to such application is necessary or appropriate in the public interest or for the protection of investors. No application to extend unlisted trading privileges to any security pursuant to clause (2) or (3) of this subsection shall be approved except after appropriate notice and opportunity for hearing. No application to extend unlisted trading privileges to any security pursuant to clause (2) or (3) of this subsection shall be approved unless the applicant exchange shall establish to the satisfaction of the Commission that there exists in the vicinity of such exchange sufficiently widespread public distribution of such security and sufficient public trading activity therein to render the extension of unlisted trading privileges on such exchange thereto necessary or appropriate in the public interest or for the protection of investors. No application to extend unlisted trading privileges to any security pursuant to clause (3) of this subsection shall be approved except upon such terms and conditions as will subject the issuer thereof, the officers and directors of such issuer, and every beneficial owner of more than 10 percent of such security to duties substantially equivalent to the duties which would arise pursuant to this title if such security were duly listed and registered on a national securities exchange; except that such terms and conditions need not be imposed in any case or class of cases in which it shall appear to the Commission that the public interest and the protection of investors would nevertheless best be served by such extension of unlisted trading privileges. In the publication or making available for publication by any national securities exchange, or by any person directly or indirectly controlled by such exchange, of quotations or transactions in securities made or effected upon such exchange, such exchange or controlled person shall clearly differentiate between quotations or transactions in listed securities and quotations or transactions in securities for which unlisted trading privileges on such exchange have been continued or extended pursuant to this subsection. In the publication or making available for publication of such quotations or transactions otherwise than by ticker, such exchange or controlled person shall group under separate headings (A) quotations or transactions in listed securities, and (B) quotations or transactions in securities for which unlisted trading privileges on such exchange has been continued or extended pursuant to this subsection.

"The Commission shall by rules and regulations suspend unlisted trading privileges in whole or in part for any or all classes of securities for a period not exceeding 12 months, if it deems such suspension necessary or appropriate in the public interest or for the protection of investors or to prevent evasion of the purposes of this title.

"Unlisted trading privileges continued for any security pursuant to clause (1) of this subsection shall be terminated by order, after appropriate notice and opportunity for hearing, if it appears at any time that such security has heretofore been withdrawn or if such security is hereafter withdrawn from listing on any exchange by the issuer thereof, unless it shall be established to the satisfaction of the Commission that such delisting was not designed to evade the purposes of this title or unless it shall appear to the Commission that, notwithstanding any such purpose of evasion, the continuation of such unlisted trading privileges is nevertheless necessary or appropriate in the public interest or for the protection of investors. On the application of the issuer of any security for which unlisted trading privileges on any exchange have been continued or extended pursuant to this subsection, or of any broker or dealer who makes or creates a market for such security, or of any other person having a bona-fide interest in the question of termination or suspension of such unlisted trading privileges, or on its own motion, the Commission shall by order terminate or suspend for a period not exceeding 12 months such unlisted trading privileges for such security if the Commission finds, after appropriate notice and opportunity for hearing, that by reason of inadequate public distribution of such security in the vicinity of said exchange, or by reason of inadequate public trading activity or of the character of trading therein on said exchange, such termination or suspension is necessary or appropriate in the public interest or for the protection of investors.

"In any proceeding under this subsection in which appropriate notice and opportunity for hearing are required, notice of not less than 10 days to the applicant in such proceeding, to the issuer of the security involved, to the exchange which is seeking to continue or extend or has continued or extended unlisted trading privileges for such security, and to the exchange, if any, on which such security is listed and registered, shall be deemed adequate notice, and any broker or dealer who makes or creates a market for such security, and any other person having a bona-fide interest in such proceeding, shall upon application be entitled to be heard.

"Any security for which unlisted trading privileges are continued or extended pursuant to this subsection shall be deemed to be registered on a national securities exchange within the meaning of this title. The powers and duties of the Commission under subsection (b) of section 19 of this title shall be applicable to the rules of an exchange in respect of any such security. The Commission may, by such rules and regulations as it deems necessary or appropriate in the public interest or for the protection of investors, either unconditionally or upon specified terms and conditions, or for stated periods, exempt such securities from the operation of any provision of section 13, 14, or 16 of this title."

SEC. 2. Any application to continue unlisted trading privileges for any security heretofore filed by any exchange and approved by the Commission pursuant to clause (1) of subsection (f) of section 12 of the Securities Exchange Act of 1934 and rules and regulations thereunder shall be deemed to have been filed and approved pursuant to said subsection (f) as amended by section 1 of this act.

SEC. 3. Section 15 of the Securities Exchange Act of 1934 is amended to read as follows:

"SEC. 15. (a) No broker or dealer (other than one whose business is exclusively intrastate) shall make use of the mails or of any means or instrumentality of interstate commerce to effect any transaction in or to induce the purchase or sale of any security (other than an exempted security or commercial paper, bankers' acceptances, or commercial bills) otherwise than on a national securities exchange, unless such broker or dealer is registered in accordance with subsection (b) of this section.

"(b) A broker or dealer may be registered for the purposes of this section by filing with the Commission an application for registration, which shall contain such information in such detail as to such broker or dealer and any person directly or indirectly controlling or controlled by or under direct or indirect common control with such broker or dealer, as the Commission may by rules and regulations require as necessary or appropriate in the public interest or for the protection of investors. Except as hereinafter provided, such registration shall become effective 30 days after the receipt of such application by the Commission or within such shorter period of time as the Commission may determine.

"An application for registration of a broker or dealer to be formed or organized may be made by a broker or dealer to which the broker or dealer to be formed or organized is to be the successor. Such application shall contain such information in such detail as to the applicant and as to the successor and any person directly or indirectly controlling or controlled by or under direct or indirect common control with the applicant or the successor as the Commission may by rules and regulations require as necessary or appropriate in the public interest or for the protection of investors. Except as hereinafter provided, such registration shall become effective 30 days after the receipt of such application by the Commission or within such shorter period of time as the Commission may determine. Such registration shall terminate on the forty-fifth day after the effective date thereof unless prior thereto the successor shall, in accordance with such rules and regulations as the Commission may prescribe, adopt such application as its own.

"If any amendment to any application for registration pursuant to this subsection is filed prior to the effective date thereof, such amendment shall be deemed to have been filed simultaneously with and as part of such application; except that the Commission may, if it appears necessary or appropriate in the public interest or for the protection of investors, defer the effective date of any such registration as thus amended until the thirtieth day after the filing of such amendment.

"The Commission shall, after appropriate notice and opportunity for hearing, by order deny registration to or revoke the registration of any broker or dealer if it finds that such denial or revocation is in the public interest and that (1) such broker or dealer, or (2) any partner, officer, director, or branch manager of such broker or dealer (or any person occupying a similar status or performing similar functions), or any person directly or indirectly controlling or controlled by such broker or dealer, whether prior or subsequent to becoming such, (A) has willfully made or caused to be made in any application for registration pursuant to this subsection or in any document supplemental thereto or in any proceeding before the Commission with respect to registration pursuant to this subsection any statement which was at the time and in the light of the circumstances under which it was made false or misleading with respect to any material fact; or (B) has been convicted within 10 years preceding the filing of any such application or at any time thereafter of any felony or misdemeanor involving the purchase or sale of any security or arising out of the conduct of the business of a broker or dealer; or (C) is permanently or temporarily enjoined by order, judgment, or decree of any court of competent jurisdiction from engaging in or continuing any conduct or practice in connection with the purchase or sale of any security; or (D) has willfully violated any provision of the Securities Act of 1933, as amended, or of this title, or of any rule or regulation thereunder. Pending final determination whether any such registration shall be denied, the Commission may by order postpone the effective date of such registration for a period not to exceed 15 days, but if, after appropriate notice and opportunity for hearing, it shall appear to the Commission to be necessary or appropriate in the public interest or for the protection of investors to postpone the effective date of such registration until final determination, the Commission shall so order. Pending final determination whether any such registration shall be revoked, the Commission shall by order suspend such registration if, after appropriate notice and opportunity for hearing, such suspension shall appear to the Commission to be necessary or appropriate in the public interest or for the protection of investors. Any registered broker or dealer may, upon such terms and conditions as the Commission may deem necessary in the public interest or for the protection of investors, withdraw from registration by filing a written notice of withdrawal with the Commission. If the Commission finds that any registered broker or dealer, or any broker or dealer for whom an application for registration is pending, is no longer in existence or has ceased to do business as a broker or dealer, the Commission shall by order cancel the registration or application of such broker or dealer.

"(c) No registered broker or dealer, or any other person, shall make use of the mails or of any means or instrumentality of interstate commerce to effect any transaction in, or to induce the purchase or sale of, any security (other than commercial paper, bankers' acceptances, or commercial bills) otherwise than on a national securities exchange, in contravention of such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest to prevent fraud, concealment, unfair discrimination, or manipulative or deceptive practices or otherwise to insure to investors protection comparable to that provided by and under authority of this title in the case of national securities exchanges.

"(d) Each registration statement hereafter filed pursuant to the Securities Act of 1933, as amended, shall contain an undertaking by the issuer of the issue of securities to which the registration statement relates to file with the Commission, in accordance with such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors, such supplementary and periodic information, documents, and reports as may be required pursuant to section 13 of this title in respect of a security listed and registered on a national securities exchange; but such undertaking shall become operative only if the aggregate offering price of such issue of securities, plus the aggregate value of all other securities of such issuer of the same class (as hereinafter defined) outstanding, computed upon the basis of such offering price, amounts to $2,000,000 or more. The issuer shall file such supplementary and periodic information, documents, and reports pursuant to such undertaking, except that the duty to file shall be automatically suspended if and so long as (1) such issue of securities is listed and registered on a national securities exchange, or (2) by reason of the listing and registration of any other security of such issuer on a national securities exchange, such issuer is required to file pursuant to section 13 of this title information, documents, and reports substantially equivalent to such as would be required if such issue of securities were listed and registered on a national securities exchange, or (3) the aggregate value of all outstanding securities of the class to which such issue belongs is reduced to less than $1,000,000, computed upon the basis of the offering price of the last issue of securities of said class offered to the public. For the purposes of this subsection, the term 'class' shall be construed to include all securities of an issuer which are of substantially similar character and the holders of which enjoy substantially similar rights and privileges. Nothing in this subsection shall apply to securities issued by a foreign government or political subdivision thereof or to any other security which the Commission may by rules and regulations exempt as not comprehended within the purposes of this subsection."

SEC. 4. Subsection (a) of section 17 of such act is amended by striking out "every broker or dealer making or creating a market for both the purchase and sale of securities through the use of the mails or of any means or instrumentality of interstate commerce", and inserting in lieu thereof "every broker or dealer registered pursuant to section 15 of this title."

SEC. 5. Subsection (a) of section 18 of such act is amended by inserting immediately before the comma following "any rule or regulation thereunder" the following: "or any undertaking contained in a registration statement as provided in subsection (d) of section 15 of this title."

SEC. 6. Subsection (c) of section 20 of such act is amended by inserting immediately before the period the following: "or any undertaking contained in a registration statement as provided in subsection (d) of section 15 of this title."

SEC. 7. Subsection (f) of section 21 of such act is amended by inserting immediately before the period the following: "or with any undertaking contained in a registration statement as provided in subsection (d) of section 15 of this title."

SEC. 8. Subsection (a) of section 23 of such act is amended to read as follows:

"(a) The Commission and the Board of Governors of the Federal Reserve System shall each have power to make such rules and regulations as may be necessary for the execution of the functions vested in them by this title, and may for such purpose classify issuers, securities, exchanges, and other persons or matters within

their respective jurisdictions. No provision of this title imposing any liability shall apply to any act done or omitted in good faith in conformity with any rule or regulation of the Commission or the Board of Governors of the Federal Reserve System, notwithstanding that such rule or regulation may, after such act or omission, be amended or rescinded or be determined by judicial or other authority to be invalid for any reason."

SEC. 9. Section 32 of such act is amended by striking out "SEC. 32." and inserting in lieu thereof "SEC. 32. (a)"; by inserting immediately before the comma following the phrase "filed under this title or any rule or regulation thereunder" the following: "or any undertaking contained in a registration statement as provided in subsection (d) of section 15 of this title"; and by adding thereto a new subsection (b), to read as follows:

"(b) Any issuer which fails to file information, documents, or reports pursuant to an undertaking contained in a registration statement as provided in subsection (d) of section 15 of this title shall forfeit to the United States the sum of $100 for each and every day such failure to file shall continue. Such forfeiture, which shall be in lieu of any criminal penalty for such failure to file which might be deemed to arise under subsection (a) of this section, shall be payable into the Treasury of the United States and shall be recoverable in a civil suit in the name of the United States."

SEC. 10. All brokers and dealers for whom registration is in effect on the date of enactment of this act in accordance with rules and regulations of the Commission prescribed pursuant to section 15 of the Securities Exchange Act of 1934 shall be deemed to be registered pursuant to section 15 of such act, as amended by section 3 of this act.

SEC. 11. Nothing in this act shall be deemed to extinguish any liability which may have arisen prior to the effective date of this act by reason of any violation of section 15 of the Securities Exchange Act of 1934 or of any rule or regulation thereunder.

SEC. 12. This act shall become effective immediately upon the enactment thereof; except that clause (2) of subsection (f) of section 12 of the Securities Exchange Act of 1934, as amended by section 1 hereof, and subsections (a) and (d) of section 15 of such act, as amended by section 3 hereof, shall become effective 90 days after the enactment of this act, and that clause (3) of said subsection (f), as amended by section 1 hereof, shall become effective 6 months after the enactment of this act.

With the following committee amendments:

Page 4, line 25, strike out "heretofore been withdrawn or if such security is hereafter" and insert the word "been."

Page 7, line 6, after the words "pursuant to", insert "clause (1) of."

Page 9, line 14, after the words "or dealer", insert "whether prior or subsequent to becoming such."

Page 11, strike out lines 12 to 24, inclusive, and insert:

"(c) No broker or dealer shall make use of the mails or of any means or instrumentality of interstate commerce to effect any transaction in, or to induce the purchase or sale of, any security (other than commercial paper, banker's acceptances, or commercial bills) otherwise than on a national securities exchange, by means of any manipulative, deceptive, or other fraudulent device or contrivance. The Commission shall, for the purposes of this subsection, by rules and regulations define such devices or contrivances as are manipulative, deceptive, or otherwise fraudulent.

The SPEAKER. The question is on the committee amendments.

The committee amendments were agreed to; and the bill as amended was ordered to be read the third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The SPEAKER. The gentleman from Missouri [Mr. SHORT] is recognized for 5 minutes.

GOVERNOR LANDON, OF KANSAS

Mr. SHORT. Mr. Speaker, it is absolutely inexcusable and wholly indefensible that any member of the President's Cabinet should at the same time act in the capacity of chairman of a great national committee, regardless of the political party to which he belongs. I was amazed this morning to read in the Washington Post a special dispatch from Grand Rapids, Mich., stating that last night Postmaster General Farley, who is also chairman of the Democratic National Committee, acting as chief dispenser of patronage, who is now ignoring his official duties and making trips all over the country in his private car while receiving the salary of the Postmaster General to defray his campaign expenses in trying to resell the New Deal to the people, referred to Governor Landon as "the Governor of a typical prairie State", and further went on to say:

I am not, of course, in possession of exact knowledge of why the Republican Party chooses to put him on a pedestal, but if I were permitted to guess, I would be inclined to believe that it was because he was elected Governor of a typical prairie State * * *."

The clear and unmistakable insinuation of this, with his other statements, and the only inference or logical conclusion which can be deduced is that a citizen, or even a Governor, of "a typical prairie State" has such limited capacities and narrow vision as to disqualify him for the Presidency. Too bad for the people on the prairies!

Mr. Speaker, I want it thoroughly understood that as a Republican I am not advocating the candidacy of Governor Landon or any other individual as our nominee for the Presidency of the United States, because I am well aware of the fact that we have at least 100 men in the Republican Party eminently qualified for that high office.

Mr. WHITE rose.

Mr. SHORT. I refuse to yield in my limited time. If the gentleman from Idaho could answer questions as well as he can ask them, he would be a marvel. I do, as a citizen of a great prairie State, resent the slur and the slam which the Postmaster General has cast upon the citizens not only of the great prairie State of Kansas, but of the States of Oklahoma, Iowa, Minnesota, Missouri, Illinois, Indiana, and every other great prairie State of the Middle West. [Applause.] He asks who in the world was Alf Landon, and who knew anything about him 2 years ago. I retort, who in the name of God ever heard of Jim Farley 2 years ago? Of course, we knew he was a prize-fight promoter in New York, which fits him admirably to be Postmaster General, and we know now that he is deliberately employing brutal prize-fight tactics in attempting to Tammanyize this country. I admit that Alf Landon was born in a modest home of humble but of honest parentage. He was not born in a mansion of an illustrious family whose name was widely known. He was not born with a silver spoon in his mouth and educated by private tutors; from childhood he had duties to perform, responsibilities to shoulder, and was educated as other children in our public schools. When he goes fishing, being so plain and simple, he gets a cane pole and a can of worms instead of taking a trip on a million-dollar yacht of some social high light.

Mr. EKWALL. And he gets some fish, too.

Mr. SHORT. And he generally brings home the bacon. I know Alf Landon. I like and admire him. He lives only 60 miles west of my district. He is a man of unimpeachable integrity, of unquestioned honor, conscientious and faithful in the discharge of his duties, tireless and efficient in his work for the public good. In public and private life his character is above reproach. The only thing wrong with Alf, according to ruthless Boss Farley, is that he is "the Governor of a typical prairie State." If only he came from Hyde Park or New York City!

Maybe Big Jim is correct when he charges that Governor Landon is "a man destitute of experience", but the taxpayers of Kansas will remember that he, as twice Governor of the Sunflower Commonwealth, during the trying years of this depression, has cut the cost of State government, reduced taxes at the same time, and balanced the budget annually. And the taxpayers of New York will never forget that Franklin Delano Roosevelt, during the years of greatest prosperity, was inaugurated Governor of the Empire State with more than $80,000,000 surplus in the State treasury, but left it with more than $95,000,000 deficit. What Mr. Roosevelt has done since he became our first and last king the American people can never forget.

Strange, is it not, that the New Dealers already see the handwriting on the wall and begin attacking a prospective Republican candidate, even before he is nominated? Jim Farley fears not only Alf Landon's record of outstanding ability and rugged honesty but also his practical political sagacity and his popularity with the masses to which he belongs. The common people know that Landon has common sense and does what he promises to do.

Mr. Speaker, in 1932 I made about 20 or more speeches in Kansas for Alf Landon when he was first elected Governor, and the remarkable thing is he was elected in spite of my speeches, and in 1934 was reelected, when practically the entire Nation went overwhelmingly Democratic. Could Mr. Farley be afraid of the Governor's vote-getting ability?

However, I am not here to eulogize Governor Landon or to extol his virtues and accomplishments. He needs no assistance of mine, and I am not advocating his candidacy. Nevertheless, I shall defend him or any other prospective candidate on my ticket from scurrilous and unwarranted attacks. This outburst of Farley plainly shows that the New Dealers are panicky, for they realize this early in the game that whomever the Republicans nominate will sweep the country this November, as Democrats join Republicans in saving the Constitution and preserving America.

One thing I can assure the present ex-officio Postmaster General and chairman of the Democratic National Committee is that Alf Landon has honestly made a success of his own business, and as Governor for two terms of the great State of Kansas he has made a most enviable and remarkable record [applause] by keeping the promises he made and the platform upon which he was elected. [Applause.] He is not exactly like some men I know who care no more for their word than a tomcat cares for a marriage license in a back alley on the blackest night. [Applause.] Perhaps Mr. Farley thinks that because the people out in the Midwest live in the prairie States, as did Lincoln, who was never heard of very much before his elevation to the Presidency, they are all dumbbells, freaks, rubes, and hicks. I will admit that they go astray occasionally. We are prone to human weakness, and every 20 years we go crazy and cockeyed with the rest of the country. Kansas did that in 1916 when her people voted the Democratic ticket, because that party "kept us out of war." Kansas did it four years ago because her citizens were lured astray by New Deal promises. But you can fool us only once in 20 years. That may be our fault; but to fool us again—ah, my friends, you cannot fool us all the time, even though we live in prairie States. We are going to have another change this November. [Applause.]

The SPEAKER. The time of the gentleman from Missouri has expired.

Mr. LUCAS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. LUCAS. I should like to know whether the gentleman from Missouri [Mr. SHORT] was making Landon's nominating speech? [Laughter.]

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Horne, its enrolling clerk, announced that the Senate agrees to the amendments of the House to bills of the Senate of the following titles:

S. 537. An act for the relief of C. O. Meyer;

S. 925. An act to carry into effect the findings of the Court of Claims in the case of William W. Danenhower; and

S. 1360. An act for the relief of Teresa de Prevost.

The message also announced that the Senate had adopted the following concurrent resolution, in which the concurrence of the House is requested:

Senate Concurrent Resolution 38

Resolved by the Senate (the House of Representatives concurring), That a joint committee consisting of three Senators and three Representatives, to be appointed by the President of the Senate and the Speaker of the House of Representatives, respectively, is authorized to make the necessary arrangements for the inauguration of the President-elect of the United States on the 20th day of January next.

The message also announced that the Vice President had appointed Mr. BARKLEY and Mr. NORBECK members of the Joint Select Committee on the part of the Senate, as provided for in the act of February 16, 1889, as amended by the act of March 2, 1895, entitled "An act to authorize and provide for the disposition of useless papers in the executive departments", for the disposition of executive papers in the following departments, viz: Department of State, Department of the Treasury, Department of War, Post Office Department, Department of Agriculture, Department of Commerce, Veterans' Administration, Federal Trade Commission, Federal Reserve Board, United States Employees' Compensation Commission, Civil Service Commission.

The message also announced that the Senate agrees to the amendments of the House to the amendments of the Senate nos. 46 and 87, further insists on its amendments nos. 24, 53, and 54 disagreed to by the House to the bill (H. R. 10630) entitled "An act making appropriations for the Department of the Interior for the fiscal year ending June 30, 1937, and for other purposes", asks a further conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. HAYDEN, Mr. MCKELLAR, Mr. THOMAS of Oklahoma, Mr. NYE, and Mr. STEIWER to be the conferees on the part of the Senate.

FLOOD CONTROL ON THE MISSISSIPPI RIVER

Mr. DRIVER. Mr. Speaker, I call up House Resolution 516.

The Clerk read as follows:

House Resolution 516

Resolved, That immediately upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of S. 3531, an act to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928. And all points of order against said bill are hereby waived. That after general debate, which shall be confined to the bill and continue not to exceed 2 hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Flood Control, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the reading of the bill for amendment, the Committee shall rise and report the same to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit, with or without instructions.

Mr. DRIVER. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. RANSLEY] one-half of the time—30 minutes.

Mr. Speaker, I yield myself 10 minutes.

The adoption of the rule just read by the Clerk will make in order the consideration of the bill (S. 3531), which is prepared for the purpose of extending and completing the adopted project on the Mississippi River under the law of May 15, 1928. To those Members who were in the House at the time the bill was passed, the explanation I expect to make here will give very little information, but there is a large membership not here and possibly does not understand the Mississippi River project.

This map before you reflects only that portion of the Mississippi River in the alluvial valley extending from Cape Girardeau in Missouri to the Gulf of Mexico. That area comprises 20,000 square miles plus. The adopted project was designed to protect fully and adequately 12,000,000 acres of that land. The other portion of the area is comprised within the border line of Louisiana which cannot be protected. The backwater areas as marked in a heavier shade of green on this map which are at the intersection of the Mississippi River tributaries within the alluvial valley, together with the lands in the floodway, provided in the engineering plan which was adopted under that act, and an unprotected area in the State of Tennessee and a small area in the State of Mississippi which, because of the character of development entering into the value of the land there, may not be economically justified to levee.

From Cape Girardeau to the Gulf of Mexico it is 1,100 miles. From the date of construction of the first levee designed to protect the then founding city of New Orleans, in Louisiana, in 1717, the people of the valley have struggled to protect themselves against what was practically a major overflow every 5 years, and more frequently a minor overflow of that river. Those overflows come from waters between the Allegheny and the Rocky Mountains, and comprise 41 percent of this Nation's area, embracing all of parts of 31 States and part of two Canadian Provinces. That enormous watershed with its run-off made the situation in the valley very critical from the very beginning of development.

The levee construction beginning at that early period was an individual enterprise on the part of the local landowners. This continued until about 1880, when this area was organized into local taxing units under their State laws and levied assessments upon all of the property within the alluvial area;

issued bonds based upon the revenues inuring to those taxing units from the betterments assessed on the land, and started in an organized way to construct their levees. But as rapidly as the people in the valley were able to expend their money on these levees the development in this enormous watershed, comprising the Missouri River and its tributaries, the upper Mississippi and its tributaries, the Illinois and Ohio Rivers, gradually increased the run-off from that watershed, until we found ourselves loaded with the burden of the bonded debt, yet unable to fend against the ever-increasing flood heights, due to that accelerated run-off. So in 1917, under an act of Congress, the Government contributed in an effort to build these levees to a certain grade and section which at that time was thought to be sufficient to fend against any flood that was possible in that stream. That same contributing system continued under the amended act of 1923, and the levee construction continued, and in fact was the only means that we then relied upon to afford protection to that valley against this enormous volume of water which was imposed upon the channels of the lower Mississippi River.

In 1927, however, we suffered an unusually heavy flood in the Mississippi Valley. It broke through our defenses practically all the way from Cairo to the Gulf of Mexico. It destroyed many of the levees we had built during the course of all these years. It wrought an enormous destruction of property and of human life, and rendered 700,000 people homeless. It forced us to bring these people out of the valley onto high ground and care for them until the flood had passed. It awakened the country. As a result, the Flood Control Act of 1928 was passed by the Congress. That act was in conformity with the recommendations of the then Chief of Engineers, Gen. Edwin Jadwin, who recommended the construction of levees to a larger grade and section all the way through the valley; and in addition he recommended the auxiliary treatment of diversion for the protection of the city of Cairo in Illinois and its 30,000 inhabitants, just south of Cairo in the State of Missouri, 40 miles in length and 5 miles wide which would reduce the flood crest of the combined Mississippi, Missouri, and Ohio River waters so that that city could safely maintain a levee system for its protection. From there south to and including the vicinity of Arkansas and the White River tributaries, levees alone were designed to afford protection. South of the confluent point of the Arkansas and the White Rivers a diversion was recommended through which 1,000,000 cubic feet of water would be taken from the main channel and carried down to a point in the vicinity of the head of the Atchafalaya River in Louisiana.

[Here the gavel fell.]

Mr. DRIVER. Mr. Speaker, I yield myself 5 additional minutes.

Mr. Speaker, the diversion at that point would carry through and follow the course indicated by the marker. This diversion would cover slightly more than 1,000,000 acres of land, the larger portion of which is highly developed, in the possession of enterprising people and farmed every year.

In order to effect the crevassing of the levees and bring the water out of the main channel into the floodway, a system of fuse-plug levees was recommended by General Jadwin and was responsible for delay in the execution of this project. The fuse-plug levee means a low section of levee which was designed to crevasse and carry the water out by natural means instead of by controlled and regulated structures; and then when thrown into this valley it would absolutely destroy everything beyond it.

They started on the execution of the project and with the exception of the large floodways the work has progressed to a point where practically the levee systems have been completed but nothing done on the floodways. Because of the dangers inherent in that plan, in 1931 the Flood Control Committee reported to this House a resolution requesting a review and a more thorough investigation into the adopted project and its engineering features. As a result there was gathered together one of the most expert bodies of men that ever served this Nation. They spent 3 years making a thorough investigation into every feature of the adopted engineering project, and a year ago they brought this Congress their recommendation, and this recommendation is the foundation on which the pending bill was constructed. There are some differences. They changed the diversion from a point near the Arkansas and White Rivers and brought it south of that. Instead of there being 65 miles of fuse-plug levees they leave only 35 miles and afford protection of the affected lands by levees.

In this changed diversion, using but about 60 percent of the amount of land required by the originally proposed floodways, they propose to take through the diversion basin 1,000,000 extra cubic feet of water. That means 1,500,000 cubic feet of water will be taken out at a place called Morganza and head of the Atchafalaya River and carried through the Atchafalaya Basin, which is 150 miles nearer the Gulf than to follow the course around by New Orleans. In this bill is contained that recommendation with one exception. Section 5 of the bill carries with it the construction of a riverside reservoir at a point in the White River backwater area and the inclusion of the St. Francis and the Yazoo systems, the only two rivers that flow entirely within the alluvial valley.

The basis for the Government's assumption of the obligation of providing these structures to protect the valley from the floods was that the local residents had expended $292,000,000 on the existing structures that enter into this plan, and they felt that that was a sufficient contribution to justify the Government obligation. At that time no consideration was given to these interior streams, although the people within the St. Francis and the Yazoo Valleys had paid equally, also those living in the particular White River project. Every acre of land in those areas had paid equally with every other acre of land that was protected under the provisions of that law. [Applause.]

[Here the gavel fell.]

Mr. RANSLEY. Mr. Speaker, I yield 10 minutes to the gentleman from Massachusetts [Mr. MARTIN].

Mr. MARTIN of Massachusetts. Mr. Speaker, the problem of eliminating the damage which comes from floods must necessarily appeal to every Member of the House. We all want to save property and life. I do not question the merits of this particular proposition. My purpose in rising is to question whether it is advisable at this time to make this large authorization of $272,000,000. If we do not now realize it we will very soon appreciate that before we get through with the flood problem it is going to cost the Government billions of dollars.

Relief from floods is not only one affecting only the Mississippi Valley, but applies equally well to the New England States, the Onio River Valley, Pennsylvania, and New York. They are all interested in this great problem of protection of life and property from flood. Mr. Speaker, I maintain we must consider this great subject in a comprehensive way. There is no real reason why a special bill, which affects only three States, should be considered. Why not wait until the complete program, which is pending in another branch, comes before us, and then we will have the full picture.

There is another point I want to stress. We should not go ahead and expend millions that may eventually end in useless waste. There is a reasonable doubt as to whether the flood-control problem should be best solved through spillway construction or reservoirs. The President has appointed a commission of inquiry, and a report, I understand, probably will be available in December. So I ask, why commit the Government to a program running several years and requiring a huge expenditure which might be regretted later? Furthermore, it is not necessary. We have been spending about $35,000,000 a year for the relief of the Mississippi Valley, and at present there is an unexpended balance of $53,000,000 available for the work. Surely the situation will not become more acute if we do not pass this

bill today. Let us wait and see what it will cost in the Ohio Valley, in New England, and the other States. Let us see what the whole program will cost.

Mr. Speaker, I am reminded of a statement that was made yesterday by the distinguished gentleman from Texas [Mr. BUCHANAN], who is chairman of the great Appropriations Committee. Said the gentleman from Texas [Mr. BUCHANAN]:

> Furthermore, if we are to start on a general policy of conservation throughout the Union, I believe in equal opportunity and equal grants, if you want to call it that, or equal advantages, for every section in conserving its natural resources, and not have just one section picked out and favored.

Those are the words uttered by the gentleman from Texas [Mr. BUCHANAN] in discussing the Interior Department conference report.

Mr. SHORT. Will the gentleman yield?

Mr. MARTIN of Massachusetts. I yield to the gentleman from Missouri.

Mr. SHORT. Of course, the gentleman will realize that the present bill is really an integral part of the original flood-control plan of the Mississippi Valley as covered by the act passed in 1928. The reason for the passage of that act was because the local interests in the Mississippi Valley from Cape Girardeau to below New Orleans had contributed $292,000,000. This bill covers the Yazoo and St. Francis Basins, and the backwaters of the White River, included in the general program, and those districts have contributed their share but have received absolutely no benefit up to the present time.

Mr. MARTIN of Massachusetts. The gentleman understands, of course, that the Government is now asked to contribute for the right-of-way, whereas previously that expense was borne by the local communities.

Mr. SHORT. I understand that; and the district represented by our colleague the gentleman from Mississippi [Mr. WHITTINGTON] has been assessed a tax, and they no longer bear the expense.

Mr. MARTIN of Massachusetts. I cannot agree with the gentleman from Missouri [Mr. SHORT]. A new policy is being established here, and it is time for the Members of the House to consider whether they want to adopt this particular policy or not. I say when we adopt a new policy we should take into consideration that we are going to have a great flood problem presented to us eventually; so let us take the whole matter up at one time and not by piecemeal. That is fair, and it is right, and that is what we ought to do.

Mr. JENKINS of Ohio. Will the gentleman yield?

Mr. MARTIN of Massachusetts. I yield to the gentleman from Ohio.

Mr. JENKINS of Ohio. Will the gentleman restate what the new policy is?

Mr. MARTIN of Massachusetts. Previously the local government contributed and paid for the right-of-way, whereas under this bill that expense will be borne by the Federal Government.

One of the great difficulties we are experiencing as a nation at the present time is that there are two or three different agencies spending money in the same field, as was stated very fully by the gentleman from Texas [Mr. BUCHANAN] in his speech of yesterday. You cannot have a consistent financial policy, you cannot bring the Budget into balance, and you cannot put this country on a sound financial basis until this power is vested in the Congress and Congress alone. The responsibility must be fixed. You cannot help by bringing in piecemeal legislation. Legislation must be brought in in a comprehensive way covering the whole problem. Let us give every section its fair share and proceed in an orderly, businesslike way to consider a great national problem.

Mr. Speaker, for the above reasons I hope the bill will be defeated. It may be said this only involves $300,000,000, some will consider this just a bagatelle, but some day the American taxpayers are going to wake up to the fact the Treasury has been depleted and can be refilled only through back-breaking taxes. The Mississippi work will go ahead. There is now an unexpended balance of over $53,000,000 to carry it on. Let them go ahead with that amount of money until the needs of all sections are determined.

Mr. WHITTINGTON. Will the gentleman yield?

Mr. MARTIN of Massachusetts. I yield to the gentleman from Mississippi.

Mr. WHITTINGTON. Is it not true, and the gentleman will find it is true if he cares to investigate, that while that amount has not been expended it is practically all obligated?

Mr. MARTIN of Massachusetts. It is part of the program and it will take all of this year to use up that amount of money.

Mr. WHITTINGTON. This includes the appropriation for the current year.

Mr. MARTIN of Massachusetts. They cannot spend $53,000,000 in the rest of this year?

Mr. WHITTINGTON. No.

Mr. MARTIN of Massachusetts. Is that not enough to spend in one part of the country until we determine what the program of the Government is going to be?

Mr. WHITTINGTON. There was only appropriated $15,000,000 for this year, and that is obligated.

Mr. MARTIN of Massachusetts. There is plenty of money available to go head with the project. Now let us stop any further commitments for several years ahead and wait until we see what the report of the committee of inquiry will be. That is the fair and honest thing to do. I hope the attitude of the House today will be to defeat this bill at this time.

[Here the gavel fell.]

Mr. RANSLEY. Mr. Speaker, I yield 10 minutes to the gentleman from Kansas [Mr. CARLSON].

Mr. CARLSON. Mr. Speaker, we have heard a very fine explanation of the Mississippi Valley flood-control problem from the distinguished gentleman from Arkansas [Mr. DRIVER], and I do not know anyone who would be better qualified to outline the problems of that valley than the gentleman from Arkansas who has previously spoken. He has been on the Flood Control Committee for years. He understands the problem.

It has been my privilege to serve on that committee during the last session of the Congress, and at the last session we held extensive hearings on this very project, which are available. This is a far-reaching project, and I do not want to come before the House this afternoon and have anyone feel that I do not realize that this is a great problem that affects this particular section of our Nation. Under the act of May 15, 1928, we accepted this as a national problem, and we are going to continue to take care of that section. There is no question about that, but we bring in here today an amendment to that act which greatly increases our national responsibility in this area, and I believe we are bringing it in at a time when we are about to change the method of flood control in this country. I believe in the near future we are going to develop a comprehensive program of flood control which will originate at the source.

What is this bill? This bill is a floodway bill. The gentleman from Arkansas [Mr. DRIVER] has ably demonstrated the problem of this large section through here [indicating]. This is known as the Eudora floodway. What do we do at Eudora? In reality we make a new floodway, a new spillway, or in reality a new river, if you want to call it that, practically 10 miles wide, at a cost of $103,000,000. Why do we do this? In order to protect this valley against the superfloods; not a flood like that of 1927, which was the greatest that has ever been recorded on the Mississippi River, but a flood 27 percent greater than the 1927 flood. The engineers in their testimony stated that we might have such a flood once in 125 to 250 years.

The question is whether we should at this time go ahead and erect these spillways and floodways when I believe—and I think the country believes—we are going to have a change in our method of flood control.

Now, you may ask what do we have to offer in the place of this floodway. I am going to make some suggestions,

and I am going to back them up by the testimony of the engineers. They are not my statements, but statements of competent Government engineers.

In the first place, the distance by the regular channel from the mouth of the Arkansas River to the Red River is 373 miles. By the establishment of bend cut-offs, which are now in existence, or which they have been constructing in the last 2 years, they have reduced this distance to 273 miles. Think of it! A 100-mile reduction in the distance by bend cut-offs. What does this mean in connection with the floodwaters of this area? General Ferguson has testified before our committee that it means a reduction of several feet in the floodwater. General Markham admitted it would be a reduction of 2½ feet in that territory, and I am going to read for your information a statement made by General Ferguson.

Now, who is General Ferguson? He is the president of the Mississippi River Commission and is the man who is in charge of this work right now, representing the Chief of Engineers, in constructing these projects; and on April 8 of this year he made a statement at New Orleans, and I am quoting a portion of it from the Times-Picayune of that city:

> We have obtained results we can measure now to the point where we know we can make the Mississippi River use its own energy to straighten its banks and keep them straight where they need straightening; to build sandbanks where they are needed and cut them away where they should be removed; to carry its own load of water and solid material in solution to the sea much faster than ever before.

Now listen to this:

> I believe we have the answer to the river problem this Nation has been trying to solve for more than a century. I see no need for the lower valley to worry about the river any more, and I see every reason for the people of the lower valley to go about their daily affairs with the thought of any danger from the river completely dismissed from their mind.

This is the statement of General Ferguson.

Mr. WHITTINGTON. Mr. Speaker, will the gentleman yield?

Mr. CARLSON. I would rather not yield until I have concluded my statement.

Mr. WHITTINGTON. I am sure the gentleman wants to quote General Ferguson correctly, and I simply want to call his attention to the telegram he sent the committee.

Mr. CARLSON. I refuse to yield now, Mr. Speaker. I shall be pleased to yield later on.

I have mentioned the bend cut-offs. We have proved this will reduce the floodwaters of this river at least 2½ feet, and some engineers say as much as 5 feet.

We have another proposal that we believe will reduce the floodwaters throughout this area, and that is by the construction of reservoirs on tributary streams.

A report has been made on 13 reservoirs on the Arkanses River and 13 on the White River, a total of 26 reservoirs. These reservoirs cost $126,000,000. Remember, now, that the Eudora floodway costs $103,000,000. These reservoirs, according to the testimony of General Markham, will reduce the flood flow or the flood stage more than 4 feet. Some engineers have estimated it at more than that, but General Markham says it will be over 4 feet.

Now, at a cost of $126,000,000 we get a reservoir system, which is much more valuable than a floodway—and who knows what the economic value of these reservoirs throughout this midwestern section and how much more important are they than the difference between $103,000,000 and $126,000,000?

Please do not think for a moment that I want to create the impression that these 26 reservoirs will reduce the flow of water as much as the Eudora floodway. They will not; but bear in mind that this floodway is built for a superflood, a flood we have never had and do not expect to have and hope we shall never have.

But consider the economic value of the 26 reservoirs in the midwestern section.

Secretary Wallace has stated that we have 30,000,000 acres of land in the Middle West which is of great concern to our National Government because of drought conditions. This is one way to protect the Mississippi Valley and save the central section of the United States from great droughts, and which concerns everyone.

It seems to me that at this time we should not go ahead and construct the Eudora floodway until we have had further study.

Let me read you a statement. My belief is that we should wait on this program. It is stated that we have $53,000,000 unexpended for this work. Let us spend that before we authorize at least $272,000,000 additional. I am quoting from the Associated Press under the date of April 20 of this year:

> Starting an exhaustive study of the country's 15 major drainage basins, Interior Secretary Harold L. Ickes yesterday asked the cooperation of local authorities in preparing a National Resources Committee report on steps needed to prevent floods.

The statement referred to the National Resources Committee which is expected to report next December.

I think we should fully realize the great expenditure we are making—$325,000,000.

The SPEAKER. The time of the gentleman from Kansas has expired.

Mr. RANSLEY. I yield the gentleman 10 minutes more.

Mr. CARLSON. It is not my intention to use the 10 minutes, but I want in conclusion to ask Members of the House seriously to consider that before we authorize this expenditure if it does not think it would be policy on the part of the Federal Government to study further before carrying out this program? I sincerely believe that in the next 2 years the engineers in our Army will be recommending reservoirs for the control of these floods and that that will be beneficial throughout this section.

Mr. DISNEY. Will the gentleman yield?

Mr. CARLSON. I yield.

Mr. DISNEY. The engineers have recommended reservoirs on the White and the Arkansas Rivers, have they not?

Mr. CARLSON. That is correct.

Mr. JENKINS of Ohio. Will the gentleman yield?

Mr. CARLSON. I yield to the gentleman from Ohio.

Mr. JENKINS of Ohio. I am much interested in the discussion by the gentleman, which has been exhaustive and learned. As I understand, there is no great necessity, no great emergency involved in this construction.

Mr. CARLSON. Personally, I do not think there is.

Mr. JENKINS of Ohio. This is an addition to and outgrowth of what we have done in the Mississippi Valley in improvements since 1927.

Mr. CARLSON. That is right.

Mr. JENKINS of Ohio. The gentleman has advanced something in which I am much interested, having stressed the difference between the policy involved in this construction and some other construction. I should like to ask if the gentleman had in mind the bill now pending in the Senate, and which they were discussing yesterday, and perhaps today, involving the expenditure to prevent floods in the Ohio Valley and in different parts of the country which were so disastrous 3 or 4 months ago?

Mr. CARLSON. I do have that in mind, and I think the bill which we passed in the last session of Congress was no doubt in the mind of the President when on January 30 of this year, in his message to Congress, he said:

> We have grown accustomed to dealing with great rivers, with their problems of navigation and of power and of flood control, and we have been tempted to forget the little rivers from which they come.

Mr. JENKINS of Ohio. What does the gentleman think of this apparent conflict? As I understand it, the bill pending in the Senate, which has attracted Nation-wide attention—delegations from all parts of the United States having been here this week—is turning on the point of how much local residents will participate in the payment of improvements. That is a question which has been debated very bitterly and exhaustively in the Senate. It appears now that that is going to be the controlling factor. In other words, it is likely that they will come to the conclusion that there will be no improvements made anywhere tending to

prevent floods unless the local communities bear at least one-half of the expense of purchasing the land and providing for the damages. If that is the case, and we are to be confronted in a few days with that bill, after we have passed this bill, we will be in the position of being confronted with two diametrically opposed propositions. In other words, the people of one section of the country will have all of their damages paid by the Federal Government, while in other sections of the country they will compel people to pay one-half of the damages and one-half of the expense of the land.

Mr. CARLSON. I thank the gentleman for his contribution, and no doubt that will be brought out later in the discussion.

Mr. DISNEY. Mr. Speaker, will the gentleman yield?

Mr. CARLSON. Yes.

Mr. DISNEY. That bill, while it originally contained the 13 projects on the White and the Arkansas Rivers, does not now contain those projects or at least all of them.

Mr. CARLSON. That is correct. The Senate bill does not contain them all. The bill as it passed the House did contain those 26 projects. The bill has been amended in the Senate and is up for consideration today, and I understand that those projects will not be included.

Mr. DISNEY. That bill carries a provision which will make the communities contribute at least 50 percent of the cost.

Mr. CARLSON. Yes.

Mr. JENKINS of Ohio. Mr. Speaker, will the gentleman permit me to ask a question of the gentleman from Oklahoma?

Mr. CARLSON. Yes.

Mr. JENKINS of Ohio. These dams and reservoirs to which the gentleman from Oklahoma refers as being in Oklahoma are in the White River Valley?

Mr. DISNEY. The White River and the Arkansas River.

Mr. JENKINS of Ohio. And what does this bill provide as to who shall pay for the damages and the land in that territory?

Mr. DISNEY. They are not in this bill. We propose to offer an amendment to put them in.

Mr. JENKINS of Ohio. What will the amendment provide with reference to that?

Mr. DISNEY. The same terms as in this bill.

Mr. JENKINS of Ohio. That is, the Government should pay all of it?

Mr. DISNEY. Yes.

Mr. JENKINS of Ohio. And if we should pass the gentleman's amendment and this bill with his amendment, and the Senate should pass the bill over there which they have agreed on so far as the damages are concerned, we will be confronted with this situation, that rights-of-way and damages incident to the construction of reservoirs in one section of the country will be paid for wholly at the expense of the Government, and in another section the communities will pay half of them.

Mr. DISNEY. Then it is up to the Congress to determine what is flood control.

Mr. DRIVER. Mr. Speaker, will the gentleman yield?

Mr. CARLSON. Yes.

Mr. DRIVER. The gentleman does not intend to say that the Government is paying all of the expense, particularly in respect to the operations on the Mississippi River. The gentleman is aware that the local people have contributed $41,000,000 while this project is under execution.

Mr. CARLSON. That is correct. The gentleman makes a correct statement, and we must bear in mind, if we adopt this bill, the Government will furnish flowage rights on three floodways. They will furnish the reservoir rights-of-way mentioned in this bill; therefore I think we are advancing a new policy of flood control even in that area.

Mr. Speaker, I shall conclude by reading a statement of General Markham with regard to the expenditure of funds in the Mississippi Valley. This was made before the Senate committee and will be found on page 44 of the Senate hearings:

> I do not think it is improper for me as Chief of Engineers to refer to the fact, quite anonymously, the more expenditure the Federal Government makes in the lower Mississippi Valley the more obligations it picks up. It seems to me as though Congress ought to know what the limit is.

I believe it is our duty to bear in mind the expenditures at this time.

Mr. WHITTINGTON. Mr. Speaker, will the gentleman yield?

Mr. CARLSON. Yes.

Mr. WHITTINGTON. Is it not a fact that that statement was made before this bill was amended in the Senate so as to meet the very argument of General Markham included in that statement?

Mr. CARLSON. That is correct, but they have been only partially met.

Mr. WHITTINGTON. But he says it satisfies him. The general has stated to our committee and to the gentleman that that particular section to which that referred has been amended and he is satisfied.

Mr. CARLSON. That is correct. I yield back the remainder of my time.

Mr. DRIVER. Mr. Speaker, I have listened with considerable interest to the very fair statements presented by my colleagues from this side. I claim to be the original reservoir advocate for flood control, because I developed to the very best of my ability the influence of reservoirs on the minor streams as they would control the floodwaters in the Mississippi River. I find this to be true, that from the standpoint of reservoir control we are absolutely beyond the pale of recognition, and I do not believe that any Member of this House will seriously contend to the contrary. After thorough engineering investigation, headed by a man whom I know to be one of the most expert of those connected at any time with this wonderful aggregation of Army Engineers, Capt. William Kelly, it was found that it would cost $1,120,000,000 to effectuate control of the floods in the Mississippi Valley that we are undertaking to deal with now on the basis of $500,000,000.

Some allusion was made to the influence of reservoirs on the Arkansas and White Rivers. Those two rivers run right through my State. I do not take my hat off to a single man on this floor in my serious concern for the development and protection of the valleys of those streams. I want to see them protected, and I am ready to go to any reasonable extent to bring it about, but there is no use kidding ourselves about this matter. When we include the Arkansas and the White Rivers in this bill we might as well kick it out of the door. The strategy of the opposition to this bill will be to adopt amendments in order to effectuate that purpose. This bill cannot carry a greater load than it carries for the protection of the Mississippi alluvial area. The original project was designed for that purpose. It was separated from the other rivers of the Nation. Why? Because of the extraordinary burdens that were imposed upon that very narrow area by the great population and interests of approximately half of the Nation. If you place one hundred and twenty-six million additional dollars on this bill for reservoirs in the White and Arkansas Rivers, I dare any man to point to an engineering statement in this RECORD that does not say that, notwithstanding the expenditure of one hundred and twenty-six adtional million, you will be forced to expend the same sum they recommend in this bill. Why? This is not disputed. If the flood of 1927 had been confined at Arkansas City, the junction of the White, the Arkansas, and the Mississippi, a difference of 12 feet would have occurred on the gage at that point. Take 4½ instead of 4.2 and take 2½ and you have 7 feet. You must have 5 feet more in order to avoid the use of the proposed floodway. It will cost just as much to put the floodway to carry that additional amount of water as it would under the estimate on this project. Then why load it down if it cannot effectuate the purpose?

This bill carries three projects within the valley. I just started to explain it to you previously when my time expired. I gave you the reason for the inclusion of these two. There is one project in the White River area. I want to make a brief explanation of that. The president of the Mississippi River Commission and the landowners affected,

who are extremely anxious to receive protection for 136,000 acres of land, which is developed, worked out with the president of the river commission, protection of that land for a riverside reservoir, the most effective on earth, containing a sufficient amount of water from the flood crest to make a desirable impression, a factor of safety at Arkansas City. The Chief of Engineers says that he did not recommend that project because of the law which requires one-third contribution on land of that sort, but it was the result of the directing force in the Mississippi Valley that that was worked out. These lands paid just exactly the same as every other acre of land in the St. Francis and Yazoo Valleys to the structures on the bank of the Mississippi River to protect these lands which do not afford any protection because of shutting off drainage and bringing the drainage from that area, which floods these channels until they cannot protect themselves. In the St. Francis those people paid $11,000,000 in addition to what these people pay on the Mississippi River structures.

Mr. JENKINS of Ohio. Mr. Speaker, will the gentleman yield?

Mr. DRIVER. I yield.

Mr. JENKINS of Ohio. I am very much interested in the gentlemen's discussion, because he indicates he knows what he is talking about. This other bill that we have talked about in the Senate seems to be a flood-control bill that is going to take care of projects more or less scattered all over the country. That is probably for the reason that this year was a very disastrous year for floods. However, in the Ohio Valley we have projects that have been approved by the Army Engineers, which call for the construction of a great many reservoirs. When those reservoirs are completed they will take 8 feet off of the flood crest of the Ohio River.

Mr. DRIVER. That is at Pittsburgh.

Mr. JENKINS of Ohio. No. Down in my section. I am coming to that. I mean down in my section. I live 250 miles below Pittsburgh. It will take 8 feet off of the crest of the Ohio River flood at that point. The gentleman recognizes that before that flood reaches our country it has gone through many towns and it has devastated a great many cities. Your territory is largely farm land. The territory which is damaged in our section includes cities and municipalities and higher-priced land. If this other bill is passed and the constructon of these dams takes 8 feet off of the flood on the Ohio River, what effect will that have upon your area?

Mr. DRIVER. If all of the waters beyond Pittsburgh in the Ohio, beyond Minneapolis in the upper Mississippi, and beyond Sioux City in the Missouri were entirely removed from the river it would not make a difference of 12 inches in the flood crest anywhere south of Cairo; it does not have that effect. The most desirable reservoir site is in the Arkansas and White Rivers, where the cost is estimated at $126,000,00. If you tried to get the same influence from the same number of reservoirs elsewhere you double the amount of money per reservoir.

Now, Mr. Speaker, hurriedly, the people in the Mississippi Valley have furnished the land for the levees. They have expended $41,000,000 for this purpose in addition to the $292,000,000 on which the national obligation was based since the 1928 act was placed in operation. The only place that the Government furnishes the flowage rights—not the land, but the flowage rights—is for the proposed floodways to divert from the river 1,000,000 feet below Arkansas City and 1,000,000 down at Morganza.

You talk about reservoirs; I should like to see them in every stream in the Nation. They have local social values beyond estimate; but can we wait on that with the menace of these floods that are likely to wipe out the valley again?

My colleagues from Massachusetts have that little wild river the Merrimack. That is a project in the bill now pending in the Senate and will be passed and put into execution at once by the engineers. Also, the Connecticut River and the rivers in Ohio and Pennsylvania—those emergent streams are the ones that must be taken care of. We cannot close our eyes to these menaces; we are bound to provide for their control. We must realize the duty and the responsibility we owe to the people in these devastated areas, and treatment cannot be delayed in deference to impending dangers.

Mr. THOM. Mr. Speaker, will the gentleman yield?

Mr. DRIVER. I yield.

Mr. THOM. In the program so far carried out in the Mississippi Valley has any reservoir been built?

Mr. DRIVER. None whatever. Further, I may say that under the original authorization of $325,000,000 for the Mississippi River flood project $90,000,000 was for navigation and not flood control, and practically $70,000,000 has been expended by the Government out of the $325,000,000 authorization contained in the bill for such purpose.

Mr. THOM. May I continue my inquiry?

Mr. DRIVER. Yes.

Mr. THOM. I am to understand, then, that provision for the completion of the reservoirs in the Mississippi Valley project is contained in the bill?

Mr. DRIVER. The authorization for it; yes. If the engineers can see where they can shift from the levee system to the reservoir system they are authorized to do so; it is within their discretion and judgment.

Mr. THOM. Am I to understand further that the land for these reservoirs is to be furnished by the United States Government?

Mr. DRIVER. No; not in the St. Francis project; and in order to verify that I want to call on my colleagues from Missouri. Is it not a fact that the project provides that in the use of reservoirs the expense cannot exceed what the use of levees would require?

Mr. ZIMMERMAN. The gentleman is correct.

Mr. THOM. Let me call the gentleman's attention to page 3 of the bill, where reference is made to the St. Francis River. The language here is—

> And the acquisition at the cost of the United States of all lands and flowage necessary to the construction of said reservoir.

Mr. DRIVER. Read further.

Mr. THOM. Except flowage of highways.

Mr. DRIVER. Read further and the gentleman will find that provision is made that it shall not cost the Federal Government one cent more than the levee system.

Mr. CULKIN. Mr. Speaker, will the gentleman yield?

Mr. DRIVER. I yield.

Mr. CULKIN. I notice the majority report refers to this bill as embodying the Markham plan.

Mr. DRIVER. Yes; General Markham, the present Chief of Engineers, made the report for the expert board that studied the subject for 3 years.

Mr. CULKIN. Does the Chief of Engineers recommend this plan in his report?

Mr. DRIVER. Absolutely; everything in this bill is recommended. This is an engineering plan we are adopting as a modification to the adopted project of 1928, except as to this feature here at White River, which was worked out with the executing commission, the Mississippi River Commission headed by General Ferguson; but because of the requirements of the law for one-third contribution on tributary streams he said he could not approve that project. He overlooked, however, the fact—and I want to impress this on the gentleman—that those lands were in exactly the same attitude as the other lands he recommended for inclusion in order to afford the protection they had paid for but were denied.

Mr. CULKIN. But the genteman does say that General Markham specifically recommends the enactment into law of the pending bill?

Mr. DRIVER. He does. This is a bill to carry his recommendations into execution. Now, they talk about waiting. Gentlemen, we cannot wait on these matters. We cannot wait on the Merrimack. That is in the project bill. There is not one single project in that bill that was not recommended by the engineers and can fit in and coordinate with the complete treatment for the rivers from which they were gathered when it becomes necessary to deal in a compre-

hensive way with flood projects in connection with various streams.

Mr. RICH. Will the gentleman yield?

Mr. DRIVER. I yield to the gentleman from Pennsylvania.

Mr. RICH. Does the gentleman mean to say that General Markham agreed to section 5 of this bill?

Mr. DRIVER. I made an express statement in regard to that matter and I believe every Member but my friend from Pennsylvania understood me. I pointed to the map, and I said he recommended everything except the White River project, and fully explained the circumstances connected with it.

[Here the gavel fell.]

Mr. DRIVER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

PERMISSION TO ADDRESS THE HOUSE

Mrs. O'DAY. Mr. Speaker, I ask unanimous consent to address the House for 10 minutes on Monday next after the reading of the Journal and disposition of matters on the Speaker's table.

The SPEAKER. Is there objection to the request of the gentlewoman from New York?

Mr. SCHULTE. Mr. Speaker, reserving the right to object, Monday next is District day. We have never had an opportunity to discuss District bills.

The SPEAKER. Is there objection to the request of the gentlewoman from New York?

There was no objection.

FLOOD CONTROL ON MISSISSIPPI RIVER

Mr. WILSON of Louisiana. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (S. 3531) to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries", and for other purposes, approved May 15, 1928.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill S. 3531, with Mr. FLANNAGAN in the chair.

The Clerk read the title of the bill.

The first reading of the bill was dispensed with.

Mr. WILSON of Louisiana. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, the general purposes of the pending bill have been thoroughly stated and made clear. This bill is offered to complete an adopted project involving the greatest engineering problem ever undertaken by the United States Government or any other country. The purpose of the bill is to carry on to completion the project through the same organization that has carried on the execution of the project since 1879, when the Government joined in the work of flood protection on the Mississippi River. After the disastrous flood of 1927, the Federal Government assumed responsibility for protection of the alluvial valley of the Mississippi River, admitting and declaring that it was a national obligation. In that statement, of course, there was given as one reason for the final completion of these projects as a national obligation the fact that the local interests involved had spent $292,000,000 since that time, and they have spent more than $41,000,000 in cooperating with the Government since the adoption of the act of 1928.

When the 1928 act was passed, it was admitted and generally understood that there would probably be changes in the final execution of the projects, and that reexaminations and resurveys would be required. House Document No. 1 is the result of a resurvey and a reexamination which covers a period of 3 years. It shows a saving to the Government if the original projects had been carried out as recommended.

Mr. Chairman, when I had the honor of becoming chairman of the Committee on Flood Control of the House, I consulted with the Chief of Engineers and the Secretary of War, and prepared a resolution asking for a complete reexamination and review of the engineering features of the projects so that a recommendation might be made covering changes, if any, that should be made in final execution. Gen. Lytle Brown was then Chief of Engineers, and in a very aggressive way, he went forward with this work. He set up an independent board composed of Gen. Harley B. Ferguson, now president of the Mississippi River Commission; Col. George R. Spaulding, Corps of Engineers; and Mr. Marston, school of engineering, Iowa State College.

After continued work, and after the expenditure of some four or five million dollars, cutting off bends in the main channel of the Mississippi River, dredging and increasing the discharge of the water into the Gulf of Mexico through the Atchafalaya River, they came back, through the present Chief of Engineers, who aggressively went forward in the same way, and presented this report covering the final execution of that great project. Extended hearings have been had. I have worked in every way to get a thorough review of the matter. I have tried to get every fact before the engineering authorities. We have taken up the matter of floodways and reservoirs. I have done all this so that I could come to Congress with a frank statement on a great national problem. We have collected the data and now recommend legislation to complete this project.

After the report was submitted the differences that arose in the hearings were thoroughly discussed, first as to whether or not we might substitute reservoirs for the floodways. After the hearings the Chief of Engineers and the Mississippi River Commission still recommended that although you might construct reservoirs in the White and Arkansas Rivers, in connection with the flood of 1927, not the superflood, if the reservoirs were constructed and in operation, with channel enlargements by cutting off the bends in the river, it would still be necessary to use the Eudora floodway in case of a flood of 1927 volume, and in the superflood it would be necessary to carry out an even greater amount of water.

Mr. Chairman, there is no way to carry on this project to completion except as recommended and approved by the agency set up for its execution by the Government. We will either have to follow them or else we will get nowhere.

Mr. ANDRESEN. Will the gentleman yield?

Mr. WILSON of Louisiana. I yield to the gentleman from Minnesota.

Mr. ANDRESEN. Will the gentleman advise the Members of the House how much money was authorized in the act of 1928, and how much money has been spent out of this original authorization?

Mr. WILSON of Louisiana. Three hundred and twenty-five million dollars was authorized by the act of 1928, and all except about $53,000,000 has been expended. About $15,000,000 is now in allotment.

Mr. ANDRESEN. Have any reservoirs been constructed with that $300,000,000?

Mr. WILSON of Louisiana. No.

Mr. ANDRESEN. Just floodways?

Mr. WILSON of Louisiana. No floodways have been constructed. There has been some levee construction, channel enlargement, and some $80,000,000 or $90,000,000 has been spent for improvement of the river for navigation purposes.

Mr. ANDRESEN. How much additional money will be required or does this bill carry by way of authorization to complete the program?

Mr. WILSON of Louisiana. Two hundred and seventy-two million dollars.

Mr. ANDRESEN. Will any additional funds be needed after the money that is provided in this bill has been expended?

Mr. WILSON of Louisiana. No; according to the recommendation of the engineers this will complete the project.

Mr. ANDRESEN. It was my understanding in 1928, when we authorized the expenditure of the $325,000,000, that that would do the work down there.

Mr. WILSON of Louisiana. No; my friend is mistaken about that.

Mr. ANDRESEN. I was here and voted for it.

Mr. WILSON of Louisiana. The general estimate at that time for the final completion of the project was $775,000,000, and I may also add that the $325,000,000 referred to included some $80,000,000 for improvement of navigation, and the gentleman cannot find anywhere one word of complaint about the expenditure of this money. It was expended for the very best purposes and in a most economical way.

Mr. JOHNSON of Oklahoma. Mr. Chairman, will the gentleman yield for a question?

Mr. WILSON of Louisiana. Yes.

Mr. JOHNSON of Oklahoma. Is it contemplated under this bill that any reservoirs will be constructed, or is it proposed to spend all the money on the lower Mississippi in the building of dikes and levees and floodways?

Mr. WILSON of Louisiana. And on floodways; yes.

Mr. JOHNSON of Oklahoma. Is the construction of any reservoirs contemplated under the measure?

Mr. WILSON of Louisiana. No; except on the Yazoo and the St. Francis, and that is in the discretion of the Chief of Engineers.

Mr. JOHNSON of Oklahoma. Those of us who live on the upper reaches of the Mississippi are interested in flood control on the Mississippi, but we are also interested in flood protection on the Arkansas and other tributaries, and we feel this can be done only by the construction of reservoirs. We are interested in real flood control.

Mr. WILSON of Louisiana. I am too.

Mr. JOHNSON of Oklahoma. And we want to see some reservoirs started while we are spending this money.

Mr. WILSON of Louisiana. The statement was made, I believe, by the gentleman from Ohio, that this is not an emergency project. Mr. Chairman, the most important emergency in connection with this flood-control project is the Atchafalaya Basin. If you will notice this map you will see that these flood waters, whether they come down through the main channel or whether they come through floodways, from all the tributaries and all the streams that make up 41 percent of the area of the United States, they must accumulate at this point [indicating] and from that point down is the Atchafalaya Basin, to carry the water safely to the Gulf, a distance of 90 miles. I say that this project is more of an emergency than anything you can imagine with reference to flood control.

[Here the gavel fell.]

Mr. WILSON of Louisiana. Mr. Chairman, I yield myself 3 more minutes.

This is the only opportunity we have to carry this project to completion with the approval of the Secretary of War and the Chief of Engineers with respect to the engineering features and the allotment or expenditure of the money, because when the Senate first started out on this bill they put in a provision that there should be just compensation paid for the land flowage rights over the floodways. The Secretary of War sent up an unfavorable report because he said there must be a definite yardstick with respect to the expense.

Mr. GREEVER. Mr. Chairman, will the gentleman yield?

Mr. WILSON of Louisiana. I yield.

Mr. GREEVER. Reference has been made to the amount of money that has been contributed by the districts or by the States contiguous to this flood-control area. How much money is that?

Mr. WILSON of Louisiana. Prior to the Flood Control Act of 1928, the local interests had spent $292,000,000 in furnishing rights-of-way to construction work. Since then they have spent something over $41,000,000 and they are still to furnish the rights-of-way for levee foundations on the main channel of the Mississippi River. So they have spent more than $300,000,000.

Mr. JENKINS of Ohio. Mr. Chairman, will the gentleman yield for a brief question?

Mr. WILSON of Louisiana. I yield.

Mr. JENKINS of Ohio. The gentleman stated a while ago that the original appropriation was $320,000,000.

Mr. WILSON of Louisiana. Three hundred and twenty-five million dollars.

Mr. JENKINS of Ohio. Practically all of that money has been spent or allocated. Was it contemplated that the money appropriated at that time would be sufficient to complete the projects that were actually contemplated then?

Mr. WILSON of Louisiana. No; there was to be an allotment from year to year for levee construction and channel improvement.

[Here the gavel fell.]

Mr. WILSON of Louisiana. Mr. Chairman, I yield 5 minutes to the gentleman from Arkansas [Mr. MILLER].

Mr. MILLER. Mr. Chairman, in the time allotted to me——

Mr. RICH. Mr. Chairman, I do not want to make a point of no quorum but I should like to ask the majority if they will not get Members in here to hear this important discussion. Here we have only about 50 Members on the floor of the House to hear this important legislation discussed.

Mr. BLANTON. Mr. Chairman, I make the point that there are only 18 Members on the Republican side.

Mr. RICH. And there are only 30 Democrats on that side. Mr. Chairman, I make the point that there is no quorum present.

The CHAIRMAN. The gentleman from Pennsylvania makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and five Members are present, a quorum. The gentleman from Arkansas will proceed.

Mr. MILLER. Mr. Chairman, I should like to have the privilege of explaining some facts which I know the House is entitled to in regard to the flood-control problems of this country. I am as much interested in the solution of the flood-control problem as any man can be and I am doubly interested to see that it is solved in a proper and constructive manner. I do not intentionally mean to make any misquotations. I should like to have the attention of the House in order that they may see what we are doing.

This bill deals with the middle section of the Mississippi River from the mouth of the Arkansas and White Rivers south.

Primarily it is based on the report of General Markham in Committee on Flood Control Document No. 1, House of Representatives, Seventy-fourth Congress, first session, which modifies the original Jadwin plan adopted in 1928, when $325,000,000 was authorized for work on the Mississippi flood-control problem.

In addition, here is what we do. Under one section of this bill we appropriate $48,000,000 to take care of the Yazoo River system, to build seven reservoirs on the Yazoo. We appropriate $16,000,000 for work on the St. Francis, which may be expended for levees or for reservoirs.

For the Yazoo all expenses for reservoirs are to be paid by the Government except damages to highways.

In other words, $16,000,000 is to be expended on the St. Francis Basin, which may be for reservoirs or levees according to the discretion of the engineers. There is an expenditure of $16,000,000 plus $48,000,000, which makes $64,000,000.

These two projects in the bill will lower the flood heights of the Mississippi River 9 inches and will cost $64,000,000. That is what you do. I am not opposed to these reservoirs. I think the only way in the world that we are ever going to control the floods on the streams is by controlling them at the source. But that is what we are doing. We are spending this $48,000,000 and this $16,000,000 for either reservoirs or levees and reducing the flood heights in the affected area 9 inches. That is all. I shall propose an amendment as section 1 (a) to this bill to construct 26 reservoirs in a

watershed comprising 183,300 square miles of territory, 13 reservoirs on the Arkansas and its tributaries, and 13 on the White and its tributaries. There is no dispute about what effect these proposed reservoirs will have on the flood waters. General Markham says it will reduce the flood heights 4.2 feet, and other engineers say more. Mind you, those 26 reservoirs are a portion of the comprehensive reservoir report filed by the Chief of Engineers in 1934.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. RICH. Mr. Chairman, I yield the gentleman 10 minutes more.

Mr. MILLER. They talk to you about the Mississippi River project and about its being an adopted project of Congress. It is—but why? Simply because the Congress did in fact adopt it. As a part of this 1928 act we also provided that the engineers should make a comprehensive survey of this country for the purpose of permanently controlling the flood waters. That survey has been made in the Mississippi Valley. Here is your map, with 151 reservoirs, at a cost of $1,125,000,000 for the control of the flood waters in the Ohio and every tributary of the Mississippi Valley. The question is, When we shall have spent this $272,000,000 here together with what we have already expended, added to what the local people have spent, we will have spent $1,000,000,000 on the lower Mississippi, and what have we accomplished insofar as the tributaries and insofar as the real territory of the Nation is concerned? In 1879 the Congress created the Mississippi River Commission. In 1883 this Commission established a levee line from Cairo, Ill., to New Orleans on the Mississippi. In 1898 it raised the grade on the levees 5 feet. In 1914 it raised the grade an additional 5 feet, and in 1928 it was found that the grade was entirely too low by several feet. The purpose and the policy has been to build levees, levees, levees—and who is paying the bills? I appeal to you men who live in the tributaries of this river. I am offering an amendment here that will protect, according to General Markham, 183,300 square miles of territory, not much of it in Arkansas, much of it in the Northwest, but it will protect them, according to him, and solve their local problems and at the same time it will solve this problem down here. I do not want to do the people in the lower Mississippi Valley an injury, but I do not want the people in the tributaries to suffer longer. They talk to you about floods in the lower Mississippi. They did have a flood in 1927, but I call attention to this comprehensive report, in which it says that the so-called superflood will possibly occur once in a hundred years, while the floods in the tributaries occur three and four times a year. The damage in the White River Valley alone in 1927 was $18,000,000; in 1928, $3,000,000; and in 1929, $7,000,000; and this is every year.

My people plant crops as often as three and four times a year. I ask you, How long can this Nation survive if its people living in the tributaries are to be utterly disregarded? They talk to you about the necessity of not touching this bill, that if you touch this bill something will happen to it. I ask you, Who is directing the destinies of this Nation? Is it the bureaus and the departments, or is it the Congress? I ask you to exercise your own common sense. Let me go back a minute and discuss these proposed reservoirs. I call attention to page 4 of this comprehensive report in which the Chief of Engineers says:

> The group of 26 reservoirs in the Arkansas and White are by far the most effective in controlling the floods on the main stem of the Mississippi River.

And the time is coming, gentlemen, just as sure as we are sitting in this House today, if you are here 10 years from now, when you will vote for an appropriation to erect these 151 reservoirs in the Mississippi Valley. If we can erect these 26 now, and it is said that is the best group of them for the protection of the valley down here, we should do it, because these rivers empty into the protected territory, and I appeal to you to make a start. In this flood-control Document No. 2, General Markham says:

> The reservoirs on the White would control 50 percent of the drainage area of that tributary; those on the Arkansas would control 55 percent of its total flood-producing area.

That area is 183,300 square miles.

> The president of the Mississippi River Commission, in a report dated April 24, 1935, which is attached hereto, presented estimates of the effect——

Mr. NICHOLS. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. NICHOLS. I make the point of order, Mr. Chairman, that there is no quorum present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and one Members are present, a quorum. The gentleman from Arkansas will proceed.

Mr. MILLER. Mr. Chairman, reading further from this report of General Markham:

> The operation of the 26 reservoirs in the Arkansas and White River Basins would, it is computed, have reduced the flow by 330,000 second-feet, with a corresponding reduction in a confined flood stage of 4 feet.

Then that report is concluded with this recommendation:

> My recommendation as to the use and value of the reservoirs on the Arkansas and White Rivers for controlling floods in the Mississippi Valley is that their construction and operation will increase the safety of the alluvial valley of the lower Mississippi River against flood, besides affording a large measure of flood protection in the White and lower Arkansas Rivers, but that these reservoirs cannot be relied on to prevent a flood which will overtop the levees unless a relief outlet is provided.

What is that flood that is going to overtop the levees? In Document No. 1, hereinbefore referred to, at page 6, he says it is the so-called superflood that will have more than 2,000,000 second-feet passing Arkansas City. This report shows that that flood will occur once in a hundred years. It is true it occurred in 1927.

Mr. GRISWOLD. Mr. Chairman, will the gentleman yield?

Mr. MILLER. I yield.

Mr. GRISWOLD. Is it not also true that General Markham said, in testifying before a Senate committee, that the flood of 1927 came out of the Arkansas River and White River?

Mr. MILLER. Yes; he said that, and it is true. Everybody knows that the Arkansas and White Rivers are the worst acting rivers in the entire Mississippi Valley, insofar as floods on the Mississippi River are concerned. Then you tell me that merely because a bill deals with the lower Mississippi we should not undertake to do anything for the Arkansas and White Rivers, when they empty right into the affected territory?

There is a section in this bill, section 5, called the White River Reservoir; but do not be misled about that. All it does is build a levee around this little strip of land, and all it does is raise the flood waters a little higher back in this district. That is all in the world that it does. I say very frankly to you, I want to see the flood-control problem solved correctly, permanently, and justly in this Nation.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. MILLER. The only way in the world it can be solved is to begin sometime in the right direction. Now is the proper time to make a step in reservoir control. In the entire debate on this bill there will not be a man come here and say that these reservoirs would not do any good. They will all admit it, but they will say we cannot stand it; that we cannot load down the bill. It is true these reservoirs cost $126,000,000, but I say to you that the building of these reservoirs and the cut-off operations in the Greenville Bends will be so beneficial that it will never be necessary for the Congress to appropriate the entire sum of $300,000,000.

Let me tell you what is happening right now in Little Rock. There is a suit pending to condemn some of this land. Do you know what the Government engineers did the other day? When General Markham hears about it I do not know what he will have to say. General Ferguson told the people

at New Orleans that they could go home and sleep because of the operation of these cut-offs with full assurance that the problem had been solved. General Markham telegraphed him and made him back-track on it.

Mr. McCLELLAN. Mr. Chairman, will the gentleman yield?

Mr. MILLER. Not just now. The record shows that General Markham telegraphed him about that statement that appeared in the Times-Picayune, but here is what happened in the land suit I mentioned—it is a suit for the condemnation of some land. When the Government attorneys, together with the Government engineers, went into court the other day, the court granted them a continuance for the purpose of enabling the Government to see what further efficiency could be had and how much further the flood heights on the Mississippi would be reduced by the operation of these cut-offs. I am just as earnest about this as I ever was in my life. I do not want to destroy or injure these people here, but the people in the Northwest, in these 183,000 square miles of territory, have suffered long. You talk about making a contribution to expenses. On my little White River alone we have about 270 miles of levees that were built at the expense of the people themselves. There are 20 districts, all of them leveed and with outstanding bonds. The question is just this: If we want to solve the problem in your territory and in my territory, if we want to render service to our people—and that is what we will have to do—we will have to be prepared to spend about a billion dollars in the Mississippi Valley alone to build 151 reservoirs. We are going to have to spend more on the Atlantic seaboard and other valleys in this Nation, but why not spend wisely?

Why build the levees alone? I appeal to you on behalf of 4,500,000 people who have suffered long that when this amendment is reached it may have the support of the entire membership of this House.

Mr. NICHOLS. Mr. Chairman, will the gentleman yield?

Mr. MILLER. I yield.

Mr. NICHOLS. In regard to the gentleman's amendment, does the gentleman know of anyone, or has he been advised of anyone, who will object to the amendment by reason of the fact that the purpose for which the amendment is introduced is not a genuinely good purpose and is not sound?

Mr. MILLER. Oh, no. The only argument that could ever be made against it is that the cost is too much. [Applause.]

If you believe in doing things right, then vote for the amendment, and we will make a start in the right direction.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I am interested in a policy of flood control whereby we may do those things that will save life and property. It is my judgment after listening to the various arguments advanced by members of the Committee on Flood Control that there is no body nationally set up that is so well fitted to handle these matters of flood control as the Board of Army Engineers, a nonpartisan organization. The Army Engineers always work, so far as I can find out, in harmony with local conditions, and cooperate with the States and local organizations.

We are now considering the bill (S. 3531) for the control of floods in the States of Arkansas, Mississippi, and Louisiana principally. No doubt the rest of the country is in a measure responsible for flood conditions that prevail in the lower Mississippi River because of the fact that the waters come from other States; and, naturally, we have a moral responsibility to assist these States. I am not overlooking this fact, but I want to call particular attention to section 5 of the pending bill. Mr. George H. Dern, Secretary of War, in his report to the Senate committee on this bill made the statement that this work is not recommended in the report, speaking of section 5. See letter of February 15, 1936, to Senator COPELAND, Senate hearings. I also want to call attention to the fact that in the House report there appears a letter dated April 30, 1936, from Maj. Gen. E. M. Markham, Chief of Engineers, to the chairman of the committee, the gentleman from Louisiana [Mr. WILSON], in which he makes this statement in reference to section 5:

> The bill, S. 3531 * * * with the exception of section 5, now conforms to the views of the Department.

In other words, he is opposed to section 5 of the bill.

We have listened to statements made by the gentleman from Arkansas in reference to the 26 dams to be constructed on the White River and the Arkansas River. I listened to the testimony given before the Committee on Flood Control in reference to these 26 dams. I have asked the question on the floor of the House time after time, "Where are you going to get the money?" I may say, however, that I am willing to spend money for flood control or any other good purpose where the money is going to be used to the very best advantage. If I interpret correctly the construction of these 26 dams it is this, that while it will cost the Federal Government $126,000,000 it will reduce the flood height on the lower Mississippi River from 4½ feet, as estimated by the Army Engineers, to as much as 5½ feet, as estimated by the board of engineers from the State of Louisiana. There is a difference of 1 foot in the estimates, but we will say the flood height of the Mississippi will be reduced by 4½ feet, while the items that are called for in this bill for the Yazoo and the St. Francis Rivers will reduce the flood height only 9 inches.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield myself 4 additional minutes.

We spend $56,000,000 on the Yazoo and St. Francis Rivers and we only reduced the flood height of the Mississippi River 9 inches. In other words, for twice the amount of money we are going to do eight times the amount of good. Does not this seem like a sensible proposition for us to consider in the House of Representatives—spend twice the amount of money and do eight times the amount of good? That is only good, ordinary common sense.

The statements made by the gentleman from Arkansas [Mr. MILLER] are just as sound as anything possibly can be.

Mr. COLDEN. Mr. Chairman, will the gentleman yield?

Mr. RICH. I yield.

Mr. COLDEN. Because of the gentleman's interest in economy I want to ask him if he does not think that the building of reservoirs and dams on tributaries, such as is being done in the case of the Tennessee River, and the development of power will make these projects self-liquidating? And is not it a sounder policy to build dams instead of levees?

Mr. RICH. But the Tennessee River project is not a flood-control project; it is a power project. When a dam is built for the purpose of generating power the reservoir behind the dam has to be kept filled and you have nothing left when it comes to controlling floods.

Mr. COLDEN. The Tennessee Valley project is both.

Mr. RICH. When it is said that by this bill we are spending $272,000,000, think of what we are doing in the way of constructive work; we are only carrying out what the board of engineers states is necessary so far as the lower Mississippi River is concerned. We have spent $893,000,000 in that section of the country alone. Other sections of the country are entitled to as much consideration as the lower Mississippi. If you take into consideration the floods of this year, you will find that there has been 10 times more damage to other sections of the country this year than was ever done to the lower valley of the Mississippi River and less money spent on the rest of the country for flood control. We must treat all States alike.

Mr. WHITTINGTON. Mr. Chairman, will the gentleman yield?

Mr. RICH. I yield.

Mr. WHITTINGTON. If the gentleman means to leave the impression that the Government has spent $893,000,000 in the lower Mississippi Valley for flood control he is utterly incorrect.

Mr. RICH. I do not want to be incorrect. Now in what respect?

Mr. WHITTINGTON. The gentleman is incorrect. I have just communicated with the Office of the Chief of Engineers, and I am advised that prior to the act of May 15, 1928, only $105,000,000 had been spent by the Government in flood control in the lower Mississippi Valley, and since that time $180,000,000 has been spent by the Government. I understand about $20,000,000 more has been allocated. That is the total amount spent in the entire history by the Federal Government for flood control in the lower Mississippi Valley.

Mr. RICH. Where did they spend the $621,000,000 for flood control on the Mississippi River?

Mr. WHITTINGTON. They have not spent that for flood control. They spent $125,000,000 on the Ohio River, more than $50,000,000 along the Missouri River, and probably as much more in the upper Mississippi River for improvement in navigation. The amounts I gave cover flood control only in the lower Mississippi. About $160,000,000 has been spent for navigation on the Mississippi.

Mr. RICH. I am talking about the Mississippi River. Has that not been spent on the Mississippi River for the benefit of the people of the South as well as for the benefit of the people all along the Mississippi River and its tributaries?

Mr. WHITTINGTON. The amounts have been spent largely for navigation. I just wanted to correct the gentleman.

Mr. RICH. The gentleman talks about navigation and states there has been $72,000,000 credited to navigation in this bill. I want to refer to Major General Ashburn's statement in regard to the operation of the Inland Waterways Corporation. He said they did not get any credit at all in figuring cost of operation for money spent on the Mississippi River for navigation. It is the way the Government officials figure cost in their operation, and I hope Major General Ashburn adds the cost of Government spending for navigation on the Mississippi River when he figures cost for operation of the Inland Waterways Corporation.

[Here the gavel fell.]

Mr. WILSON of Louisiana. Mr. Chairman, I yield 5 minutes to the gentleman from Arkansas [Mr. TERRY].

Mr. TERRY. Mr. Chairman, I shall support the amendment, which will be later offered, which includes 26 reservoirs on the Arkansas and White Rivers, as well as the so-called Overton bill which we are now considering.

During the past winter the President of the United States sent us a message in which he stated that we should go carefully into the question of coordinating the efforts of the Government in meeting flood control and soil erosion. There is now pending in the Senate H. R. 8455, a bill which has included in it many projects so far as flood control is concerned. The Overton bill now before us for consideration covers only a small part of the problem of flood control, and covers principally the lower Mississippi River. According to the terms of the Overton bill, we will have to spend $103,000,000 for the so-called Eudora spillway. We will have to spend $49,000,000 for seven reservoirs on the Yazoo River, and about $16,000,000 for reservoirs on the St. Francis River.

Mr. Chairman, I think this problem should be treated from a national standpoint. The Government has only a certain amount of money to spend for flood control. We should, to the best of our ability, see that every dollar of the money goes as far as possible to alleviate bad conditions not only in the lower Mississippi but also on the tributaries of that great river. Last year hearings were held by the House committee on the question of whether or not they would change the Jadwin plan for the construction of spillways in southeast Arkansas and Louisiana. The Flood Control Committee of the House asked General Markham, Chief of Army Engineers, to make a report on what would be necessary to eliminate the Jadwin planned spillways in southeast Arkansas. On May 15, 1935, in Document 3 of the Seventy-fourth Congress, General Markham wrote Mr. WILSON, chairman of the Flood Control Committee, as follows:

The following report is submitted in response to the resolution of the Committee on Flood Control of the House of Representatives, dated April 24, 1935, requesting the Chief of Engineers to submit a report on a series of reservoirs in the Arkansas River Basin, the White River Basin, and other river basins for such relief and protection as will abrogate the necessity of fuse-plug levees and diversions from the main channel of the Mississippi River.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. TERRY. Mr. Chairman, General Markham goes on with this statement:

The Mississippi River Commission has submitted a report, dated December 15, 1934, in accordance with section 10 of the Flood Control Act of May 15, 1928, on a comprehensive system of reservoirs for flood control. This report lists 151 reservoirs as best adapted to the purpose of local flood control on the tributaries on which they are situated and the flood control of the Mississippi River. The total estimated cost of the entire system is $1,125,807,000. The most effective reservoirs of the system, so far as the flood control of the Mississippi River is concerned, are the group of 13 on the Arkansas River and 13 on the White River, the estimated cost of which is $126,719,000.

The report of the Mississippi River Commission, which will be transmitted to Congress in due course, shows that the operation of the entire system would have so reduced the 1927 flood that it could have been carried between the levees provided in the project adopted by the Flood Control Act of 1928, without diversions from the main channel of the Mississippi River if the fuse-plug levees were raised to the same grade as the remainder of the system. For a larger flood, or the so-called superflood, such as would have resulted had the flood of 1927 been augmented by greater discharges from the upper tributaries, the complete reservoir system, if operated without regard to flood control in the tributaries, would have so reduced the flood discharge that it probably could have passed through the leveed channel without recourse to floodways and diversions. If, however, the system were operated to afford flood control for the tributaries as well as for the Mississippi River, the discharge of such great flood would have been in excess of the capacity of the leveed channel.

The report indicates therefore that the costly system of reservoirs under study would not abrogate the necessity for fuse-plug levees or similar works, and diversions from the main channel of the Mississippi River to afford assured protection against extreme floods.

The reservoirs included in the study of the Mississippi River Commission were those developed by exhaustive studies of the various tributaries made in accordance with section 10 of the Flood Control Act of 1928.

Mr. Chairman, it seems to me that before this Committee authorizes an expenditure of $272,000,000, which will benefit only a small section of the country on the lower Mississippi, it should give careful and serious consideration to the inclusion of these 26 reservoirs which the Chief of Engineers admits will reduce the flood height at Arkansas City by over 4 feet, and not only will it do that but it will give protection to the valley of the Arkansas River in Arkansas, Oklahoma, New Mexico, and Colorado and on the White River in Arkansas and Missouri.

Mr. FULLER. Will the gentleman yield?

Mr. TERRY. I yield to the gentleman from Arkansas.

Mr. FULLER. Is it not a fact that the Arkansas and the White Rivers are the two largest tributaries of the Mississippi River, and they are the only two rivers of that character that have not received Federal aid?

Mr. TERRY. I think the gentleman's statement is correct as to reservoirs.

Mr. FULLER. Is it not true also that the 26 projects that we are trying to have included in here are the very same 26 that this same committee reported to the House in a bill which was passed by the House at the last session of Congress and is now dying in the Senate?

Mr. TERRY. The House included these reservoirs in a bill which was passed last August, but, with the exception of two, all of them were taken out in the Senate.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield 3 minutes to the gentleman from Michigan [Mr. MAIN].

Mr. MAIN. Mr. Chairman, this bill deals with subject matter which fundamentally requires technical information. Local atmosphere, based upon some appreciation of the physical facts in the territory involved, will have a bearing upon this vote. For these reasons I hesitate to offer any comments on the merits of the bill. However, as a member of the committee, perhaps I can render some service to the Members of the House by calling attention to the fact that the

provision for this so-called Eudora spillway does not contemplate the acquisition of a fee-simple title to the land which may be overflowed in the event of the superflood, which is contemplated by the sponsors of the bill. The bill proposes only to acquire the rights of flowage at a cost of some $15 or $20 per acre involving an area of 822,000 acres. A considerable portion of this land is well developed and is in a high state of cultivation.

I have a picture, therefore, Mr. Chairman, of this spillway in some unfortunate period in the future being in a fine state of cultivation and development for rural and urban uses; but if this superflood should come, this area would be turned into a temporary river 10, 15, or 50 miles in width. Of course, the population would be disturbed, and no doubt there would be great destruction of property and possibly loss of life. Although I do not for a moment put my opinion against the opinion of the engineers, yet it does seem to me that the proposed expenditure of $103,000,000 for this Eudora spillway is adopting the pound of cure instead of looking for the ounce of prevention. It does seem to me, Mr. Chairman, that the plan for reservoirs on the White and the Arkansas Rivers is in line with the homely policy that prevention is better than cure; and I undertake to say, no matter how valuable the Eudora spillway may be from the standpoint of the people on the easterly side of the Mississippi River, it cannot by any stretch of the imagination render any service in avoiding flood dangers at Pittsburgh or Cincinnati. But, on the contrary, Mr. Chairman, treatment of the flood problem on the Monongahela and Allegheny Rivers and on the White and Arkansas Rivers will help to avoid the flood dangers on both sides of the lower Mississippi River.

[Here the gavel fell.]

Mr. WILSON of Louisiana. Mr. Chairman, I yield 5 minutes to the gentleman from Oklahoma [Mr. DISNEY].

Mr. DISNEY. Mr. Chairman, if flood control is what we really want here, then everybody should vote for the amendment. If this is what is really wanted in the lower Mississippi, then the addition of a comparatively small sum of money, compared with the total, added to the amount carried here really produces flood control. When you add a comparatively small sum of money, even though we are dealing in large sums, and head off the top flood water by from 4 to 5 feet, as compared with a 9-inch cut-off, with comparatively a little less money, then the advocates of the bill, if flood control is all that is involved, should join with the advocates of the amendment and pass the amendment.

I am pleased to be on common ground with my colleague, the gentleman from Pennsylvania [Mr. RICH]. I usually disagree with him quite violently, but this afternoon I admire his judgment and endorse the suggestion he has made, that it is common sense by the addition of less than one-half more money to get 10 times the result.

Now, let me talk to you a moment about the Arkansas River. The Arkansas River is 1,500 miles in length. It heads up in the middle of Colorado and the watershed embraces the greater part of Oklahoma, a great share of the States of Kansas, New Mexico, Colorado, and Arkansas, inhabited by nearly 4,000,000 people. This river, with its nearly 4,000 miles of tributaries, has caused an annual flood damage over a long period of years of nearly $5,000,000. If you will amortize the amount involved for a moment in your own minds, you will see it pays big dividends when you add to it the flood damage in the White River, and since the amendment which is to be offered will really bring about flood control.

We do not have to hark back many years to the time when the Army Engineers declared that the only way to control the waters of the Mississippi was by more dikes and levees on the lower Mississippi. Only in recent years have they agreed that the reservoir system is the proper one, and here is what they now say officially and authoritatively. I am quoting from their own report:

The group of 26 reservoirs in the Arkansas and the White are by far the most effective—

Not equally effective, but by far the most effective—

in controlling the floodwaters of the main stem of the Mississippi.

What more do you want? Why not join us in the amendment instead of simply saying that "if your amendment is adopted it will kill the bill"? How is it going to kill the bill? Why should we not stand up for our rights and demand that we have our rights when we are within reason? Are we going to continue to be browbeaten by the departments and by another body? This is the time to say how far we shall go when we have all the rights and all the reason on our side of the program.

These 26 projects went in last year. It is true they were knocked out in another body, and there may be a duplication of two or three or four of them, but we are not going to build all of them at once. Therefore we need not be alarmed at this preliminary stage of the legislation that we are going to have any duplication. This is simply an authorization anyway, and the time will come when we will have to make a selection between the projects when time for actual appropriation comes, and under the terms of the bill, if the amendment is adopted, we carry our share with respect to the payment of rights-of-way and the other penalties or costs that have to be borne. So it seems to me reasonable, if flood control on the lower Mississippi River is what you really want, to adopt the amendment. [Applause.]

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield 5 minutes to the gentleman from Oklahoma [Mr. NICHOLS].

Mr. NICHOLS. Mr. Chairman, ladies and gentlemen of the Committee, I am sorry that there are not more Members present on the floor to listen to the discussion of this very important matter. Thanks to the able and accurate count by the Chairman, they are not here; but this is a most important matter. There is a very important spot in the United States along the White and Arkansas Rivers that has long been forgotten territory insofar as relief from floods is concerned.

The gentleman from Oklahoma said if this is to be a flood-control bill, why not make it that. I should like to ask the same question.

No one will say that by taking care of the area in the lower Mississippi you will solve 100 percent of the flood problems of the lower Mississippi, but a report of the Army Engineers says that the building of these 26 reservoirs on the White will control 50 percent of that tributary and on the Arkansas 55 percent of the total flood-producing area.

A report made by the President of the Mississippi River Commission in April 1935 stated that the construction of these 26 reservoirs would reduce the flood stage 4 feet at Arkansas City.

It goes into the number of second-feet and says that construction of these 26 reservoirs would reduce it by 320,000 second-feet.

I have the utmost respect for the reports of the Army Engineers on this flood problem, and they say that the construction of 26 reservoirs are most important to control the floodwaters of the lower Mississippi.

All you gentlemen have answered every argument that has been made by throwing into our faces the recommendations of the Army Engineers.

I give it back to you and ask you to stand by the recommendation of the Army Engineers. They say that the construction of 26 dams on the White and Arkansas Rivers would take care of those floodwaters that contribute most to the floodwaters of the lower Mississippi.

If you are not going to support the Miller amendment simply because you are afraid it will destroy this bill, then I say to you that that is a poor excuse. How do you know it will destroy the bill? Who is the man here who can say that he has word from the White House that it will destroy it? Who is the man here who can say that he has word from another body that it will destroy it? My guess is as good as yours. I say that it will not. I say that from all points of reason that it should not, and I am one who still thinks that we are operating at least to some extent a reasonable system of government in these United States.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. WILSON of Louisiana. Mr. Chairman, I yield 5 minutes to the gentleman from Arkansas [Mr. McCLELLAN].

Mr. McCLELLAN. Mr. Chairman, I regret that in the consideration of and passage of legislation of such vital importance there should arise any confusion or controversy whatever. It is unfortunate when we come into the House with a bill on which a committee has spent a whole year—all last session of Congress and part of this—in hearings, where every bit of testimony that was available was heard, that we should be confronted with a squabble in an effort to superimpose laymen evidence and laymen opinion for that of those trained and experienced and able to give counsel. When the bill has the endorsement and approval of the highest authority next to the Congress and the President of the United States, it should appeal to our judgment and command our respect and support. We should not be asked to accept laymen testimony in preference to that which is authentic insofar as the best technical minds go.

I want you to get a correct picture with reference to this problem. The 1928 act adopted a project for the control of floods in the lower Mississippi River. That project is in process of execution now. There is one phase of it that has not been undertaken and is not going to be undertaken because, as I understand, on account of the interpretation placed on the act. You already have a spillway in this area [pointing to map] now in operation which, if a flood comes, will cover all the area shown in this area in green, but these guide levees shown in yellow on the map have never been built. They were supposed to have been constructed to control these floods. All of this black dotted line is a fuse-plug levee supposed to be 32 miles in length, but it is in reality 65 miles long, and it is left open there and is 3 feet lower than the levee on the opposite side of the river; and that is for the purpose of permitting the excess water, when the floods come, to overflow and go down what is known as the Boeuf Basin and will cover not just that within the yellow lines but will cover all this area in green. That is the unfinished part of the project, that is the part of the project the Markham report modifies and undertakes to improve.

Let me point out wherein it does. In this Boeuf floodway area there are 1,326,000 acres of land, while in the Eudora floodway, recommended to be adopted as a substitute for the Boeuf, there are, including the back protection levee, only 822,037 acres, or 503,963 acres less of the most fertile lands in the valley. You can, therefore, construct this floodway for several million dollars less than the Boeuf floodway, so the modified plan is the most economical and carries with it the greatest conservation of these fertile lands. It is a large improvement over the present adopted project. I hate to disagree with my colleague from Arkansas [Mr. MILLER] but he made one statement I think is not correct, when he told you that there were now condemnation suits pending in Little Rock, Ark. That is a mistake. There is not a condemnation suit pending there by the Government. Suits have been filed by landowners in this Boeuf Basin because their property has been taken by the Government for public use without due compensation and those suits are pending and the Government is delaying them. Every time they come up for trial the Government delays and has them continued in the hope that Congress will pass this bill and abandon the Boeuf floodway so that those suits will not have to be tried and can be dismissed and in that way settle the controversy. Those are the suits that the gentleman referred to. They are not condemnation suits. I want to answer another argument that has been made.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. WILSON of Louisiana. Mr. Chairman, I yield the gentleman 2 minutes more.

Mr. McCLELLAN. It has been said that if we want flood control, if you want to solve this problem in the lower Mississippi Valley, we should adopt this amendment to construct the reservoirs. I do not oppose the reservoirs. If they are constructed together with this project, they will solve every flood-control problem that I have in my district and I shall be ready to resign from the flood-control committee and go to some other where I might better serve the further interests of my constituency, but the Army Engineers do not say, as the gentleman from Oklahoma [Mr. NICHOLS] stated—they never have said—that the reservoirs on the White and the Arkansas were of major or greater importance than these floodways or diversion channels. Let me tell you what they have said. They did say that those reservoirs, insofar as the effect of reservoirs on the lower Mississippi Valley is concerned, would contribute more, that they were of more value than reservoirs on the other tributaries, but they say you can construct reservoirs on the White and the Arkansas at a cost of $126,000,000. I say to you read the report and the hearings. It is there repeatedly said in the last session of Congress and in this that you may build them, but you cannot dispense with the Eudora floodway after they are constructed. That these diversion channels are indispensable to the safety of the valley not only for superfloods which may come any time within the next 100 years from now, as they say, but when any flood comes of the proportions of the 1927 flood they will still be necessary even though the reservoirs on the White and Arkansas have been constructed and are in operation.

Mr. NICHOLS. Mr. Chairman, will the gentleman yield?

Mr. McCLELLAN. Not now.

Mr. NICHOLS. I deny that statement.

Mr. McCLELLAN. Get some time and read it. The gentleman can read the record I am speaking of.

[Here the gavel fell.]

Mr. McCLELLAN. If you will give me time I will answer the gentleman. I am referring to the record. I know it is in there.

Mr. Chairman, this Nation, as never before, is conscious of the impelling necessity for legislation adopting projects that will bring relief from the menace, devastation, destruction, misery, and human suffering caused from violent floods such as we have had in the recent past. It would be wonderful indeed if we could, with the enactment of one law, provide for the immediate construction of flood-control projects that would control the waters of every important stream in this Nation and insure the safety of their valleys. Common reason suggests, however, the impossibility of being able by the passage of one bill at this session of Congress to accomplish such tremendous results. So many factors enter into flood control that it is necessary to have investigations, surveys, studies, and the counsel and recommendations of the best engineering staff available to the United States Government. We do not like to proceed by piecemeal, that is true. I am going to support the pending bill because this project is ready. Years of study, surveys, and investigations have been made. Due hearings have been held. This bill has the endorsement of the Chief of Army Engineers, on whom the President of the United States must rely for his guidance in the approval of any legislation involving an engineering plan or construction projects on our navigable streams. It is ready for passage and should have the support of every Member of this House who is in sympathy with flood control. Nothing can be gained by opposing this bill simply because other worthy projects are not included or because it does not embody a comprehensive program throughout the Nation. We should pass this bill and then pass others as rapidly as proper investigation and report can be made and where they are found to be practical, economically justified, and necessary for the conservation and protection of lives and property.

To those who are criticizing this bill and saying that the 1928 Flood Control Act appropriated $325,000,000; and we are now back asking for more money, I wish to direct your attention to the record. When the 1928 floold-control bill was under consideration it was pointed out at that time by the Mississippi River Commission and the Chief of Army Engineers that the cost of the project for the control of floods and protection of the lower Mississippi Valley would be approximately $775,000,000. See General Markham's

statement, page 37 of the Senate hearings on this bill. Therefore, Congress at the time of the passage of the 1928 act was fully advised what the ultimate cost of this undertaking would be. The appropriation now asked is not, therefore, an unanticipated expense.

The highest engineering authority has stated repeatedly that it is necesasry to control or divert 1,000,000 cubic feet per second of floodwaters in case of a major flood in order to insure the safety of the lower Mississippi Valley. I should like to see the construction of the 26 reservoirs on the White and Arkansas authorized at this session of Congress. They are most meritorious, and the valleys of these rivers are entitled to that consideration. In order that there may be no misunderstanding or any misapprehension on the part of any Member when he comes to cast his vote on this legislation, I desire to emphatically assert, based upon the repeated statements of the Chief of Army Engineers and the president of the Mississippi River Commission, that construction of the reservoirs on the White and Arkansas and the cut-off and stream-rectification work now being carried on, will not suffice to control the floods in the lower valley. They will contribute to it substantially. The reservoirs will lower flood heights on the Mississippi 4.2 feet. The effect of the cut-offs has not yet been accurately determined. So far as we know at present the best opinion is, when completed they will possibly lower flood heights 2½ feet.

The reservoirs will withhold approximately 365,000 second-feet of water, leaving a volume of 635,000 cubic feet that must be taken out of the main channel by diversion. If a flood should reoccur, of the proportions of that which came in 1927, with the 26 reservoirs on the White and Arkansas in operation and the cut-offs and stream-rectification work completed, there would still be, Mr. Chairman, a volume of water, if confined, five feet higher than the main channel levees. Therefore, let us regard the proposed amendment for 26 reservoirs on the White and Arkansas solely upon its merit and not labor or act on the erroneous impression that by amending this bill so as to authorize the construction of these reservoirs, the Eudora floodway can be dispensed with. If the Army Engineers and the Mississippi River Commission are competent, if they are giving and have given us the benefit of their best judgment, if they are worthy of our relying upon them for correct engineering data, information, and recommendations, then we should follow them and adopt the plans they submit and recommend for the solution of these engineering problems. I, for one, do not feel competent to dispute the judgment of the Army Engineers in matters of engineering. In that respect I subordinate my judgment to theirs. In matters of economics and in the practical provisions of legislation dealing with the execution of the plan and administering the law, then I rely upon my own judgment and from my experience as a lawyer and as a Member of Congress.

Others contend that we should adopt the 151 reservoirs program at a cost of $1,125,807,000. The record reveals that it would take from 20 to 30 years—another generation—to complete such a program. During that time this great valley would continue to be exposed to the ravages of torrential floods. Shall we delay? Is it wise to procrastinate? The plan is approved. It is time to act, and we can be assured that with the passage of this legislation, either with the amendment for the 26 reservoirs on the White and Arkansas or without it, that it is ample to and does provide for a complete and final solution of the flood-control problem in the largest and most fertile valley in all the world.

Mr. Chairman, I trust that the membership of this House will rise above partisan influence and that we shall be guided not as Democrats or Republicans but as representatives of a wonderful people, and act and vote as Americans, in the interest of America, and for the common welfare. [Applause.]

[Here the gavel fell.]

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. WILSON of Louisiana. Mr. Chairman, I ask that all Members who have spoken on this bill may have permission to revise and extend their remarks.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. RICH. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. WEARIN].

Mr. WEARIN. Mr. Chairman, I ask unanimous consent to revise and extend my remarks and include a few short quotations.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. WEARIN. Mr. Chairman, the accent of the present administration is upon soil and moisture conservation as far as the farm and agricultural program is concerned. It seems to me that the thought is wrapped up very closely with the flood-control program. It has been my pleasure to cooperate with this committee, to some extent, as far as it was possible to do so, in the matter of this legislation, which in my judgment is not an answer to flood-control problems. The time is coming when the United States Government is going to have to devise a Nation-wide program for flood control that will conserve the moisture at the points of its origin, rather than building levees higher and higher along any of the streams.

Mr. COLDEN. Mr. Chairman, will the gentleman yield at that point?

Mr. WEARIN. I will a little later on.

I happen to live along one of the principal tributaries of the Mississippi River; namely, the Missouri. It carries a tremendous volume of water into that great Father of Waters. Unfortunately, we have accentuated our interest in that major stream rather than in the tributaries that go to make up the body of its flowage. It seems to me that we, the Committee on Flood Control, the Congress, the War Department, the Soil Conservation Service, the Forestry Department, and National Planning Board, and any other related agencies, should be cooperating with a view to advancing a complete coordinated national program of water conservation composed of reservoirs and of basins along the tributaries of the Mississippi, and in turn their tributaries, as well as other river systems, all of which would couple up nicely with the conservation of our soil and the moisture in our small streams. Then and only then will we have a complete answer to this unfortunate condition that prevails in the lower reaches of the Mississippi River.

It should be evident that the proposed program would properly reach back to the tiniest of trickling streams that mark the beginning of the entire trouble. The present disastrous floods near the mouth of the Mississippi are a result of many crude and thoughtless abuses of nature on the part of man. We have stripped the Nation of its vast forest resources that at one time held back tremendous volumes of water both at the roots of the trees and in their foliage. In fact, we have not even paused long enough in our headlong dash for profits to take stock of what happened to China as a result of a similar program. We have hurriedly dipped our plows into the sod of prairie lands that should never have been turned over, because their characteristics were such that they were not suitable to profitable cultivation. The result has been the hastening of many little waters through the sandy loam-washing gullies in a dash to the great rivers. At the elbow of the plowman has come the dust storm and all its attendant evils just because we did not realize the sod we destroyed had been conserving moisture and acting as an insurance policy against floods. We have hastened, in order to provide employment for dredge operators, to straighten out innumerable little creeks and rivers that used to wind their way through fertile valleys, holding up the waters at their bends and in their deep, cool pools that were invaluable as beauty spots and conservers of wildlife, in addition to being reservoirs the contents of which seeped down into the subsoil and preserved the productivity of the area. In the valley where I live a crude,

aimless, unplanned ditch ruined a beautiful little stream with wildlife resources, power and local industry sites, and lowered the natural water level until we have been forced to go from 15 to 20 feet deeper for good wells.

I mention these things because they have all, in addition to being local calamities, added to the problem of flood control not only on the lower Mississippi but upon every great river. The building of higher and higher levees does not solve it. We should be spending millions to correct such past mistakes, but only after we have devised a thoroughly coordinated program in some such manner as I have suggested, taking all angles of the situation into consideration and mapping it out for the entire Nation. Unless we do this our problem is going to become more and more complicated with the passing of the years. The situation reminds me of some correspondence I have been having recently with that able, thoughtful, and noted American, Gutzon Borglum. He attached a copy of a letter concerning his trip through a flooded area to one he wrote to me, and I want to quote a few paragraphs from it, because they indicate one of a number of solutions, if we really wanted to do something about it all.

I was on a train slowly feeling its way through the water which washed above its running gear. We all felt angry and impatient and ashamed as we stared into the pale faces on those wet, bedraggled sufferers waiting in cars and trucks on the side track to let us go by. Just beyond was the mad current of the main body of the river. Everything was flooded. A little frame church teetered by, bumped along, careened, its little bell clapping one or two faint tolls, then silent, gone. God! Why don't we do something, rushed over me. Then I remembered we were only a democracy and that we were at peace—we were not at war, and the vote out here was really not worth very much to any party. The waters of the Missouri and Mississippi Rivers and their tributaries rampant represent one, if not the most, ruthless force on the American continent and are a menace to the sources of a vast part of our life and wealth.

* * * I noticed after we passed the Red River there were no more flood waters. The great ravines and river beds through Texas were fairly dry and carried easily the little water that trickled through them. Then I recalled the great Missouri with its tributaries. It drains all of Montana, the third greatest State in the Union, Texas and California alone leading. Tributaries of the Missouri drain three-fourths of Wyoming, all of North and South Dakotas; the Platte, that wild, masterful flood, drains part of Wyoming, the northeast corner of Colorado, and all of Nebraska. In Kansas there are the Kansas and Arkansas Rivers; the Red River between Oklahoma and Texas and all of this eastern slope of the Rocky Mountain range for 2 months has been in flood, pouring its volumes down through the narrow throat of the Mississippi into the Gulf. America little realizes that a strip from 800 to 1,000 miles in width, from Canada in the north to Texas in the south, east of the Rocky Mountains, drains into the Mississippi. * * *

The following idea has occurred to me recently and I have made it known through one public address: Tap the flood waters which flow into the Mississippi River from the eastern Rocky Mountain watershed, starting at such point as will insure the greatest amount of drainage and deliver the water to the most necessary points, traveling south. An exact location cannot be suggested in this letter. The important matter is to cut the great arteries, beginning with the Missouri, carry the great canal south across the Platte, the Kansas, Arkansas, and Red Rivers. This process could prevent all flood water west of, let us say, longitude 970 from ever going into the Mississippi and could be so effective that the little water that would enter the rivers east of the great canal would be of no importance. At other times the great gates would automatically allow the streams to continue their natural flow. Such a plan would protect the Mississippi Basin from all the Rocky Mountain water in times of danger. Very little imagination will tell anyone instantly what a bond of security that would establish in the hearts of every property owner in the great Mississippi Valley from Iowa south to the Gulf. But that is only half the picture. That flood water would be available in Nebraska during dry period, in Kansas and in Oklahoma. * * *

In Texas a system of lakes could be easily established to receive the whole 10,000 square miles of water without loss to anyone. * * *

Mr. Borglum's proposal is worthy of consideration in connection with the establishment of reservoirs, basins, forest areas, power projects, soil-conservation work, and all of the other outdoor problems so closely associated with water, that product we have been wasting so wantonly when it should be stored like any other crop.

At the present time the water that we need in Iowa, Nebraska, and the upper sections of that river system is being stimulated and hastened in its flow out into the Gulf of Mexico, along with tremendous volumes of rich soil that never ought to have been washed away. It might be well for us to observe that along the Nile, with its heavy load of silt, they have devised a plan of spreading the waters, under control, for the sake of the fertility of the soil. The loss of our waters and our fertile soil will not be improved materially from the standpoint of permanence, by any program of levee construction. I am not necessarily opposing the bill, but I deplore its failure to cope with the problem.

I am aware of the fact that the people in the section affected are deserving of consideration and protection. I want to protect them, but at the same time I hope we will not forget that this particular bill is like putting salve on an ingrown toenail. It eases the pain, relieves the complications, but it does not eliminate the cause of the evil, which without attention will grow worse and worse. That is what we, as statesmen, if we are such, should attempt to do—eliminate the cause with a constructive plan. I trust that either before this Congress adjourns or before another Congress passes into history, the Flood Control Committee will be able to come before this House with a program of national water conservation that I think we need and which I think should be coupled up with the agricultural program, the soil-conservation program, the forest and other conservation work.

When we do that we will have solved the major portion of our flood problems in the lower regions of the Mississippi River, and all our other large river systems. We can in that manner make a tremendous contribution to the national welfare, a contribution that will result in the preservation of our soil fertility, our national water levels in the various sections of the Nation that have been lowered materially through short-sighted drainage policies, not only along the major streams but along the minor streams, and the water thus saved in the territory where it is needed, and used in the proper manner, either for irrigation or for the preservation of an atmospheric condition that is necessary if we are to have as a permanent asset fertile, productive areas in the United States. I am doing everything in my power to assist with the advancement of a Nation-wide program such as I have suggested.

I now yield to the gentleman from California.

Mr. COLDEN. The gentleman from Iowa and others who have discussed this question have referred to flood control, erosion, and irrigation. Why have you not mentioned the development of power and of navigation that are so closely interwoven with this question of flood control?

Mr. WEARIN. I am in thorough accord with the New Deal power-production program that should be incorporated with the matter of water conservation in the United States, and I trust it will be advanced and spread throughout the whole United States. The Tennessee Valley Authority has demonstrated the possibility of producing and distributing electricity, after proper allowances for depreciation, taxes, and operating costs, to the public at a fraction of its present cost. The people should not be denied such privileges and the program of power production can very well be consolidated with flood control and its associated fields. I will have more to say about that particular subject a little later on. [Applause.]

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield 3 minutes to the gentleman from Washington [Mr. KNUTE HILL].

Mr. KNUTE HILL. Mr. Chairman, I was born and reared in the Mississippi Valley, so I am quite familiar with conditions there. About a quarter of a century ago I went out West. One good thing in going out West is that it gives you a different viewpoint. Coming to the point, I want to say that in spite of the fact that quite a number of those who are standing for flood control opposed us yesterday in trying to get money for irrigation and reclamation in the West. I am strongly and heartily in favor of flood control, whether it be in the Mississippi Valley, whether it be in the upper Mississippi Valley, or whether it be on the New England coast, and I will tell you why. Although I am a resident of the West, I am a citizen of the United States and

believe in taking care of our people, whether they be down in the Mississippi Valley, up in New England, or out West. I believe in the motto "Live and let live."

They talk about a pork barrel. I wonder if it is a pork barrel when we are trying to save the homes of the people or where out West we are trying to build homes for the people?

I say to you here and now I am in favor of the Miller amendment. Why? Because we are taking care of conditions at the headwaters. "As the twig is bent the tree is inclined." Taking care of the headwaters through the use of dams is a control of the difficulty at the source, and I believe in taking care of them all along the eastern watershed of the Rocky Mountains all the way from Canada to the Gulf of Mexico. Taking care of waters there will prevent floods in the lower portions of the river.

Mr. COLDEN. Mr. Chairman, will the gentleman yield?

Mr. KNUTE HILL. I yield.

Mr. COLDEN. Why not build power plants on these tributaries and let them pay for themselves?

Mr. KNUTE HILL. That is all right; I am in favor of building power plants, building homes, and so forth. I am in favor of all those things.

Mr. RICH. Mr. Chairman, will the gentleman yield?

Mr. KNUTE HILL. I yield.

Mr. RICH. How would the building of dams for power plants provide for flood control?

Mr. KNUTE HILL. I said I was in favor of power development, too.

Mr. RANDOLPH. Mr. Chairman, will the gentleman yield?

Mr. KNUTE HILL. I yield.

Mr. RANDOLPH. The gentleman will agree, then, that all over this country the construction of reservoirs and small dams on the headwaters of streams is our most effective method of flood control.

Mr. KNUTE HILL. The gentleman is correct.

I want to emphasize that I am in favor of flood control, that I am talking for it and voting for it—a little different from the attitude taken by the chairman of our Committee on Appropriations on yesterday, when he said he was for reclamation and then talked and voted against it. [Applause.]

[Here the gavel fell.]

Mr. WILSON of Louisiana. Mr. Chairman, I yield 4 minutes to the gentleman from Missouri [Mr. ZIMMERMAN].

Mr. ZIMMERMAN. Mr. Chairman, I want to take a few minutes of the time of the Committee this afternoon to explain my interest in this bill and why I am for this bill. Those of us who have studied this question of flood control by means of reservoirs know that reservoirs constructed for the generation of hydroelectric power cannot be used as a means for the preventing of floods.

Mr. COLDEN. Mr. Chairman, will the gentleman yield at this point.

Mr. ZIMMERMAN. I yield.

Mr. COLDEN. What about the Tennessee Valley undertaking?

Mr. ZIMMERMAN. In other words, it costs so much to construct a dam that may be used for the generation of electric power that it is not economically justifiable as a flood-control proposition.

Mr. GRISWOLD. Mr. Chairman, will the gentleman yield?

Mr. ZIMMERMAN. I yield.

Mr. GRISWOLD. General Markham testified, did he not, that dams constructed for creating reservoirs to be used for the generation of hydroelectric power were not helpful in the prevention of flood control?

Mr. ZIMMERMAN. That is right. General Markham, Chief of the Board of Army Engineers, said that reservoirs constructed for power purposes were not available for flood-control purposes.

Mr. GRAY of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. ZIMMERMAN. I yield.

Mr. GRAY of Pennsylvania. Is it not true that any reservoir that is constructed for the purpose of producing power is filled with water?

Mr. ZIMMERMAN. That is right.

Mr. GRAY of Pennsylvania. Whereas a reservoir or dam constructed to control floods is empty except during that season of the year when the floodwaters need to be checked.

Mr. ZIMMERMAN. Yes; they must be dry during most of the year.

Mr. COLDEN. Mr. Chairman, if the gentleman will yield further, that is not true in the case of Boulder Dam in our part of the country.

Mr. ZIMMERMAN. That was constructed, I am sure, on a different principle.

Mr. COLDEN. That was for the purpose of flood control and the generation of power.

Mr. ZIMMERMAN. My colleague the gentleman from Arkansas [Mr. MILLER] has referred to the placing of the St. Francis River in this flood-control project. The gentleman from Arkansas did not tell this committee that the people in the St. Francis Basin have already contributed $50,000,000 toward building the levee along the main stream of the Mississippi River to keep the water of the Mississippi River out of the St. Francis Basin. Because the Ozarks have been denuded of their forests, because our hillsides have been cleared and plowed during the last 10 or 15 years the run-off has been so rapid and fast that the waters debouched down into the St. Francis Basin and have destroyed the levees which we built at our own cost and expense just as the levees were built along the White River and the Arkansas River; but, in addition to building our own levees at our own expense, levees which have been destroyed, we have contributed $50,000,000, and are now paying taxes to maintain the levee along the Mississippi River to keep the waters of that river from spreading over the rich St. Francis Valley. I may say further that we have lost annually $1,500,000 during the last 15 years. The Government finally recognized the necessity of treating the St. Francis River and have gone in there and spent over $1,000,000 repairing the levees that were destroyed by floodwaters from the St. Francis River. This, Mr. Chairman, is why the St. Francis River and the Yazoo River have been included in the lower Mississippi project by the Army Engineers.

Let me emphasize the fact that if we adopt this amendment and add $126,000,000 to this program the Army Engineers will not approve it; and if we pass this bill and the Senate concurs in this amendment I doubt seriously if it can receive Presidential sanction. We ought to be practical about these matters.

Mr. JOHNSON of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. ZIMMERMAN. I yield.

Mr. JOHNSON of Oklahoma. The gentleman has just made an interesting statement. If I understood him correctly, he stated that he doubted seriously if it can receive Presidential sanction if the amendment is adopted. Will the gentleman tell us on what authority he makes such a bold statement?

Mr. ZIMMERMAN. Because the Army Engineers have refused to recognize the feasibility of adding reservoirs to this project.

Mr. JOHNSON of Oklahoma. What has that to do with the President's attitude? Surely the gentleman does not mean to state that any Army engineers anywhere speak for the President of the United States.

Mr. WILSON of Louisiana. Mr. Chairman, I yield the gentleman 2 additional minutes.

Mr. ZIMMERMAN. Mr. Chairman, something has been said about these reservoirs having been placed in a bill last year. May I say to the Members that the pending bill has never been before the House prior to the present time? No bill has been brought to the Seventy-fourth Congress providing for treatment of the lower Mississippi Valley situation. We did include these 26 reservoirs in an omnibus bill which passed this House last year, but we all remember the fate of that bill. It was laughed out of court when sent over

to the Senate. It was held up to ridicule and, as a consequence, the bill lies dormant today.

This bill has passed the Senate. It has received the approval of the Army Engineers, as well as the Mississippi River Commission. If we load the bill down with amendments I doubt if there is any chance to have it enacted at this session of Congress.

Mr. RICH. Will the gentleman yield?

Mr. ZIMMERMAN. I yield to the gentleman from Pennsylvania.

Mr. RICH. Have the Army Engineers approved section 5?

Mr. ZIMMERMAN. They have not approved section 5, but they will not object to it if incorporated in this bill, so General Markham stated to the committee the other day.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield 4 minutes to the gentleman from California [Mr. FORD].

Mr. FORD of California. Mr. Chairman, I do not suppose a great many Members of the House fully realize the situation that exists in the Mississippi Valley as a result of the floods of the Mississippi River. We read about the situation in the papers and we know something about it in a general way. But, Mr. Chairman, I lived on that river for a great many years, and I know something about the situation. Millions of dollars have been squandered on various types of improvement on that river with the idea of checking floods, but I am convinced the only way the floodwaters of the Mississippi River can be controlled is by going to the source, and through the medium of dams and reservoirs we may make that river safe.

We had a similar condition in California and Arizona under the Colorado River project. The Colorado River some years came down and flooded the whole area, and for a long time it hung like the sword of Damocles over the Imperial Valley. A dam was built at Boulder Dam which has served to check the situation and it has made life and property safe in the Imperial Valley.

Mr. COLDEN. Will the gentleman yield?

Mr. FORD of California. I yield to the gentleman from California.

Mr. COLDEN. Is it not true that at Boulder Dam, and generally throughout the country, flood control, navigation, and power go hand in hand?

Mr. FORD of California. They do. I should like to see this made a power project, but if it is not made a power project I am still in favor of it for the reason that flood control in a great, rich, magnificent area, such as is included in the Mississippi River Valley, is absolutely essential. The building of a purely flood-control dam does not necessarily mean that later on a dam which would produce power cannot be built there. For this reason I am heartily in favor of any measure that will take away from those people who live along the Mississippi River the danger and the fear of the appalling tragedy that occurs there ever so often when a flood comes along.

As a little boy I saw the Mississippi River come up over our farm and cover a thousand acres of corn to a point where if you went out in a boat and reached down you could not touch the top of the corn. That was rich ground and the corn grew high. Just about 18 or 20 miles below St. Louis, where the Meramec River joins the Mississippi River, I have seen our farm under 20 feet of water.

Mr. Chairman, I hope this measure will be passed.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield 4 minutes to the gentleman from Indiana [Mr. GRISWOLD].

Mr. GRISWOLD. Mr. Chairman, there is one thing this debate has developed, and that is the fact that as a national policy we have no policy so far as flood control is concerned. We picked up the lower Mississippi River in 1928 and used it as an individual project. We picked up the Sacramento flood-control project and used it as an individual project on a different basis. Then we picked up the Lake Okeechobee project. Those are the only three Federal-controlled projects and every one of them works on a different basis.

Let us take these various hearings: I do not care whether you take the hearings on the omnibus bill or the hearings on this bill or any other bill, you will find that all through the hearings runs the thread of thought that it might be better to control the water at the source—in other words, in the tributaries; but the Congress started, as General Markham stated, to establish a policy on the lower Mississippi of controlling the water after it got down there. That is the policy we are now requested by General Markham in these latest hearings to adhere to, because the Congress has established this policy in this single case. If Mr. Hoover and General Jadwin conceived an erroneous plan and Congress put it into execution in 1928, there is no reason why Congress should not in 1936 correct the error of the past.

We forget about all these other places that need flood control. General Markham in his latest testimony testified as to the economic loss, not in the lower Mississippi River country, but in the tributaries. He testified to the loss from the recent flood up in Pittsburgh, which was something like $250,000,000 in one particular section, the city of Pittsburgh. Yet, on the lower Mississippi River in 1913, the loss from the whole flood of that year, according to the Mississippi River Commission figures, amounted to only $160,000,000.

Mr. Chairman, I am in favor of the Federal Government going into the flood-control business as a national policy, and we should tackle the problem of these tributaries and congested districts where the loss is much greater than down where the floodwaters finally arrive. Unless we take care of these tributaries and take care of the economic loss in these tributaries, there will be no good come from these flood-control projects. We should consider the losses this past spring from the floods that occurred in New York, Connecticut, Ohio, Indiana, and elsewhere. We are not establishing a national policy. We are just keeping on with the old individual system which segregates one section from another or one region from another. Until we can reach the place where we have a national system, eliminate the economic loss in these tributaries, and confine the waters at the source, we will not accomplish anything. If we go to work on the lower Mississippi, or any other stream, we should take care of the tributaries as well. We have it on the testimony of General Markham and other officers of the Army Engineers that the great flood of 1927 in the lower Mississippi was caused by water that came out of the Arkansas; that the other floods were a result of the floodwaters in the Ohio. He further stated, "It is the combination that gives you the superflood", and that the Ohio floodwaters came from "small lakes and cracks in levees up the Wabash and up the Ohio." A national policy should make provision for impounding the water at the source.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I yield the balance of my time to the gentleman from Oklahoma [Mr. JOHNSON].

Mr. JOHNSON of Oklahoma. Mr. Chairman, the great problem of flood control is one in which every Member of this House is or ought to be tremendously interested and deeply concerned. When I came to the Congress a few years ago I was anxious to be placed on the Flood Control Committee and was very much disappointed, as most new Members are, when I was not made a member of the committee that I had my heart set on. Two years later, however, I was given a place on the Flood Control Committee. During my service on that important committee I made considerable study of the Nation-wide problem of flood control. I enjoyed my service on that committee. It was a pleasure to serve with some of the most excellent gentlemen in this Congress, some of whom are still serving with distinction on that committee. But, frankly, I soon became convinced that the majority of the members on the Flood Control Committee were concerned primarily in legislation for the lower Mississippi. It seemed to me they were not very much interested in a Nation-wide flood-control system in which I was so deeply concerned. Our hearings and investigations were confined largely to the lower Mississippi River. The tributaries were practically ignored.

I wanted to approach the flood-control situation from a national viewpoint. I believed then, and am more fully convinced now, that if we are ever to have a comprehensive and effective flood-control plan in America that we must stop the waters on the upper reaches of the Mississippi and the other rivers and streams of the country and not wait until the water gets down toward the mouth of such streams where it is absolutely impossible to control the raging devastating floods that sweep everything before them.

May I say that I am tremendously interested in flood control on the Mississippi, as well as on its tributaries? But I am thoroughly convinced that there will never be any real flood control by constructing levees and dykes only on the lower Mississippi.

A few years ago I went with the Flood Control Committee down the lower Mississippi on an inspection tour. We were on a little boat on the Mississippi where we rode most of the way from Cairo, Ill., to New Orleans. We crossed the Mississippi many times, and strange as it may seem, when our committee got within less than 50 miles of New Orleans our little boat, with a clearance of only 5 or 6 feet, struck a sand bar and there we were stranded for hours because of the millions of tons of soil that had been washed from Oklahoma, Missouri, Iowa, Ohio, Illinois, and the other States down near the mouth of the Mississippi. When we reached the mouth of the great Father of Waters we saw that red dirt going out for miles and miles into the Gulf of Mexico, and I became more and more convinced that if we were to solve this gigantic problem we must build a system of reservoirs on the upper reaches of the Mississippi and its tributaries in connection with a real Nation-wide soil-conservation program. [Applause.]

Our committee was taken out in the lower valley, 15 or 20 miles from the channel of the Mississippi River, where we saw houses in treetops 20 feet high, a pitiful sight to behold. Such scenes should convince anyone that it would be absolutely impossible to build dikes, levees, and floodways to control that ocean of raging water on the lower Mississippi at flood stages. I know it cannot be done if we continue to ignore the upper tributaries. Frankly, I have a deep feeling that it is wasteful extravagance to continue to pour millions of dollars into the lower Mississippi and fail and refuse to make any effort to check the floods before they get to the lower Mississippi.

It is needless for me to say that I am going to support the pending amendment of the gentleman from Arkansas, because I am convinced it points the way to sane, sound, and practical flood control. If adopted, not one of the 26 proposed reservoirs will be constructed in the district I have the honor to represent in Congress, so I cannot be charged with having a selfish interest.

May I add that I shall support the Miller amendment for the further reason that I am convinced it proposes the proper policy concerning the great, perplexing problem of flood control? Now or later this Congress is going to be compelled to adopt a policy with reference to flood control, and we are never going to solve the flood-control problem until we approach it in the sane, sensible manner of building reservoirs and stopping the water—or at least checking it—near where it falls. [Applause.]

May I stress the thought that, in my judgment, now is the time the Congress ought to adopt a permanent flood-control policy? It is high time that the Congress should decide if we shall continue the present makeshift method of wasting money on the lower Mississippi with utter disregard to the upper tributaries from whence all floods come.

Of course, Mr. Chairman, we hear the old story that if this amendment is adopted, it kills the bill. That is an old gag we have been hearing for many years—"if this amendment is adopted it will kill the bill" is always resorted to when sound argument cannot be offered.

Mr. DRIVER. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Oklahoma. I shall be delighted to yield to my good friend from Arkansas.

Mr. DRIVER. Can the gentleman point to any one project that this Congress has ever authorized that was not based upon the recommendation of the Army Engineers?

Mr. JOHNSON of Oklahoma. No; I know of none. But since the gentleman raises that question, may I remind him that each of the 26 reservoirs provided to be constructed under the Miller amendment has received the approval of the Army Engineers. Of course, we all know that the Army Engineers have favored the lower Mississippi Valley and that very few of them look with favor on reservoirs. And yet they admit that these proposed 26 reservoirs would lower the Mississippi at flood stage more than 5 feet.

Mr. DRIVER. Mr. Chairman, will the gentleman yield further?

Mr. JOHNSON of Oklahoma. Yes; I yield again to my distinguished and able friend from Arkansas.

Mr. DRIVER. My statement is made in view of the fact that the project bill now pending in the Senate carries $365,000,000 of authorized projects recommended by the engineers.

Mr. JOHNSON of Oklahoma. Oh, yes; but who in the world can tell what the body at the other end of this Capitol Building will do about flood control or on any other matter of legislation? [Applause.]

[Here the gavel fell.]

Mr. WILSON of Louisiana. Mr. Chairman, I yield 15 minutes to the gentleman from Mississippi [Mr. WHITTINGTON].

FLOOD-CONTROL WORKS IN THE ALLUVIAL VALLEY OF THE MISSISSIPPI RIVER

Mr. WHITTINGTON. Mr. Chairman——

Mr. FULLER. Mr. Chairman, I want to ask the chairman of the committee a question.

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Arkansas?

Mr. WHITTINGTON. No; I do not yield. Mr. Chairman, the bill under consideration involves no new plan, no new projects. It is an amendment to the Flood Control Act of May 15, 1928. It provides for the enlargement and expansion of that act.

It is confined to the alluvial valley of the lower Mississippi River. The Flood Control Act of May 15, 1928, was passed after the most exhaustive hearings ever conducted by the Committee on Flood Control.

Mr. FULLER. Mr. Chairman, the gentleman is making a very interesting speech and he ought to have a better audience. I suggest the absence of a quorum.

The CHAIRMAN. The gentleman from Arkansas makes the point of no quorum. The Chair will count. [After counting.] One hundred and seven Members are present, a quorum.

Mr. WHITTINGTON. Mr. Chairman, the bill under consideration for flood-control works in the alluvial valley of the Mississippi River involves no new projects. It provides for an authorization of $272,000,000 to be expended over a 6-year period. The bill is an amendment to the Flood Control Act of May 15, 1928. That act was passed by Congress after most thorough and exhaustive investigations. The Mississippi River has been studied by the Corps of Engineers for more than a hundred years.

The Flood Control Act of 1928 is sound from an economic and engineering standpoint. Levees along the main river were raised, strengthened, and enlarged; they were supplemented by floodways and diversions. The New Madrid floodway was to protect the territory in the vicinity of Cairo; the Boeuf diversion was to protect the area between the Arkansas and the Red Rivers; the Atchafalaya floodway was to provide for an additional outlet to the Gulf; the Bonne Carre spillway was primarily for the protection of the city of New Orleans.

At the time the project was adopted, all methods of flood control were considered, including the reservoir plan. The act provided for additional studies with the view to substituting reservoirs between Cape Girardeau and Baton Rouge for the Boeuf diversion. Further studies were made; the policy of diversions was reaffirmed. The Flood Control Committee of the House on January 28, 1932, requested the Chief of Engineers to examine and review the project with the view of determining if changes or modifications should be made in its final execution.

Prior to the great flood of 1927 all of the natural outlets had been closed; the last outlet to be closed was Cypress Creek in the vicinity of Arkansas City. There was a natural outlet in the vicinity of Arkansas City that provided for the escape of excessive floods through the Boeuf and Tensas Basins. Prior to 1916 this outlet was 12 miles wide. The Mississippi River Commission, representing the Government, permitted the outlet to be closed. In 1919 it was only 1,200 feet wide. In 1921 the Cypress Creek outlet was closed; the Mississippi River Commission committed a blunder; a monumental mistake was made. It was thought that levees only would solve the problem of flood control in the lower Mississippi Valley. As a result of the closing of Cypress Creek, the lands were cleared, cities were established, drainage canals were constructed, and highways were built. The people relied upon the Government.

In the Flood Control Act of 1928 a fuse-plug levee was provided at the head of the so-called Boeuf diversion. Other levees above and below and on the opposite side were raised, strengthened, and enlarged; the fuse-plug levee was to remain substantially at the 1914 grade. The plan is and was that excessive floodwaters would crevasse the weaker and lower levee and thus divert the waters through the Boeuf Basin. Guide levees were provided.

Section 4 of the Flood Control Act of 1928 declared that the United States would provide flowage rights for the destructive waters that were passed by reason of the diversion from the main channel. The people in the Boeuf Basin construed the act to mean they would be entitled to payment for flowage rights. An opposite view is entertained by the Chief of Engineers.

I opposed the fuse-plug levee. I advocated then, and advocate now, an automatic, controlled diversion, with compensation for flowage rights. The fuse-plug levee has always been a source of irritation and dissatisfaction.

Meantime, property owners in the Boeuf Basin filed suits for large amounts of damages. These suits are pending. After carefully studying the adopted project, Maj. Gen. Edward M. Markham, Chief of Engineers, on February 12, 1935, in House Flood Control Committee Document 1, Seventy-fourth Congress, first session, submitted a report and recommended an amendment to the Flood Control Act to provide for the substitution of a controlled diversion at Eudora for the Boeuf diversion, to provide for the Morganza floodway and the Atchafalaya floodway and to provide for projects for the St. Francis River and the Yazoo River, important tributaries of the Mississippi River, located wholly within the alluvial valley.

AMENDMENT

The pending bill contains the recommendation of the Chief of Engineers. It is approved in the main by him. The purpose is to modify, enlarge, and perfect the plan adopted in the act of May 15, 1928.

The Flood Control Act of May 15, 1928, declared that the problem in the lower Mississippi Valley was national. The act affirmatively declared that the people of the lower Mississippi Valley had complied with the principle of local contribution and stated that they had contributed prior to 1927 approximately $292,000,000. The act further declared, and I quote:

> No local contribution to the project herein adopted is required.

While the act specifically provides that the Federal Government will pay for the flood-control works, it required the local interests to furnish the rights-of-way for levees along the main river. This involved large expenditures. The local interest are now paying heavy levee taxes. There were outstanding bonds for works that had been constructed prior to 1927; interest and maturities must be met. The local interests were required to maintain the works. As shown by a letter of the Chief of Engineers to the chairman of the Flood Control Committee of the House dated April 23, 1935, the local interests in the lower Mississippi Valley, since May 15, 1928, up to that time—more than a year ago—had expended an additional $41,413,680.66.

The act of May 15, 1928, authorized an appropriation of $325,000,000. Of this amount approximately $100,000,000 was in aid of navigation.

The pending bill, which is an amendment of the act, authorizes an appropriation of $272,000,000, of which approximately $72,000,000 is for navigation works. The Mississippi River is the longest navigable river in the world; the Ohio is navigable; the Missouri is being made navigable. It is interesting to recall that the total tonnage along the Mississippi River in the very heyday of steamboat activities and prior to the elimination of river traffic by railways was around 6,000,000 tons. The annual tonnage is now around 20,000,000 tons. The Mississippi River is the most important navigable river in the United States; for 300 miles above its mouth it has a channel 30 feet deep; ocean-going vessels are accommodated the year round. The large expenditures made for navigation along the Ohio, the upper Mississippi, and the Missouri Rivers would be in vain if provision were not made for navigation in the lower Mississippi River. The navigation works are continuous; bars in rivers must be cleared and bars in harbors must be removed.

ESTIMATE

Of the $325,000,000 authorized in the Flood Control Act of 1928, expenditures have been made, properly chargeable to improvements for flood protection, aggregating about $205,000,000. Some $70,000,000 has been expended for improvements for navigation. The authorization of $325,000,000 was an estimate. I quote from the report of the Senate Committee on Commerce on the Flood Control Act of May 15, 1928, which report is dated March 24, 1928:

> This work is of such magnitude that the sum of $325,000,000 must be considered as simply an estimate; the actual cost of the work will doubtless be much more. If, as the work nears completion, an additional sum is found to be necessary, there can be no doubt but that Congress will authorize its appropriation.

Gen. Edward M. Markham, Chief of Engineers, emphasized that no responsible person ever entertained the idea that $325,000,000 would complete the project authorized by the act of May 15, 1928. He called attention to the fact that the Mississippi River Commission, in its report, stated that it would cost, roughly, $775,000,000.

SOUND

The gentleman from Arkansas [Mr. MILLER] urges that the Arkansas and the White Rivers be accorded the same treatment as the lower Mississippi River. The friends of flood control will not be deterred. He speaks disparagingly of the pending bill by calling it sacred. He has used an incorrect term. Sacred is hardly a proper term to apply to legislation, whether it be on the lower Mississippi River or its chief tributaries; in fact, I doubt if the word "sacred" is applicable to legislation generally, but it is important that legislation be sound. It is important that it be economically justified. It is because the pending bill is sound and economically justified that no amendment should be made.

All projects should stand on their merits. The Arkansas and White Rivers are entitled to the same treatment accorded to other tributaries and to other similar rivers. The case is not on all fours with the St. Francis and Yazoo. These rivers are influenced by the waters of the Mississippi River and are located wholly within the alluvial valley.

NATIONAL FLOOD CONTROL

Two bills are pending in Congress. The Overton bill has been passed by the Senate and is now under consideration here. The omnibus flood-control bill to provide for the Arkansas, White, and other rivers, has passed the House and is now under consideration in the Senate.

I believe that flood control is a national problem. The administration is attacking the problem in two bills. The Mississippi River presents entirely different questions from those that occur on other streams. The pending bill is applicable to the alluvial valley. I am sympathetic with flood control on all rivers and on all streams. I will continue to promote all worthy projects in the Omnibus Flood Control Act. Public opinion has been focused upon flood control as

a national issue by the destructive floods of the past few years. I believe that those who dwell along the tributaries of the Mississippi River will promote national flood control by insisting that worthy projects be retained in the omnibus bill, that all projects stand on their merits, and that the Federal contributions be most liberal. At the same time national flood control will be promoted by the passage not only of the omnibus bill but of the pending bill.

I voted for flood-control works along other rivers. Without criticizing, I thought it would be unwise to oppose reservoirs along the Monongahela, along the Colorado, along the Tigret, along the Columbia, and along the Tennessee Rivers merely because those acts did not provide for the lower Mississippi River. I did not pursue the unwise course of undertaking to amend the Tennessee Valley Authority or other projects by insisting that they embrace the lower Mississippi Valley. As I have stated, all legislation should be considered on its merits.

ARKANSAS AND WHITE RIVERS

The gentleman from Arkansas [Mr. MILLER] and the gentleman from Arkansas [Mr. TERRY], repeatedly stated before the Committee on Flood Control, and they now state, that they do not oppose the pending bill or any of the projects in the bill, but they ask that it be amended so as to include reservoirs along the Arkansas and White Rivers.

Personally, I should like to see the reservoirs constructed at Federal expense, but the Chief of Engineers and president of the Mississippi River Commission state that the building of the reservoirs would not eliminate the Eudora diversion; in other words, the Chief of Engineers has repeatedly stated that he favors the pending bill, but that he would oppose it if provision is made for the building of the Arkansas and White reservoirs at Federal expense. He maintains these reservoirs are valuable primarily for local flood control. At the same time, he is frank to admit, as I am glad to say, that they are the best reservoirs for flood control insofar as the lower Mississippi River is concerned. He asserts that equivalent protection at much less cost to the people of the country can be provided by the Eudora diversion.

DAMAGES

It has been repeatedly urged that much of the authorization of $272,000,000 will be used to pay for lands and flowage rights in the Eudora and other floodways.

The Public Treasury is protected. Only a small part of the authorization can be devoted to acquiring lands and flowage rights for floodways.

Under section 12 of the bill, a floodway 10 miles wide and more than 100 miles long is contemplated. Improved lands, highways, and canals are involved. The area in the Eudora floodway and in the set-back levee district in the vicinity of Arkansas City is approximately 822,000 acres. It is well to keep in mind that the Chief of Engineers recommends the Eudora floodway as a substitute for the Boeuf floodway, because the Boeuf floodway would be more expensive and would embrace more than a million acres of land.

The pending bill provides that not more than $20,000,000 shall be paid for 75 percent of the flowage rights and rights-of-way in both the Eudora and Morganza floodways. In the Morganza floodway there are some 65,000 acres of land. I repeat, but a small part of the authorization is for lands and flowage rights; it is to be devoted to flood-control works, including levees and spillway structures.

MINORITY REPORT

There is a minority report signed by the Republican members of the committee, with one Democrat. Those signing the minority report do not oppose the pending bill; they admit that legislation for the lower Mississippi is imperative, but they ask that no bill be passed unless that bill embraces all rivers in the United States. The administration has a different plan. The problem is to be solved by two bills. The Overton bill deals with the lower Mississippi River; the omnibus flood-control bill embraces other rivers in all other parts of the country. The administration evidently favors both bills. The Republican members of the committee advocate delay. The country demands flood-control legislation. We have postponed the matter long enough; the time for action has arrived.

It is passing strange that those who are responsible for the minority report advocate for tributaries of the Mississippi River the exact provisions of the pending bill for the Yazoo and St. Francis Rivers. They fail to discriminate; they fail to consider all of the factors; they overlook the fact that these two rivers are wholly in the alluvial valley; that they are unlike any other stream. They overlook the fact that these two rivers are now and have been for 75 years contributing to flood-control works along the lower Mississippi River.

The south bank of the Arkansas and the west bank of the Red River have been provided for. The pending bill merely does for the Yazoo and the St. Francis in the headwater area what has been done for the Arkansas and Red in the backwater areas.

It is easy to criticize; it is most difficult to construct. The minority report calls attention to a newspaper interview purported to have been given by General Ferguson, president of the Mississippi River Commission, to the Times-Picayune on April 8, 1936. This is but a sample of the fallacy of the minority report. When Mr. MILLER, of Arkansas, referred to the matter in his statement before the Flood Control Committee, as shown by the hearings April 30–May 1, 1936, page 47, General Ferguson wired as follows:

No statement made by me to newspapers was intended to infer that my views on the need of Eudora or other floodways have been changed from those given before the House Flood Control Committee in 1935.

If the minority report had been fair, instead of quoting from a newspaper report, General Ferguson's statement to the committee would have been quoted. General Ferguson stated before the Flood Control Committee of the House in 1935 and before the Commerce Committee of the Senate in 1936 that the construction of reservoirs along the Arkansas and White Rivers would not eliminate the necessity for the Eudora floodway. Maj. Gen. Edward M. Markham, Chief of Engineers, repeatedly over and over again stated that the reservoirs along the Arkansas and White would be additional factors of safety, but that he could not recommend that they be constructed at Federal expense. He emphatically stated that equivalent relief at much less cost could be obtained by diversions.

Mr. Chairman, in this connection, under consent given, I include the following letter from General Markham, the Chief of Engineers, to the chairman of the committee, dated April 28, 1936. The letter is as follows:

APRIL 28, 1936.

Hon. RILEY J. WILSON,
Chairman, Committee on Flood Control,
House of Representatives, United States,
Washington, D. C.

DEAR JUDGE WILSON: When I received from you several days ago certain newspaper articles quoting statements attributed to General Ferguson with respect to the control of the Mississippi River by means of cut-offs, dredging, and sand dikes, I instructed General Ferguson to wire me what he wished to say having any relation to the necessity for the Eudora floodway. In answer I have received the following telegrams:

CHIEF OF ENGINEERS, UNITED STATES ARMY,
Munitions Building, Washington, D. C.:

The Eudora floodway is necessary. I urgently recommend that all the engineering work recommended in the report of the Mississippi River Commission be authorized.

FERGUSON.

CHIEF OF ENGINEERS, UNITED STATES ARMY,
Munitions Building, Washington, D. C.:

Re tel twenty-fifth no statement made by me to newspapers was intended to infer that my views on the need of Eudora or other floodways have been changed from those given before House Flood Control Committee in 1935.

FERGUSON.

Pertinent testimony by General Ferguson on this subject will be found on pages 75, 76, 77, and 78 in hearings before a subcommittee of the Committee on Commerce, United States Senate, Seventy-fourth Congress, second session, on S. 3531, a bill to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928 (Jan. 27, 28, 29, and 30, 1936).

The ultimate effects of cut-offs, dredging, and sand dikes on the control of the floods of the Mississippi River are at this time unknown. The beneficial effects which can be hoped for by such

measures are not sufficiently large to warrant the consideration of them as a substitute for the floodways and other positive measures that have been recommended by me.

Yours very truly,

E. M. MARKHAM,
Major General, Chief of Engineers.

Mr. Chairman, also in this connection, under the consent given, I include a letter from the Chief of Engineers to the chairman of the committee, reporting on the bill under consideration and approving the bill, as I have stated, except as to section 5, which letter is dated April 30, 1936, and is as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, April 30, 1936.

Hon. RILEY J. WILSON,
Chairman, Committee on Flood Control,
House of Representatives, Washington, D. C.

DEAR JUDGE WILSON: In compliance with your request to me at the hearings before the Flood Control Committee of the House on April 30, 1936, I have to inform you that bill S. 3531, a bill to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928, as amended and passed by the Senate on April 21, 1936, with the exception of section 5 now conforms to the views of the Department and satisfies the objections urged to the bill in the report of the Secretary of War of February 15, 1936, to the Commerce Committee of the Senate, which report was made prior to the amendments that were adopted by the Senate.

Yours very truly,

E. M. MARKHAM,
Major General, Chief of Engineers.

ECONOMICALLY JUSTIFIED

Those who advocate flood-control works under the guise of solving the problem in the lower Mississippi River, but in reality for local flood protection along the tributaries, often assert that the money heretofore appropriated by Congress for flood protection along the lower Mississippi Valley has been wasted. The statement is utterly inaccurate. Every dollar appropriated under the act of May 15, 1928, will be conserved; all levees constructed will be continued; all works will be utilized. The whole purpose of the pending bill is to expand and to enlarge the project so as to provide for the execution of the plan contemplated.

RESERVOIRS

Reservoirs provide an ideal method of flood control from a strictly engineering standpoint, but for the control of the floods in the alluvial valley of the Mississippi River the costs are excessive. The costs of reservoirs on the headwaters or tributaries for flood control in the lower stretches of alluvial rivers are really prohibitive.

Reservoirs are effective for the control of floods especially along the smaller streams and tributaries of the larger rivers.

The reservoirs for protection of the areas along the headwaters of the tributaries of the Mississippi River will not provide for the prevention of floods along the main river. It is essential that reservoirs for this purpose be located close to the alluvial valley, as in the case of the reservoir along the St. Francis River and the reservoirs along the Yazoo River system.

Reservoirs for flood control along the lower Mississippi River have been advocated especially by those who live along the tributaries.

Section 10 of the Flood Control Act of 1928 directed the Mississippi River Commission to investigate most thoroughly reservoirs along the tributaries. The purpose was to ascertain if reservoirs could be constructed so as to eliminate provisions for diversions or floodways.

A comprehensive report was submitted and was published as House Document 259, Seventy-fourth Congress, first session. One hundred and fifty-seven reservoirs were investigated; the total capacity was approximately 94,000,000 acre-feet; the estimated cost was $1,126,121,000. The Chief of Engineers, the Board of Engineers for Rivers and Harbors, and the Mississippi River Commission reported that if these reservoirs along the Mississippi River were constructed and in operation, a diversion either through the Boeuf Basin or through the Macon Basin at Eudora could be eliminated, but they further reported, as all accomplished engineers agree, that the levee system that now obtains, with the reservoir system, would be imperative and must be maintained to protect the lower Mississippi Valley from maximum floods.

Those promoting reservoirs for local flood control along the tributaries of the Mississippi River make the mistake of asserting that the policy of levees has failed. In their eagerness for local protection at Federal expense they would destroy protection in the lower Mississippi Valley.

Gen. H. B. Ferguson, President of the Mississippi River Commission, in testifying before the Flood Control Committee of the House in May 1935, said that about 12 percent of the storage of the 157 reservoirs at about 14 percent of the estimated costs of the 157 reservoirs had been constructed at Fort Peck, on the Muskingum, the Tigret, and the Tennessee Rivers, but he stated that the combined effect would be to reduce the floods only 50,000 cubic second-feet at the mouth of the Arkansas River, where in a maximum flood there are a million cubic feet that must be diverted. The effect would be to reduce the floods at the mouth of the Arkansas River one-half a foot.

Again, Gen. Edgar Jadwin, Chief of Engineers, estimated that in the flood of 1913 if all of the water flowing by Pittsburgh on the Ohio River, all of the water flowing by St. Paul on the Mississippi River, and all of the water flowing by Sioux City on the Missouri River had been held back by reservoirs, the flood waters south of Cairo would have been reduced by only 2 percent.

The reservoirs on the Miami River in Ohio contribute to reducing the Cairo gage one-fifth of an inch.

Arthur E. Morgan, Chairman of the Tennessee Valley Authority, made the following statement in connection with the great Mississippi flood of 1927:

> The excessive rains which cause any single flood seldom extend over more than 20 percent of the whole drainage area of the Mississippi River. * * * Flood control of the lower Mississippi by means of reservoirs on the headwaters of the streams is a delusion.

The Chief of Engineers has repeatedly testified in hearings on flood control that the control of the floods in the lower Mississippi Valley cannot be accomplished by reservoirs on the tributaries of the Mississippi River. The cost of construction is prohibitive and the time required would unduly and dangerously delay protection, but if constructed the diversions are necessary insurance while the reservoirs are being built.

Reservoirs constructed primarily for flood control cannot be used for the development of power or for reclamation. It takes an empty reservoir to provide for flood prevention, while it takes a full reservoir to generate power.

Again, reservoirs constructed for flood-control purposes to benefit the lower Mississippi River cannot benefit the local areas as fully and as completely as reservoirs constructed primarily with the view to protecting the local area along the headwaters of the tributaries. The most effective reservoirs for flood control along the lower Mississippi River are those that are located closest to the alluvial valley, as in the Yazoo River project.

But there is a place for reservoirs; they are beneficial for flood control along the tributaries. There are areas that can be protected by the use of dams. This is especially true where the benefits will exceed the costs of construction.

The best way to promote reservoirs along the tributaries is to concede that they supplement but cannot substitute for levees or diversions along the lower Mississippi River.

MISSISSIPPI RIVER

The alluvial valley of the Mississippi River extends from Cape Girardeau, Mo., to the head of the passes where the river flows into the Gulf of Mexico. The distance by river is 1,100 miles, but as the crow flies the distance is 600 miles. The valley ranges from a width of 20 miles in the vicinity of Natchez to a width of 80 miles in the vicinity of Greenville, the average width being 50 miles. Twenty million acres, before the building of levees, were subject to overflow. The

major floods come on an average of once in 15 years. Ordinary or minor floods occur from 5 to 10 years. The area includes the St. Francis Basin in Arkansas, the Yazoo Basin in Mississippi, the Tensas Basin, composed of the Boeuf and Macon Valleys, the Atchafalaya Basin, and the LaFourche Basin, as well as the alluvial lands adjacent to the Mississippi River on the east bank around Lake Ponchartrain in Louisiana.

The territory drained by the Mississippi River and its tributaries consists of all or parts of 31 States, is equivalent to 41 percent of the area of the United States, and has a total area of 793,600,000 acres.

The problem of flood control in the lower Mississippi Valley involves confining the waters between levees along the main river and diversions and floodways to supplement the levees along the main river that formerly constituted a mighty river 50 miles wide from Cairo to the Gulf of Mexico.

In the pending legislation we are dealing with the greatest valley in the world. The Mississippi River is in reality not only the chief navigable river in the United States, but it is the great drainage canal of the Nation. Hundreds of millions of dollars have been expended along the Ohio, the Missouri, and the upper Mississippi for navigation. Unless there is an outlet to the sea through Mississippi with a dependable channel, improvements for navigation in the upper stretches and tributaries of the Mississippi River are in vain.

Bienville chose the site for New Orleans because it was above high water at the time he found it. The first levee built at New Orleans was in 1717. Ten years later it was the boast of the Governor that the levee was a mile long and 18 feet wide. The country was being settled; lands were being cleared. By 1812 the landowners had leveed the river on both banks for 340 miles above and below New Orleans.

By 1927 the entire levee line from Cape Girardeau to the Gulf had been substantially completed to the 1914 grade. The total amounts contributed by the Federal Government for building the levees, as compared with the local contributions, were small. All of the natural outlets were closed except the outlet through the Atchafalaya River.

The history of the improvement of the Mississippi River is interesting. The improvements were begun and continued until 1927 primarily in aid of navigation. Flood control came in at the back door.

Congress in 1820 appropriated $5,000 to investigate the Ohio and Mississippi Rivers. S. Bernard and Joseph G. Tutten, Army engineers, made the surveys and submitted the report in 1822. It was in 1850, upon the election of Gen. Zachary Taylor as President, that Congress appropriated $50,000 for starting the surveys made by the Army engineers Humphreys and Abbott. General Taylor had been a cotton planter in Louisiana; he had lived on the banks of the Mississippi River. The report of these engineers made in 1861 remains as the most authoritative report ever published on the Mississippi River, or on any other river.

During the War between the States improvements along the Mississippi River were interrupted. Following the war the States and local interests were unable to rebuild. The levees built by the local interests were destroyed during the war by the armies of the contending forces for military purposes. The great floods continued to appear.

From the first Federal aid for improvements along the Mississippi River was primarily for channel stabilization to promote navigation. However, leading statesmen advocated flood control—Henry Clay, John C. Calhoun, Thomas H. Benton, Abraham Lincoln, and James A. Garfield were among the American statesmen who advocated the improvement of the Mississippi River for commerce and for flood control.

The Mississippi River Commission was organized in 1879. In 1881 Congress appropriated $1,000,000 for improvements on the Mississippi River, primarily for navigation.

An appropriation of $4,000,000 in 1882 was vetoed by the President. Subsequent appropriations were increased and by 1912, $6,000,000 was being appropriated annually.

The Flood Control Act of 1917 authorized the first definite appropriation for flood control. The Government contributed one-half the costs of building levees where the local interests had been unable to build them. The work was interrupted and impeded by the World War. A subsequent Flood Control Act was passed in 1923 with an authorization of $60,000,000. It was intended to supplement and reinforce the Flood Control Act of 1917, interrupted, as I have stated, by the World War.

The policy of levees only prevailed. The Cypress Creek outlet in the vicinity of Arkansas City, at the head of the Boeuf Basin, was the last natural outlet to be closed. A monumental mistake was made. This outlet was closed in 1921. The great flood of 1927 demonstrated that levees only would not solve the problem. Two hundred and forty-six people lost their lives; 700,000 people were driven from their homes; the lower Mississippi Valley was flooded from April until August; no crops were made; property was damaged and destroyed, according to the report of the Chief of Engineers, in value from $200,000,000 to $400,000,000. The American people voluntarily contributed, through the American Red Cross, for rescue and relief work, $18,000,000.

Congress, in response to public sentiment, put its hand to the plow. The people of the lower valley had done their best; they had spent $292,000,000, according to the report of the Chief of Engineers, in an effort to protect their lives and their property. It was apparent to the country that they were unable to protect themselves from the waters that came from points as far east as Pittsburgh and as far west as Idaho, and from the waters of all the territory between the Alleghenies and the Rockies.

The local interests had incurred large indebtedness in building the levees to the 1914 grade. There were millions of dollars in outstanding bonds; recurring floods had resulted in bankruptcy to some of the local levee boards. The Flood Control Act of 1928 was passed; $325,000,000 was authorized. The project provided for diversions, spillways, and floodways to supplement levees.

I repeat to emphasize that the pending act is to amend the Flood Control Act of 1928 and to provide for the perfection and completion of that act. I repeat to emphasize that all levees constructed and other flood-control works built will be utilized, and that all of the moneys heretofore appropriated for flood control along the Mississippi River will be utilized. No improvements will be discarded and no money has been wasted.

CONSERVATION

I believe in the conservation of the soil as well as the conservation of all our natural resources. I favor the policy of reforestation. There is no conflict between these measures and plans for flood control. They are worth while; they can stand on their merits. It is not necessary for those who advocate the conservation of natural resources to maintain that the policy will result in the control of floods. Those who advocate reforestation and soil conservation as substitutes for flood-control measures deal in generalities; they fail to submit any data to show either the costs or results of conservation or reforestation as flood relief and control methods; they overlook the fact that long before the soil was depleted or the forests were wasted there were great floods along all of the rivers and streams of the United States. Soil conservation and reforestation are by no means synonymous with works for flood control.

New times and new conditions demand new measures. I am interested in flood control along all rivers and in all States. I am interested in little waters, but I am emphasizing big rivers. The digging of a few ditches, the building of a few dams will not suffice. The planting of grass and trees and soil-conserving crops is not enough. There is a place for the policy of reforestation and soil conservation, but there is also a definite place in the program for flood-control works. There must be levees, floodways, and reservoirs. The two policies should supplement each other.

YAZOO AND ST. FRANCIS RIVERS

The Yazoo River in Mississippi and the St. Francis River in Arkansas are located in the alluvial valley. The Representatives from Arkansas will speak for the St. Francis River. I have studied the project; it is justified. I know

that the residents of both the Yazoo and St. Francis are now and have been for years taxed for flood protection along the lower Mississippi River. I speak especially of the Yazoo Basin.

There are 4,250,000 acres of land in the Yazoo Basin; there are two flood problems—one from the overflows of the Mississippi River and the other from the overflows of the Yazoo River. The Yazoo River system takes its source near the Tennessee line and flows southerly along the foothills of the Yazoo Basin and empties into the Mississippi River at Vicksburg.

As I have stated, the Flood Control Act of 1928 declared that flood control along the lower Mississippi River was a national question, and that the local interests should not be required to make contribution, but the fact remains that at the time of the adoption of the project the local interests were required to maintain the works after completion and to provide for rights-of-way. There were millions of dollars in bonds outstanding. The people in the Yazoo Basin, including the Yazoo River system, are now and have been for 75 years contributing to flood-control works along the Mississippi River; they have contributed approximately $55,000,000. In addition, they have expended, as shown by the report of the engineers, $20,000,000 for local protection. They have taxed themselves to the limit; they have paid for protection which they have not received. The cases of the Yazoo and the St. Francis Rivers are different from any other streams. No other streams, except those now protected in the alluvial valley, are paying for flood works along the lower Mississippi River. Flood-control projects, therefore, along the Yazoo and St. Francis Rivers are included in the pending bill. No other taxpayers have been or are now contributing to flood-control works along the Mississippi River. The valleys of these two tributaries are the largest, most productive, and highly improved along the Mississippi River.

The Yazoo project will protect approximately 1,570,000 acres of extremely fertile and productive land.

There were two maximum and excessive floods in 1932 and in 1933. In the flood of 1932, which was the largest flood in 50 years, 993,000 acres were flooded; in 1933, 600,000 acres were overflowed; in 1935, 550,000 acres were overflowed, with 25 deaths, and damages aggregated $2,000,000. Substantially one-half of the area is cultivated and 90 percent is suitable for cultivation; there are some 400 miles of railways, 700 miles of improved highways, and more than 300,000 people are affected.

The Yazoo River is navigable. One million five hundred and seventy thousand acres in the headwater area and 300,000 acres in the backwater area will be protected. The proposed reservoirs will be located near the foothills. All engineers agree that reservoirs most beneficial for flood control in the alluvial valley are those that are located near the valley. There is an unusual opportunity to demonstrate the reservoir theory in the pending bill.

Under the Emergency Relief Act of 1935 an appropriation for the largest of the reservoirs has been made. During the present session Congress has already made an appropriation for the next fiscal year. One-third of the reservoir work has thus been authorized. The project was favorably recommended by the Director of the Budget and by the President of the United States. I know of no more beneficial project.

The Yazoo River is about 520 miles long. There are many and diverse interests. The Yazoo Delta is the home of long-staple cotton. The project would protect one of the most important and valuable areas of the United States and will demonstrate the practicability and desirability of the so-called reservoir system of flood control along the lower Mississippi River.

The local interests must do their part. Under the recommendations of the Chief of Engineers they are required to maintain the works, to furnish rights-of-way for all levees, and to pay for all highway relocations and damages.

The Yazoo River is the principal tributary of the Mississippi River on the east bank between Cairo and the Gulf of Mexico.

The Chief of Engineers recommends the reservoir system along this river as the most practical and economical method of flood control. He was most careful to state that while the floods along the main Mississippi River would be reduced at Vicksburg by 6 or 8 inches, his recommendation was not based altogether upon this fact. He emphasized the large area, the contributions to flood control along the Mississippi River, the backwater influence, the large expenditures made, and the necessity for a comprehensive plan. I would favor any similar project anywhere in the United States.

ANALYSIS

The bill is short. It was referred to the Chief of Engineers; the bill in its entirety was approved by him, except section 5. His favorable report on the bill appears on page 10 of the committee report. While he does not recommend section 5, it is fair to say that this section deals with an inconsiderable part of the authorization, and that, while the Chief of Engineers did not recommend section 5, this section is recommended, as shown by the hearings, by the Mississippi River Commission.

The committee report contains a careful and correct analysis of the bill section by section. There is no occasion to repeat the analysis here, except to say that the bill is an amendment of the Flood Control Act of 1928; is economically and engineeringly sound; provides for no new project; inaugurates no new policy; contemplates the enlargement and completion of the adopted project, and is recommended by the Chief of Engineers.

CONCLUSION

The Corps of Engineers of the United States are the ablest flood-control engineers in the country; they speak for the country; they are impartial. I know of no better agency to represent the country and the Congress. All projects are treated on their merits. I favor a policy of national flood control. The execution of the project should be under the Chief of Engineers. Congress can make no mistake when the recommendations of the Chief of Engineers are followed and adhered to.

Population is increasing; the hazards of floods are multiplying; the damages are increasing. The Federal interest in flood control is becoming more and more important. In our complex civilization, in our efforts to conserve and preserve our national resources and to protect life and property the policy of flood control will be expanded from time to time to meet new and changing conditions. The increasing hazards demand protection from floods that can be economically prevented.

The Flood Control Act of 1928, as amended in the pending bill, provides for the greatest river improvements in history. There are 20,000,000 acres of land in the alluvial valley; 12,000,000 acres are usable and will be protected when the project is executed; there are 4,000,000 acres in backwater areas and 4,000,000 acres in channels, diversions, and floodways. Eight million acres are protected about half of the time.

The leading nations in all of the ages, as a proper governmental function to promote the general welfare, have provided for public works. Permanent and beneficial public works always contribute to the progress and advancement of our common country.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. WHITTINGTON. Mr. Chairman, I ask unanimous consent to revise and extend my remarks and include therein quotations from the hearings from the statements of General Markham and General Ferguson and a reply made by the president of the Mississippi River Commission to a newspaper article quoted by the minority report, and a letter from the Chief of Engineers to the chairman dated April 28, 1936, and to include a letter from the Chief of Engineers approving the bill under consideration to the chairman of the committee dated April 30, 1936.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

The CHAIRMAN. All time for general debate having been exhausted, the Clerk will read the bill.

The Clerk read as follows:

Be it enacted, etc., That the project for the control of floods of the Mississippi River and its tributaries, adopted by Public Act No. 391, approved May 15, 1928 (45 Stat. 534), Seventieth Congress, entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", is hereby modified in accordance with the recommendations of section 43 of the report submitted by the Chief of Engineers to the chairman of the Committee on Flood Control, dated February 12, 1935, and printed in House Committee on Flood Control Document No. 1, Seventy-fourth Congress, first session, as hereinafter further modified and amended; and as so modified is hereby adopted and authorized and directed to be prosecuted under the direction of the Secretary of War and the supervision of the Chief of Engineers.

Mr. MILLER. Mr. Chairman, I offer an amendment. Pending that, Mr. Chairman, I would like to ask someone a question for information. The debate on this amendment will probably run on for several minutes. I wonder if we want to go into debate on the amendment tonight.

Mr. WILSON of Louisiana. Yes.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. MILLER: Page 2, line 7, after the word "Engineers", insert a new section, as follows:

"The Chief of Army Engineers, under the direction of the Secretary of War, is authorized and directed to change, modify, and enlarge the engineering plans for the control of the floodwaters of the Mississippi River and its tributaries, adopted by the provisions of the act approved May 15, 1928, in accordance with the report of the Chief of Engineers on 13 reservoirs in the Arkansas River Basin and 13 reservoirs in the White River Basin, described in the report of the Mississippi River Commission of December 15, 1934, and in the letter of the Chief of Engineers, dated May 15, 1935, to Hon. RILEY J. WILSON, chairman, Committee on Flood Control, House of Representatives, the same being Document No. 2 of the Committee on Flood Control, House of Representatives, Seventy-fourth Congress, first session, and, as so modified, are hereby adopted and authorized and directed to be prosecuted as projects, under the direction of the Secretary of War and under the supervision of the Chief of Engineers.

"That the projects for flood control in the Arkansas River Basin and the White River Basin hereby adopted and authorized shall include the acquisition at the cost to the United States of all lands and flowage necessary to the construction of said reservoirs, except flowage of highways, and the project shall not be undertaken until States or responsible local interests shall give satisfactory assurance that they will undertake without cost to the United States all alterations of highways made necessary because of the construction of the reservoirs and pay all damages which may result by reason of highway alterations: *Provided*, That the reservoirs hereinbefore provided for may be located by the Chief of Engineers in his discretion: *And provided further*, That penstocks or other similar facilities adapted to possible future use in the development of hydroelectric power may be installed in any dam herein authorized when approved by the Secretary of War upon the recommendation of the Chief of Engineers.

"All lands taken or used in carrying out the provisions of this section shall be paid by the United States as provided for in section 4 of the act approved May 15, 1928."

Mr. MILLER. Mr. Chairman, under this amendment the 26 reservoirs referred to are the 26 reservoirs that are listed in the Flood Control Committee, House of Representatives Document No. 2. They are the 26 reservoirs that the Army Engineers say will be most effective for the control of the flood waters of the Mississippi River. They are the reservoirs that will control 50 percent of the drainage area of the White River Basin and 55 percent of the drainage area of the Arkansas River Basin, or more than 50 percent of 183,000 square miles of territory, at a cost of $126,719,000. That includes the entire cost, except the cost and damage to the highways. It follows exactly the formula laid down in the original bill with reference to the reservoirs in the Yazoo River system. I may say it follows exactly a provision that was adopted by the Senate this afternoon in an amendment to the omnibus flood-control bill now under consideration in the Senate, with reference to the payment of costs and with reference to the payment of damages for flowage rights for reservoirs that are authorized in that bill to be built in the Ohio Valley and other places.

In addition, Mr. Chairman, this amendment carries a provision authorizing the inclusion of penstocks and other facilities for the purpose of developing hydroelectric energy whenever the Chief of Army Engineers certifies their erection is feasible. This provision also was taken from the omnibus bill and is a provision that was sent to the Senate Committee on Commerce by the Chief of the Army Engineers for the purpose of having those dams, in places where it is feasible, constructed so as to make possible the generation of hydroelectric energy. The erection of the reservoirs, however, is primarily for the purpose of flood control.

I have outlined all this amendment does. It adds $126,000,000 to the bill but, let me say, Mr. Chairman, in all candor—and I appreciate the fact the debate has been rather warm; I appreciate the fact that gentlemen are very much interested in the bill—I am vitally interested personally, but aside from that I am more interested in the establishment in this Nation of a flood-control policy which adopts the reservoir system. [Applause.]

Let me say further that the erection of these 26 reservoirs fits in the general plan of reservoir flood control. They are part of the 151 reservoirs that will some day be built in the Mississippi Valley for the control of the flood waters of the Missouri, the Ohio, and other tributaries of the Mississippi. It is only a step in the ultimate direction. It cannot hurt the bill, arguments to the contrary notwithstanding. Those opposing the amendment express the opinion that it will wreck the bill, that it means the downfall of the bill and failure to obtain a bill, but that is their opinion. The question is, Shall we use our own judgment and do what we know is best or will we permit some department head to tell us what we shall do?

Mr. DRIVER. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I addressed the question to a Member this afternoon asking him if he could point to one single measure that has been adopted by this Congress without a specific recommendation of the Engineers, and he answered that he could not; and you Members, including the oldest Member in service in this House, never witnessed any such action on the part of an American Congress.

I hail from Arkansas, a State in which there are more miles of the White River and as many miles of the Arkansas River as there are in all the other States through which these rivers flow. If this bill dealt with the Arkansas and the White Rivers as a treatment of the floods on these rivers and their control through reservoirs I would support it with all the energy I possess, but let me present to you the fact that the bill under consideration is an authorization for the completion of an adopted project.

It is free of other tributaries than those directly connected with the alluvial valley of the Mississippi River. The Army Engineers say to you and to me that even though we adopt this amendment and add $126,000,000 to the authorization it will still be necessary to expend every dollar of the money they recommend in order to effectuate the safety of the alluvial valley. That is the situation we are in. In the light of this statement from the Board of Engineers do you think for one moment the President of the United States will approve a bill that carries $126,000,000 more than the amount recommended by the Engineers? Consider this in all seriousness. Any man who wants to defeat this bill can do it, I am frank to say, by supporting this amendment. There is no use in kidding ourselves. Why should the President, who is guided by the advice of this aggregation of talent we have drawn together, approve a bill loaded as this amendment would load it when the Engineers will tell him that he must still expend the amount of money they recommend in order to effectuate this project?

Members asked me if the President said so. I tell you the President did not say so; but if he had, I would not have said it here, out of the usual regard we have for such communications; but I say to you he did not say so. I still believe, however, that the President is a man who will be guided by the advice of those who are there to give him information; and if he is so guided, do you think he is going to approve a bill that carries such a large sum of money which will have no effect at all on the purpose of the bill to complete the Mississippi River project?

Mr. JOHNSON of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. DRIVER. I yield gladly.

Mr. JOHNSON of Oklahoma. Is it not a fact that these proposed reservoirs are the best reservoirs that can be built on the upper Mississippi?

Mr. DRIVER. There is no doubt in the world about that. The Engineers in their report have said that the most effective reservoirs would be those on the Arkansas and the White Rivers.

[Here the gavel fell.]

Mr. DRIVER. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. DRIVER. The Engineers have reported that, so far as the White and the Arkansas Rivers are concerned, reservoirs on these rivers will effectuate more complete control than reservoirs on any other rivers tributary to the Mississippi. If, therefore, we disregard the engineering recommendations and look forward to controlling the floods of the Mississippi River by the reservoir system, then the expenditure of this $126,000,000 will reduce the flood height 4½ feet when we need 12 feet to insure the safe passage of the water without destroying the valley. They say we will get 2½-feet reduction from bend cut-offs.

We get 7 feet—5 feet more—which leaves the diversion at the same cost they recommend here, without the inclusion of the reservoirs. If we disregard the Engineers' recommendations and confine ourselves to reservoirs, 26 in number, the cost will be $126,000,000. To get an additional 5 feet in the unfavorable areas, how much more money will it cost? It is a fact if these 26 reservoirs cost $126,000,000 we will need at least $200,000,000 more for less-favorable reservoirs to provide the additional 5 feet.

[Here the gavel fell.]

Mr. WILSON of Louisiana. Mr. Chairman, I would like to submit a unanimous-consent request with reference to time.

Mr. RICH. May I ask the gentleman what the intention of the Chairman is about going on with the debate this evening?

Mr. WILSON of Louisiana. I was hoping we might finish the bill.

Mr. RICH. There are quite a number of Members who want to be heard on these amendments. It is now practically 5 o'clock, and it will be 7 o'clock before we get through. We cannot finish the bill in less than 2 hours.

Mr. WILSON of Louisiana. Can we not agree to limit the debate to 20 minutes?

Mr. RICH. I do not know. There are a lot of Members who want to be heard.

Mr. MILLER. I would suggest that the debate on this particular amendment might be closed in 20 minutes. I do not refer to the section, but to the particular amendment.

Mr. RICH. Is it the intention of the Chairman to go on and finish the bill tonight?

Mr. WILSON of Louisiana. I would be glad to do that if we could. I do not know how many amendments will be offered.

Mr. Chairman, I ask unanimous consent that debate on the pending amendment close in 20 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

Mr. WHITTINGTON. Mr. Chairman, reserving the right to object, as a member of the committee, I should like to have at least 5 minutes.

Mr. FULLER. Mr. Chairman, I should like 6 or 7 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

Mr. WHITTINGTON. May I suggest that the gentleman modify his request and make it 25 minutes.

Mr. WILSON of Louisiana. Mr. Chairman, I modify the request and ask unanimous consent that debate on this amendment close in 25 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. FOCHT. Mr. Chairman, I ask unanimous consent to revise and extend my remarks in the RECORD, at this point.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FOCHT. Mr. Chairman, the day has been given to the question of flood control and water power, and much has been said on the subject that is informative and makes finally clear the fact that our contention made on Monday, April 8, 1935, as to the control of the floodwaters of the Mississippi River finds full support, more than a year later, in many speeches by prominent Members of this body. The CONGRESSIONAL RECORD of April 8, 1935, contains the following:

Mr. CARTER. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. FOCHT].

Mr. FOCHT. Mr. Chairman, for many years I have listened to the discussions of rivers and harbors bills. In the earlier days most of the time was taken up in characterizing the rivers and harbors bills as "pork barrel" bills. It was some time until I fully comprehended what that meant. I am delighted to say today, however, that I have good faith in my friend of all these years, the gentleman from Texas [Mr. MANSFIELD] and chairman of this committee, his knowledge of legislation, and his understanding of what "pork barrel" means, to know that he would not sanction the reporting of any such measure to this House, as was once done. He has given us, furthermore, wonderful information in regard to the purpose of this bill.

Most of the bills that relate to water and the West have had to do with irrigation schemes and plans and with power and lights. I would like to call your attention to another phase which might be encompassed within the range of a rivers and harbors bill. I have read of the devastating floods of the Mississippi. It seems to me these two purposes—irrigation and electric light and power—for which vast sums of money have been appropriated, could well stand aside for a moment while we consider this uncontrolled flood force which destroys but which could be converted to useful purposes if given proper attention; and in the short time at my disposal I shall give you several concrete examples of how it might be done. After I had looked over those two particular instances, I was in great wonderment why the intelligence of this House had not been aroused by the recurrence of these destructive floods on the Mississippi River; how it was they had failed to direct the attention of the committee and the country to putting barriers before these floods on the tributary streams.

I shall cite you two cases in Pennsylvania, and I hope you will investigate at least one. There are Members from western Pennsylvania who are familiar with what we call the Pymatuning Swamp proposition, and they may tell about this wonderful accomplishment.

While I was a member of the Water Supply Commission of Pennsylvania, during a vacation from this House, and associating with eminent men like John Birkenbine, who built many dams in the South, and is known to be one of the greatest hydroelectric engineers in the world, they impounded that water; and that great section, including part of Ohio, has been made safe from floods. The water is impounded during flood times and stored against use in the summer season to give them ample water supply for their mills on Beaver River, a tributary of the Ohio.

But the greatest engineering feat, with completely satisfactory results, is but 60 miles from Washington, at Safe Harbor, just over the line in Pennsylvania.

[Here the gavel fell.]

Mr. CARTER. Mr. Chairman, I yield 3 additional minutes to the gentleman from Pennsylvania.

Mr. FOCHT. The State of Pennsylvania has an area of 45,126 square miles. The watershed that supplies the north and west branches of the Susquehanna River of Pennsylvania covers an area of half the 45,126 square miles of the State; yet the young engineer, John Wails, who later built dams for the Italian Government, can sit in his office and by touching a button have absolute control of the floodwaters of that watershed in Pennsylvania. In other words, when a flood starts or is threatened in the upper sections of the State he opens his wickets. The water does not flow over the dam at all; not a drop goes over, so perfect is the control he has over a mile and a half of dam; but he opens the gates and the water flows into lower portions of the river and basins ready to receive it. If we would do the same things on the tributary streams of the Mississippi River we would not have recurring harrowing stories we read every year of the Mississippi River, with the bottom of the river higher than the surrounding land, breaking dikes and spreading desolation and ruin over that great valley.

No such thing could occur if we would take the money we are going to put into these other schemes and arrest the water of the tributary streams, which would be a complete and definite control of all the waters. That can be seen and the Members will agree with me when they look at this Safe Harbor Dam. They have put that into operation and are even able to control the ice that comes down the river, as well as all kinds of debris. It is the

most complete example of flood-water control the world has seen; yet we go on with these other doubtful schemes and pass by something that would save an untold number of lives and billions of dollars of property and terror those floods cause in the Mississippi Valley.

Do what I have suggested with every tributary and that will be the end of floods in the Mississippi Valley.

(Here the gavel fell.)

Mr. MANSFIELD. Mr. Chairman, I yield 3 minutes to the gentleman from Missouri [Mr. COCHRAN].

Mr. COCHRAN. Mr. Chairman, I want to compliment the gentleman from Pennsylvania [Mr. FOCHT] on his observations just made.

I hope that the Flood Control Committee of this House at the present session of Congress will at least provide for a survey so that we may construct some dams out there to hold back these flood waters. If they do that, we will not have the situation in the Mississippi Valley that we had this spring.

Mr. FULLER. Mr. Chairman, I am very vitally interested in the pending amendment. I am not opposed to this bill, and, to be frank, I may say that I am going to support it whether this amendment is adopted or not. I think it is of very great importance that this bill or something very similar be adopted so far as the Mississippi Valley is concerned. We have recently read in the newspapers about floods here and there in the East, but they were just baby floods in comparison to the floods that occur down there in the Mississippi Valley.

Mr. Chairman, this bill does not affect my district very much because I am located up in the mountains; however, the White River does run through eight counties in my district. I am principally interested in reservoirs which will be constructed for a dual purpose—flood control and electric power—as provided in this amendment. The Arkansas and White Rivers are two of the biggest rivers in that country and have never received any substantial aid from the Government. Congressmen from my own district and from all over the State of Arkansas have been voting from time immemorial for harbor improvements and flood control all over the country, and have never complained. Now, when there is an opportunity to do something for the Mississippi Valley, I think we should have serious consideration.

Some statements have been made about this bill being so sacred that it should not be amended simply because it is reported by the Flood Control Committee. Of course, this bill never came from the House Flood Control Committee. It was created and born in the Senate and, as a matter of fact, is known as Senator OVERTON'S bill. It is true that the House committee in some sort of form has approved it.

Mr. Chairman, may I say also that this same House committee submitted a bill last year which included these 26 reservoirs that we are seeking to have included in this bill. That bill went over to the Senate, and there it is sleeping. The same power that has brought this bill in here, the same power that is seeking to keep us from amending it is the power that keeps us from getting what we should have.

The pending amendment states that at such time as the engineers deem proper there may be constructed 26 reservoirs of such character that they may be used for electric purposes. In my district alone there is provision for three of them, namely, Wildcat Shoal, Lone Rock, and Norfolk. White River near Cotter is the greatest site for the generation of electric power between the Allegheny Mountains and the Rocky Mountains. The engineers say they can produce electric power there for 8 mills per kilowatt and that there is capacity for 260,000,000 kilowatts each day.

It is important to the people generally that this amendment should be accepted. For many long years the White River Power Co., a New York concern, has had an option or lease upon which is known as the Wildcat Shoals on White River. That option has expired, and they have made application to the Power Commission to have it extended. I fear it will be extended unless saved to the Federal Government.

[Here the gavel fell.]

Mr. FULLER. Mr. Chairman, I ask unanimous consent to proceed for 3 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. FULLER. Mr. Chairman, the statement is made that the President will veto this bill if it includes the amendment which has just been offered, but no one has any authority to make such a statement.

If the Government does not build these dams which can serve a useful purpose by providing cheap electricity as well as flood control, the utility companies are going to grab them up. This is an absolute cinch and certainty. They are the most valuable properties in this country today, and the utilities have been trying to get them, and there have been hearings held about it. If you do not provide for the building of these dams in this bill, the Power Trust will build them, and with this power they will continue to charge their outrageous and exorbitant prices.

We have voted for your people in California, Washington, Oregon, and the West, and for the Tennessee Valley, as well as over the entire country for similar projects as sought in this amendment. We have helped you to build dams and reservoirs in Ohio so that you would not have any more trouble by reason of such floods, and we now ask you to help us out in this instance.

The engineers have declared themselves in favor of these dams in their reports. They have said that these 26 projects are the most valuable in our country, and at the same time it will be economical from a flood-control viewpoint.

If you only authorize the use of this money as provided in the bill, what will it mean? It will mean that next year or 5 years from now they will come back and ask for more money because some levee has fallen or the river has changed its course; and it is just a matter of continually taking money out of the Federal Treasury for the prevention of the overflow of these great streams, while it is an absolute cinch and certainty that by building these reservoirs you insure flood control, practice economy, and at the same time preserve the power sites for the people.

I hope you will consider the pending amendment seriously and adopt it and let the bill go to conference. The reservoirs were in the bill passed last year and these gentlemen now opposing then favored it. Why fight it now? Simply because they contend this bill is sacred, because it was given to them by the Senate, and they want to pass it exactly like it is, irrespective of the views they have held in the past and irrespective of the wishes of the Members of this House. [Applause.]

[Here the gavel fell.]

Mr. WILSON of Louisiana. Mr. Chairman, I think it is somewhat unfair to the committee and to myself as chairman of the committee to advance the argument that those who oppose the adding of reservoirs in the White and Arkansas Rivers to this particular bill are opposed to these reservoirs which have very great value for many reasons. I sponsored and reported out the bill that carried those projects. I endeavored to secure the passage of that bill after surveys and examinations by the Corps of Engineers, and if the War Department and the Corps of Engineers would approve including them in this bill and if they would eliminate the expenditure of the $103,000,000 for the Eudora floodway, it would be a different matter. However, that is impossible, and rather than see any amendment to this bill that would bring about an unfavorable report from the War Department and cause it to fail of passage, we must oppose the amendment, because it would destroy the opportunity we now have for carrying out the greatest engineering project ever undertaken in America. However, I am in favor of carrying them out by general legislation.

So, Mr. Chairman, I do not want the Members of the Committee to understand that those who are asking for this bill to be passed, after all this work, are not endeavoring in every way to use reservoirs, if they would avoid the necessity for floodways or if they would not receive an unfavorable report from the War Department. The Chief of Engineers in his letter to me has stated that these reservoirs would be factors of safety, but would not eliminate the necessity for the floodways.

Mr. TERRY. Mr. Chairman, will the gentleman yield for a brief remark?

Mr. WILSON of Louisiana. Yes.

Mr. TERRY. I call the gentleman's attention to page 660 of the hearings before the House Flood Control Committee last year, in which General Ferguson, president of the Mississippi River Commission, makes this statement:

These Arkansas and White River Reservoirs, with some modification of the present levees, and with some allowance for future increase in discharging capacity of the river, would obviate the necessity of the Eudora floodway for protection against a flood of the same origin and magnitude as that of 1927.

Mr. WILSON of Louisiana. And I may quote General Ferguson relative to a statement he made with regard to an article appearing in the press:

No statement made by me to newspapers was intended to infer that my views on the need of the Eudora floodway have been changed from those given before the Flood Control Committee in 1935.

He then said the Eudora spillway was necessary. I may also refer to the statement made by General Ferguson before the committee to the effect that he had great hopes for a continued shortening of the channel of the Mississippi, which has been done under a resolution which I favored and which was approved by the Chief of Engineers, but they say that whatever is done under that provision, the reservoirs will not avoid the necessity for the floodways, and if you added the $126,000,000 to the bill you would still need the floodways, and, furthermore, I do not believe you could get the approval of the War Department.

Mr. NICHOLS. Mr. Chairman, will the gentleman yield?

Mr. WILSON of Louisiana. Yes.

Mr. NICHOLS. I do not think the sponsors of this amendment are against the Eudora floodway. We are willing to go along and support that legislation.

Mr. WILSON of Louisiana. Can you secure approval of the legislation with $126,000,000 added to the bill?

Mr. NICHOLS. Absolutely.

[Here the gavel fell.]

Mr. WHITTINGTON. Mr. Chairman, I yield to no man in my advocacy of conservation of our natural resources. I want to see the resources along the Arkansas and the White Rivers developed for power and flood control.

When the Tennessee Valley Act was under consideration I did not oppose that legislation because the Mississippi River was not included in it. I did not ask that it be amended to include the Mississippi River.

I favor a policy of national flood control. For years, in season and out of season, as a member of the Committee on Flood Control, I have promoted such a policy.

Let me remind you that the omnibus bill we passed last session, which I supported, included 13 reservoirs each for the Arkansas and White Rivers. It has been amended in the Senate so as to provide for a flood-control policy and for the prevention of soil erosion.

There have been no hearings before the Flood Control Committee respecting the White River for power development. A reservoir for flood control is useless, according to the Engineers, for power development, because the reservoir must be empty for flood control and must have water for power development. Reservoirs for both flood control and power development are much more expensive than flood-control reservoirs.

Now, just a word about this amendment.

If the 26 reservoirs in the amendment are adopted, it means that on tributaries that have made no contribution toward flood-control works along the Mississippi River the local interests will make no contribution whatever.

It has been asserted that Gen. H. B. Ferguson, President of the Mississippi River Commission, maintained that the bend cut-offs and the 26 reservoirs along the Arkansas and the White would eliminate the necessity for the Eudora diversion. The wish is father to the thought by those who make such a statement. General Ferguson, as shown by pages 75 and 76 of the hearings before the Senate Commerce Committee on the pending bill, emphatically stated that the 26 reservoirs and the bend cut-offs would not eliminate the Eudora diversion. I quote his language in response to a question by Senator OVERTON as to whether there was any reasonable probability that the cut-offs and 26 reservoirs would render a substantial diversion in the middle section unnecessary:

Brigadier General FERGUSON. Our figures now indicate that a flood such as occurred in 1927 would have to have water diverted somewhere below the mouth of the Arkansas.

It is well to keep in mind that the Chief of Engineers repeatedly stated in the hearings that the effects of cut-offs were problematical. The gentleman from Kansas [Mr. CARLSON] stated that the cut-offs had reduced the distance from the mouth of the Arkansas to the mouth of the Red River by some 100 miles. All of the cut-offs are between the levees. The levees are on an average of 25 feet in height in the area mentioned. Cut-offs are across bends; they reduce the low-water length; but in floods the waters are confined between the levees. There is thus substantially no reduction of river length when the floods are within a few feet of the top of the levees.

Fortunately there have been no major floods since the cut-offs were begun some 4 years ago. I think they are beneficial, but General Ferguson and the Chief of Engineers time after time stated that they should not be substituted for the diversion. They are additional factors of safety.

The gentleman from Arkansas [Mr. MILLER] repeatedly referred to Documents 2 and 3, House Flood Control Committee, Seventy-fourth Congress, first session. After stating that the 26 reservoirs along the Arkansas and White would be additional factors of safety in the alluvial valley of the lower Mississippi River, General Markham concluded said Document 2 by saying—and I quote his words:

But these reservoirs cannot be relied on to prevent a flood which would overtop the levees unless a relief outlet is provided.

Again I quote General Markham from said Document 3:

The report indicates, therefore, that the costly system of reservoirs under study would not abrogate the necessity for fuse-plug levees or similar works and diversions from the main channel of the Mississippi River to afford assured protection against extreme floods.

The minority members of the committee, in their minority report, quote General Ferguson as saying that bend cutting has reduced floods that have occurred 2½ feet. I have already referred to the testimony of General Ferguson before the Commerce Committee. I quote from pages 75 and 76:

Senator OVERTON. They [cut-offs and 26 reservoirs along the Arkansas and White] would not dispense with the necessity of having the Eudora floodway for the escape of waters from the Mississippi River?

Brigadier General FERGUSON. You would require a floodway.

The answer to the contention that cut-offs and reservoirs, or either of them, would eliminate the necessity for the Eudora diversion is found in the documents transmitted by the Chief of Engineers, Major General Markham, and by the president of the Mississippi River Commission, General Ferguson. They both state in their reports in House Document 1, Seventy-fourth Congress, first session, that they recommend the Eudora floodway. This is a sufficient answer to the contentions advanced in the minority report.

I may also say in this connection that the quotation in the minority report from General Markham in criticism of the pending bill was before the Senate amended the bill as recommended by the Chief of Engineers. The Chief of Engineers took the position that the local interests should be required to furnish the rights-of-way for reasonable compensation; he objected to condemnation authority. The Senate amended the bill to meet his views. The quotation by the minority in their minority report has no place; it was directed to a provision that has been eliminated from the bill.

It is amusing to see the minority quote the President in their minority report. The administration has a plan. The problem is being attacked by perfecting the omnibus flood-control bill that passed the House and is now pending in the Senate, and by the passage of the pending bill for the lower Mississippi River.

The minority, in quoting from President Roosevelt, evidently anticipated that he would ask that the problem of

formulating a policy of flood control be continued. The policy of the minority is to delay. The responsible spokesmen for the administration are in control of the Senate and House. The Chief of Engineers speaks for the President. The administration has indicated that it is satisfied with the Overton bill and amendments have been submitted by the Chief of Engineers in line with the views of the administration in the omnibus flood-control bill.

Moreover, and I quote from the language of the President copied by the minority in their report:

It is not suggested that we neglect our main streams.

What stream is more of a main stream than the lower Mississippi River? The President had in mind, evidently, the lower Mississippi River when he stated we should not neglect the main streams and give our whole attention to minor waters.

None have objected to any of the provisions in the pending bill. They merely ask that the provisions of the bill be expanded so as to provide for other streams and other rivers.

In all public works there must be factors of safety. The lower Mississippi Valley had a flood that almost overtopped the levees in 1928 following the flood of 1927. There was another maximum flood in 1929. From the days of De Soto on down maximum floods in the lower Mississippi Valley have occurred on an average of every 15 years. It has been 9 years since the last flood. The 26 reservoirs will be the equivalent of a diversion of from 330,000 to 360,000 cubic feet at Arkansas City. It will eliminate levee heights to the extent of 4½ feet but, according to the testimony of all engineers, it would have taken a levee 9 feet higher than the existing levee, with an additional 3-foot freeboard, or 12 feet, to have contained the flood of 1927. The Chief of Engineers says that even if the reservoirs were constructed a floodway would be imperative. There would be an additional 4½ to 7½ feet to be provided for.

Again the Chief of Engineers opposes the construction of the reservoirs for flood control in the lower Mississippi Valley, and he states very emphatically that the costs of reservoirs to provide for the necessary diversion are a billion and a quarter dollars. Equivalent relief by a floodway at Eudora can be provided at a cost of $103,000,000. Only from twenty-five million to thirty million dollars of this amount will be paid for damages to lands, highways, and other property. The remainder of the $103,000,000 will be expended in constructing diversion works and guide levees.

The flood of 1927 came out of the Arkansas and White Rivers. Floods in the lower Mississippi Valley usually come from the Ohio River. In the event the floods came from the Ohio, the Missouri, or the upper Mississippi River reservoirs along the Arkansas and White would be of no benefit. This is another reason the Chief of Engineers insists upon the Eudora diversion.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. WHITTINGTON. Mr. Chairman, I ask unanimous consent to proceed for 3 minutes, which are left, as I understand it, of the time allotted.

The CHAIRMAN. Without objection, the gentleman from Mississippi is recognized.

Mr. RICH. Mr. Chairman, I am entitled to 5 minutes, and I yield to the gentleman.

Mr. FLETCHER. Mr. Chairman, will the gentleman yield?

Mr. WHITTINGTON. Yes.

Mr. FLETCHER. Are any of these reservoirs included in the Muskingum-Scioto-Ohio Valley project?

Mr. WHITTINGTON. They were not included in the pending Mississippi River bill. I do not know whether they have today baen included in the Senate or not in the omnibus bill. If they have not been included, I should personally like to see them included.

Mr. FORD of California. Will not the whole Mississippi Valley, so far as power is concerned, be taken up in the Norris proposition for the T. V. A.?

Mr. WHITTINGTON. I should think so. I want to see the power development on the White as fast as there is demand.

Mr. DISNEY. Mr. Chairman, will the gentleman yield?

Mr. WHITTINGTON. I shall yield in a moment.

Mr. DISNEY. But the gentleman keeps saying that, and yet he does not yield.

Mr. WHITTINGTON. I will not yield to the gentleman if he interrupts in such a manner without permission. Mr. Chairman, the 26 reservoirs on the Arkansas and White Rivers, if they are constructed, will provide for about 330,000 to 360,000 second cubic feet. The Chief of Engineers says that you have to divert 1,000,000 cubic feet in order to protect the lower valley. If we add these 26 reservoirs for flood control, he tells us that we would still have to construct the Eudora floodway, because if you added the 26 reservoirs you would still have 650,000 cubic feet down there to provide for, and the Chief of Engineers stated that it will take 157 reservoirs to give the equivalent of the 1,000,000 second-feet diverted by the Eudora floodway, costing one hundred and three million, whereas the 157 reservoirs would cost a billion and one-quarter dollars. I would like to see them all constructed. They will come some day. It may be 25 years or 50 years. When they do come every foot of land used for this diversion down there can be utilized. It will be necessary only to remove the guide levees, but in the meantime the purpose of this legislation, recommended by the Chief of Engineers, is to provide for navigation and flood control in the lower valley.

Mr. NICHOLS. Mr. Chairman, will the gentleman yield?

Mr. WHITTINGTON. Yes.

Mr. NICHOLS. Will not the gentleman admit and agree with me that the addition of these 26 dams to the construction of the Eudora floodway would be of great material assistance to relieve floods in the lower Mississippi.

Mr. WHITTINGTON. I have stated in season and out of season that personally I would like those 26 reservoirs constructed as additional factors of safety, but the Chief of Engineers, the spokesman for the President, says substantially that in the upper stretches of the Arkansas and White Rivers they have paid nothing for flood control along the Mississippi River, that the case is different from the St. Francis, and he says that he cannot and will not support this bill or approve it if they are inserted, because it means $127,000,000 additional to the Federal Treasury. I yield now to the gentleman from Oklahoma [Mr. DISNEY].

Mr. DISNEY. Does what some department says determine the policy for the Congress?

Mr. WHITTINGTON. I might answer the gentleman by saying that the Chief of Engineers is impartial, and represents Congress and the country. I have already said the best way to promote flood control on the gentleman's and on all rivers is to eliminate inadequate and unworthy projects. I represent a district where there are rivers and streams that are not included in the pending bill. I would like to have them included as well as the White and the Arkansas, but I do not believe they ought to be included on the same basis as the rivers in the Mississippi or alluvial valley.

Mr. NICHOLS. The gentleman does not say that ours are inadequate.

Mr. WHITTINGTON. I do not. They were in the omnibus bill when it passed the House, and I voted for the bill.

The CHAIRMAN. The time of the gentleman from Mississippi has expired. All time has expired. The question is on agreeing to the amendment.

Mr. WILSON of Louisiana. Mr. Chairman, I move that the Committee do now rise.

Mr. MILLER. O Mr. Chairman, we had an agreement that we would vote on this amendment tonight. That was the agreement.

Mr. RICH. That was the understanding.

Mr. NICHOLS. I demand a vote upon the amendment.

Mr. WILSON of Louisiana. Mr. Chairman, I move that the Committee do now rise.

The CHAIRMAN. The question is on the motion of the gentleman from Louisiana that the Committee do now rise.

The question was taken; and on a division (demanded by Mr. DRIVER) there were—ayes 22, noes 66.

So the motion was rejected.

Mr. NICHOLS. Mr. Chairman, I demand a vote on the amendment.

Mr. WHITTINGTON. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and eight Members present, a quorum.

Mr. MILLER. Mr. Chairman, I ask for a vote upon the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas.

Mr. WHITTINGTON. Mr. Chairman, I ask unanimous consent that the amendment be again reported.

The CHAIRMAN. Without objection, the Clerk will again report the amendment.

There was no objection, and the Clerk again reported the Miller amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas [Mr. MILLER].

The question was taken; and on a division (demanded by Mr. DRIVER) there were ayes 78 and noes 36.

So the amendment was agreed to.

Mr. LAMNECK. Mr. Chairman, I understood this was the last order of business for the day. I would like to offer an amendment to be considered tomorrow and have it printed in the RECORD, so that it will be available to the membership.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

The amendment is as follows:

Amendment offered by Mr. LAMNECK: Page 2, line 7, after the word "Engineers", add the following: *"Provided*, That the Chief of Engineers, under the supervision of the Secretary of War, shall, at the expense of the United States Government, construct a system of levees and reservoirs to adequately control the floodwaters of the Scioto, Olentangy, and Sandusky River Valleys in Ohio: *And provided further*, There is hereby appropriated the sum of $40,000,000 for the carrying out of the above project."

The Clerk read as follows:

SEC. 2. That the Boeuf floodway, authorized by the provisions adopted in the Flood Control Act of May 15, 1928, shall be abandoned as soon as the Eudora floodway, provided for in Flood Control Committee Document No. 1, Seventy-fourth Congress, first session, is in operative condition and the back-protection levee recommended in said document, extending north from the head of the Eudora floodway, shall have been constructed.

SEC. 3. That the levees along the Mississippi River from the head of the Morganza floodway to the head of the Atchafalaya River and down the east bank of the Atchafalaya River to intersection with the west protection levee of said Morganza floodway shall be raised and enlarged to 1928 grade and section.

Mr. RICH. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. RICH. I understood the gentleman from Louisiana [Mr. WILSON] made the statement that after we had the vote on the amendment offered by the gentleman from Arkansas the Committee would rise. Is that the understanding?

Mr. WILSON of Louisiana. No. I did not make that statement.

The CHAIRMAN. The Chair had no part in any agreement.

Mr. MARTIN of Massachusetts. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. FLANNAGAN, Chairman of the Committee of the Whole House on the state of the Union, reported that that Committee, having had under consideration the bill S. 3531, directed him to report that it had come to no resolution thereon.

ROBINSON-PATMAN EQUAL OPPORTUNITY IN BUSINESS BILL

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. PATMAN. Mr. Speaker, what is the Robinson-Patman bill?

Answer. This bill was introduced in the House on June 11, 1935, and the same bill was introduced in the Senate by the Honorable JOSEPH T. ROBINSON, majority leader, June 26, 1935. It is H. R. 8442 in the House. It is S. 3154 in the Senate. It is a bill making it unlawful for any person engaged in commerce—

First. To discriminate in price or terms of sale between purchasers of commodities of like grade and quality.

Second. To prohibit the payment of brokerage or commission under certain conditions—dummy brokerage.

Third. To suppress pseudo-advertising allowances.

Fourth. To provide a presumptive measure of damages in certain cases.

And to protect the independent merchant, the public whom he serves, and the manufacturer from whom he buys from exploitation by unfair competitors.

STATUS OF BILL

2. Question. What is the status of this legislation at this time?

Answer. It was unanimously reported favorably by the Senate Committee on the Judiciary February 3, 1936. It was favorably reported with amendments by the House Judiciary Committee March 31, 1936. It was called up by Senator ROBINSON in the Senate April 28, 1936, and was considered until April 30, when it was passed with amendments. When the bill was sent to the House the Speaker, at our request, permitted it to remain on the table, where it is now. The House Rules Committee the past 3 days has been considering a special rule for consideration of the bill. The Rules Committee will vote on the question tomorrow, May 22. If the rule is granted, I understand it is agreed that the bill will be taken up for House action next Tuesday, May 26. It should not take more than 1 day for House action.

3. Question. If this bill passes the House what will be the next step?

Answer. The next step will be for the Senate to select conferees and the House to select conferees to meet and iron out differences between the two bodies, as there will undoubtedly be differences between the two bills.

4. Question. If conferees of the two Houses agree on the bill, will it then become a law?

Answer. No; the report of the conferees will have to be adopted by both the Senate and the House and then the President will either have to sign it or it will become a law without his signature should he fail to veto it within 10 days.

MANDATE OF DEMOCRATIC PLATFORM

5. Question. Does this bill conform to a mandate in the Democratic platform?

Answer. The Democratic platform of 1932 provides:

We advocate strengthening and an impartial enforcement of the antitrust laws to prevent monopoly and unfair trade practices and revision thereof for the better protection of labor and the small producer and distributor.

There is no bill pending before Congress that is being urged that carries out this provision of the Democratic platform except the Robinson-Patman bill. This bill complies in every way with that part of the Democratic platform.

HOW EVILS ARE CORRECTED

6. Question. How does this bill attempt to correct the evils complained of?

Answer. By an amendment to section 2 of the Clayton Act which has been rendered ineffective by weasel provisos and exceptions which crept into the bill, the full import of which were not realized during its consideration by Congress in 1914. Our amendments will carry out the original intentions and purposes of the law.

7. Question. What specific provisions are included in this bill?

Answer. First. Advertising allowances. Large manufacturers have been coerced into giving certain large mass buyers great reductions in prices under the guise of advertising allowances. This bill will not prohibit advertising allowances but it will prohibit advertising allowances to be used as a guise for price reductions and prohibit advertising allowances that are not given proportionately to all customers. In other words, manufacturers will have a right to select their customers but when selected they must deal with them equally and fairly.

Second. Dummy brokerage. A practice has grown up whereby large mass buyers bribe representatives of the seller,

oftentimes the seller representing groups of farmers, under the guise of a brokerage allowance. It is not a brokerage allowance at all; it is a bribe. This bill will not compel the use of a broker but it will prohibit one party from bribing the representative of the other under the guise of brokerage allowances or commissions.

Third. Quantity discounts. The practice has grown up of manufacturers allowing large mass buyers great discounts that their competitors do not receive even for the same quality and quantity purchased under the guise of quantity discounts. This bill does not prohibit quantity discounts where they are based upon differences in cost of manufacture and distribution, but it does prohibit a manufacturer from giving a discount to one customer without giving the same discount to another customer who purchases the same quantity under the same conditions. The bill permits differentials, but prohibits discriminations.

Fourth. Quantity limits. Under this bill the Federal Trade Commission will be permitted to fix a quantity limit under certain conditions where so few buyers are able to purchase certain large quantities that are available to them for a lower price that are not available to others, that such a practice is calculated to promote a monopoly in any line of business. If the Federal Trade Commission finds that to be true, it may fix a quantity limit, which will mean that any one purchasing that quantity will receive the same price per quantity unit as one purchasing a number of such quantity units. In other words, it is the same theory as railroad freight rates. In 1887 the people demanded that discriminations and favoritism in freight rates be prohibited. A bill was introduced for that purpose. The privileged few immediately commenced the propaganda that such a bill if enacted into law would cause prices to increase to consumers, would place a shelter over and reward the inefficient and could not possibly be enforced. Nevertheless, the law was placed upon the statute books, and it has not increased prices to consumers, rewarded the inefficient, or become unenforceable. If one causes to be transported one carload of freight, he pays the same price per car as one who causes to be transported a trainload or any number of carloads. It was admitted by the Interstate Commerce Commission and the Supreme Court of the United States that a trainload could be transported at a cost considerably less per car than individual carloads could be transported, but the ruling fixing the carload quantity has been upheld because if a lower price is granted to those who can transport trainloads and more, this practice will operate in the interest of the large dealers and cause the businesses of the smaller dealers to be destroyed. The only reason that the Federal Trade Commission will have to fix such a quantity limit will be to prevent monopoly in any line of business. It may fix a carload, several carloads, or less than a carload as the quantity limit, depending upon the nature of the commodity, the quantities in which it is usually bought and sold, and its distribution among large and small competitors.

ANTI-BASING POINT

8. Question. Does the bill contain an anti-basing point provision?

Answer. The House bill as reported by the committee under section 5 contains a definition of price, which is really an anti-basing point provision. The Judiciary Committee, however, met today and passed a resolution requesting the chairman to introduce an amendment on the floor striking this provision from the bill. This meets with my approval and I am sure will meet with the approval of a majority of the Members of the House; the Senate bill does not contain such a provision, therefore this question will not be in conference and such a provision cannot be reinserted by the conferees.

CLASSIFICATION SECTION

9. Question. What is the classification section of the bill that is so much discussed?

Answer. This is subparagraph 1 of the House bill as reported by the House Judiciary Committee. This paragraph will be removed upon motion of the chairman of the Judiciary Committee, since he was instructed by the committee this morning to offer such an amendment; and undoubtedly it will prevail.

ESSENTIAL PROVISIONS REMAIN

10. Question. After these amendments have been adopted, what essential provisions will be contained in the bill?

Answer. What the sponsors first proposed and are now insisting upon, that is, an effective law against pseudo-advertising allowances, dummy brokerage allowances, quantity discounts in excess of differences in cost of manufacture and distribution, and authority granted to the Federal Trade Commission to fix quantity limits to prevent monopoly.

HOW WILL LAW BE ENFORCED

11. Question. Who will enforce this law?

Answer. Since this will be an amendment to the Clayton Act, it is backed by all of the remedies afforded by the Clayton Act:

First. By cease-and-desist order of the Federal Trade Commission, enforced if necessary by order of the Federal courts, and punishable for its disobedience.

Second. By injunction suit, prosecuted by the Attorney General.

Third. By similar suit or injunction or damages prosecuted by anyone injured by its violation.

WILL NOT INCREASE PRICES

12. Question. Will this law raise prices to consumers?

Answer. I know it is charged by one man, who, incidentally, receives an enormous salary and bonus from a corporate chain store, that it will increase prices to consumers $750,000,000 a year. There is no basis for this statement, and evidently the party making it was thinking more about losing his enormous salary and bonus, if the law were enacted, than he was about the cost to consumers. The truth is that if corporate chains can save the consumers three-quarters of a billion dollars a year when they are doing only 25 percent of the retail business, the consumers of the country will be saved billions of dollars a year when the independents who do the other 75 percent of the retail business receive prices from manufacturers on the same basis as the corporate chains. This law will make competition keener, and the public always benefits from keen competition. It will not cause manufacturers to charge the corporate chains more, but it will require them to give independents and smaller chains the same price for the same quantity.

BROKERS AND WHOLESALERS

13. Question. Will this law build a fence around brokers and wholesalers, grant them a bonus or subsidy, or benefit them in any way?

Answer. This law will in no way shelter or protect brokers and wholesalers. It will benefit them to the extent only that they are able to render a service at equal or lower costs than anyone else. This law will not compel a broker or wholesaler to be used. Sales may be made directly from a manufacturer to the retailer or to consumers, but if brokerage or wholesale allowances are paid, they must be paid for services rendered and not used as a bribe.

FARMERS

14. Question. How will this law affect farmers?

Answer. Farmers will be benefited. Under existing practices, farmers selling perishable products of any kind are at the mercy of the large mass buyers. For instance, potatoes, tomatoes, and strawberries must be loaded at a certain time in refrigerator cars and be moved toward the markets. The large mass buyers, there being only a few in number, work together, and knowing that these perishable products must be sold before they deteriorate, stay out of the market until such opportune time as they are permitted to buy at their own price. This enables them to use these commodities purchased at robbery prices by almost highwayman tactics as leaders in their stores in the cities to convince their customers that they can sell at such cheap prices. The farmer pays the bill in loss of buying power. The public pays the bill because the farmer has lost that buying power and can-

not buy what other people engaged in other lines of business have for sale. If the business of independents, including brokers and wholesalers, is destroyed the destructive work and policies of a few large mass buyers will be more effective and the farmers left still more at the mercy of the mass buyers. The consumer should always have the benefit of the lowest prices consistent, however, with a fair price to the producer of the raw material, a fair wage to the wage earner who converts the raw material into the finished product, and a fair cost of distribution, including transportation. This bill is in the direction of causing keener competition and restricting the power of a few large mass buyers to control the market in any line of business.

ARE HEAVY INDUSTRIES OPPOSED?

15. Question. Is this bill opposed by cement, lumber, and hardware manufacturers and others in the heavy-industry lines?

Answer. They were opposed to the bill when it had the antibasing point, but I have not heard of anyone engaged in this line of business being opposed to the main purposes of the bill as herein outlined with the antibasing point eliminated.

ALL MANUFACTURERS NOT GUILTY

16. Question. Are all manufacturers guilty of the practices and evils this bill is intended to correct?

Answer. No; many manufacturers, including Cream of Wheat, Kellogg's, and others, have for many years dealt fairly and equally with all their customers. Recently Standard Brands, Inc., adopted the same policy. This bill, if enacted into law, will merely compel manufacturers to treat their customers fairly.

NOT PRICE FIXING

17. Question. Is this a price-fixing bill?

Answer. No; it is opposed to price fixing. Because a manufacturer will be compelled to sell to all of his customers at the same price under the same conditions does not mean that his competitor across the street manufacturing the same quality of merchandise will be compelled to sell to his customers at the same price. It will merely mean that whatever price the competing manufacturer across the street sells for, he must treat his own customers fairly and sell to them at the same price basis.

NOT ANTICHAIN

18. Question. Is this an anti-chain-store bill?

Answer. It is only antichain insofar as it may deprive certain large corporate chains of certain privileges they are now enjoying that they are not entitled to enjoy as a matter of right and justice, and which they enjoy at the expense of their small competitors, whether chains or independents. This law will have no effect whatsoever on retail distribution.

SUGAR INSTITUTE CASE

19. Question. Is this law contrary to the views of the Supreme Court in the Sugar Institute case?

Answer. No; the Sugar Institute prohibited all quantity discounts whatsoever. The Supreme Court decided they should permit quantity discounts reflecting differences in cost. That is exactly what this bill permits.

OPPONENTS OF BILL

20. Question. Who is opposing this bill?

Answer. Naturally, those who are enjoying unfair privileges are opposed to giving them up. One large corporate chain is paying a few of its officials $1,996,692 a year, or one-quarter of what they take in annually in special discounts and allowances. One of these officials receives, including his bonus, $188,000 a year; another $146,000; another $125,000; and others $100,000 on down. If they are placed upon the same competitive floor and are denied the right to coerce and intimidate manufacturers and are denied the right to bribe representatives of farmers and are forced to do legitimate merchandising and permit the independents who are doing 75 percent of the business to grant their customers the same low prices as the corporate chains, these large salaries of these officials will possibly be in jeopardy. People who have certain privileges become greedy. It is perfectly natural that they should. It is also natural that they have gotten used to these special privileges, rebates, and benefits not received by others and are not going to give them up without a struggle. Our bill will force equal rights to all and special privileges to none.

21. Question. Does this bill prevent price changes by manufacturers?

Answer. No; prices may be changed as at present except prices shall not be changed for the sole and only purpose of granting a special favor or benefit to a favorite customer. A bona-fide price may be changed at any time. This right is expressly reserved in the bill.

DANGER OF MONOPOLY

22. Question. Is there a real danger of monopoly in certain lines of distribution?

Answer. Yes; at first, first variety stores represented the principal line of business operated by chains. Then groceries, shoes, drugs, and others have been embraced. As one line of business is taken over and the areas producing the best volume are covered, another line of business is immediately taken up for the same purpose. The Bureau of the Census discloses that in 1933 the variety chain stores in the District of Columbia were doing 96 percent of this business, chain shoe stores 60 percent, chain grocery stores 80 percent, chain drug stores 62 percent. If you limit comparisons to the areas in which corporate chains operate you will discover that they already have a monopoly in the areas producing the greatest and best volume in the cities of this country in many lines of business.

23. Question. Is it a fact that the census figures disclose that the number of independent merchants have increased during the last few years?

Answer. Yes; it is true; but these increases were all over the Nation and in areas not served by chains at all or in lines of business in which the chains were not engaged. Besides, these increases in number of units often represent small filling stations and a small stock of groceries in areas where chains do not operate.

RESULT IF LAW NOT PASSED

24. Question. What will be the result if this bill or a similar law is not passed?

Answer. The people of America must very quickly decide whether they want absentee ownership of business through corporate chains or whether they want local independent merchants. I believe that the interests of the consumers and this country will be served by preserving independent business which forces competition and lower prices to the consumers. If we have absentee ownership of business the public will pay and pay dearly, the profits going to the privileged few. Local communities will be destroyed, since the local reservoirs of credit will be dried up and the opportunities for young people will be very much restricted. In addition, absentee ownership and a few large mass buyers will destroy the buying power of both farmers and wage earners. The 26,000,000 people engaged in agriculture must have good prices or they cannot buy what the 36,000,000 people dependent upon manufacturing and mechanical pursuits offer for sale. If those engaged in manufacturing and mechanical pursuits and dependent upon such pursuits do not receive fair wages, they cannot purchase the services of the 11,000,000 people dependent upon transportation and communication or the 18,000,000 people dependent upon distribution.

PRESENT ADMINISTRATION MADE LONG STEP IN DIRECTION OF TAKING BONUS AWAY FROM COUPON CLIPPERS

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. PATMAN. Mr. Speaker, very few people, even Members of Congress, realize how far the present Democratic administration has gone in the direction of converting a billion dollars a year from banks and private individuals, holders of Government bonds, to the aged people of our Nation. Our Government now pays to holders of tax-exempt interest-bearing bonds almost a billion dollars a year in the form of interest charges.

I have been advocating a change in our monetary system that will permit our country to save this amount of annual interest each year, and in my arguments I have often stated that it would be much better for the aged people of our Nation to receive this money than for the Government to pay it in the form of a premium, bonus, or subsidy for the use of its own credit.

BLANKET MORTGAGES ISSUED BY FEDERAL RESERVE BANKS ON PEOPLE'S PROPERTY

The Federal Reserve banks are privately owned institutions. They are owned by private corporations, member banks. Not a penny of their stock is owned by the Government or by an individual. These banks have the power to issue Federal Reserve notes. These notes are money. They do not look like mortgages, but they are mortgages. Every note is a promise by the Government of the United States to pay the bearer a certain amount of money. This Government promise carries with it a mortgage on all the property of all the people, including their earnings. It appears idiotic for the Government to allow corporations owned by other private corporations to use the Government's credit in this way without at least some compensation in return therefor. However, these superbanking corporations have this great right and privilege to use money without paying any compensation whatsoever to the Government for the use of this great privilege. They do not even pay interest to the Government. They do not pay taxes to the Government for this great privilege. They do not pay anything to the Government or to the people in the form of compensation or remuneration for this great privilege of using mortgages on the property and earnings of all the people of this Nation. The only expense they incur by reason of issuing this money is the actual cost of printing the money, which is about 27 cents a thousand dollars. These Federal Reserve banks and other banks of the country now hold about $16,000,000,000 of United States Government securities. These securities are tax exempt and interest bearing. Any of these bonds can be converted into new money at any time. The Federal Reserve banks may use the bonds as a basis for the issuance of currency; pay nothing for the currency except the cost of printing, and continue to get interest on the bonds that are used as a basis for the issuance of the money. Federal Reserve banks should be owned by the Government, the Government giving the member banks credit for the comparatively small investment of $144,000,000 that they have in these institutions. When the Government takes over these institutions it should gradually but eventually cause these banks to purchase and own all outstanding Government securities. This change should not be made quickly but it should be made gradually. After it is made, however, the Government will save the interest that it is now paying for the use of its own credit.

HOW SOCIAL SECURITY ACT AFFECTS THIS SITUATION

Although President Franklin D. Roosevelt and his advisers have not seen fit to go as far as many of us would like to go in this direction, a long step has been made in the direction that we are going in the Federal Social Security Act that became a law August 14, 1935. In title 2 of this act an old-age reserve account is provided for. This account will increase year by year and eventually it will likely be as large as the national debt. Under this law the funds in this account must be invested in Government securities. Therefore, this account should eventually own all outstanding Government securities. Then the interest that is paid by the Government to this account will go for the purpose of providing for old-age security. It will not be paid to Federal Reserve banks, private banks, individuals, or corporations holding Government securities as it is paid to them at this time, but it will be paid into this account which will go to the benefit of the aged people of this country.

Therefore, a great long step has been made by President Roosevelt in the direction of taking an annual bonus away from Government coupon clippers and giving it to the aged people of our country who have contributed so greatly to the building of our country in time of peace and in saving our country in time of war and for whose benefit the wealth of this great Nation should be generously used. This is not pleasing to the American Liberty (Bond) League.

SECRETARY MORGENTHAU'S STATEMENT BEFORE COMMITTEE

Secretary Morgenthau appeared before the Committee on Ways and Means of the House of Representatives in support of the economic security bill. I quote the following as an excerpt from his statement before that committee:

Under our proposal, the Federal Government would guarantee an investment return of 3 percent on all receipts from the pay-roll and earnings taxes that were not currently disbursed in benefit payments. Such sums would be used progressively to replace the outstanding public debt with the new liability incurred by the Federal Government for old-age annuities. To the extent that the receipts from the old-age annuity taxes are used to buy out present and future holders of Government obligations, that part of the tax revenues that is now paid out to private bondholders will be available for old-age annuity benefits; thereby minimizing the net additional burdens upon the future.

SOCIAL SECURITY ACT, SOUNDLY CONCEIVED, BEGINS TO WORK—LET US BUILD IT UP

Mr. MAVERICK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

DO YOU WANT A PLAN IN THE AIR OR SOCIAL SECURITY?

Mr. MAVERICK. Mr. Speaker, social security for those who need it, and work for those who can, is what the American people want—and not just a name attached to a word like "plan." The United States Government with its States, backed by the people of the United States, can certainly do more than any individual, whatever his name may be—Smith, Jones, or Townsend.

Revelations have been made recently quite depressing to old people who have been contributing heavily with the idea that some plan will bring back $200 a month.

YOU CANNOT EAT THE FRONT PAGE

Little has been said in the newspapers about the Social Security Act which was enacted last year, and which is getting under way, paying out millions in money and already beginning to be a success.

The Townsend plan may make the front page, but you cannot eat the front page—the Social Security Act is already delivering the goods.

I have always favored pensions and social security, but I want to make sure that the people really get this security. Aside from the fact that the Townsend plan is not a plan, it only applies to old people and does not apply to the citizenship of America at large like the Social Security Act. It is not my purpose to abuse Dr. Townsend, although I have heard him talk in the vaguest terms. Although he admitted getting money, he seemed to have no comprehension of how twenty-eight or more billions could be raised each year to pay out.

No single man or group of men, or any organization, however much they hope for certain things, can get around ordinary business principles. The Social Security Board, without rushing to the front pages, without beating any drums, is working on a businesslike basis through your own Government, the United States of America, and with our several States.

In my own State of Texas, for instance, a million dollars has already been put in the treasury by the Board. The same thing is true of many other States. This will continue.

A $30 BIRD IN HAND WORTH $200 BIRD IN BUSH

In 32 States 600,000 old people are receiving pensions running up to $30 a month, which is better than an old person subscribing money out for a mere hope and getting nothing. A $30 bird in the hand that you can eat is worth far more than a $200 bird in the bush that you cannot even catch.

Besides these 600,000 old people, some 150,000 dependent children in 18 different States are receiving monthly cash payments which support them at home. These payments keep children out of orphan asylums, off freight cars, out of sickness, death, thievery, and crime. Why are they getting help? Because the Social Security Act puts up a dollar for every $2 spent by the State.

Blind persons to the extent of 20,000 are already receiving aid in 17 States.

OLD PEOPLE WANT YOUNG TO PARTICIPATE

At this point let me repeat that the Social Security Act applies to the entire citizenship of the American people and is based on sound economics and workable methods, while the Townsend plan only applies to old people and is based on rushing out the paper money. It seems to me that a well-organized act is the only solution from a viewpoint of common sense, and is also more unselfish. Certainly the old people prefer that young people, others who are blind, crippled, or sick shall likewise receive a square deal.

This problem of old people affects us all, and none of us can keep from getting old or from dying. I have a lot of statistics in mind, but roughly speaking the proportion of old people is increasing very rapidly for the reason that families get smaller and smaller and the pioneer age has passed. And the point is we must approach this problem safely—and with accuracy and intelligence.

Dr. Townsend says that his plan ought eventually to include people down to 50 and 55 years. I wonder why, if we can bring prosperity that way, we could not drop to 40, then 30, and then have one big money machine and there would be no use of having any production of any kind—except paper money.

TWENTY-EIGHT BILLION DOLLARS EXTRA A YEAR WOULD BANKRUPT COUNTRY

Of course, I have said before that it would bankrupt the country to issue $28,000,000,000 in extra currency a year, and after more serious research and conversation with all classes of informed persons I find this to be true. Even should the country not go bankrupt, the purchasing power of the $200 would probably not be over $30. Therefore it seems to me that the reasonable thing is to provide for payments and assistance which we are sure to get.

SECURITY NECESSARY FOR CIVILIZED SOCIETY

Let me now discuss the Social Security Act itself. It is a long-range plan and is as necessary to business and industry as it is to the individual citizen. Should the unemployment of the depression cease, or relief become unnecessary, the social security program would be absolutely necessary if we are to have a civilized society.

OUTLINE OF SOCIAL SECURITY ACT

The Social Security Act has the following groupings:

Unemployment compensation (State and Federal).

Old-age assistance and old-age benefits:

1. Assistance—State and Federal.
2. Benefits—Federal only.

Security for children:

1. Grants to States to assist in meeting the costs of aid to dependent children (mothers' aid).
2. Grants to States to assist in meeting the costs of maternal and child-health services.
3. Grants to States to assist in meeting the costs of child-welfare services.
4. Grants to States to assist in meeting the costs of services for crippled children.

Aid to the blind.

Extension of public-health services.

Vocational rehabilitation.

The methods of financing these programs are widely misunderstood. In the majority of security projects the Federal Government offers to share the expense of a welfare program if the State will set up a system of its own. This method of encouraging State action has proved its success in other fields. It combines the efficiency of local administration with the unity of a national program.

Every State in the Union has registered its approval of the plan by agreeing to cooperate in one or another of the Federal-State welfare programs.

HEADED BY GOVERNOR WINANT, REPUBLICAN

The plan is proceeding satisfactorily under the leadership of John G. Winant, formerly Governor of New Hampshire, a Republican, and one of the brightest and ablest men in the Nation. Associated with him are Arthur J. Altmeyer, who had 14 years' experience in social legislation as chief statistician and secretary of the Wisconsin Industrial Commission, and was Assistant Secretary of Labor at the time of his appointment, and Vincent M. Miles, lawyer and ex-department commander of the American Legion in the State of Arkansas. The act requires that no more than two out of three board members shall be from the same political party. I say this to show that this work is to be nonpartisan. Except for certain experts and attorneys, the administration of the act requires civil service in all its appointments. From the start, politics is eliminated.

Let me discuss what is sought to be done.

First, concerning unemployment, which is connected with all the other problems: There are at least 10,000,000 without jobs. Also there are others forced out of jobs now and again, and among employed persons many become unemployed by accidents and disease. In the year 1933, 55,000 workers were permanently injured by industrial accidents and 14,000 killed. In the same period of time the death rate from other causes was and is higher than in any other civilized country in the world.

These conditions have put what the authorities recognize as some 20,000,000 people on Government relief. I believe the figure of those destitute, unemployed, or suffering a low standard of living will likely prove nearer thirty or forty million. But there are millions enough, and there is no use arguing the number of millions. It is important, however, to know that among those on relief something like 40 percent are children under 16.

All of this is bound up in the general matter of unemployment and the general necessity for social security.

UNEMPLOYMENT COMPENSATION BEGINS TO OPERATE

State unemployment compensation laws do not authorize immediate payments, but the number of persons already protected by them for the future exceeds 7,000,000, almost 40 percent of the total number who would be eligible if all States had enacted laws. This is due to the fact that such highly industrial States as New York and Massachusetts are among those which have already passed such legislation. Others are contemplating action now.

STATES COOPERATE IN FINANCING

Unemployment compensation benefits, as we know, are to be paid out of funds established by State laws. In States with approved laws employers can credit the amount of their contributions to State unemployment compensation funds against 90 percent of a Federal tax on pay rolls. Additional Federal grants are made to States for the cost of administration. The result is that any State may install an unemployment compensation system without increasing either its own expenses or the taxes on its citizens.

I have seen editorials in which it was stated that States must raise enough money to pay for an unemployment compensation program or lose an equal amount of money already collected from their citizens by Federal taxes. The facts are just the opposite. The act is carefully planned so that a State can install unemployment compensation without cost to itself or its citizens.

The act lays a Federal tax of 1 percent in 1936, 2 percent in 1937, and 3 percent thereafter on certain pay rolls. Each State by requiring employers to contribute may establish an unemployment compensation fund from which benefits will be paid to the unemployed. A particular State may require that both employers and employees contribute to this fund. Employers may then credit the amount of their contributions against 90 percent of the Federal tax on pay rolls.

Under this plan, employers all over the country pay the same Federal tax so that their competitive status is unchanged, but in States with unemployment compensation programs the tax is spent at home in providing security for its citizens.

A careful study of the act itself should be made in order to understand its various ramifications. However, I have gathered some figures on public assistance which includes old age, children, blindness, and disability of various kinds; I find that tangible results have already been achieved.

SEVEN HUNDRED AND NINETY-NINE THOUSAND PEOPLE TO BENEFIT BY JUNE—MILLION SOON

For instance, almost 800,000 needy persons will receive cash allowances under the act before June of this year; it will not be many months before this reaches a million citizens of all ages. Among those benefited are 631,000 needy aged, 19,700 blind persons, and 147,800 dependent children. This last group is the one whose homes were in danger of being broken up because of the death or incapacity of a parent. Now, by means of small monthly payments their widowed mothers will be enabled to keep them at home, where they can obtain a normal start in life.

Thirty-nine States are cooperating with the Federal Government in at least one of these public-assistance projects. Eighteen million dollars will be spent on these programs this spring by the Federal Government alone, and State contributions will build the fund up to $36,000,000 before it reaches the beneficiaries.

These sums are trivial compared with the appropriations for general relief, but they all go to support the unemployables—people who are in dire need of aid and unable to do any kind of work. I know of no other expenditures which will do as much good.

PUBLIC HEALTH—CRIPPLED CHILDREN—NATIONAL REHABILITATION

Health measures authorized by the Social Security Act have obtained even wider cooperation. Forty-seven States have submitted plans for an extension of their public-health services with the aid of Federal funds.

Maternal and child health in rural areas are receiving particular attention in these plans. Crippled children will also be aided, and training provided for workers who have been disabled by industrial accidents and otherwise. Often disabled men can learn some new occupation and resume their place in the normal life of the community.

OLD-AGE SECURITY PLAN DESCRIBED—PAYMENTS SHOWN

The foregoing show some general figures on the matter of public assistance. Speaking specifically of old age, the social-security program is divided into assistance and benefits. The first is money paid out by the States to the needy aged in cooperation with the Federal Government. Under the latter is established an old-age benefit system to be financed wholly by the Federal Government.

I have already quoted figures on the old-age assistance payments. They show that this assistance for the needy is substantial, is immediate—if the State cooperates—and that Federal money is being paid now, and will continue to be paid in the States which approve plans.

In contrast to this, Dr. Townsend's plan is impracticable, and no such law is likely to be enacted for years. The sensible thing is, therefore, to build up social security of all kinds and old-age assistance now.

For old-age assistance to those over 65, the Government pays half—but not in excess of $15—and the State half. Those who are now, or by June will be, getting regular checks number 631,743; and they receive each month $11,136,329 in the 32 States which so far have submitted and had approved their plans for old-age assistance.

RETIREMENT BENEFITS START IN 1942

Let us discuss the old-age benefit program, although the old-age protection it affords is all in the future, for no regular benefits will begin until 1942. By next year, however, payments may be made to workers who die or reach the age of 65 before earning enough money to qualify for regular benefits.

This system, you recollect, is supported by Federal payments from the general funds. These future appropriations are balanced by the collection of special pay-roll and income taxes. Elaborate records of employees' earnings must be built up to fulfill our obligations to pay benefits to workers on the basis of their wages in employments covered by the system.

Regular benefits will eventually be paid monthly to qualified workers when they reach the age of 65. The amounts will vary according to the total amount of wages which each worker received in certain employments before he was 65 and after the end of 1936. A man who earns total wages of only $2,000 will receive the minimum benefit of $10 a month until his death. One who works steadily and receives $45,000, say by earning $1,500 a year for 30 years, will receive $50 a month. The maximum monthly benefit will be $85. This Federal system is not a form of relief based on the poverty of the beneficiary, but is a plan to provide for the old age of self-supporting wage earners.

CRITICISM—TOO MUCH, TOO LITTLE

Something should be said about the criticisms of the act and of the Board. They are common enough but not consistent. One set of objectors says the payments are inadequate. Others complain that the program is too expensive. To this I might say such forms of criticism somewhat offset each other. It is true the needy do not get as much as we should like them to have; on the other hand, we are spending more money than some people think is desirable.

Some groups are protesting that security programs are being installed too rapidly; others the opposite. Again we must strike a balance between speed and caution. Hastily installed systems of administration could spoil the whole effect of the law. The act yokes together three wild horses—Federal, State, and county governments. Plenty of power should come out of a team like that, but we must make very sure that the harness is sound.

On the whole it is remarkable how much of the criticism is directed at details and how little at the principles of the act. The Social Security Board is expressly authorized to propose improvements in their system. It will do so as soon as its experience in the various States warrants such action.

Mr. Speaker, let me sum up. The Social Security Act, I repeat, is not anywhere near perfect, but it is a start. It covers a large field of human life; in fact, attempts to cover the whole field of our modern industrial life, with its ups and downs of sickness, unemployment, lack of child opportunity, family break-down, and old age. No system can meet these questions, of course, but we can strive to alleviate suffering and unexpected hardships, and the Social Security Act is a measure designed to that end.

Moreover, if one studies it without prejudice, it will hold water as not only workable but absolutely necessary. The act will directly benefit the businessman against panics and slack periods. And it is not a selfish plan for one class alone but for every free-born American living under these skies.

COOPERATION OF POSTAL INSPECTORS WITH BUREAU OF INVESTIGATION, DEPARTMENT OF JUSTICE

Mr. SUMNERS of Texas. Mr. Speaker, I call up a privileged resolution (H. Res. 508) calling on the Attorney General for certain information, upon which there is an adverse report by the committee.

The Clerk read as follows:

REPORT NO. 2735. REQUESTING INFORMATION FROM THE ATTORNEY GENERAL

Mr. SUMNERS of Texas, from the Committee on the Judiciary, submitted the following adverse report (to accompany H. Res. 508):

"The Committee on the Judiciary, to whom was referred the resolution (H. Res. 508) directing the Attorney General to furnish the House of Representatives with information concerning an allegation that postal inspectors did not furnish information and did not cooperate with agents of the Bureau of Investigation, Department of Justice, in the capture of Sam Coker, an associate of Harry Campbell, alleged mail robbers, at Garrettsville, Ohio, together with copies of correspondence on the subject, after consideration, report the same adversely to the House, with the recommendation that it do not pass.

"There is attached hereto and made a part of this report a communication addressed to the chairman of the committee by the Attorney General with regard to this resolution, as follows:

"OFFICE OF THE ATTORNEY GENERAL,
"*Washington, D. C., May 16, 1936.*

"Hon. HATTON W. SUMNERS,
"*House of Representatives, Washington, D. C.*

"MY DEAR MR. CONGRESSMAN: I have your letter of May 14, in which you enclose a copy of House Resolution No. 508, which has been referred to the House Judiciary Committee, and upon which you request my views.

"Inasmuch as the subject matter of the resolution relates to cooperative action of two executive departments of the Government in their efforts to apprehend and punish law violators, any publication of information as to their methods of operation would be dis-

advantageous to their efficient functioning. Consequently I recommend with great respect that the resolution should be not passed.

"With kind regards, sincerely yours,

"STANLEY REED,
"Acting Attorney General."

Mr. SUMNERS of Texas (interrupting the reading of the report). Mr. Speaker, I ask unanimous consent that the letter be printed in the RECORD and not read.

Mr. MARTIN of Massachusetts. Reserving the right to object, has the gentleman informed the Member who introduced this resolution that it was coming up at this time?

Mr. SUMNERS of Texas. No. It is a unanimous report from the Committee on the Judiciary. I was not in the committee when the gentleman from Missouri [Mr. SHORT] was there, but I believe he has no objection to this procedure. I think everybody agrees to it.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk concluded the reading of the letter.

Mr. SUMNERS of Texas. Mr. Speaker, I move to lay the resolution on the table.

The motion was agreed to.

A motion to reconsider was laid on the table.

CONTESTED ELECTION—LINCOLN ROY M'CANDLESS, CONTESTANT, V. SAMUEL WILDER KING

Mr. GAVAGAN, from the Committee on Elections No. 2, submitted a report (H. Res. 521) on the election contest of Lincoln Roy McCandless, contestant, against Samuel Wilder King, contestee, which was referred to the House Calendar.

EXTENSION OF REMARKS

Mr. BLANTON. Mr. Speaker, I was going to prefer a request for a special order, but the majority leader does not want any more special orders today and I will conform to his desire. So I ask unanimous consent to extend my own remarks and to embrace some data illustrative of my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Texas [Mr. BLANTON]?

Mr. RICH. Reserving the right to object, Mr. Speaker, I would like to know how much data the gentleman is going to put into the RECORD?

Mr. BLANTON. It will be such data as is needed to be illustrative of my speech.

Mr. RICH. About how many pages of the RECORD will it take?

Mr. BLANTON. The data I will quote will consume only about three or four pages.

Mr. RICH. That is a good many pages.

Mr. BANKHEAD. Mr. Speaker, the regular order.

The SPEAKER. Is there objection to the request of the gentleman from Texas [Mr. BLANTON]?

There was no objection.

TEXTILES FROM JAPAN

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to proceed for 1 minute.

The SPEAKER. Is there objection?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to extend my remarks and include as a part thereof a report from the Tariff Commission which shows that at last they have yielded to our request and will increase the duty on certain cotton textiles from Japan more than 40 percent in some instances. [Applause.]

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, while this is a step in the right direction it will not be enough to take care of the situation. It does not include an increased duty on velveteens, and I must continue my battle. The report of the Tariff Commission follows:

COTTON CLOTH

The Tariff Commission announces that the President has approved the findings of the Commission with respect to the excess of domestic over Japanese costs of cotton cloth, and has issued a proclamation under the provisions of section 336 of the Tariff Act of 1930 increasing the duties on bleached, printed, dyed, or colored cotton cloths containing yarns the average number of which exceeds no. 30 but does not exceed no. 50. The cloths on which duties are changed constituted about 58 percent, on the square-yard basis, of the total cotton cloths imported in 1933, and about 90 percent of the cotton cloths imported from Japan in that year.

The duties on cotton cloths in paragraph 904 of the Tariff Act of 1930 depend on the fineness of the yarn; the higher the yarn number the higher the duty. On bleached cotton cloths within the limits specified in the proclamation the duties under the 1930 act range from 23.85 percent ad valorem for 31s average yarn number to 30.5 percent for 50s; the new duties will range from 34 percent ad valorem for 31s to 43.5 percent for 50s. On printed, dyed, or colored cotton cloths within the limits specified the duties under the act of 1930 range from 26.85 percent ad valorem for 31s average yarn number to 33.50 percent ad valorem for 50s average yarn number; the new duties will range from 38 percent ad valorem for 31s average yarn number to 47.5 percent ad valorem for 50s average yarn number. The proclaimed duties represent an increase over the existing duties of about 42 percent for both bleached cloths and printed, dyed, or colored cloths. The increase in rates does not affect unbleached cloth nor cloth woven with eight or more harnesses, or with Jacquard, lappet, or swivel attachments.

The cost-of-production investigation of domestic and foreign cotton cloths was instituted by the Tariff Commission in response to a Senate resolution. The Commission selected for use as the basis of cost comparisons bleached, printed, dyed, and colored cotton cloths containing yarns, the average number of which exceeds 30 but does not exceed 50. Imports of unbleached cloths as a whole are small, and imports of bleached, printed, dyed, or colored cloths coarser or finer than the 31s–50s range consist of numerous varieties, each of which is imported in relatively small quantities from any one country. Imports within the 31s–50s range constitute nearly three-fifths of the total imports and they come principally from Japan. In its report the Commission compared costs of production of domestic cloths delivered at New York, the principal market, with costs, as evidenced by invoice prices, of similar Japanese cloths delivered at New York.

The United Kingdom supplied the bulk of the cotton cloths imported into the United States prior to 1931. Switzerland was the leading source in the period 1931–34. Late in 1934 the imports from Japan became important, and that country was the principal source of imports in 1935 and in 1936 to date. Of the total United States imports in 1935, amounting to 62,000,000 square yards, Japan supplied 36,400,000 square yards, of which 30,000,000 square yards were bleached, 6,000,000 were printed, dyed, or colored, and 357,000 unbleached. Of these 1935 imports from Japan, about 33,000,000 square yards, or over 90 percent, were within the yarn counts of 31s to 50s on which the duty has been increased. Imports from Japan in the first quarter of 1936 increased to over 21,000,000 square yards.

The imported Japanese cloths are lighter in weight than the most nearly comparable domestic goods, and they have sold at prices per yard which take into account the weight difference. Import prices, in fact, have usually been lower than domestic by more than the disparity in weight and frequently have been lower than the costs of production of the heavier domestic cloths.

The bulk of the cotton cloths imported from Japan in 1935 and the first quarter of 1936 were mulls and shirtings, mostly bleached but including some piece-dyed, finished from gray shirtings; these are competitive in a range of uses with domestic nainsooks and muslins similarly finished from gray print cloth. The main use of the Japanese mulls and shirtings is in the manufacture of nightgowns, children's underwear, and men's handkerchiefs.

Of the total United States production of countable cotton cloths, amounting to more than 7,300,000,000 square yards in 1933, print cloths and sheetings are the largest items. The shift in production of these goods from New England to the Southern States since 1921 has been very noticeable. In the case of print cloth, the Southern States had about 61 percent of the total national production in 1921 and 94 percent in 1933. In 1935 there was very little print cloth produced in New England.

Imports of countable cotton cloths from all sources were equivalent to somewhat less than 1 percent and imports from Japan to about one-half of 1 percent of the total yardage of domestic production in 1935. The competition of imports from Japan is, however, confined to part of the field only—that of print cloths, especially bleached print cloths. The ratio of total imports of shirtings from Japan to total domestic production of print cloths was about 2 percent in 1935, and the ratio of bleached shirtings from Japan to domestic production of bleached print cloths was about 13 percent.

Although the United States is the world's largest producer of cotton cloth, Japan in recent years has been the largest exporter. The United States regularly exports more cotton cloth than it imports, but in recent years its export trade has fallen sharply, the decline due in large part to the competition of cheaper fabrics from Japan. Japan's exports of cotton cloth to the United States constituted in 1935 less than 2 percent of its total exports of such cloth.

The new rates of duty will become effective on June 20, 1936.

AGREEMENT BETWEEN RAILROAD CARRIERS AND THEIR EMPLOYEES

Mr. CROSSER of Ohio. Mr. Speaker, I ask unanimous consent to address the House for 3 minutes in regard to a matter of importance to the entire membership.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. CROSSER of Ohio. Mr. Speaker, with much pleasure I wish to make a statement which I am sure all Members of the House will be glad to hear.

The differences between the railroads of the United States on the one hand and the railroad employees on the other, in regard to the rights of employees in connection with proposed consolidations of terminal facilities have been adjusted. A written agreement was signed today by the representatives of the railroads and by the representatives of the railroad workers. The agreement is for a period of 5 years beginning on June 18, 1936, and does away with the necessity for the enactment of the Wheeler-Crosser bill which would restrict reductions in railroad employment, and which is now pending before congressional committees in the Senate and House of Representatives. [Applause.]

I think it proper to say that much credit is due to both the representatives of the railroad workers and to the representatives of the railroads for the rare intelligence, high sense of justice, and devotion to duty manifested by them in their efforts to reconcile their great and serious differences. In the controversy was involved the loss of the positions of possibly 200,000 men, a very serious matter, indeed, at this time. The management and men have worked out with a great deal of care an arrangement that is mutually satisfactory to management and men.

I think that we should pay tribute to the fine spirit evidenced by both parties for the satisfactory conclusion of the whole matter. When the railway labor bill was before the House for consideration, I stated that the use of the means provided in that bill for mediation in and settlement of railway labor disputes would rapidly develop a spirit of conciliation and cooperation between the workers and the management which would tend to establish good will and harmony throughout the whole industry.

The signing today of the remarkable document to which I have referred, that is, the contract between the railroad companies and their workers, fulfills in a gratifying measure the prediction to which I have referred. It is a triumph of principle over force and advances the cause of justice immeasurably.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. CROSSER of Ohio. I yield.

Mr. McCORMACK. My friend the gentleman from Ohio has been very kind, and properly so, in complimenting the representatives of the employees and of the railroads, but I think that the gentleman from Ohio himself is entitled to be complimented. The gentleman has worked tirelessly on all occasions in behalf of the railroad employees. He has done so on this important question, having introduced legislation to bring about results if an agreement had not been reached. I repeat, the gentleman himself is to be complimented. [Applause.] It has been a pleasure for me to work with the gentleman from Ohio [Mr. CROSSER] on this matter, as I was on the railroad retirement legislation, and I am pleased to hear him advise the House that a settlement has been arrived at.

Mr. CROSSER of Ohio. I thank the gentleman from Massachusetts. I can only say that I have done whatever was in my power to have justice done to all parties concerned.

Mr. Speaker, I ask unanimous consent to extend my remarks and to include therein a copy of the agreement I referred to, which was signed here in Washington, D. C., today. It is very important that the Members have it.

Mr. RICH. Mr. Speaker, reserving the right to object, is this a document that should be printed in the RECORD? Should it not rather be printed in pamphlet form?

Mr. CROSSER of Ohio. The trouble is the Members will be asked for it immediately; their constituents will want to know what it contains.

Mr. RICH. I am not going to object, but we are trying to keep the RECORD down; and I am just wondering whether it is proper to print this agreement in an extension of remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The agreement referred to follows:

AGREEMENT OF MAY 1936, WASHINGTON, D. C.

This agreement is entered into between the carriers listed and defined in appendixes A, B, and C, attached hereto and made a part hereof, represented by the duly authorized joint conference committee signatory hereto, as party of the first part, and the employees of said carriers, represented by the organizations signatory hereto by their respective duly authorized executives, as party of the second part, and, so far as necessary to carry out the provisions hereof, is also to be construed as a separate agreement by and between and in behalf of each of said carriers and its employees who are now or may hereafter be represented by any of said organizations which now has (or may hereafter have during the life of this agreement) an agreement with such carrier concerning rates of pay, rules, or working conditions.

The signatories hereto, having been respectively duly authorized as aforesaid to negotiate to a conclusion certain pending issues concerning the treatment of employees who may be affected by coordination as hereinafter defined, hereby agree:

SECTION 1. That the fundamental scope and purpose of this agreement is to provide for allowances to defined employees affected by coordination as hereinafter defined, and it is the intent that the provisions of this agreement are to be restricted to those changes in employment in the railroad industry solely due to and resulting from such coordination. Therefore, the parties hereto understand and agree that fluctuations, rises and falls, and changes in volume or character of employment brought about solely by other causes are not within the contemplation of the parties hereto or covered by or intended to be covered by this agreement.

SEC. 2. (a) The term "coordination" as used herein means joint action by two or more carriers whereby they unify, consolidate, merge, or pool in whole or in part their separate railroad facilities or any of the operations or services previously performed by them through such separate facilities.

(b) The term "carrier" as used herein when it refers to other than parties to this agreement means any carrier subject to the provisions of part I of the Interstate Commerce Act; when it refers to a party to this agreement it means any company or system listed and described in appendixes A, B, or C as a single carrier party to this agreement.

(c) The term "time of coordination" as used herein includes the period following the effective date of a coordination during which changes consequent upon coordination are being made effective; as applying to a particular employee it means the date in said period when that employee is first adversely affected as a result of said coordination.

SEC. 3. (a) The provisions of this agreement shall be effective and shall be applied whenever two or more carriers parties hereto undertake a coordination; and it is understood that if a carrier or carriers parties hereto undertake a coordination with a carrier or carriers not parties hereto, such coordination will be made only upon the basis of an agreement approved by all of the carriers parties thereto and all of the organizations of employees involved (parties hereto) of all of the carriers concerned. No coordination involving classes of employees not represented by any of the organizations parties hereto shall be undertaken by the carriers parties hereto, except in accord with the provisions of this agreement or agreements arising hereunder.

(b) Each carrier listed and established as a separate carrier for the purposes of this agreement, as provided in appendixes A, B, and C, shall be regarded as a separate carrier for the purposes hereof during the life of this agreement: *Provided, however,* That in the case of any coordination involving two or more railroad carriers which also involves the Railway Express Agency, Inc., the latter company shall be treated as a separate carrier with respect to its operations on each of the railroads involved.

(c) It is definitely understood that the action of the parties hereto in listing and establishing as a single carrier any system which comprises more than one operating company is taken solely for the purposes of this agreement and shall not be construed or used by either party hereto to limit or affect the rights of the other with respect to matters not falling within the scope and terms of this agreement.

SEC. 4. Each carrier contemplating a coordination shall give at least 90 days written notice of such intended coordination by posting a notice on bulletin boards convenient to the interested employees of each such carrier and by sending registered mail notice to the representatives of such interested employees. Such notice shall contain a full and adequate statement of the proposed changes to be effected by such coordination, including an estimate of the number of employees of each class affected by the

intended changes. The date and place of a conference between representatives of all the parties interested in such intended changes for the purpose of reaching agreements with respect to the application thereto of the terms and conditions of this agreement shall be agreed upon within 10 days after the receipt of said notice, and conference shall commence within 30 days from the date of such notice.

SEC. 5. Each plan of coordination which results in the displacement of employees or rearrangement of forces shall provide for the selection of forces from the employees of all the carriers involved on bases accepted as appropriate for application in the particular case; and any assignment of employees made necessary by a coordination shall be made on the basis of an agreement between the carriers and the organizations of the employees affected, parties hereto. In the event of failure to agree the dispute may be submitted by either party for adjustment in accordance with section 13.

SEC. 6. (a) No employee of any of the carriers involved in a particular coordination who is continued in service shall, for a period not exceeding 5 years following the effective date of such coordination, be placed, as a result of such coordination, in a worse position with respect to compensation and rules governing working conditions than he occupied at the time of such coordination so long as he is unable in the normal exercise of his seniority rights under existing agreements, rules, and practices to obtain a position producing compensation equal to or exceeding the compensation of the position held by him at the time of the particular coordination, except, however, that if he fails to exercise his seniority rights to secure another available position, which does not require a change of residence, to which he is entitled under the working agreement and which carries a rate of pay and compensation exceeding those of the position which he elects to retain, he shall thereafter be treated for the purposes of this section as occupying the position which he elects to decline.

(b) The protection afforded by the foregoing paragraph shall be made effective whenever appropriate through what is hereby designated as a "displacement allowance" which shall be determined in each instance in the manner hereinafter described. Any employee entitled to such an allowance is hereinafter referred to as a displaced employee.

(c) Each displacement allowance shall be a monthly allowance determined by computing the total compensation received by the employee and his total time paid for during the last 12 months in which he performed service immediately preceding the date of his displacement (such 12 months being hereinafter referred to as the "test period") and by dividing separately the total compensation and the total time paid for by 12, thereby producing the average monthly compensation and average monthly time paid for, which shall be the minimum amounts used to guarantee the displaced employee, and if his compensation in his current position is less in any month in which he performs work than the aforesaid average compensation he shall be paid the difference, less compensation for any time lost on account of voluntary absences to the extent that he is not available for service equivalent to his average monthly time during the test period, but he shall be compensated in addition thereto at the rate of the position filled for any time worked in excess of the average monthly time paid for during the test period.

SEC. 7. (a) Any employee of any of the carriers participating in a particular coordination who is deprived of employment as a result of said coordination shall be accorded an allowance (hereinafter termed a "coordination allowance") based on length of service which (except in the case of an employee with less than 1 year of service) shall be a monthly allowance equivalent in each instance to 60 percent of the average monthly compensation of the employee in question during the last 12 months of his employment in which he earned compensation prior to the date he is first deprived of employment as a result of the coordination. This coordination allowance will be made to each eligible employee while unemployed by his home road or in the coordinated operation during a period beginning at the date he is first deprived of employment as a result of the coordination and extending in each instance for a length of time determined and limited by the following schedule:

Period of payment

Length of service:	*Months*
1 year and less than 2 years	6
2 years and less than 3 years	12
3 years and less than 5 years	18
5 years and less than 10 years	36
10 years and less than 15 years	48
15 years and over	60

In the case of an employee with less than 1 year of service, the total coordination allowance shall be a lump-sum payment in an amount equivalent to 60 days' pay at the straight-time daily rate of the last position held by him at the time he is deprived of employment as a result of the coordination.

(b) For the purposes of this agreement the length of service of the employee shall be determined from the date he last acquired an employment status with the employing carrier, and he shall be given credit for 1 month's service for each month in which he performed any service (in any capacity whatsoever) and 12 such months shall be credited as 1 year's service. The employment status of an employee shall not be interrupted by furlough in instances where the employee has a right to and does return to service when called. In determining length of service of an employee acting as an officer or other official representative of an employee organization he will be given credit for performing service while so engaged on leave of absence from the service of a carrier.

(c) An employee shall be regarded as deprived of his employment and entitled to a coordination allowance in the following cases:

1. When the position which he holds on his home road is abolished as a result of coordination and he is unable to obtain by the exercise of his seniority rights another position on his home road or a position in the coordinated operation, or

2. When the position he holds on his home road is not abolished but he loses that position as a result of the exercise of seniority rights by an employee whose position is abolished as a result of said coordination, or by other employees, brought about as a proximate consequence of the coordination, and if he is unable by the exercise of his seniority rights to secure another position on his home road or a position in the coordinated operation.

(d) An employee shall not be regarded as deprived of employment in case of his resignation, death, retirement on pension or on account of age or disability in accordance with the current rules and practices applicable to employees generally, dismissal for justifiable cause in accordance with the rules, or furloughed because of reduction in forces due to seasonal requirements of the service; nor shall any employee be regarded as deprived of employment as the result of a particular coordination who is not deprived of his employment within 3 years from the effective date of said coordination.

(e) Each employee receiving a coordination allowance shall keep the employer informed of his address and the name and address of any other person by whom he may be regularly employed.

(f) The coordination allowance shall be paid to the regularly assigned incumbent of the position abolished. If the position of an employee is abolished while he is absent from service, he will be entitled to the coordination allowance when he is available for service. The employee temporarily filling said position at the time it was abolished will be given a coordination allowance on the basis of said position until the regular employee is available for service and thereafter shall revert to his previous status and will be given a coordination allowance accordingly if any is due.

(g) An employee receiving a coordination allowance shall be subject to call to return to service after being notified in accordance with the working agreement, and such employee may be required to return to the service of the employing carrier for other reasonably comparable employment for which he is physically and mentally qualified and which does not require a change in his place of residence, if his return does not infringe upon the employment rights of other employees under the working agreement.

(h) If an employee who is receiving a coordination allowance returns to service the coordination allowance shall cease while he is so reemployed and the period of time during which he is so reemployed shall be deducted from the total period for which he is entitled to receive a coordination allowance. During the time of such reemployment however he shall be entitled to protection in accordance with the provisions of section 6.

(i) If an employee who is receiving a coordination allowance obtains railroad employment (other than with his home road or in the coordinated operation) his coordination allowance shall be reduced to the extent that the sum total of his earnings in such employment and his allowance exceed the amount upon which his coordination allowance is based; provided that this shall not apply to employees with less than 1 year's service.

(j) A coordination allowance shall cease prior to the expiration of its prescribed period in the event of—

1. Failure without good cause to return to service in accordance with working agreement after being notified of position for which he is eligible and as provided in paragraphs (g) and (h).

2. Resignation.

3. Death.

4. Retirement on pension or on account of age or disability in accordance with the current rules and practices applicable to employees generally.

5. Dismissal for justifiable cause.

SEC. 8. An employee affected by a particular coordination shall not be deprived of benefits attaching to his previous employment, such as free transportation, pensions, hospitalization, relief, etc., under the same conditions and so long as such benefits continue to be accorded to other employees on his home road, in active service, or on furlough, as the case may be, to the extent that such benefits can be so maintained under present authority of law or corporate action or through future authorization which may be obtained.

SEC. 9. Any employee eligible to receive a coordination allowance under section 7 hereof may, at his option at the time of coordination, resign and (in lieu of all other benefits and protections provided in this agreement) accept in a lump sum a separation allowance determined in accordance with the following schedule:

Separation allowance

Length of service:	*Months' pay*
1 year and less than 2 years	3
2 years and less than 3 years	6
3 years and less than 5 years	9
5 years and less than 10 years	12
10 years and less than 15 years	12
15 years and over	12

In the case of employees with less than 1 year's service, 5 days' pay, at the rate of the position last occupied, for each month in which they performed service, will be paid as the lump sum.

(a) Length of service shall be computed as provided in section 7.

(b) One month's pay shall be computed by multiplying by 30 the daily rate of pay received by the employee in the position last occupied prior to time of coordination.

SEC. 10 (a). Any employee who is retained in the service of any carrier involved in a particular coordination (or who is later restored to service from the group of employees entitled to receive a coordination allowance) who is required to change the point of his employment as result of such coordination and is therefore required to move his place of residence, shall be reimbursed for all expenses of moving his household and other personal effects, and for the traveling expenses of himself and members of his family, including living expenses for himself and his family, and his own actual wage loss during the time necessary for such transfer, and for a reasonable time thereafter (not to exceed 2 working days), used in securing a place of residence in his new location. The exact extent of the responsibility of the carrier under this provision and the ways and means of transportation shall be agreed upon in advance between the carrier responsible and the organization of the employee affected. No claim for expenses under this section shall be allowed unless they are incurred within 3 years from the date of coordination, and the claim must be submitted within 90 days after the expenses are incurred.

(b) If any such employee is furloughed within 3 years after changing his point of employment as a result of coordination, and elects to move his place of residence back to his original point of employment, the carrier shall assume the expense of moving his household and other personal effects under the conditions imposed in paragraph (a) of this section.

(c) Except to the extent provided in paragraph (b) changes in place of residence subsequent to the initial changes caused by coordination and which grow out of the normal exercise of seniority in accordance with working agreements are not comprehended within the provisions of this section.

SEC. 11 (a). The following provisions shall apply, to the extent they are applicable in each instance, to any employee who is retained in the service of any of the carriers involved in a particular coordination (or who is later restored to such service from the group of employees entitled to receive a coordination allowance) who is required to change the point of his employment as a result of such coordination and is therefore required to move his place of residence:

1. If the employee owns his own home in the locality from which he is required to move, he shall at his option be reimbursed by his employing carrier for any loss suffered in the sale of his home for less than its fair value. In each case the fair value of the home in question shall be determined as of a date sufficiently prior to the coordination to be unaffected thereby. The employing carrier shall in each instance be afforded an opportunity to purchase the home at such fair value before it is sold by the employee to any other party.

2. If the employee is under a contract to purchase his home, the employing carrier shall protect him against loss to the extent of the fair value of any equity he may have in the home, and in addition shall relieve him from any further obligations under his contract.

3. If the employee holds an unexpired lease of a dwelling occupied by him as his home, the employing carrier shall protect him from all loss and cost in securing the cancelation of his said lease.

(b) Changes in place of residence subsequent to the initial change caused by coordination and which grow out of the normal exercise of seniority in accordance with working agreements are not comprehended within the provisions of this section.

(c) No claim for loss shall be paid under the provisions of this section which is not presented within 3 years after the effective date of the coordination.

(d) Should a controversy arise in respect to the value of the home, the loss sustained in its sale, the loss under a contract for purchase, loss and cost in securing termination of lease, or any other question in connection with these matters, it shall be decided through joint conference between the representatives of the employees and the carrier on whose line the controversy arises, and in the event they are unable to agree, the dispute may be referred by either party to a board of three competent real-estate appraisers, selected in the following manner: One to be selected by the representatives of the employees and the carrier, respectively; these two shall endeavor by agreement within 10 days after their appointment to select the third appraiser, or to select some person authorized to name the third appraiser, and in the event of failure to agree, then the Chairman of the Interstate Commerce Commission shall be requested to appoint the third appraiser. A decision of a majority of the appraisers shall be required, and said decision shall be final and conclusive. The salary and expenses of the third or neutral appraiser, including the expenses of the appraisal board, shall be borne equally by the parties to the proceedings. All other expenses shall be paid by the party incurring them, including the salary of the appraiser selected by such party.

SEC. 12. If any carrier shall rearrange or adjust its forces in anticipation of a coordination, with the purpose or effect of depriving an employee of benefits to which he should be entitled under this agreement as an employee immediately affected by a coordination, this agreement shall apply to such an employee as of the date when he is so affected.

SEC. 13. In the event that any dispute or controversy arises (except as defined in sec. 11) in connection with a particular coordination, including an interpretation, application, or enforcement of any of the provisions of this agreement (or of the agreement entered into between the carriers and the representatives of the employees relating to said coordination as contemplated by this agreement) which is not composed by the parties thereto within 30 days after same arises, it may be referred by either party for consideration and determination to a committee which is hereby established, composed in the first instance of the signatories to this agreement. Each party to this agreement may name such persons from time to time as each party desires to serve on such committee as its representatives in substitution for such original members. Should the committee be unable to agree, it shall select a neutral referee and in the event it is unable to agree within 10 days upon the selection of said referee, then the members on either side may request the National Mediation Board to appoint a referee. The case shall again be considered by the committee and the referee, and the decision of the referee shall be final and conclusive. The salary and expenses of the referee shall be borne equally by the parties to the proceeding; all other expenses shall be paid by the party incurring them.

SEC. 14. Any carrier not initially a party to this agreement may become a party by serving notice of its desire to do so by mail upon the members of the committee established by section 13 hereof. It shall become a party as of the date of the service of such notice or upon such later date as may be specified therein.

SEC. 15. This agreement shall be effective June 18, 1936, and be in full force and effect for a period of 5 years from that date and continue in effect thereafter, with the privilege that any carrier or organization party hereto may then withdraw from the agreement after 1 year from having served notice of its intention so to withdraw: *Provided, however,* That any rights of the parties hereto or of individuals established and fixed during the term of this agreement shall continue in full force and effect, notwithstanding the expiration of the agreement or the exercise by a carrier or an organization of the right to withdraw therefrom.

This agreement shall be subject to revision by mutual agreement of the parties hereto at any time, but only after the serving of a 60 days' notice by either party upon the other.

For the participating carriers listed in appendix A:

H. A. ENOCHS.
JNO. G. WALKER.
WM. WHITE.

For the participating carriers listed in appendix B:

C. A. CLEMENTS.
E. J. CONNORS.
C. M. DUKES.

For the participating carriers listed in appendix C:

H. A. BENTON.
W. J. JENKINS.
J. B. PARRISH.

For the participating carriers:

H. A. ENOCHS,
Chairman, Joint Conference Committee.

For the participating organizations of employees:

A. Johnston (by W. J. B.), grand chief engineer, Brotherhood of Locomotive Engineers; D. B. Robertson, president, Brotherhood of Locomotive Firemen and Enginemen; J. A. Phillips, president, Order of Railway Conductors of America; A. F. Whitney, president, Brotherhood of Railroad Trainmen; T. C. Cashen, president, Switchmen's Union of North America; E. J. Manion, president, Order of Railroad Telegraphers; J. G. Luhrsen, president, American Train Dispatchers' Association; A. O. Wharton, president, International Association of Machinists; J. A. Franklin, president, International Brotherhood of Boilermakers, Iron Ship Builders, and Helpers of America; Ray Horn, president, International Brotherhood of Blacksmiths, Drop Forgers, and Helpers; John J. Hynes, president, Sheet Metal Workers' International Association; C. J. McGlogan, vice president, International Brotherhood of Electrical Workers; Felix H. Knight, president, Brotherhood Railway Carmen of America; J. J. McNamara, president, International Brotherhood of Firemen and Oilers; F. H. Fljozdal, president, Brotherhood of Maintenance of Way Employees; Geo. M. Hanson, president, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; A. E. Lyon, acting president, Brotherhood of Railroad Signalmen of America; M. S. Warfield, president, Order of Sleeping Car Conductors; James J. Delaney, president, National Organization Masters, Mates, and Pilots of America; Wm. L. Brown, president, National Marine Engineers' Beneficial Association.

GEO. M. HANSON,
Chairman, Railway Labor Executives' Association.

Signed at Washington, D. C., May 21, 1936.

PERRY'S VICTORY MONUMENT

Mr. O'CONNOR. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (S. 3118) to provide for the creation of the Perry's victory and international peace memorial national monument on Put in Bay, South Bass Island, in the State of Ohio, and for other purposes.

The Clerk read the title of the bill.

Mr. RICH. Mr. Speaker, reserving the right to object, can the gentleman tell us whether this has been approved by the Advisory Board?

Mr. O'CONNOR. I may explain to the gentleman that when the Consent Calendar was last considered a similar House bill was passed, and at that time the gentleman engaged in a colloquy which brought out the fact that it was approved and that there was no expense to the Federal Government involved. Through inadvertence an identical Senate bill at the Speaker's desk was not considered. It was only afterward that we found the Senate bill; and I am merely asking now to consider the Senate bill, which should have been taken up at that time.

Mr. RICH. If the Advisory Board has approved the project, I shall not object.

Mr. O'CONNOR. I so understand.

Mr. BLANTON. And an identical House bill has been passed; is that right?

Mr. O'CONNOR. Yes.

Mr. BLANTON. Then the gentleman will move to lay the House bill on the table?

Mr. O'CONNOR. The House bill is now pending in the Senate, and I will advise them of the action of the House.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the President of the United States be, and he is hereby, authorized to establish by proclamation the following-described Government lands, together with the Perry's Victory Memorial proper, its approaches, retaining walls, and all buildings, structures, and other property thereon, situated in Put in Bay Township, South Bass Island, Ottawa County, Lake Erie, State of Ohio, as the "Perry's Victory and International Peace Memorial National Monument", for the preservation of the historical associations connected therewith, to inculcate the lessons of international peace by arbitration and disarmament, and for the benefit and enjoyment of the people: Commencing at the intersection of the middle line of Delaware Avenue and Chapman Avenue, in the village of Put in Bay, and running thence south 83°59′ E. in the middle line of said Delaware Avenue, and the same extended 495 feet to Lake Erie; thence north 49°59′ E. along said lake shore 346 feet; thence north 43°14′ E. along said lake shore 212 feet; thence north 53°13′ E. 400 feet along said lake shore; thence north 46°6′ W. about 730 feet to Lake Erie; thence southwesterly and westerly along said lake shore to the middle line, extended, of said Chapman Avenue; thence south 1°30′ W. along said middle line, and the same extended, about 520 feet to the place of beginning, and containing 14.25 acres of land and known as a part of lots nos. 1 and 2, range south of county road, and a part of lot no. 12, East Point, in South Bass Island, in the township of Put in Bay, county of Ottawa, State of Ohio.

SEC. 2. That the administration, protection, and development of the aforesaid national monument shall be exercised under the direction of the Secretary of the Interior by the National Park Service, subject to the provisions of the act of August 25, 1916, entitled "An act to establish a National Park Service, and for other purposes", as amended.

SEC. 3. After the said national monument has been established as provided in section 1 hereof, the Secretary of the Interior is hereby authorized to accept donations of land, interests in land, buildings, structures, and other property as may be donated for the extension and improvement of the said national monument, and donations of funds for the purchase and maintenance thereof, the title and evidence of title to lands acquired to be satisfactory to the Secretary of the Interior: *Provided*, That he may acquire on behalf of the United States out of any donated funds by purchase when purchasable at prices deemed by him reasonable, otherwise by condemnation under the provisions of the act of August 1, 1888, such tracts of land within the said national monument as may be necessary for the completion thereof.

SEC. 4. The members of the Perry's Victory Memorial Commission created by act of Congress March 3, 1919, having by their patriotic and active interest faithfully conserved for posterity this important historical area and objects, shall hereafter act as a board of advisers, and with such other powers as the Secretary of the Interior may direct, in the maintenance of such national monument and shall consist of the present surviving and active members of the Commission provided for in said act, namely, on the part of the United States, John A. Johnston and Hugh Rodman, and on the part of the several States: Ohio, Webster P. Huntington, Carl B. Johannsen, and A. V. Donahey; Pennsylvania, Milton W. Shreve, Thomas C. Jones, and George M. Mason; Michigan, James E. Degan; Illinois, Chesley R. Perry, William Hale Thompson, and Richard S. Folsom; Wisconsin, Charles B. Perry, A. W. Sanborn, and S. W. Randolph; New York, Charles H. Wiltsie and Jacob Schifferdecker; Rhode Island, Harry E. Davis; Kentucky, Samuel M. Wilson, W. J. Moore, and Robert H. Winn: *Provided*, That as vacancies occur in the Commission on the part of the United States, they shall remain unfilled until only one Commissioner of the United States remains; thereafter there shall be only one Commissioner of the United States: *Provided further*, That as vacancies occur in the Commission on the part of the several States they shall remain unfilled until only one Commissioner from each State remains; thereafter there shall be only one Commissioner from each State. After the membership of the Commission has been reduced in accordance with the provisions of this act, vacancies shall be filled in the manner set forth in the act of March 3, 1919. The members of the Commission shall receive no compensation or expenses, except actual traveling expenses incurred in attending meetings of the Commission upon call of the Secretary of the Interior.

SEC. 5. Employees of the Perry's Victory Memorial Commission at the time of the enactment of this legislation may, in the discretion of the Secretary of the Interior, be employed by the National Park Service in the administration, protection and development of said national monument.

SEC. 6. That the provisions of the act of March 3, 1919 (40 Stat. 1322–1324), and acts supplementary thereof and amendatory thereto and all other acts inconsistent with the provisions of this act are repealed to the extent of such inconsistency.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HOUR OF MEETING

Mr. BANKHEAD. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 11 o'clock tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. WERNER, for 1 week, on account of official business.

To Mr. MURDOCK, for 10 days, on account of official business.

EXTENSION OF REMARKS

Mr. CROSSER of Ohio. Mr. Speaker, I have unanimous consent to extend my remarks by including the railroad agreement to which I referred. I now ask unanimous consent that I may extend my remarks in this way notwithstanding the rule of the Joint Committee on Printing which requires the obtaining of an estimate on an extension which covers more than a specified number of pages.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

Mr. RICH. Mr. Speaker, reserving the right to object—I do not want to object to anything being printed if it is absolutely necessary to have this tonight.

Mr. CROSSER of Ohio. I may say to the gentleman that the Members are very anxious to get this tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 537. An act for the relief of C. O. Meyer;

S. 920. An act for the relief of Ruth J. Barnes; and

S. 3789. An act authorizing the Secretary of Commerce to convey the Charleston Army Base Terminal to the city of Charleston, S. C.

ADJOURNMENT

Mr. BANKHEAD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 30 minutes p. m.), pursuant to the order heretofore made, the House adjourned until tomorrow, Friday, May 22, 1936, at 11 o'clock a. m.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. GREENWOOD: Committee on Rules. House Resolution 520. Resolution providing for the consideration of H. R. 12120; without amendment (Rept. No. 2728). Referred to the House Calendar.

Mr. DOXEY: Committee on Agriculture. H. R. 8271. A bill to amend the act entitled "An act to insure adequate supplies of timber and other forest products for the people of the United States, to promote the full use for timber growing and other purposes of forest lands in the United States, including farm wood lots and those abandoned areas not suitable for agricultural production, and to secure the correlation and the most economical conduct of forest research in the Department of Agriculture, through research in reforestation, timber growing, protection, utilization, forest economics, and related subjects, and for other purposes", approved May 22, 1928; without amendment (Rept. No. 2729). Referred to the Committee of the Whole House on the state of the Union.

Mr. DOXEY: Committee on Agriculture. House Joint Resolution 366. Joint resolution providing for the establishment of a game management supply depot and laboratory, and for other purposes; without amendment (Rept. No. 2730). Referred to the Committee of the Whole House on the state of the Union.

Mrs. NORTON: Committee on the District of Columbia. S. 3450. An act to regulate the sales of goods in the District of Columbia; with amendment (Rept. No. 2731). Referred to the Committee of the Whole House on the state of the Union.

Mr. SUMNERS of Texas: Committee on the Judiciary. S. 4038. An act to amend an act of Congress approved March 3, 1863, entitled "An act to reorganize the courts in the District of Columbia, and for other purposes"; without amendment (Rept. No. 2732). Referred to the House Calendar.

Mr. RAMSPECK: Committee on the Civil Service. S. 3160. An act to amend the law relating to residence requirements of applicants for examinations before the Civil Service Commission; with amendment (Rept. No. 2733). Referred to the Committee of the Whole House on the state of the Union.

Mr. JONES: Committee on Agriculture. Senate Joint Resolution 38. Joint resolution for the adjustment and settlement of losses sustained by the cooperative marketing associations; with amendment (Rept. No. 2734). Referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ELLENBOGEN: A bill (H. R. 12814) to provide for a census of population, occupation, and unemployment, and for other purposes; to the Committee on the Census.

By Mr. BACON: A bill (H. R. 12815) authorizing the transfer of Camp Upton Military Reservation, Long Island, N. Y., to the State of New York for forest demonstration, game conservation and management, and public-park uses; to the Committee on Military Affairs.

By Mr. COFFEE: A bill (H. R. 12816) levying a 10-percent ad-valorem duty upon articles imported from certain countries in default of interest on war debts due the United States; to the Committee on Ways and Means.

By Mr. TERRY: A bill (H. R. 12817) to establish the Arkansas Mounds National Monument of America in Lonoke County, Ark.; to the Committee on the Public Lands.

By Mr. SUMNERS of Texas: A bill (H. R. 12818) to authorize the Attorney General to provide instruction and information on the subject of crime control; to the Committee on the Judiciary.

By Mr. RYAN: Joint resolution (H. J. Res. 593) providing for the sale of postage stamps at places other than the post office or its branches, and for other purposes; to the Committee on the Post Office and Post Roads.

By Mr. GUYER: Joint resolution (H. J. Res. 594) authorizing the Secretary of Agriculture to combat the grasshopper plague in the Kaw Valley in Kansas and making appropriation therefor; to the Committee on Appropriations.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CULKIN: A bill (H. R. 12819) granting an increase of pension to Mary E. Pooler; to the Committee on Invalid Pensions.

Also, a bill (H. R. 12820) granting an increase of pension to Henrietta Peavey; to the Committee on Invalid Pensions.

By Mr. ELLENBOGEN: A bill (H. R. 12821) for the relief of Maj. William W. McCaw; to the Committee on Claims.

By Mr. FLETCHER: A bill (H. R. 12822) granting an increase of pension to Rosa E. McEowen; to the Committee on Invalid Pensions.

By Mr. GINGERY: A bill (H. R. 12823) for the relief of Stanley Baker; to the Committee on Claims.

By Mr. GRAY of Pennsylvania: A bill (H. R. 12824) for the relief of the Johnstown Coal & Coke Co.; to the Committee on Claims.

By Mr. MAVERICK (by request): A bill (H. R. 12825) for the relief of Sam Alexander; to the Committee on Military Affairs.

By Mr. McFARLANE: A bill (H. R. 12826) for the relief of James Wilcox; to the Committee on Naval Affairs.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

10933. By Mr. BACON: Petition of 10 residents of Long Island, N. Y., urging legalization of lotteries under Federal control; to the Committee on Ways and Means.

10934. By Mr. COLDEN: Resolution adopted by the Board of Supervisors of the County of Los Angeles, Calif., on May 7,

1936, urging the establishment of a Federal housing agency and appropriation of necessary funds to enable such agency to aid local public housing agencies to develop low-rent housing programs; to the Committee on Banking and Currency.

10935. By Mr. DARROW: Memorial of the Philadelphia Board of Trade, opposing Senate bill 4174, authorizing the Interstate Commerce Commission to approve or disapprove of the consolidation or abandonment of carrier facilities of public service, etc.; to the Committee on Interstate and Foreign Commerce.

10936. By Mr. HIGGINS of Massachusetts: Resolution by the board of aldermen of the city of Chelsea, Mass., opposing admission to the United States of former President Calles of the Republic of Mexico; to the Committee on Foreign Affairs.

10937. By Mr. JOHNSON of Texas: Memorial of J. Webb Howell, chairman, agricultural committee, and Hon. W. S. Barron, chairman, legislative committee, Bryan-Brazos County Chamber of Commerce, Bryan, Tex., favoring House bill 12498; to the Committee on Agriculture.

10938. By Mr. LUDLOW: Petition of the Boonville (Ind.) Press Club to Members of Congress, urging that recognition be given the work of Hon. William Fortune in connection with the George Rogers Clark Memorial by the placing of a tablet inscribed with his name and his accomplishments in this cause in the memorial building at Vincennes, Ind.; to the Committee on the Library.

10939. By Mr. LUNDEEN: Petition of the Minnesota State Conservation Commission, urging the designation of Birch Coulee State Park in Minnesota as a national cemetery; to the Committee on Public Buildings and Grounds.

10940. By Mr. PLUMLEY: Petition of Lodge No. 717, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, favoring the passage of House bill 11609; to the Committee on Interstate and Foreign Commerce.

10941. By Mr. DEROUEN: Petition of the Church of the Brethren, Roanoke, La., adopted at their 1935 annual conference, regarding war; to the Committee on Finance.

10942. By Mr. SADOWSKI: Petition of the Detroit Community Fund and board of directors of the Detroit Council of Social Agencies, suggesting a long-time relief program; to the Committee on Appropriations.

10943. Also, petition of the Detroit Housing Commission, Detroit, Mich., endorsing the Wagner bill; to the Committee on Banking and Currency.

10944. Also, petition of the Wayne County Council, Veterans of Foreign Wars, Detroit, Mich., protesting against the ruling of the Works Progress Administration perpetrated on veterans; to the Committee on Appropriations.

10945. By Mr. SCOTT: Petition of the Utopia Society of America, requesting Congress to institute an official investigation of the activities of the American Ambassador, Jefferson Caffery, for his lack of protection of the rights of American citizens in Cuba, and for his suppression of the real facts on Cuba; for his support of the bloody Fascist regime of Sergeant Batista; and demand the immediate freedom of thousands of political and social prisoners who are being held in Cuban dungeons; and demand the immediate recall of Jefferson Caffery as Ambassador to Cuba, and substitute a real representative of the American people as his successor; to the Committee on Foreign Affairs.

10946. Also, petition of the Central Labor Council of Alameda County, denouncing the action of officials of the United States Bureau of Reclamation who have required workmen to dry drill in seven silica rock tunnels located near Kenneth, Calif., thereby knowingly exposing these citizen workmen to the identical dust hazards of disease and of death that took its deadly toll in the Gauley Bridge, W. Va., tunnel; to the Committee on Agriculture.

10947. By Mr. TINKHAM: Memorial of the General Court of Massachusetts, favoring the permanency of the Civilian Conservation Corps; to the Committee on Appropriations.

10948. Also, memorial of the General Court of Massachusetts, relative to affording the privilege of entry into this country to those persons who are being persecuted and discriminated against in Germany; to the Committee on Immigration and Naturalization.

10949. By Mr. TREADWAY: Resolutions adopted by the General Court of Massachusetts, favoring the permanency of the Civilian Conservation Corps; to the Committee on Appropriations.

10950. Also, resolutions adopted by the General Court of Massachusetts, relative to the entry into this country of certain persons from Germany; to the Committee on Immigration and Naturalization.

HOUSE OF REPRESENTATIVES

FRIDAY, MAY 22, 1936

The House met at 11 o'clock a. m.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Merciful Father, invisible and yet the Eternal One, Thou art everywhere save in the hearts of Thy wicked children. Thou art in the majesty of the heavens and in the wide-spreading earth, in the beauty of the flower, in the radiance of the sun, and in the mellow light of the stars; may these challenge us to the highlands of thinking and living. Teach us to be conscious of Thy nearness, and so may we never be afraid. We pray that we may greet this new day with newness of joy. Help us to fill these hours with wise thoughts and generous deeds, and thus make human life a little stronger, sweeter, and richer. Inspire us to be brave and earnest to seize the opportunities of these passing days. In the Redeemer's name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Horne, its enrolling clerk, announced that the Senate had passed without amendment a bill of the House of the following title:

H. R. 11747. An act extending the time for making the report of the Commission to study the subject of Hernando De Soto's Expedition.

The message also announced that the Senate had passed, with an amendment, in which the concurrence of the House is requested, a bill of the House of the following title:

H. R. 8455. An act authorizing the construction of certain public works on rivers and harbors for flood control, and for other purposes.

MEMORIAL TO OFFICERS OF THE IMMIGRATION AND NATURALIZATION SERVICE

Mr. LANHAM. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the joint resolution (H. J. Res. 439) authorizing the erection in the Department of Labor Building of a memorial to the officers of the Immigration and Naturalization Service and Immigration and Border Patrol who, while on active duty, lost their lives under heroic or tragic circumstances, with a Senate amendment, and concur in the Senate amendment.

The Clerk read the Senate amendment, as follows:

Lines 3 and 4, strike out "Director of Public Buildings and Public Parks of the National Capital" and insert "Director of the National Park Service."

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

THE DISTRICT OF COLUMBIA APPROPRIATION BILL

Mr. BLANTON. Mr. Speaker, I ask leave to proceed for 2 minutes to deny a malicious falsehood that the Washington Post printed about me this morning, stating that I am unfriendly to the President of the United States, when I am as good a friend to the President as he has in this House.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. BLANTON. Mr. Speaker, it is a fact well known to the Members of this House that the newspapers of Washington deliberately and maliciously play me up daily in a false light, simply because I am chairman of the subcommittee handling the District of Columbia appropriation bill and have refused to give them a $5,700,000 contribution out of the United States Treasury. They are trying deliberately and mendaciously to put me out of Congress; but they cannot do it, as my constituents want me here.

Mr. Speaker, there is no man in this House more friendly to the President of the United States than I am. I was against the Wagner bill and against the Guffey bill, but that does not interfere with my friendly relations with the President. I may not always agree with the President, but I am his friend.

This was a malicious lie that the Post printed about me this morning. It is mad because I am one of those who will not give in to the Senate on all of the 87 amendments they have put on the House bill.

In order to get a bill and not deprive the District of Columbia of some new projects badly needed to which it is entitled, and which projects we gave to the District in the House bill, our House conferees yesterday, as a last resort, proposed to the Senate that if they would recede on just 3 of their 87 amendments the House conferees would recede on the other 84 Senate amendments. That was more than fair, but the Senate does not want a bill; its conferees, as usual, are trying to bulldoze the House, and we are not going to give in to the Senate on matters of fundamental principle any more. The Senate conferees and the Washington newspapers prate much about carrying out the President's Budget. If we held them to that there would be no Eastern High School, no Chain Bridge, no needed fire trucks, and no new police-court building, as none of them are in the President's Budget. They are not sincere in that foolish contention.

Mr. Speaker, on the other question of character education and communism in the schools, the House having refused to allow another $78,660 to be wasted and misapplied by Dr. Ballou, and the Senate wants to waste this $78,660, I already have the permission of the House, and there is printed in the RECORD a carefully prepared speech with much information on that subject.

I hope those interested will look on pages 6551–6568, where they will find ample evidence for keeping this $78,660 out of the appropriation bill and for keeping communism out of the District school curriculum. Communism is something that ought not to be there. My colleagues will find ample reason for voting against the "sissy" bill next Monday, and for not repealing the law that stops communism in the schools.

Character is formed in the home under the direction of the father and mother and the family and not in a public school under the direction of teachers, and this Washington Post and these other Washington papers ought to quit lying about me because I am upholding the rights of the House of Representatives on the District of Columbia appropriation bill.

I ask every person who has access to the CONGRESSIONAL RECORD, and who may read my remarks, to turn back to page 6551 and read my speech printed in the RECORD, and they will then understand fully all the facts about the "red rider" and the "sissy" bill, which seeks to repeal it.

A DISTINGUISHED PHYSICIAN OF YORK, PA.

Mr. HAINES. Mr. Speaker, I ask unanimous consent to proceed for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. HAINES. Mr. Speaker, 51 years ago in my district a young practicing physician, just 50 weeks out of school, administered the first oxygen gas ever administered to a human being. This is one of the great contributions to human welfare.

This gentleman is 74 years old today, and in the city of York distinguished citizens from far and near have gathered to pay tribute to this fine man. Without taking the further time of the House, Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on this subject.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. HAINES. Mr. Speaker, I have asked the Congress to award a Congressional Medal of Honor to Dr. George E. Holtzapple, of York, Pa., for his great contribution to medical science and humanity.

On March 6, 1885, Dr. Holtzapple was called to the bedside of a Mr. Fred Gable, residing in Loganville, York County, Pa., who was suffering with pneumonia. He found the man nearing death from the ravages of this disease after all known methods had failed to help. Dr. Holtzapple, then only in his fifty-first week as a practicing physician, returned to his office, where he gathered together chemicals, test tubes, and a blow torch, and equipment to produce oxygen. Returning to the bedside of the victim, and with the help of Mrs. Gable, he produced the oxygen, and in 20 minutes the patient showed improvement and later recovered entirely.

As a recognition for his work there is now placed in the Army Medical Museum a sketch depicting the birth of oxygen treatment for pneumonia sufferers. The story of Dr. Holtzapple's introduction of the oxygen treatment is a tale of triumph by perserverance, science, and confidence over the ills of mankind.

It seems to me to be most fitting that the Congress should award such a medal during the lifetime of this great man.

Dr. Holtzapple was born in York County, Pa., on May 22, 1862. His ancestry goes back to the Revolutionary days. His father, a poor man, was first a shoemaker—when shoes were made by hand—and later a farmer.

He attended schools of his birthplace, graduating from the York Collegiate Institute. He took a course in philosophy at Lebanon Valley College, located in Annville, Pa. He was given a degree, doctor of science, by the Susquehanna University in 1925, as a special honor.

Dr. Holtzapple took his medical course at Bellevue Hospital Medical College in New York City, from which he was graduated in 1884 with the degree of doctor of medicine. Later he took post-graduate courses at Johns Hopkins Medical School, Baltimore, Md., and the New York Post-Graduate Medical School and Hospital. The first 16 years of his medical career were devoted to general practice. Since then his work has been confined to internal medicine. He has been given testimonial dinners by members of his profession in recognition of his services and contributions. He is consulting physician and president of the staff of the York Hospital, and for 24 years has lectured to nurses in training. He is former president of the York County Medical Society and is a member of both the American Medical Association and the American College of Physicians. For many years he has occupied a prominent place in the American Association for the Advancement of Science. During the World War he was the first physician to offer his services, so far as the section of our community is concerned, but could not meet the physical requirements and consequently was rejected. However, that did not stop him. He rendered great services at home; was chairman of the medical advisory board and was a member of almost every local committee. He was director in the York County Chapter, American Red Cross and chairman of the first-aid courses. This fine gentleman deserves all the honor that his generation can bestow upon him, while he lives.

As his Representative and at the direction of a great host of my constituents, I appeal to the Congress for the Medal of Honor, feeling that this fine gentleman richly deserves it. My bill, H. R. 5762, was before the House on the Private Calendar, but was objected to by two Members on the minority side, but my understanding is that these objectors wanted an opportunity to make further study of the bill. I have again appealed to the Committee on the Library, asking that this bill be included in its omnibus bill so that the House may again have an opportunity to pay tribute to one of

America's great contributors to human welfare. The Committee on the Library submitted the following report to accompany H. R. 5762:

This is a bill to authorize the President to present in the name of Congress a medal of honor to Dr. George E. Holtzapple, York, Pa., who on March 6, 1885, administered oxygen in the treatment of pneumonia for the first time on record, thereby saving the life of a human being and blazing the trail of one of the greatest achievements in medical science.

On March 6, 1885, Dr. Holtzapple was called to the bedside of a Mr. Fred Gable, then residing in Loganville, York County, Pa., who was suffering with pneumonia. He found the man nearing death from the ravages of this disease. After all known methods had failed to help, Dr. Holtzapple, then only in his fifty-first week as a practicing physician, returned to his office, where he gathered together chemicals, test tubes, and a blowtorch, and equipment to produce oxygen. He then returned to the bedside of the victim and, with the help of Mrs. Gable, produced the oxygen, and in 20 minutes the patient showed signs of improvement and later recovered entirely. Mr. Gable is living today. As a recognition for this work there is now placed in the Army Medical Museum a sketch depicting the birth of oxygen treatment for pneumonia sufferers as a lasting momento for his work. Edgar Erskine Hume, major, Medical Corps, United States Army librarian, under date of February 8, 1935, acknowledged this sketch in the following letter:

"It is to be regretted that our Government has no medal or similar award which can be made in recognition of the achievements of men like Dr. Holtzapple. We can reward bravery and distinguished service in the Army and Navy and in other branches of the Government service, but pure scientific merit goes on unrecognized by the United States Government, although appreciated by men of science. If we only had a medal for distinguished service in medical science, one might be appropriately awarded to Dr. Holtzapple."

The following is a summary of my own statement to the committee when I appeared before them asking them to report favorably my bill:

Some years ago Dr. Holtzapple wrote to the American Medical Association to find out if anyone had a claim prior to his in administering oxygen to pneumonia patients. The association replied that, according to its records, which go back to a period preceding Dr. Holtzapple's published article of the eventful night, March 6, 1885, which article appeared in the American Medical Association Journal in 1887, that he was the first, but suggested that he check the matter through the Surgeon General's office to make doubly sure. To Dr. Holtzapple's request he was informed that the office was not equipped to fill such requests, but that, if he liked, certain names of people capable of making such research would be furnished him. A Miss B. Cunradi, No. 2 Dupont Circle, Washington, D. C., was selected to make this research, and under date of October 23, 1925, Miss Cunradi wrote as follows:

"In accordance with your request, I yesterday went to the Surgeon General's library in order to make the investigation requested by you. The work of looking up the references on the treatment of pneumonia in the first published series of the library catalog consumed some little time, as in this series they are not classified according to form of treatment, such as occurs in the second and current editions of the catalog. I find that although your article of September 1887 is listed in the first series, as well as in the second, there is no other reference given in the first catalog for treatment of pneumonia with oxygen. Moreover, I verified the statement made by the American Medical Association and find that out of some dozen references contained in the second series of the catalog for treatment of pneumonia with oxygen, yours antedates all the others, the earliest of which falls in the nineties. As you may know, the first edition of the catalog covers the earliest publication contained in the Surgeon General's library until about 1888, while the second edition includes approximately the years 1888 to 1906. I think, therefore, that you can safely claim priority in the publication, at least, of information regarding this method of treatment for pneumonia."

In 1932 the Associated Press released a story of the incident that was published throughout the entire Nation, which statement was never challenged or denied. On July 14, 1932, the National Broadcasting Co. enacted a scene over the radio to an unseen audience giving a word picture of this first treatment, and pointing out how a young doctor manufactured oxygen at the bedside of a pneumonia victim in a little country home and saved the patient's life. That broadcast from coast to coast was not challenged or denied. Dr. Holtzapple's article in the New York Medical Journal of September 18, 1887, aroused the medical world, which led to a long series, extending to the present time, of articles by other scientists.

The script of the National Broadcasting Co.'s coast-to-coast broadcast will also be deposited in the medical library here in Washington to be a part of the record.

My colleagues, I believe that this Congress should approve awarding the medal of honor to this fine gentleman in recognition of his great contribution to humanity while he lives, and I further believe that the evidence submitted after careful research will justify this action. Certainly we can do no less to those whose contribution to human welfare has meant so much. We have honored others for similar contributions, and it cannot be said that in making this award we are establishing a precedent. I am sure the Nation will approve all the honor we confer on this great man, Dr. George E. Holtzapple, of York, Pa.

The death of Great Britain's King, George V, brought to light a message of commendation which he commanded to be sent to Dr. Holtzapple when he learned that it was Dr. Holtzapple's discovery, made over half a century ago, that contributed to his recovery some years ago when he was suffering from pneumonia. The letter to this fine gentleman was prepared by His Majesty's private secretary on royal stationery which bears the name of Buckingham Palace and an engravure in red ink of the British Crown, the letter dated September 19, 1933, reading as follows:

The private secretary presents his compliments to Dr. G. W. Holtzapple and is commanded to thank him for his letter and enclosure of the 8th instant.

The royal letter was in response to Dr. Holtzapple's communication to the King congratulating him upon his recovery from a serious illness, the nature of which was similar to the one which brought about the York physician's discovery on March 8, 1885, while he was a doctor at Loganville, York County, Pa. The administration of oxygen gas to pneumonia patients has since become a universal practice and has contributed as much to human welfare as almost any other discovery by man. The British King's recovery was attributed to the administering of oxygen gas, and millions of other humans have had the benefit of this great discovery on the part of my constituent and friend Dr. George W. Holtzapple.

It seems to me to be both proper and right to honor this fine gentleman, for in doing this we honor one of our finest American citizens. Awards have been made to those who have destroyed other humans in defense of country and flag, but in this instance it is an honor to one who has contributed to the saving of human life. Mr. Speaker, I wish there was a parliamentary situation afforded to me to reconsider my bill in this session; but in the event that this cannot be done, I hope the Committee on the Library will report out with an affirmative report a bill in the next session. If reelected to Congress, I shall reintroduce my bill.

THOMAS JEFFERSON MEMORIAL

Mr. SMITH of Virginia, from the Committee on Rules, reported the following resolution (Rept. No. 2743), which was referred to the House Calendar and ordered printed:

House Resolution 522

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 12027, a bill "to authorize the execution of plans for a permanent memorial to Thomas Jefferson." And all points of order against said bill are hereby waived. That after general debate, which shall be confined to the bill and continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on the Library, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the reading of the bill for amendment, the Committee shall rise and report the same to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit, with or without instructions.

THE CITY OF LYNCHBURG, VA.

Mr. WOODRUM. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (S. 4448) to authorize the coinage of 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the issuance of the charter of the city of Lynchburg, Va.

Mr. RICH. Mr. Speaker, reserving the right to object, I may say to my friend from Virginia that what Congress appropriates is one thing and where you are going to get the money is another. Now, we are going to make money by coining these 50-cent pieces in commemoration of another anniversary. This is, perhaps, the thirtieth bill of

this kind to come in here this session of Congress. It is surely the beginning of Democratic inflation, and I warn the Members of the House to beware. [Laughter and applause.]

There being no objection, the Clerk read the Senate bill, as follows:

Be it enacted, etc., That in commemoration of the one hundred and fiftieth anniversary of the issuance of the charter to the city of Lynchburg, Va., there shall be coined at a mint of the United States to be designated by the Director of the Mint not to exceed 20,000 silver 50-cent pieces of standard size, weight, and composition and of a special appropriate single design to be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, but the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

SEC. 2. The coins herein authorized shall bear the date 1936, irrespective of the year in which they are minted or issued, shall be legal tender in any payment to the amount of their face value, and shall be issued only upon the request of the Lynchburg Sesqui-Centennial Association upon payment by it of the par value of such coins, but not less than 5,000 such coins shall be issued to it at any one time, and no such coins shall be issued after the expiration of 1 year after the date of enactment of this act. Such coins may be disposed of at par or at a premium by such association, and the net proceeds shall be used by it in defraying the expenses incidental and appropriate to the commemoration of such event.

SEC. 3. All laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material, and for the transportation, distribution, and redemption of coins, for the prevention of debasement or counterfeiting, for the security of the coins, or for any other purposes, whether such laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

IMPROVEMENT OF THE INDIANA HARBOR SHIP CANAL AND THE GRAND CALUMET AND LITTLE CALUMET RIVERS

Mr. SCHULTE. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. SCHULTE. Mr. Speaker and Members of the House, I wish to take this opportunity to address the Members of the House for a few minutes to explain a situation which exists in my district—the First Congressional District of Indiana—with regard to efforts I have made to obtain Federal funds for deepening, widening, and improving the Indiana Harbor Ship Canal and the Grand Calumet and Little Calumet Rivers.

My district is located on the southern shores of Lake Michigan. It has a population of approximately 300,000 persons. The district is highly industrial, with industries so diversified that practically every commodity used by mankind is manufactured in Lake County, Ind. Because of the many different industries the region has often been referred to as "the workshop of America."

It was my pleasure the other day to read an item in a newspaper which stated that the steel mills of East Chicago and Gary had passed Pittsburgh in the production of steel during the last 6 months' period. This is a good sign, and news of this character is welcomed by the people of my district and the people of the Chicago area. When production is stepped up in the steel mills of East Chicago, Indiana Harbor, and Gary, not to mention the various other industries in Hammond, Whiting, and other cities, times are good, business is brisk, and my people are contented. When production is at a low ebb the situation is quite the contrary.

As I mentioned before, efforts have been made to secure an appropriation to improve the Indiana Harbor Ship Canal along with the Grand Calumet and Little Calumet Rivers. However, efforts to secure sufficient funds have been to no avail because of the fact that the United States Army Engineers will not approve improvements deemed necessary to keep pace with the growth and progress of my district. At this time I would like to compliment all officials and citizens who have aided in their efforts to secure funds which would allow us to carry on the work that we now deem expedient to the welfare of the people of my district.

Now the point I am trying to make is this. If the Army engineers would cooperate with us and see the necessity of such improvement, there is no question but that the improvement would be such a boom to industry and commerce that within the next decade the population of my district would exceed a half million people. It has been pointed out to the Army Engineers that even now, with the crowded condition of the ship canal, there is more tonnage going in and out of the canal than from a great many bigger and larger ports of the United States where the Government has spent millions of dollars.

The Federal Government has spent millions upon millions of dollars widening, deepening, and dredging the Alleghany, Monongahela, the Ohio, and Hudson Rivers. I am sure that the need for expenditure of an appropriation to make the improvements in my district is as dire as when Members of this Congress voted to make improvements of the above-mentioned rivers. I feel that since the Government allowed such improvements to be made in other parts of the country that the people of my district should be granted the same concessions, and that the Members of this body should, when the time comes, approve such a measure, since there was no objection to the other grants being made.

Since the building of the canal in 1903, location of various industries has increased, with the result that a great many millions of dollars have been spent by industry in the building of plants and docks. It should be obvious that these industries would never have come to my district if it were not possible to obtain water transportation, and with the vision to the future, that needed improvements would be made, and increased water service would be made available as time and progress permitted.

As it is today, a great many industries have been lost to my district because of the fact that this Government will not appropriate needed funds to carry on the work of deepening and widening the ship canal and the two rivers. I feel that now is the time I would like to have cooperation of the Members of the House in connection with a bill authorizing this Government to proceed with the work that we in the Middle West deem is necessary.

Improvement of this project will not only bring industries to this region but will give employment to thousands of persons now idle. Situated as this region is in close proximity to the Indiana coal fields, the rich Mesabi ore ranges of Minnesota, there is every reason to believe this improvement would not only enhance the commerce of the Calumet region but the entire Middle West.

No doubt there may be some opposition to this improvement from some of the transportation systems owing to the fact they will say it will eliminate the long haul by a number of the railroads. However, this will more than offset the increased number of men that will, of necessity, be employed on switch engines to switch the cars in and out of the industries in the hauling of raw materials and the finished products.

The march of time and the wheels of progress demand that this Government appropriate sufficient funds to make this improvement now. It is necessary, and the people of my district are demanding it. They want action. Officials of the cities and civic organizations approve of these plans and are demanding that this Government allow us to keep pace with the trend of business improvements, and the signs of prosperity which are seen on every hand these days. To make this improvement now will allow the great Middle West to enjoy an expansion, which is so necessary to the welfare of my district, and a prosperity never before realized within the Calumet region, the hub of all activity in the Middle West.

The people of the Middle West demand that the resources of the lake be utilized, and that this Government improve this water transportation.

I wish at this time to give you a brief outline of the history of the Indiana Harbor Ship Canal, located in the cities of East Chicago and Indiana Harbor on the shores of Lake

Michigan, which was prepared by E. W. Wolfe, secretary-manager of the East Chicago Chamber of Commerce:

HISTORY OF THE INDIANA HARBOR SHIP CANAL, 1888–1935

In the year of 1888 the population of the city of East Chicago was only 775. However, those far-sighted citizens realized the potential possibilities of the natural advantages and the geographic location of the district from an industrial standpoint, provided water-transportation facilities were made available. Discussions reached a point in that year where a movement was started to build a ship canal.

Land for construction of the canal was deeded during 1888 and 1889 by Caroline M. Forsythe and husband, the Calumet Canal & Improvement Co., the Standard Steel & Iron Co., and these deeds were duly recorded.

In 1901 the work on the harbor was started and was carried on until its completion in 1903. In the year of 1901 the East Chicago Land Co. commenced the building of the canal, building 7,700 feet in a southwesterly direction from Lake Michigan and thence at a right angle 5,143 feet to White Oak Avenue, constructing a small turning basin just northeast of the Canal Street Bridge, dredging the channel to a depth of between 20 and 22 feet. Due to unforeseen circumstances, the completion of this branch of the canal consumed several years and was not finished until the year of 1914.

The navigable branch of the ship canal, that part running from Lake Michigan to White Oak Avenue, was built to a width of 300 feet from the breakwater to the railroad bridges of the E. J. & E., N. Y. C., B. & O., and the I. H. B. Railroads, and to a width of 200 feet over the balance.

The south branch of the ship canal was started several hundred feet south of Canal Street Bridge and built 1½ miles south to the junction of the Grand Calumet River, which had been designated by the United States Government as a navigable stream. This branch of the canal was dredged to a depth of 15 feet and to a top width of 200 feet to One Hundred and Forty-first Street and to approximately 150 feet top width from that point to the Grand Calumet River.

Records on file indicate that the right-of-way for the entire canal was accepted by the Secretary of War in compliance with the provision in act of Congress approved June 5, 1910, for and in behalf of the United States Government, and from that time the canal has been maintained by the United States Government, assisted, however, by the different industries up until 1929.

Since the building of the canal the location of industry along its shores has been ever constant and a great many millions of dollars have been spent by industry in the building of plants and docks, these industries would never have located in East Chicago (Indiana Harbor) had they not been able to obtain water transportation and with the future thought that additional water service would be made available to them.

The navigable portion of the canal has been in general use from 1914 up to date. A great deal of difficulty was experienced with the turning basin, it being small and not properly protected. On January 11, 1929, during the second session of the Seventieth Congress, House bill 16169 was passed, which authorized the Secretary of War to accept free and clear of all encumbrance a strip of land from the East Chicago Co., the purpose of which was for the construction of a new turning basin.

The work on the construction of the new turning basin was started in 1931 at the junction of the north and south branches of the canal, and the work was completed and the basin ready for service in 1932.

There are now located along the navigable portion of the canal nine huge industries that own and operate all of the property along its shores and who have made tremendous investments in this property. I am setting forth below the names of these different industries in the order in which they located and, wherever possible, their investment in dock improvements.

During the year of 1901 the Inland Steel Co. located in East Chicago and was the first plant to locate on the Harbor Canal. They occupy a frontage of 3,115 feet along the canal, all improved, at a cost to themselves of $416,490.

During the year of 1904 the American Steel Foundries built its large plant along the ship canal, occuping a frontage of 2,848 feet, making their own improvements. We do not have the cost figures for this improvement.

During the year 1910 the Standard Oil Co. built their docks along the north side of the west branch occupying a frontage of 1,430 feet, and all improved at a cost of $74,127.37.

During 1916 the Associated Box Corporation located on the north side of the ship canal, occuping a frontage of 377 feet, all improved, at a cost of $48,000.

During the year 1916 the Mark Manufacturing Co. started to build their big plant on the north side of the ship canal at its mouth, just opposite from the Inland Steel Co., occupying a canal frontage of 3,200 feet. This plant was taken over by the Youngstown Sheet & Tube Co., who built all their dock improvements, and while I do not have their exact cost figures it relatively compares with the cost of the Inland Steel Co.

During the year 1917 the Sinclair Refining Co. located its large refinery on the north side of the canal at Indianapolis Boulevard. They occupy a canal frontage of 1,760 feet. I have been unable to secure the improvement cost; however, there were many thousands of dollars spent on their improvements.

During the year 1918 the Consolidated Oil Co. built its refinery on the south bank of the canal at Indianapolis Boulevard. The properties of this refinery were purchased by the Bartles-Maguire Oil Co., who operated these properties until 1933, when they were merged with the Wadhams Oil Co. who operated them up to 1934, when they merged with the Standard Oil Co. of New York. They occupy 825 feet of canal frontage and it was improved by them at a cost of more than $85,000.

During the year 1928 the United States Gypsum Co. located its large plant on the north side of the canal at Canal Street, building its plant and dock as a unit at a cost of several hundred thousand dollars and occupying 990 feet, all covered by improvements. I cannot give the exact cost of this improvement due to the type of its construction.

During 1928 the Shell Petroleum located its docks along the south bank of the canal, between Indianapolis Boulevard and the turning basin, occuping 604 feet, fully improved by them at a cost of $67,329.42, not including the cost of heads and pipes that had to be brought up to dock property.

During 1928 the East Chicago Dock Terminal Co. built large docks on the south side of the canal between the turning basin and Canal Street. They occupy a frontage of 1,680 feet on the canal, which they have fully improved at a cost of $115,520.

During 1929 the Empire Oil & Refining Co. built its dock along the south side of the canal, between the turning basin and Indianapolis Boulevard, occupying a 600-foot frontage, and fully improved by them at a cost of $185,000.

During 1934 the Texas Co. built its docks and bulk station on the south side of the canal at Canal Street Bridge. They occupy a frontage of 508 feet, fully improved at a cost of $49,400.

In addition to the vast amounts spent by industries for dock improvements they were also called upon during the years up to 1929 to stand a portion of the yearly dredging expense. For example, during the years of 1924 to 1929, inclusive, the Inland Steel Co., the Standard Oil Co., and the Youngstown Sheet & Tube Co. spent $105,090 for the dredging of the canal channel, which was in addition to the $25,000 spent by the Government for maintenance purposes, which was excessively low.

By way of comparison with the previous years since this ship canal has been in service some tonnage figures may prove enlightening. During the period from 1914 to 1928, inclusive, the tonnage handled through the Port of Indiana Harbor by the various industries located on the canal has shown a constant yearly increase, as indicated by the following tabulation:

	Tonnage
1914	1,355,060
1915	1,639,597
1916	1,722,525
1917	1,691,858
1918	2,130,186
1919	1,985,818
1920	2,636,118
1921	2,317,524
1922	2,970,248
1923	3,880,882
1924	3,721,407
1925	4,240,308
1926	5,306,271
1927	5,054,933
1928	5,121,666

For the years of 1929 to 1935, inclusive, I am showing in the following table the tonnage handled by the different industries located on the canal only, and the number of ships using this waterway, showing the total tonnage by year and also the total for the 7-year period.

Tonnage, inbound and outbound

Name	1929	1930	1931	1932	1933	1934	1935	Total over period
Inland Steel Co.	3,453,869	2,831,703	1,788,953	519,071	1,711,549	2,016,868	2,248,825	14,570,838
East Chicago Dock Terminal Co.	253,998	151,759	157,612	131,531	210,852	245,269	233,064	1,384,085
Wadhams Oil Co.					12,870	36,465	79,365	128,700
Empire Oil & Refining Co.		84,057	118,811	106,769	37,394	62,448	226,415	635,894
Shell Petroleum Corporation	134,236	165,267	155,066	200,608	196,419	282,292	346,194	1,480,162
Texas Co.						280,165	250,760	560,925
Standard Oil Co.	1,191,955	965,573	1,044,045	1,009,534	1,010,387	1,065,453	1,100,000	7,416,957
United States Gypsum Co.	125,000	125,000	130,857	70,976	71,852	99,882	103,451	727,012
Youngstown Sheet & Tube Co.	2,895,185	1,209,943	695,166	145,798	405,786	761,422	750,941	6,924,241
Sinclair Refining Co.						164,000	93,222	257,222
Total	8,054,233	5,623,302	4,090,510	2,184,371	3,657,109	5,014,274	5,462,237	34,086,036
Number of ships	1,260	1,546	1,319	870	1,252	1,624	1,981	9,852

Along the south branch of the ship canal—that portion which is unnavigable and which is included in the ship canal, Grand Calumet, Little Calumet, Sag Channel development project, and which extends from the turning basin to the junction of the Grand Calumet River—there are located a great number of heavy-type as well as basic industries, whose investment along the south branch of the canal reaches high into the millions of dollars. These industries are all potential users of waterway transportation; they, for the most part, are prohibited from the use of the existing water service at the present time due to excessive costs in getting to dock facilities. Even under these extenuating circumstances a number do use waterway service, being forced to do so by reason of the fact their competitors have waterway service, and if our concerns are to stay in certain markets they are forced to meet this competition. One industry in particular which is located a short distance from the canal on the Grand Calumet River is the Grasselli Chemical Co., which during the past year handled 53,797 tons, and from 1929 to 1935 handled 242,626 tons.

Many of the industries that have located along the south branch of the ship canal and a strip along the Grand Calumet did so because all land along the harbor canal had been taken and they felt that before long this south branch would be made navigable. The industries of which I speak, and whose plants or properties are on and along the south branch of the canal and Grand Calumet River, are: The Inter-State Steel Co., Buckeye Steel Casting Co., Metal & Thermit Corporation, U. S. S. Lead Refinery, Inc., the Grasselli Chemical Co., Lavin & Son, Graver Tank & Manufacturing Corporation, Weber Insulations, Inc., Calumet Foundry & Machine Co., Continental Roll & Steel Foundry Co., Republic Rolling Mills Corporation, Hyman Michaels Co., International Smelting & Refining Co., the East Chicago City Dock, the Superheater Co. The above named, together with those listed on the navigable portion of the harbor ship canal, are only a portion of the industries located in East Chicago.

The harbor and waterway development in East Chicago has been responsible for the heavy industrial development in the city, and to this development is due the large increase in population that has taken place during the past years, as is shown by the census reports of the United States Government.

Population of East Chicago, United States census

1890	1,255
1900	3,411
1910	19,098
1920	35,967
1930	54,784

The benefits from the development of the Indiana Harbor Port and Ship Canal is vitally important to the entire Calumet region of Indiana, in that the industries in East Chicago normally employ in excess of 32,000 workers, with a weekly pay roll much in excess of $1,000,000, and upon this pay roll the entire district is dependent.

The volume of outbound water-borne tonnage will greatly increase, more industries will be located, more men employed, and greater pay rolls, so beneficial to the district, will be had when the south branch of the ship canal, the Grand Calumet, Little Calumet, and the Sag Channel, is made available for use by the industry of the district.

FLOOD CONTROL ON MISSISSIPPI RIVER

Mr. WILSON of Louisiana. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (S. 3531) to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3531, with Mr. FLANNAGAN in the chair.

The Clerk read the title of the bill.

Mr. LAMNECK. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 2, line 7, after the word "Engineers", add the following: "*Provided*, That the Chief of Engineers, under the supervision of the Secretary of War, shall, at the expense of the United States Government, construct a system of levees and reservoirs to adequately control the floodwaters of the Scioto, Olentangy, and Sandusky River valleys in Ohio: *And provided further*, There is hereby appropriated the sum of $40,000,000 for the carrying out of the above project."

Mr. WILSON of Louisiana. Mr. Chairman, I make the point of order against the amendment that it makes a direct appropriation.

Mr. WHITTINGTON. Mr. Chairman, I make the further point of order, but I am willing to reserve it if the gentleman wishes.

Mr. LAMNECK. I am willing that the Chair should rule on the point of order. Mr. Chairman, I want to call attention to the fact that the amendment was presented last evening with the understanding that it was to be an amendment to the section that included the reservoir plan for the White River and the Arkansas River.

For some reason or other the Clerk continued with the reading of the next section. It was my understanding, and the understanding of others, that the amendment would be offered to the section that was discussed last evening when we adjourned. It may not be germane to the section read last but it is germane to the section to which it is offered.

Mr. WHITTINGTON. Mr. Chairman, in addition to not being germane, some of the rivers mentioned in the amendment are not tributary to the Mississippi River, so it cannot be germane to any part of the bill. This is a bill for flood control along the Mississippi River and its tributaries. The Sandusky does not empty into the Mississippi River or into any tributary of the Mississippi River; it empties into Lake Erie.

The proposed amendment to this bill is not germane because the bill under consideration is only an authorization. The amendment proposes an outright appropriation of $40,000,000. In the third place, we are considering section 4 of the bill, to which it is certainly not germane.

The gentleman obtained unanimous consent to have printed in the RECORD his amendment which he proposed to offer when the House convened today for the information of the committee. There was no unanimous consent that we should return to section 1, to which, if it is germane at all, it is germane.

For these reasons the amendment is not in order. Inasmuch as section 1 has been passed, inasmuch as the amendment embraces rivers not tributary to the Mississippi, and inasmuch as the amendment carries an appropriation, I insist on the point of order.

The CHAIRMAN. The amendment proposes to appropriate $40,000,000. Rule XXI provides that no bill or joint resolution carrying appropriations shall be reported by any committee not having jurisdiction to report appropriations nor shall an amendment proposing an appropriation be in order during consideration of a bill or joint resolution reported by a committee not having that jurisdiction.

Inasmuch as the amendment appropriates money in violation of the rule, the Chair sustains the point of order.

Mr. LAMNECK. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amendment offered by Mr. LAMNECK: Page 2, line 7, after the word "Engineers", add the following: "*Provided*, That the Chief of Engineers, under the supervision of the Secretary of War, shall, at the expense of the United States Government, construct a system of levees and reservoirs to adequately control the flood waters of the Scioto and Olentangy River valleys in Ohio: *And provided further*, There is hereby authorized to be appropriated the sum of $40,000,000 for the carrying out of the above project."

Mr. WHITTINGTON. Mr. Chairman, I make the point of order against the amendment that it is not germane, that the authorizations of this bill and the projects in the authorizations are contained in section 1, that section 1 has been passed, that we are now considering section 4. In addition to that, Mr. Chairman, the proposed amendment does not embrace any tributary of the Mississippi River. My understanding is that the Scioto River and the Olentangy River are located in the State of Ohio, that the Scioto River is a tributary of the Ohio River, and the Olentangy River is a tributary of the Scioto, so that in no event could this amendment be germane either to the bill or to section 1 of the bill.

Mr. LAMNECK. Mr. Chairman, I think these two rivers are tributary of the Mississippi River, indirectly at least, and it seems to me that the amendment is germane to this section of the bill.

The CHAIRMAN. The Chair is ready to rule. This amendment is offered to page 2, line 1, section 1, of the bill, which has already been passed. The only way under the rules in which it can be entertained at this time is by unanimous consent. The Chair, therefore, sustains the point of order, and the Clerk will read.

Mr. LAMNECK. Mr. Chairman, I move to strike out the last word. This flood proposition is beginning to be a very important matter in this country. In my State in 1913 the flood waters of the Miami River Valley were controlled and the costs thereof were paid entirely by benefited property. At the present time in Ohio we are making an improvement in the Muskingum Valley. The Federal Government made an appropriation through the P. W. A. of $24,000,000, and under a State law that we have there was created a conservancy district, and the conservancy board has assessed against the property benefited by this improvement $12,000,000. In many cases the assessment is greater than the value of the property. In Newcomerstown, Ohio, a small city, there is a concern which is on the tax duplicate for $137,000. The assessment against the property is $90,000. There is another concern there whose property is valued at $47,000 and the assessment against the property for that improvement is $30,000. I contend that if we are going to have a flood-control program in this country we cannot assess benefited property in such a way that, in effect, means confiscation, and that is what will happen if the benefited property is supposed to pay a great part of the cost of flood improvement and flood control. Gentlemen ought not to fool themselves when they talk about passing flood-control legislation by thinking the property benefited is not going to be assessed enormous amounts. I know in a little town that I was born and raised in in Ohio the benefits assessed against property are more than the property is worth.

I call attention to another thing. We have the Home Loan Act, and gentlemen know that we loan money on homes up to 80 percent of the assessed value. I know one property that has a home loan on it for $4,000, 80 percent of its value. Along comes the flood-improvement program and assesses that property $2,000 more, so that the assessment and mortgage against that property today is more than its value. The home owner has no equity in the property, and you will be doing the same thing if you assess the cost of improvement against farms. You will assess them for more money than they are worth. In the Miami Valley, in Ohio, there is not a single farm which, as a result of the 1913 flood, as a result of the 1913 act, is worth the money today that the assessment provided for.

Here we are down in the Mississippi Valley making an appropriation for $272,000,000, while up in Arkansas we voted in an amendment, which I voted for, which provides for an expenditure of $126,000,000, and I am here to tell you now that you will never collect $126,000,000 from Arkansas for the improvement made on those two rivers, because the land is not worth that much.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. JENKINS of Ohio. Mr. Chairman, I rise in opposition to the pro-forma amendment. I shall direct my remarks in line with what my good friend Mr. LAMNECK has had to say, and that is to call the attention of the House to the fact that we are in this bill entering upon a very dangerous policy, especially when we consider what was done in the Senate yesterday. Yesterday, in my weak way, I tried to impress upon the membership here that this is a very important bill, and the most important thing about it is that it has no definite policy as to State or local participation. On several of the projects named the bill provides that the Government shall pay for all damages and all rights-of-way. On other projects in the bill it provides that the State or local beneficiaries from the improvement shall furnish the rights-of-way and assume all damages. Yesterday the Senate passed a very important bill, known as the Copeland omnibus flood-control bill, providing for omnibus flood relief. It provides relief for many, if not all, the sections which suffered from disastrous floods this last spring. It touches almost every part of the United States. As I understand it, in that bill a very definite policy has been set forth. It provides that the Government shall pay the expenses of the improvement. Then the communities or States or landowners, those who are immediately interested, must pay for all rights-of-way and for all damages up to the amount that the Government puts into the improvement.

If the damages and the rights-of-way amount to more than the cost of the improvement by the Government, the Government will share with the territory in paying that excess. As an illustration, in the Pittsburgh territory the Government expects to put in improvements worth $20,000,000. The damages and the rights-of-way will cost $30,000,000. The Pittsburgh territory will have to pay that $20,000,000, the same as the Government puts into the improvements. Then the difference between twenty and thirty million, which is ten million, shall be divided equally between the Government and the local authorities. If that is the case, if Pittsburgh and all other sections are going to have to match the Government, so to speak, then what we did yesterday in voting for these reservoirs on the Arkansas and White Rivers is entirely wrong. I voted for that amendment; but if that is the situation, it is entirely wrong, because there the Federal Government is going to pay for everything. I am calling upon those on the Democratic side who have responsibility for this flood-relief program to come forward with a consistent, constructive program. Let us not find ourselves confronted with a situation that will inevitably result in a veto by the President of the United States, and we will have no flood relief anywhere.

Mr. WHITTINGTON. Mr. Chairman, will the gentleman yield?

Mr. JENKINS of Ohio. I yield.

Mr. WHITTINGTON. Is it not true that the members of the committee did their best to point out how you were making a mistake in passing that amendment and making discrimination on those two rivers yesterday?

Mr. JENKINS of Ohio. I do not want to take any of that blame myself, because I am for flood control. The country needs it. I am calling upon the Democratic authorities, the Democratic leaders, the Democratic President, and the Democratic administration to get out of this inconsistent position in which they now are, get out of this aura of inconsistency, and come out into the daylight and give us an intelligent program that the President and the Nation will support, and that will be right and consistent and just.

Mr. DRIVER. Mr. Chairman, will the gentleman yield?

Mr. JENKINS of Ohio. Yes; I yield.

Mr. DRIVER. There is no one who can misunderstand the definition of the duties and responsibilities in the adopted program for flood control on the Mississippi River. It is written into the law. The people there themselves contributed and turned over to the Government $292,000,000. In addition to that, they paid $41,000,000 for land damages that were required under this bill, and we protested as vehemently as anybody possibly could against the inclusion of projects that were based on some other separate definition of responsibility, and the gentleman supported it.

Mr. JENKINS of Ohio. The gentleman no doubt helped write the bill, and for that reason knows more about this bill—S. 3531—than I do, and I call upon him and his able assistants to redraft this bill or amend it so that it will contain a consistent policy.

Mr. DRIVER. Yes. I know all about it.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

The Clerk read as follows:

SEC. 4. That neither of the projects for the flood control of the St. Francis River or the Yazoo River, hereby authorized, shall be undertaken until the States, or other qualified agencies, shall have furnished satisfactory assurances that they will undertake, without cost to the United States, all alterations of highways made necessary because of the construction of the authorized reservoirs, and meet all damages because of such highway alterations, and have agreed also to furnish without cost to the United States all lands and easements necessary to the construction of levees and drainage ditches constructed under this project: *Provided*, That the reservoirs for control of headwater flow of the Yazoo River system may be located by the Chief of Engineers, in his discretion: *And provided further*, That the Chief of Engineers may, in his discretion, substitute levees, floodways, or auxiliary channels, or any or all of them, for any or all of the seven detention reservoirs recommended in his report of February 12, 1935,

for the control of floods of the Yazoo River: *And provided further*, That the Chief of Engineers, with the approval of the Secretary of War, may modify the project for the flood control of the St. Francis River as recommended in said report, to include therein the construction of a detention reservoir for the reduction of floods, and the acquisition at the cost of the United States of all lands and flowage necessary to the construction of said reservoir except flowage of highways: *Provided further*, That the estimated cost to the United States of the project is not increased by reason of such detention reservoir.

Mr. JENKINS of Ohio. Mr. Chairman, I move to strike out the last word. I do this so that I may take up this argument that I was having with the gentleman from Arkansas a moment ago, and to bring out this point: As I said, I am not as familiar with this bill as the gentleman from Arkansas is. I do not claim to be; but, as I look through this bill, I find there are several projects where the Government pays everything. For certain other projects you have stipulations to the effect that the territory benefited thereby must come forward with some contribution. How is it that you do not have a consistent program in this bill?

Mr. DRIVER. It is consistent, if the gentleman will stop to take into consideration the necessities and the engineering recommendations with regard to it. On all levees all damages, the local interests are required to pay it and to maintain the completed structure. That is generally true until you come to the floodways. When this water is taken out of the river—that is, the excess water—and carried through these diversion channels, imposing a burden on the lands, there it does not protect but condemns the land. Necessarily the Government assumes that responsibility. I call attention to the fact that these lands involved here are lands that are protected by levees and have been for many, many years, but because of the increase in the flood heights, the engineers find it necessary to take out of the channels of the Mississippi River this excess water, so the balance of it can pass safely between these levees in the channel. They take that burden out of the Mississippi River and pour it into this protected area, and take the lands of the people for that diversion, for the common good. Of course, you have no basis to cause a contribution on the part of those people who are not benefited but who are destroyed.

Mr. JENKINS of Ohio. So that I may get it plain, let me ask the gentleman this question. Yesterday we passed an amendment to this bill providing for the construction of 26 reservoirs, and that amendment provided that the Government must assume all expense of construction and all expense of damages and all expense of rights-of-way.

Mr. DRIVER. And maintenance; yes. What you did to us was a plenty.

Mr. JENKINS of Ohio. Now, you state that this bill provides, before this amendment was put on, the same thing, that the Government must pay everything except the $41,000,000 which these States have heretofore contributed.

Mr. DRIVER. Oh, no, no. Now, let us get that straight. When the act of 1928 was passed, under which the Government assumed responsibility for building the structures, the local interests had expended $292,000,000 on the levees along the river that were used under the adopted project, and were simply increased in grade and sections. In other words, they were built up higher and stronger by the Government, but the people put those levees there out of their own money, $292,000,000.

When that project was adopted there were certain rectifications the engineers thought necessary, together with some additional levies in order to connect up and make a consistent line of them. They imposed the burden on local interests to pay for every acre of that land, damages, and to maintain the completed structures. Under that responsibility the local interests since 1928 have paid out $41,000,000 and are continuing to pay for and maintain the structures.

[Here the gavel fell.]

The Clerk read as follows:

SEC. 5. The Chief of Engineers, under the supervision of the Secretary of War, shall at the expense of the United States Government construct a system of levees substantially in accordance with general plan shown on map designated as sheet no. 1 entitled "Tributary Levee Location Survey—White River Levee District—Proposed Levee Location" accompanying report dated April 2, 1925, and filed in office of first and second Mississippi River commission districts, Memphis, Tenn. The Chief of Engineers shall have the right to alter, change, or modify said plan as to the grades and levee sections: *Provided, however*, That no work shall be commenced on the above-mentioned project until the State, levee boards, or other responsible local interests have given assurances satisfactory to the Secretary of War that they will (a) provide without cost to the United States all rights-of-way necessary for the construction of said project; (b) provide drainage facilities made necessary by construction of levees; (c) acquire and provide without cost to the United States all flowage and storage rights and easements over, upon, and across the lands and properties within the protected area in the event it becomes necessary in the judgment and discretion of the Secretary of War or the Chief of Engineers to use said area, or any part thereof, for an emergency reservoir; (d) hold and save the United States free from liability for damages on account of the use of said area for reservoir purposes during said emergency.

Mr. RICH. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. RICH: Page 4, line 1, strike out section 5.

Mr. RICH. Mr. Chairman, I believe all the Members realize it is absolutely necessary to have some nonpartisan organization take care of flood control, an organization in which the Members of the House and the people of the country will have confidence. I do not know of any body of men who can handle flood control to the satisfaction of the people of the country generally better than the Corps of Army Engineers, a nonpartisan organization.

Coming now to section 5, I want to read what Secretary of War George H. Dern wrote on February 15, 1936, to Senator COPELAND:

Section 5 of the bill authorizes the construction of a system of levees to protect land in the backwater areas of the White River and provides for payment by the United States of the entire construction cost of the system. This work is not recommended in the report. The requirement that the Government bear the whole construction cost is not in accord with the policy established by Congress in similar cases. Section 6 of the act of May 15, 1928, provides for the construction by the United States of levees protecting lands in areas subject to backwater influences of the Mississippi River on condition, among others, that local interests contribute 33⅓ percent of the costs of the work. This is a reasonable requirement in all cases of like character, and the Department is unable to recommend that the entire cost of the construction of levees in a backwater area be borne by the United States.

Secretary of War Dern objects to section 5 of the bill, as you note from this letter. I also want to call your attention to a statement contained in a letter written by E. M. Markham, major general, Chief of Engineers, War Department, to the chairman of our committee, the gentleman from Louisiana [Mr. WILSON]:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, April 30, 1936.

Hon. RILEY J. WILSON,
Chairman, Committee on Flood Control,
House of Representatives, Washington D. C.

DEAR JUDGE WILSON: In compliance with your request to me at the hearings before the Flood Control Committee of the House on April 30, 1936, I have to inform you that bill S. 3531, a bill to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928, as amended and passed by the Senate on April 21, 1936, with the exception of section 5, now conforms to the views of the Department, and satisfies the objections urged to the bill in the report of the Secretary of War of February 15, 1936, to the Commerce Committee of the Senate, which report was made prior to the amendments that were adopted by the Senate.

Yours very truly,

E. M. MARKHAM,
Major General, Chief of Engineers.

With the exception of section 5. This is the section I strike out by my amendment. Now, are we going to permit the Corps of Army Engineers to handle this flood-control situation under the plan adopted in 1928 or are we going to inject in the bill features contrary to the well-considered plan of the War Department?

Mr. WHITTINGTON. Mr. Chairman, will the gentleman yield?

Mr. RICH. I yield.

Mr. WHITTINGTON. I agree with the statement made by the gentleman, but it is only fair to say that the gentleman voted against the recommendation of the Chief of Engineers on yesterday when he voted for the Miller amendment, adding $126,000,000 to this bill. That is a fair statement, according to the RECORD, is it not?

Mr. RICH. That is right, and I want to tell the gentleman why I did it. Whenever I can by spending twice the money do eight times the amount of good that could be done by spending half the money, I want to do it. That is sound business.

[Here the gavel fell.]

Mr. RICH. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

Mr. ANDRESEN. Mr. Chairman, I object.

Mr. WHITTINGTON. Mr. Chairman, the gentleman from Pennsylvania is a member of the committee. This is an important part of the bill. I ask unanimous consent that the gentleman from Pennsylvania may proceed for 3 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. WHITTINGTON. Mr. Chairman, will the gentleman yield?

Mr. RICH. I want to answer the gentleman's question first. I realize that the Miller amendment provided that the rights-of-way for the 26 reservoirs were to be paid for by the Federal Government, but I was under the impression that an amendment would be offered striking out that feature on the Arkansas, the White, as well as the Yazoo and St. Francis Rivers.

Mr. WHITTINGTON. But, Mr. Chairman, if the gentleman will yield, the amendment was not modified and did not provide that the cost of rights-of-way should be borne by local interests at the time the gentleman voted for the amendment.

Mr. RICH. Yes; but even now several Members on our side are trying to work out an amendment that will accomplish that result. The amendment will soon be presented; just be patient. If we can do that, it will then be in accordance with the plan of the Army Engineers.

Mr. WHITTINGTON. Just a moment. The gentleman voted for the amendment.

Mr. RICH. I voted for the amendment.

Mr. WHITTINGTON. The gentleman is a member of the committee, is against the bill, signed the minority views, and has done everything he could to try to kill the bill.

Mr. RICH. No. We want to perfect the bill.

Mr. WHITTINGTON. That is exactly what the gentleman is doing; trying to kill it.

Mr. RICH. If an amendment is adopted striking out the obligation of the Federal Government to pay for the right-of-way for these reservoirs and section 5 not approved by Army Engineers, I will vote for the bill. If such amendments are not adopted, I will not.

Mr. WHITTINGTON. But the gentleman signed the minority views and is against the bill with or without the amendment.

Mr. RICH. We are against certain features of the bill that are contrary to the established plan and policy of 1928, and we are trying to get the Members of the House to adopt a bill that will be satisfactory to the Army Engineers. The people in the Mississippi Valley should be treated the same as we treat everybody else. When it comes to the matter of flood control the people in the Mississippi Valley have gotten the lion's share. Now they are trying to secure the inclusion of these other rivers and steal a march on the other people of the country and make the other people pay their burden, a burden they should stand themselves.

Mr. WHITTINGTON. Mr. Chairman, will the gentleman yield?

Mr. RICH. I yield.

Mr. WHITTINGTON. Is it not a fact that the president of the Mississippi River Commission recommended section 5, the section the gentleman has moved to strike out?

Mr. RICH. I am not prepared to say; I do not know. I do not want to comment on it because I do not want to make a misstatement.

Mr. DRIVER. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I am going to use my colleague's yardstick to support this particular section of the bill. If I do not do it perfectly, I am willing to withdraw the section from the bill.

The justification he offered for his support of a reservoir amendment adopted yesterday, as the Members will recall, was that it would reduce the flood height in the Mississippi River in the vicinity of Arkansas City 4.2 feet. I am commenting on the reasons which the gentleman from Pennsylvania offered for supporting the reservoir amendment; $126,000,000 would reduce the flood height 4.2 feet in the vicinity of Arkansas City. The same Army Engineers he commends have stated in their report on this section of the bill that with $12,000,000 they could reduce the flood height at the same place 6 inches, which means $12,000,000 for 6 inches under this section and $14,000,000 for the like reduction under the amendment which the gentleman from Pennsylvania supported yesterday.

Mr. RICH. Will the gentleman yield?

Mr. DRIVER. I yield to the gentleman from Pennsylvania.

Mr. RICH. The Army Engineers make the statement, do they not, that by building the 26 reservoirs they can reduce the flood height in the lower Mississippi 4½ feet?

Mr. DRIVER. Yes; and 6 inches with $12,000,000.

Mr. RICH. The engineers of Louisiana say it will decrease the height of the flow on the Mississippi River as much as 5½ feet?

Mr. DRIVER. They said 4.2 feet. The Louisiana people estimated it would be possibly 5 feet or slightly in excess, but even then there would be 5 feet additional which we would have to take care of by diversion. It will cost us the same amount of money, notwithstanding the expenditure of $126,000,000.

Mr. RICH. In connection with the two rivers mentioned in the bill, does not the report show we will have to spend $56,000,000 to reduce the flood height 9 inches?

Mr. DRIVER. The reduction in the flood height comes from the Yazoo system. The engineers never offered any justification for the inclusion of the St. Francis on the ground of reducing the Mississippi River flood height. They base their contention absolutely on the fact that the landowners in the St. Francis Basin have contributed equally with every other protected acre in the valley for the construction work on the Mississippi River, and they are today contributing the same amount of money on an acreage basis as are these other protected lands, because every acre of overflow land in the valley is burdened with a debt created through the issuance of bonds and the owners of these overflow lands are just hanging on hoping against hope that they may be protected. They are today paying their proportion on an acreage basis of the maturing principal and annual interest obligations under these bonds. There is the reason for the inclusion of these two streams entirely within that alluvial valley, not on account of reducing purposes, although they do reduce in the Yazoo according to the statement, 9 inches, but nothing in the St. Francis, which is on a different basis entirely.

I may say to the gentleman from Pennsylvania that I am using his own yardstick in order to justify the inclusion.

[Here the gavel fell.]

Mr. CARLSON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it is rather interesting to listen to the discussion here today after the argument we heard yesterday in regard to the approval or disapproval of Engineers' reports. I am sure you all remember a number of distinguished gentlemen took the floor and made the statement it was impossible to secure enactment of flood-control legislation without the approval of Army Engineers. Now we come in here today with an amendment that has the disapproval of Secretary of War George H. Dern as well as the disapproval of the Chief

of Engineers, Gen. E. M. Markham. It does have the approval of General Ferguson, who is Chairman of the Mississippi River Commission, in his report to the Chief of Engineers.

Mr. DRIVER. Will the gentleman yield?

Mr. CARLSON. I yield to the gentleman from Arkansas.

Mr. DRIVER. Is not the same thing true of the amendment adopted yesterday?

Mr. CARLSON. The gentleman is correct.

Mr. DRIVER. I am using the gentleman's own yardstick.

Mr. CARLSON. I may say to the gentleman from Arkansas that I expect him to demand a roll call which will take that amendment from the bill.

Mr. Chairman, here is a section of the bill that in my opinion should be eliminated for the reasons just stated. The testimony of General Markham shows this is reclamation work.

Mr. Chairman, I hope the House votes to strike out section 5 and eliminate $12,000,000 of the expenditure.

Mr. COLDEN. Mr. Chairman, I move to strike out the last two words.

Mr. Chairman, I am not going to attempt to discuss the merits of this bill. However, all this discussion has impressed me with the necessity of national planning. Here we are pouring millions and millions of dollars into building levees and digging ditches, establishing basins, and so forth, to take care of the water of the river down at the bottom of the slope. I think we should reverse the policy. I do not suppose that can be done at this time, because I presume the necessity for this bill is such that we cannot change the policy at this moment. Every barrel of this destructive water that flows into the lower Mississippi River is of great value in the West and Northwest, and if we could impound this water on the upper Missouri River and its tributaries it would be of great benefit. The water has tremendous value for irrigation purposes in Montana, the Dakotas, in many parts of Oklahoma, Kansas, and Nebraska, and all through the West. If this water were impounded near its source it would protect the moisture of those semiarid territories, and it also has a tremendous value in the development of power which is very greatly needed in those sections of the country. The development of power at the source, or along the course, of these rivers would defray the entire cost of many of these dams and projects.

Mr. Chairman, I make this comment in order to call the attention of the Members of Congress to the necessity of revising our policy to point out the value of national planning and to try to get away from the building of levees and ditches only and get to that greater plan and system of national planning that has already been established on the Tennessee River and its tributaries. As I view it, flood-control, navigation, irrigation, and power development should be correlated.

Mr. DONDERO. Will the gentleman yield?

Mr. COLDEN. I yield to the gentleman from Michigan.

Mr. DONDERO. I understand this section is in the bill contrary to advice of the Army Engineers. Is it not a fact only four times in the history of the Nation has the Congress ever acted diametrically opposite to the advice and information given by the Engineers on matters of this kind?

Mr. COLDEN. I assume the gentleman is correct, but my purpose was not to discuss the merits of the bill but to get an idea before the Members.

Mr. DRIVER. Mr. Chairman, will the gentleman yield?

Mr. COLDEN. I yield to the eminent gentleman from Arkansas.

Mr. DRIVER. For the information of my colleague from Michigan, I desire to say that the Engineers made a special study of this particular area, and it is incorporated in a report they made to the Congress, House Document 202, of the Seventy-third Congress, with a complete engineering plan respecting this particular problem which is on all fours with the matter we have discussed here.

Mr. COLDEN. My idea is that we ought to have a Missouri Valley authority, we ought to have a Platte Valley authority, and we ought to take all of these great basins and develop them under a system of national planning, and this would take care of the floods on the lower Mississippi and that water could be used for conservation of moisture, navigation, irrigation, and power. The Boulder Dam on the Colorado River is a combination of flood control and power development. The Boulder Dam will repay its entire cost and eventually produce a profit. Why not apply this policy in the Mississippi and Missouri Valleys?

Mr. RICH. Mr. Chairman, will the gentleman yield?

Mr. COLDEN. I yield.

Mr. RICH. If the Army Engineers approved this, why did Secretary Dern write the letter I read on the floor here, and why did Gen. E. M. Markham write the letter that I read on the floor a few moments ago disapproving it?

Mr. COLDEN. I will say to the gentleman from Pennsylvania that I cannot read the mind of either one of the authorities he has quoted.

To build basins and reservoirs for the control of floods in the flat lands of the Mississippi Valley not only destroys the use of great areas of fertile soil but serves only for the promotion of bullfrogs and pony mosquitoes. To store these floods at the source in basins and reservoirs will add greater prosperity to semiarid regions and add to our national wealth. The development of power will repay the cost of many of these projects and add to the convenience and comfort of a large population. Water at its source can be used as an asset if intelligently controlled. If permitted to flow unharnessed and unrestrained, it carries but destruction to those below.

[Here the gavel fell.]

The pro-forma amendments were withdrawn.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania [Mr. RICH].

The amendment was rejected.

The Clerk read as follows:

SEC. 6. That the United States shall provide the drainage made necessary by the construction of floodway levees included in the modified project.

SEC. 7. That the United States shall construct at its own cost one railroad and one highway crossing over the Eudora floodway and not to exceed three railway and two highway crossings over the Morganza floodway, and not to exceed one railway crossing (together with suitable physical connections therewith) and one highway crossing over the floodway west of the Atchafalaya River provided for in the modified project: *Provided*, That equitable agreements can be made with the railroad and highway authorities concerned and that the appropriate railroad or highway agencies agree to accept and maintain and operate these crossings without cost to the United States: *Provided further*, That the railroads crossing the Morganza and West Atchafalaya floodways agree in consideration for the crossings constructed to waive all claims against the Government for any damages that may occur by reason of overflows in the Morganza and West Atchafalaya floodways: *And provided further*, That other railway and highway damages shall be adjusted as provided for in section 12.

SEC. 8. That, in addition to the construction by the United States of roads in connection with floodways as heretofore provided, the Federal Government may, in the discretion of the Chief of Engineers, and within the limits of available funds, construct additional roads to afford access to those portions of the levee lines not otherwise accessible.

Mr. JENKINS of Ohio. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JENKINS of Ohio: After section 8, line 6, page 6, insert:

"SEC. 8. (a) That no money appropriated under authority of this act shall be expended on the construction of any project until States, political subdivisions thereof, or other responsible local agencies have given assurances satisfactory to the Secretary of War that they will (a) provide without cost to the United States all lands, easements, and rights-of-way necessary for the construction of the project, except as otherwise provided herein; (b) hold and save the United States free from damages due to the construction works; (c) maintain and operate all the works after completion in accordance with regulations prescribed by the Secretary of War: *Provided*, That whenever expenditures for lands, easements, and rights-of-way by States, political subdivisions thereof, or responsible local agencies for any individual project or useful part thereof shall have exceeded the present estimated construction cost therefor, the local agency concerned may be reimbursed one-half of its excess expenditures over said estimated construction cost: *And provided further*, That when benefits of any project or useful part thereof accrue to lands and property outside of the State in which said project or part

thereof is located, the Secretary of War may acquire the necessary lands, easements, and rights-of-way for said project or part thereof after he has received from the States, political subdivisions thereof, or responsible local agencies benefited the present estimated cost of said lands, easements, and rights-of-way, less one-half the amount by which the estimated cost of these lands, easements, and rights-of-way exceeds the estimated construction cost corresponding thereto: *And provided further*, That the Secretary of War shall determine the proportion of the present estimated cost of said lands, easements, and rights-of-way that each State, political subdivision thereof, or responsible local agency should contribute in consideration for the benefits to be received by such agencies: *And provided further*, That whenever not less than 75 percent of the benefits as estimated by the Secretary of War of any project or useful part thereof accrue to lands and property outside of the State in which said project or part thereof is located, provision (c) of this section shall not apply thereto; nothing herein shall impair or abridge the powers now existing in the Department of War with respect to navigable streams."

Mr. WHITTINGTON. Mr. Chairman, I make a point of order against the amendment that it is not germane.

The amendment, if at all germane, would have been germane to section 1 of the bill, which undertakes to provide for methods of financing the projects authorized and which does provide for the financing of the projects authorized in this bill.

The amendment is not germane for another reason. As I understand, the gentleman proposes it as a separate section, and the proposed amendment undertakes to deal not only with flood control but with other matters over which the War Department has no supervision.

If I caught the reading of the amendment aright, it is taken bodily from the omnibus bill that passed the Senate yesterday as an amendment of the bill passed by the House last session. It is not germane to this bill, which is confined to flood control and to navigation only on the lower Mississippi River, and has nothing to do with the benefits that may accrue to power or to irrigation.

So, I say, Mr. Chairman, that section 1 is the section that deals with the financing of the projects and with the conditions on which they shall be financed, and I remind the Chair that section 1 adopts paragraph 43 of Committee Document No. 1 and enumerates the projects and refers to the terms upon which they shall be financed. So, if the amendment were germane to the bill at all it would be germane only to section 1, which has been passed, and is not now under consideration.

It is not germane, I repeat, as an independent section because it deals with matters wholly beyond the scope of this bill, which is limited to flood control and navigation along the Mississippi River and its tributaries.

Mr. JENKINS of Ohio. Mr. Chairman, the amendment is absolutely germane, because it puts a real heart into the bill. Every bill like this providing for an appropriation states how the money shall be expended. That is what the bill does. It is a limitation on the manner and method of spending the money.

This amendment is taken bodily from a bill passed yesterday in the Senate. That was a flood-relief bill and nothing but a flood-relief bill. This is a flood-relief bill and nothing but a flood-relief bill. The amendment meets every test as to germaneness.

If this amendment is adopted it will give some consistency to the bill so that it will be fair and reasonable and so the President will approve it. It will provide that every project in the bill shall be paid for in a certain way—that every project named in the bill shall be paid for in the same way—not paid for by the Government in one instance and by individuals or communities in another instance. It will give consistency to the bill.

This is the language put in the other flood-relief bill in the Senate, language that the President has approved, and that the Army Engineers have approved, and that the conscience of the Nation will approve.

If you want a bill that is consistent, you should adopt this amendment.

Mr. WHITTINGTON. Mr. Chairman, when the gentleman from Ohio mentioned a yardstick, the only discrimination has been for those projects along the Ohio River.

Mr. JENKINS of Ohio. Oh, no; my amendment provides that all similar improvements should be paid for in the same way, regardless of where they are located, and you ought to be willing, if you share the benefits, to share the expense, just as is required of sections in Pennsylvania and Connecticut and Illinois.

Mr. WILSON of Louisiana. Mr. Chairman, I think the amendment of the gentleman from Ohio has no application to this bill.

The CHAIRMAN. The Chair is ready to rule. As the Chair views the matter, the amendment is a limitation on the expenditure of money appropriated in the bill, and therefore the Chair holds that the amendment is germane and overrules the point of order.

Mr. JENKINS of Ohio. Mr. Chairman, in this bill so far we have 26 reservoirs and 10 or 15 different projects, and, as far as I am able to find, there is no set yardstick to measure the local or governmental participation. Each project stands on its own feet. One project in one State might be paid for by the Government in its entirety, while an exactly similar project in the same State or in a different State might be paid for partly by the Government and partly by the State or by an assessment upon the parties or property benefited.

The Senate has been busy for the last 3 weeks formulating a bill which passed the Senate yesterday and which is known as the Copeland omnibus flood-control bill. It is not a Republican Senate, it is a Democratic Senate. This bill contains a definite plan whereby the expense of the construction of the projects is provided. It provides a yardstick by which each project is to be built and paid for. The Chair has ruled my amendment germane. The amendment is germane. It is reasonable and sensible. The language of my amendment is consistent, and it has been approved by the President. The committee should vote for it and every Member should vote for it.

Mr. LAMNECK. Mr. Chairman, will the gentleman yield?

Mr. JENKINS of Ohio. Yes.

Mr. LAMNECK. Is it not true that this is in line with the Senate bill passed yesterday?

Mr. JENKINS of Ohio. That is correct. This will make it in line.

Mr. LAMNECK. Yes; and I hope every Democrat will vote for it.

Mr. RICH. Mr. Chairman, will the gentleman yield?

Mr. JENKINS of Ohio. Yes.

Mr. RICH. This is the amendment that we are trying to get through in order that we might put this bill in line with the Senate bill, as requested by me of the gentleman from Mississippi [Mr. WHITTINGTON] a few moments ago. I hope all Members will support the amendment.

Mr. McCLELLAN. Mr. Chairman, will the gentleman yield?

Mr. JENKINS of Ohio. Yes.

Mr. McCLELLAN. There is one thing the gentleman is overlooking when he is talking about local benefits as affecting the lower Mississippi Valley and compelling them to make additional contributions. Certainly, those landowners ought to pay for these benefits to the limit of their ability, but they have already done it. They have spent $330,000,000 trying to get protection for this valley. To that extent it does place them upon a different basis from territory that has never paid anything.

Mr. JENKINS of Ohio. There is no question but that the Army Engineers can take that into consideration.

Mr. McCLELLAN. But the amendment does not take that into consideration.

Mr. JENKINS of Ohio. It will be construed in that way.

Mr. McCLELLAN. It has the effect of placing a burden on the people and property owners of the valley that they have heretofore fully discharged.

Mr. WILSON of Louisiana. Mr. Chairman, I hope the amendment will not be adopted. This bill proposes to carry out the projects adopted in the act of 1928, when the declaration of Congress was made that all requirements for local contributions had been complied with, that $292,000,000

had been paid by the local interests, and that no other local contribution should be required. That was adopted as a national problem. I think it would be unfortunate to change that policy which this bill recommends for the completion of that great project.

Mr. JENKINS of Ohio. Mr. Chairman, will the gentleman yield?

Mr. WILSON of Louisiana. Yes.

Mr. JENKINS of Ohio. How is the gentleman, as chairman of this committee, going to come in here next week and defend this program which the Senate has adopted as applying to Pennsylvania and Oklahoma and various other States, and oppose it for Louisiana?

Mr. WILSON of Louisiana. Because the contribution required in that bill, even a greater burden, has been already placed upon the people of the alluvial valley, and they have already discharged it. That is the reason I can defend it. They are burdened with debts now for the payment of it, and the act which we are simply amending stated that on account of the contributions made no other local contribution should be required for the carrying out of the project. That was a declaration of Congress, a declaration of a national program to be completed on that basis. I hope the amendment will be defeated.

Mr. GRISWOLD. Mr. Chairman, I move to strike out the last word. I think the amendment should be adopted, in line with trying to get a policy of flood control that affects all parts of the country alike. We quibbled a lot here yesterday about whether the Army Engineers or someone else should approve this report. In the bill passed in the Senate yesterday, which applies to all the rest of the country, except this special Overton bill territory, it was provided that the Army Engineers would not be considered, and their reports are clear out. The thing that will be considered is what the President wants. He will allocate the funds, he will suggest which works shall have priority, regardless of the Army Engineers' report. I think the only thing this Congress can do, to do justice by all the people of the country, is to adopt a policy that affects all of the country alike, not a policy which says you shall have a system one way in flood control in the lower Mississippi, but in the rest of the United States you shall have some other system. It is preposterous that this Congress should try to legislate flood control by sections or regions. We should legislate it for the whole country, and it should be all alike. All should get justice in spending flood-control money. North, South, East, or West, it is one land and one people affected in each region alike by flood waters. Legislation should apply to all alike. It should be a proposition of flood control, and not flood-control money. [Applause.]

Mr. COX. Mr. Chairman, I move to strike out the paragraph. There is great necessity for flood-control legislation. The best thought in this country on the question of flood control is to be found in the Flood Control Committee of the House. The most important work done by the Congress in the effort to deal with this national problem was begun under the chairmanship of Frank Reid, a Republican from Illinois. The policy of the Government in dealing with this question was laid down in the act of 1928, and unless you know something of the background of this legislation and the conditions that brought it about, you are unable to appreciate the importance of adhering to the bill that has been reported by your committee. No greater mistake could be made by the Congress than recognizing the problem of flood control as purely a Federal problem.

That has not been done. It was not done in the bill of 1928. It is not here sought to be done. The amendment that was adopted yesterday was most unfortunate. That amendment itself probably wrecks the bill. If the pending amendment should be accepted, it will undoubtedly destroy the legislation. The purpose of the pending bill is to carry out a policy that was laid down in the act of 1928. There is no indication of an intention to accept the problem of flood control along the Mississippi as purely a national responsibility, and nothing is proposed by way of benefit to that area that in any way discriminates against any other area of the country. The people along the Mississippi have been dealing with this flood problem for more than a hundred years. They have expended millions of dollars, running up to nearly $300,000,000.

The CHAIRMAN. The time of the gentleman from Georgia [Mr. COX] has expired.

Mr. COX. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

Mr. JENKINS of Ohio. Pending that request, Mr. Chairman, I should like to ask what is the parliamentary situation, and how does the gentleman gain the floor? I understood it was by making a motion to strike out the paragraph. I have no objection to his proceeding, but I want to reply.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. COX. The contribution that it is proposed the Government shall make in the bill is, in a measure, to match the contribution already made by people in the affected territory. The people erected their own protective works. They were taken over by the Government and further improved. There is no suggestion coming from that area that the people affected be forever relieved of further contribution to any protective measures that may be adopted by the Government.

Mr. Chairman, if we should accept the principle of the amendment adopted yesterday as the policy of the Government and should follow it to its logical conclusion, it would impose a burden of in excess of $11,000,000,000 upon the people of this country.

Mr. MILLER. Mr. Chairman, will the gentleman yield?

Mr. COX. I yield.

Mr. MILLER. The amendment adopted yesterday is an exact copy of the provisions of this bill with reference to the Yazoo Reservoir.

Mr. COX. Mr. Chairman, I was for many years a member of the Flood Control Committee of this House and am interested in securing proper legislation. I hope the committee will reject the amendment.

The CHAIRMAN. The time of the gentleman from Georgia has again expired.

The question is on the amendment offered by the gentleman from Ohio [Mr. JENKINS].

The question was taken; and on a division (demanded by Mr. JENKINS of Ohio) there were ayes 57 and noes 34.

Mr. WILSON of Louisiana. Mr. Chairman, I ask for tellers.

Tellers were ordered, and the Chair appointed Mr. WILSON of Louisiana and Mr. JENKINS of Ohio to act as tellers.

The Committee again divided; and the tellers reported there were ayes 70 and noes 44.

So the amendment was agreed to.

The Clerk read as follows:

SEC. 9. The sum of $15,000,000 is authorized to be appropriated as an emergency fund to be allocated by the Secretary of War on the recommendation of the Chief of Engineers in rescue work or in the repair or maintenance of any flood-control work on any tributary of the Mississippi River threatened or destroyed by flood heretofore or hereafter occurring: *Provided*, That the unexpended and unallotted balance of said sum, or so much thereof as may be necessary, may be allotted by the Secretary of War, on the recommendation of the Chief of Engineers, in the reimbursement of levee districts or others for expenditures heretofore incurred or made for the construction, repair, or maintenance of any flood-control work on any tributaries or outlets of the Mississippi River that may be threatened, impaired, or destroyed by the flood of 1927 or subsequent flood; and also in the construction, repair, or maintenance, and in the reimbursement of levee districts or others for the construction, repair, or maintenance of any flood-control work on any of the tributaries or outlets of the Mississippi River that may have been impaired, damaged, or destroyed by caving banks or that may be threatened or impaired by caving banks, of such tributaries, whether or not such caving has taken place during a flood stage: *Provided further*, That if the Chief of Engineers finds that it has been or will be necessary or advisable to change the location of any such flood-control work in order to provide the protection contemplated by this section, such change may be approved and authorized.

SEC. 10. After the Eudora floodway shall have been constructed and is ready for operation, the fuse-plug levees now at the head of the Boeuf and Tensas Basins shall be constructed to the 1914 grade and the 1928 section. The fuse-plug levees at the head of the Atchafalaya Basin on the west side shall be constructed to the 1914 grade and the 1928 section. The fuse-plug levees at the head of the Atchafalaya Basin on the east side of the Atchafalaya River shall be constructed to the 1914 grade and 1928 section, and, after the Morganza floodway has been completed, shall be raised to the 1928 grade as provided in section 3 of this act. Thereafter those stretches of said levees which are left as fuse-plug levees shall be reconstructed and maintained as herein provided, subject to the provisions of section 3 of this act. Any funds appropriated under authority of this act may be expended for this purpose.

SEC. 11. That the back-protection levee north of the Eudora Floodway shall be constructed to the same grade and section as the levees opposite on the east side of the Mississippi River: *Provided*, That this levee extending from the head of the Eudora floodway north to the Arkansas River shall be so located as to afford adequate space for the passage of floodwaters without endangering the levees opposite on the east side of the river and shall be constructed contemporaneously with the construction of the Eudora floodway; except that, until the Eudora floodway is in operative condition, there shall be left in this back levee north of the head of the Eudora floodway openings which shall be sufficient, in the discretion of the Chief of Engineers, to permit the passage of all floodwaters to be reasonably contemplated in the event of any break in the riverside fuse-plug levee prior to the time the Eudora floodway shall be in operative condition.

SEC. 12. In order to facilitate the United States in the acquisition of flowage rights and rights-of-way for levee foundations, the Secretary of War is authorized to enter into agreements with the States or with local levee districts, boards, commissions, or other agencies for the acquisition and transfer to the United States of such flowage rights and levee rights-of-way, and for the reimbursement of such States or local levee districts, boards, commissions, or other agencies, for the cost thereof at prices previously agreed upon between the Secretary of War and the governing authority of such agencies, within the maximum limitations hereinafter prescribed: *Provided*, That no money appropriated under the authority of this act shall be expended upon the construction of the Eudora floodway, the Morganza floodway, the back-protection levee extending north from the Eudora floodway, or the levees extending from the head of the Morganza floodway to the head of and down the east bank of the Atchafalaya River to the intersection of said Morganza floodway until 75 percent of the value of the flowage rights and rights-of-way for levee foundations, as estimated by the Chief of Engineers, shall have been acquired or options or assurances satisfactory to the Chief of Engineers shall have been obtained for the Eudora floodway, the Morganza floodway, and the area lying between said back-protection levee and the present front-line levees: *Provided further*, That easements required in said areas in connection with roads and other public utilities owned by States or political subdivisions thereof shall be provided without cost to the United States upon the condition that the United States shall provide suitable crossings, including surfacing of like character, over floodway guide-line levees in said areas for all improved roads now constituting a part of the State highway system and shall repair all damage done to said highways within the said floodways by the actual use of such floodways for diversion: *Provided further*, That when such portion of said rights as to all of said areas shall have been acquired or obtained and when said easements required in connection with roads and other public utilities owned by States or political subdivisions thereof have been provided as hereinabove set forth, construction of said flood-control works in said areas shall be undertaken according to the engineering recommendations of the Report of the Chief of Engineers, dated February 12, 1935 (House Committee on Flood Control Doc. No. 1, 74th Cong., 1st sess.), and the Secretary of War shall cause proceedings to be instituted for the condemnation of the remainder of said rights and easements, as are needed and cannot be secured by agreement, in accordance with section 4 of the Flood Control Act of May 15, 1928: *Provided further*, That in no event and under no circumstances shall any of the additional money appropriated under the authority of this act be expended for the acquisition of said 75 percent of the flowage rights and rights-of-way hereinabove contemplated in excess of $20,000,000: *Provided further*, That the Chief of Engineers is authorized, out of the funds herein authorized to be appropriated, to purchase flowage easements over lands and properties in the floodway west of the Atchafalaya River and lying above the approximate latitude of Krotz Springs: *Provided further*, That none of such easements in said West Atchafalaya floodway shall be purchased until options covering at least 75 percent of the total value of such easements, as estimated by the Chief of Engineers, shall have been obtained at prices deemed reasonable by the Chief of Engineers and not exceeding in the aggregate $2,250,000 for said 75 percent of said easements with respect to the floodway west of the Atchafalaya River: *Provided further*, That easements required in said West Atchafalaya floodway in connection with roads and other public utilities owned by States or other political subdivisions shall be provided without cost to the United States upon condition that the United States shall provide suitable crossings, including surfacing of like character, over floodway, guide-line levees for all improved roads in said West Atchafalaya floodway now constituting a part of the State highway system, and shall repair all damage done to said highways within said West Atchafalaya floodway by the actual use of such floodway for diversion: *Provided further*, That no flowage easements shall be paid for by the United States over properties subject to frequent overflow in the Atchafalaya Basin below the approximate latitude of Krotz Springs: *Provided further*, That payment for rights-of-way, easements, and flowage rights acquired under this section, or reimbursement to the States or local interests furnishing them, shall be made as soon as the Chief of Engineers is satisfied that such rights-of-way, easements, or flowage rights have been acquired in conformity with local custom or legal procedure in such matters; and thereafter no liability of any kind shall attach to or rest upon the United States for any further damage by reason of diversions or floodwaters: *And provided further*, That if the Secretary of Agriculture shall determine to acquire any of the properties within the floodways herein referred to, for national forests, wildlife refuges, or other purposes of his Department, the Secretary of War may, upon recommendation by the Chief of Engineers, in lieu of acquiring flowage rights, advance to or reimburse the said Secretary of Agriculture sums equal to those that would otherwise be used for the purchase of easements desired by the War Department, and the Secretary of Agriculture is authorized to use these sums for the purpose of acquiring properties in the floodways in question.

SEC. 13. That $272,000,000 is hereby authorized to be appropriated for the carrying out of the modified adopted project, and all unexpended balances of appropriations heretofore made for the prosecution of said flood-control project are hereby made available for the purposes of this act.

Mr. MILLER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MILLER: Page 12, line 20, after the word "that", strike out "$272,000,000" and insert in lieu thereof "$398,719,000."

Mr. MILLER. Mr. Chairman, the amendment merely provides for an increase in the authorization in accordance with the amendment adopted yesterday.

Mr. HAINES. Mr. Chairman, will the gentleman yield?

Mr. MILLER. I yield.

Mr. HAINES. I thought it was $126,000,000 additional.

Mr. MILLER. It is. It simply adds $126,000,000 to the $272,000,000. That is the only purpose of the amendment.

I will say frankly that the entire sum will not be necessary, in view of the amendment offered by the gentleman from Ohio [Mr. JENKINS]; but in order to keep the bill in proper shape, the authorization ought to be made, so that the money can be appropriated as and when needed. That is the only purpose of the amendment.

Mr. WILSON of Louisiana. Mr. Chairman, I rise in opposition to the amendment.

I would oppose the approval of the additional authorization for $126,000,000, because I hope we can formulate the bill so as to keep within the recommendation of the War Department for the completion of this project and carry that out.

Mr. MILLER. Well, will the gentleman yield?

Mr. WILSON of Louisiana. I yield.

Mr. MILLER. The gentleman will admit that the amendment ought to be agreed to now in view of the amendments that have been adopted by the committee?

Mr. WILSON of Louisiana. Well, yes; but I want to be consistent in voting to keep either one out of the bill.

Mr. MILLER. That is all right, but it ought to be agreed to now.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. CARLSON. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. CARLSON to the amendment offered by Mr. MILLER: After the word "that", in line 20, strike out "$398,719,000", in the Miller amendment, and insert "$295,719,000."

Mr. CARLSON. Mr. Chairman, the purpose of my amendment is to amend this bill so as to authorize the construction of the Eudora floodway and not appropriate the funds for it at this time. This bill as we have now drawn it contains 26 reservoirs, and in the discussion yesterday it was brought out that they would materially reduce flood dangers through that territory.

I am going to read some testimony in regard to the need of immediately constructing the Eudora floodway. This is

found on page 74 of the hearings in the United States Senate on this bill, and is the testimony given by General Ferguson. Here is the testimony:

Senator OVERTON. General, do you think that it is desirable to have a comprehensive flood-control plan adopted now or do you think it would be better to wait, say, another 2 years or more, to determine the effect of cut-offs and reservoirs and additional outlets and bank-stabilization or other works?

General FERGUSON. I think there should be a plan now, and I reported so last year.

Senator OVERTON. Is it practical to proceed with the works recommended in the lower section—the Atchafalaya and the Morganza—leaving the middle section in its present condition and for future determination?

General FERGUSON. As an engineering problem, yes, sir. As a political problem, that is another question.

Senator OVERTON. Well, of course, from an engineering standpoint you could undertake to work on any section of the river and ignore another section?

General FERGUSON. Yes, sir.

I wanted to call your attention to that testimony. We put in those reservoirs, we authorize the construction of this floodway; and if the commission that is now studying the flood problems of the United States make a report next December to the President of the United States that we need this floodway in addition to other reservoirs in the Mississippi Valley Basin I will be for the appropriation; but I do not believe we should pass it today. I think this bill should be passed with the authorization I have offered as an amendment.

Mr. WHITTINGTON. Mr. Chairman, I move to strike out the last word.

The bill carries an authorization of $272,000,000. On yesterday the committee adopted an amendment which provides for an additional $126,000,000 for the construction of 26 reservoirs along the Arkansas and the White Rivers. The gentleman from Arkansas [Mr. MILLER] proposes an amendment to increase the authorization carried in the bill by $126,000,000. I oppose that amendment. Other gentlemen today opposing the Miller amendment but voting for it yesterday undertook to correct what they said was an error in passing the so-called Jenkins amendment, under which the people in the floodway districts are required to furnish the rights-of-way. With all deference to my colleague from Kansas, the increase of this authorization by $23,000,000 will by no manner of means eliminate the Eudora floodway.

Mr. CARLSON. Mr. Chairman, will the gentleman yield at this point that I may correct his statement?

Mr. WHITTINGTON. In just a moment. I am saying that if $272,000,000 will provide for the Eudora floodway, certainly $295,000,000 will provide for it. I now yield to the gentleman from Kansas.

Mr. CARLSON. My amendment was for $103,000,000 instead of $21,000,000.

Mr. WHITTINGTON. The gentleman's amendment made the total carried in this section $295,719,000; or, I repeat for emphasis, approximately $23,000,000 more than carried by the bill.

Mr. CARLSON. That is right.

Mr. WHITTINGTON. Under the terms of the bill, with an authorization of $272,000,000, the Eudora floodway is provided for. Pray tell me how you are going to eliminate it by making the authorization $295,000,000? There is no way on earth to eliminate the Eudora floodway except through legislation, and it is now too late for such an amendment. The Eudora floodway is already provided for in the bill.

Mr. Chairman, I submit that in my judgment a mistake was made in the adoption of the Miller amendment. This mistake was further accentuated by the adoption of the Jenkins amendment. The adoption of these two amendments will probably require less than $272,000,000; and I respectfully submit that at least the authorization should remain as reported by the committee, $272,000,000, because all additional amounts that may be required by the Miller amendment will be offset by the amendment of the gentleman from Ohio [Mr. JENKINS]. I submit that both amendments, that of the gentleman from Kansas and the gentleman from Arkansas [Mr. MILLER], should be voted down.

Mr. RICH. Mr. Chairman, will the gentleman yield?

Mr. WHITTINGTON. Yes; gladly.

Mr. RICH. If we cut out the Eudora floodway authorization of $102,000,000 we can build those 26 dams for the people out there in the Arkansas and White River Valleys.

Mr. WHITTINGTON. But on yesterday the gentleman voted for them, even though he was opposed to the bill.

Mr. RICH. I am going to vote for this money to help those people out.

Mr. WHITTINGTON. The trouble is the gentleman is not doing that. We cannot eliminate the Eudora floodway; it is utterly impossible to eliminate the Eudora floodway unless we go back and revise and amend the bill.

Mr. RICH. Then, let us go back and amend the bill accordingly.

Mr. WHITTINGTON. We will cross that bridge when we get to it. The trouble with all amendments favored by you is that they are for the defeat of the bill. At the present time you must admit that the two pending amendments are not in order.

Mr. MAIN. Mr. Chairman, I move to strike out the last two words.

Mr. Chairman, for my own benefit and, I hope, for the benefit of some of the Members of the House, I want to call attention to some rather significant things about this bill. The first section, apparently, is the meat of the bill, yet I defy anyone on reading the first section of the bill to get the slightest comprehension of what we are attempting to do. It refers to section 43 of a letter from the Chief of Engineers under date of February 12, 1935, and that section appears on page 13 of the Flood Control Committee Document No. 1. It does not mention any figures or allocate any funds for any of these projects.

Therefore, Mr. Chairman, I fail to see how any appropriation or authorization in this bill is going to allocate any portion of the funds to the Eudora floodway. Yesterday we specifically designated $126,000,000 for the reservoirs on the White and Arkansas Rivers. So far so good. But I would like to have some information on the subject of the status of funds involved in the proposed authorization for the Eudora floodway. I do not find it in the bill, and I do not find it in section 43 of the report of the Chief of Engineers under date of February 12, 1935.

On page 28 of a supplemental report in Document No. 1 of the Flood Control Committee, coming from some gentleman with headquarters at Vicksburg, Miss., we find a figure of $103,000,000 as the estimate recommended for the Eudora spillway. But that is in section 44 of a supplemental report on page 28. I find no specific information in the bill or in the section referred to in the bill which throws any light upon this proposed allocation of $103,000,000 for the Eudora spillway.

[Here the gavel fell.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas [Mr. CARLSON] to the amendment offered by the gentleman from Arkansas [Mr. MILLER].

The amendment to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas [Mr. MILLER].

The amendment was rejected.

The Clerk read as follows:

SEC. 14. If any provision of this act, or the application thereof, to any person or circumstances, is held invalid, the remainder of the act, and the application of such provisions to other persons or circumstances, shall not be affected thereby.

Mr. WHITTINGTON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, we have now completed the reading of the bill, and the Committee will soon rise. On yesterday the Committee adopted an amendment to provide for 26 reservoirs, offered by the gentleman from Arkansas. Today, in the language of the gentleman from Ohio [Mr. JENKINS], the Committee undertook to correct that mistake by adopting an amendment which he proposed. The amendment which the

gentleman from Ohio offered is taken bodily from an amendment adopted by the Senate to the so-called omnibus flood-control bill, passed by the House in July of last year.

Mr. Chairman, in my opinion that amendment has no place in the pending bill. The omnibus bill passed by the House and Senate does not undertake to deal with the lower Mississippi River. When the Republican Party was in control in 1928 it was ordained by statute that in the lower Mississippi there should be a floodway through the Boeuf Basin. Some of us who lived in that area then and live there now felt that the provisions were inadequate and indefinite. There is no provision for floodways or diversions in the omnibus bill. Only the pending bill provides for floodways.

Mr. Chairman, what is the effect of the language inserted by the Jenkins amendment? It is nothing more or less than that the people living in the Eudora floodway, an area 10 miles wide and almost 100 miles long, will be required to pay the cost of their own destruction. Mr. Chairman, after your Flood Control Committee has considered the pending legislation for a year and a half, will the House now crucify the bill to clarify the Flood Control Act of 1928, passed when the Republicans were in control? In the Overton bill we are undertaking to clarify and to perfect the act of 1928, and the bill follows to the letter the recommendation of the Chief of Engineers, except as to section 5, which is recommended by the Mississippi River Commission.

As pointed out by the gentleman from Arkansas [Mr. MCCLELLAN], there are pending suits aggregating millions of dollars because of defects which this bill undertakes to correct; moreover, there are two floodways in the lower Atchafalaya Basin. Is it reasonable to suppose that the people in the lower Atchafalaya Basin, in the Tensas Basin in Louisiana and Arkansas, called upon to furnish 1,000,000 acres of land, will furnish their land and at the same time pay the cost of their own crucifixion? Such is the effect of the amendment so far as floodways in the pending bill are concerned adopted by the committee today, as proposed by the gentleman from Ohio [Mr. JENKINS].

The Government is protected as to land values in the pending bill. The Senate modified the bill providing for these floodways so as not to permit more than $20,000,000 to be paid for 75 percent of all the land, the flowage rights, the utilities, schools, churches, drainage systems, and all public and private improvements because the Government of the United States made a monumental mistake in ever permitting the Cypress Creek diversion near Arkansas City to be closed in 1921.

I urge that the Jenkins amendment be eliminated or modified in order to prevent the destruction of the bill.

I extend my remarks, under leave granted, by saying that under the Flood Control Act of May 15, 1928, the States and local interests are required to provide rights-of-way for levees along the main river, but under the terms of the act, floodways and spillways were to be constructed at Federal expense. Such a floodway was constructed and took a large area of land in southeast Missouri. The Bonne Carre spillway in Louisiana has been constructed, but the Boeuf diversion in the vicinity of Arkansas City, which will really constitute a new river some 15 miles wide and 100 miles long, has not been constructed because no provision has been made to compensate property owners for damages and flowage rights to approximately 1,000,000 acres of land. The provision for diversion through the Boeuf Basin remains, but no compensation has been made. Suits for millions of dollars in damages are pending. The pending bill to provide for a smaller diversion at less expense to the Government substitutes the Eudora floodway for the Boeuf diversion. The Eudora floodway is approximately 10 miles wide; the lands are located in southeast Arkansas and in the Tensas Basin in Louisiana. The floodway embraces approximately 822,000 acres of land.

There are two additional floodways in the Atchafalaya Basin in Louisiana; they embrace about 175,000 acres.

There are no such projects in the omnibus flood-control bill. The lower Mississippi River is not provided for in that bill. The pending bill carries $72,000,000 for navigation and the remainder is largely for flood-control works; only a small amount will be paid to property owners for damages to property.

In the St. Francis River project, located wholly in the alluvial valley, if levees are constructed, the local interests will pay for the rights-of-way. The same situation will obtain along the Yazoo River. In the St. Francis, reservoirs can only be substituted for levees provided the expense to the Federal Government will not exceed the costs in the event the levee system obtains along the St. Francis River.

The amendment provides for the policy in the omnibus flood-control bill as adopted by the Senate. That bill embraces other rivers in practically every State in the Union. The same yardstick will be applied to all of the States and to all rivers, but in the pending bill floodways are to be provided to accommodate the waters that come from 31 States of the Union and without flood-control works, in maximum floods the entire lower Mississippi Valley constitutes a mighty river 50 miles wide and 1,100 miles long. The floodways are made necessary because of the floods that accumulate largely in the State of Louisiana from 31 States of the Union. They constitute a national burden.

The pending amendment deals with no such situation. It can have no application along the lower Mississippi River; it should be eliminated.

The reservoirs along the Yazoo are recommended by the Chief of Engineers. In his report the Chief of Engineers states that the lands in the Yazoo Basin have paid more than $50,000,000 for flood-control works along the Mississippi River; they are now providing for rights-of-way and for maintenance. In addition, the area along the Yazoo River system has expended more than $20,000,000, according to the Chief of Engineers, to provide local flood-control works that are inadequate. The Yazoo River is affected by the backwaters of the Mississippi River. I repeat, to emphasize, that the Chief of Engineers recommends both the Yazoo and the St. Francis projects just as they appear in the pending bill.

The case is different with the 26 reservoirs along the Arkansas and the White. The areas protected by these reservoirs do not now contribute, nor have they ever contributed, to flood-control works along the Mississippi River. According to the Chief of Engineers, while the Federal Government has expended some $285,000,000 for flood-control in the lower Mississippi Valley and $160,000,000 for navigation along the Mississippi River, in all of the history of the Government, the local interests have fully complied with the principle of local contribution by having paid prior to 1928, $292,000,000, and by having paid since 1928, according to the Chief of Engineers, more than $41,000,000 additional.

I agree that a mistake was made in inserting the reservoirs along the Arkansas and the White. Protection will be provided for the tributaries without any local contribution for rights-of-way. The same is not true of the lower Mississippi Valley. There the people must pay for the rights-of-way for levees along the Mississippi River. The cases of these reservoirs are altogether different from the reservoirs along the St. Francis and the Yazoo; they are not in the alluvial valley; they have never paid for protection in the valley that they are not now receiving.

The gentleman from Ohio [Mr. JENKINS] and the gentleman from Pennsylvania [Mr. RICH] have both stated that they voted for the 26 reservoirs along the Arkansas and White under a misapprehension. The answer is that they voted for the amendment with their eyes open. It was a mistake. The amendment requiring the local interests to provide floodways is another mistake. One mistake cannot be corrected by making another. The remedy is to eliminate both mistakes. The 26 reservoirs along the Arkansas and the White, as provided by the amendment of the gentleman from Arkansas, and the requirement for the local interests

to pay for lands and for flowage rights in the floodways and reservoirs along the lower Mississippi River, should both be eliminated from the pending bill.

Mr. JENKINS of Ohio. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this is an impassioned last-minute plea on the part of the gentleman from Mississippi [Mr. WHITTINGTON] in an effort to undo what we did a little while ago after a long, stubborn, and fair debate. He is making this speech with the hope that when the bill comes up for final passage and he demands a separate vote on the Jenkins amendment that you will undo what you have already done by voting down my amendment. You will not be so fickle as to change your minds just to save the pride of the committee. In 1928 this House voted more than $300,000,000 for the improvement and protection of the Mississippi Valley floodway. At that time it was not contemplated that the improvement we are voting on today was absolutely necessary. We spent that much money, and we did everything that the Army Engineers said at that time should be done.

Let us have this out on a fair argument. We voted that amount of money and spent that amount of money in the lower Mississippi Valley. They come forward today with a bill calling for approximately $300,000,000 more, and to that was added yesterday another $126,000,000. This makes a total of nearly $500,000,000 which this Congress is going to appropriate for three or four States in that territory down there. That may be all right, and if it is right I am in favor of it, but I say it is not all right to vote that much money and then come in here next week and vote for an omnibus flood-control bill which takes in Colorado, Iowa, Pennsylvania, New England, Ohio, and practically 95 percent of the United States, and put upon them a different yardstick and a different burden by which they must pay for improvements in their respective sections. That bill will provide for every dollar's worth of improvements which the Government puts into the projects provided for therein. The people must provide the rights-of-way and must provide for the payment of damages. That bill will provide just as my amendment seeks to have this bill provide; it will provide that the Government will not construct any project unless some local authority, State, or municipality will come forward with a substantial contribution.

Mr. Chairman, does the gentleman from Mississippi mean to say that he can conscientiously stand up here next week, when the other flood-relief bill comes up for consideration, and as a member of the Flood Relief Committee, say to the Pittsburgh district, to Pennsylvania, and to all other parts of the United States that they will have to pay for their own improvements while down in the Southland in his State he has provided that the Government shall pay the total cost of their projects without any State or local participation whatsoever? Is this a battle between the Northland and Southland? But why should the three States of Arkansas, Mississippi, and Louisiana have an appropriation of over $400,000,000, free from local participation, while all the other 45 States will be getting about one-half that much and will be called upon to match in most instances dollar for dollar with the Government for all projects constructed in these 45 other States?

Mr. WHITTINGTON. Will the gentleman yield?

Mr. JENKINS of Ohio. No; I prefer not to yield at this time.

Mr. Chairman, I ask in all frankness, are we going to say to one section that we will build their improvements, we will pay everything, and then say to the Ohio Valley, the Connecticut Valley, the northern Mississippi Valley, the Missouri Valley, and all other sections of the United States that if they want the Government to put in improvements they will have to put up dollar for dollar? No; that is not fair; it is not reasonable; it is not just and will not prevail.

I appeal to the Members on the Democratic side to maintain their position on the Jenkins amendment, because the President has put his stamp of approval on it. The position of Senator COPELAND and the action of the Senate yesterday indicate what the position of the President is. He will not approve any plan that does not call for local contributions and local participation. He has already made his position, and if you want your bill passed you should leave the Jenkins amendment in it, because it provides for what the President of the United States wants done.

Mr. WHITTINGTON. Mr. Chairman, will the gentleman yield?

Mr. JENKINS of Ohio. I yield.

Mr. WHITTINGTON. Is there any project in the amendment to which the gentleman has referred, passed by the Senate, that provides for three floodways 10 miles wide and taking 200,000 acres of land?

Mr. JENKINS of Ohio. That is not the point. We have not recognized or challenged the merits or the necessity of any of these projects. We have no special interest in that floodway. If that floodway is so necessary, why did you not build it with the $325,000,000 that we gave you last year and the year before? That is simply a continuation of a project that is going to call for about $1,000,000,000, and you want this Congress to vote $1,000,000,000 to your section, and you do not propose to contribute a nickel, but whenever the floods come 25-feet high in the business houses of Pittsburgh, and rise 25 feet in the business districts of New England, and when the beautiful, prosperous, and thickly populated Ohio Valley is inundated from hill to hill with a great sea of murky water 1,000 miles long, carrying danger, sickness, and death to hundreds of its citizens, and hundreds of millions of dollars in damages to the people, the municipalities, and the States, you want to have them stand for this loss year after year; and when they ask for relief from the Government you want to say to them, "You shall not have any relief unless you match dollar for dollar with the Government." No, my friends, do not be misled.

You should stay with your vote on this amendment, because it is reasonable, it is fair, and it is just. [Applause.]

[Here the gavel fell.]

Mr. McCLELLAN. Mr. Chairman, I rise in opposition to the pro-forma amendment.

Mr. Chairman, it is very unfortunate to have these controversies, but we ought not to proceed here with a misunderstanding and on misstatements of facts put into the RECORD by the gentleman from Ohio.

Those who are now determined to defeat this bill make the statement that back in 1928, when this legislation came up, $325,000,000 was appropriated to carry out and execute this project. I say to you that was only appropriated as a part of the expense then known to be necessary, and the Chief of Army Engineers at that time so reported, and it was known by the Congress in passing on the legislation that an expenditure of $775,000,000 would be necessary to complete this project. The 1928 act was adopted with that knowledge in the possession of Congress at the time and an appropriation was made to carry on the work as far as $325,000,000 would go.

Almost all of this money has been expended, and the Army engineers, acting pursuant to a resolution adopted by your Flood Control Committee, after having made a further study of the matter, report that if you will substitute the Eudora floodway for the Boeuf, the cost of which was included in the estimate of $775,000,000, the work can be done at less expense and at a saving of millions of dollars and that it will conserve 500,000 acres of the most fertile lands of the Mississippi Valley and keep it for utilization instead of converting it into a floodway. The highest authority, the authority upon which the President of the United States must rely and the authority upon which you and I, as Members of Congress, ought to rely for guidance upon technical problems of this sort, has so recommended.

So this is not a plea for more money. It is only legislation for the authorization of the money that was contemplated in the adopted project and plan for the control of floods in the lower Mississippi.

May I make this observation, in conclusion? Mr. Chairman, we have a fight here for flood control. This Nation

is flood-control conscious. They want flood-control legislation. Here is an adopted project that has been recommended by the proper authorities. Vote against this bill today and you vote to retard the progress that this Nation is looking forward to in flood-control legislation. Here is your fight on this—Republican—side of the House. Are we going to follow them today? The chairman of the Flood Control Committee that reported out the original 1928 act and passed it was a Republican. We are trying to carry out the program then adopted. Today you find the opposition to a progressive flood-control program for this Nation over there on the Republican side, where we might expect it. I call upon you as Democrats who sympathize with flood-control legislation, not to crucify this bill with this Republican amendment that will destroy it and delay and postpone the day when we may have protection in this great valley and when you will get flood relief in Pennsylvania, Ohio, and in other States and valleys of the Nation. I ask my Democratic friends to support the bill.

Mr. WILSON of Louisiana. Mr. Chairman, I ask unanimous consent that all debate on this section and all amendments thereto close in 15 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. RICH. Mr. Chairman, all I wish to say to the committee at this time is that I am not trying to obstruct flood-control legislation, as stated by the gentleman from Arkansas [Mr. McCLELLAN]. I think the time has come when the Nation is flood-control conscious, but there was a bill passed in the Senate yesterday taking care of all the country. The Mississippi Valley now has $63,000,000 to spend at the present time and they will not suffer. We have done more for them than any other section of the country regarding flood control.

I want to see a flood-control bill for the lower Mississippi, but it ought to be handled in the same way that it is in all other sections of the country. Let us treat everybody in this country alike, regardless of where they live.

[Here the gavel fell.]

Mr. GRISWOLD. Mr. Chairman, I regret that the gentleman from Arkansas precipitated a partisan question. This is not a partisan matter. Waters that come down the Wabash, waters that come down the Ohio, waters that come down through Pennsylvania and Connecticut are not a partisan question, and we are only asking justice for those States. Under this bill the reservoirs should be paid for in the same way that flood control is paid for under the omnibus bill passed by the Senate on yesterday. We want to help these people in the lower Mississippi, if it is possible to help them. We also want to help those in other sections who have lost their farms because they could not pay the damages caused by the flood and taxes too.

We want those in other States to have the same rights that you give the people in the lower Mississippi. What is sauce for the goose is sauce for the gander. Let us have it that way. Let us make this Overton bill conform to the omnibus Senate bill as the Jenkins amendment does make it.

The omnibus flood-control bill was passed and went to the Senate last session. For some reason it was held up until the Overton bill came out. The Overton bill was not introduced until this session. That bill passed the Senate and came to the House. It gave the omnibus flood bill the "run around." There was a gentleman in the other body who took the attitude, when the Overton bill was up, that only the Engineers' report could be accepted, and that same gentleman yesterday voted to take the projects in the omnibus bill out of the Engineers' hands and put it in the hands of someone else.

Let us make this bill as it should be. Let us have a national policy. What is sauce for the goose is sauce for the gander. [Applause.]

Mr. WILSON of Louisiana. Mr. Chairman, I want this bill to have a fair and reasonable consideration, but I do not know any way by which we can do it satisfactorily with the amendment of the gentleman from Ohio in the bill. That amendment is connected with the Senate omnibus flood bill, but it has no place in this bill. This project in the lower Mississippi Valley, authorized by this bill, is not on the same basis as any other flood-control project in America.

Mr. JENKINS of Ohio. Mr. Chairman, will the gentleman yield?

Mr. WILSON of Louisiana. Yes.

Mr. JENKINS of Ohio. When we passed the omnibus bill last year—the bill the gentleman speaks of—the bill went over to the Senate, and the Senate put it on the shelf by reason of a speech by Senator TYDINGS, did it not?

Mr. WILSON of Louisiana. I do not know what it did. I know that we passed it, and that we expect to carry it out, and that we have spent in the Ohio River, without any local contribution, over $160,000,000.

Mr. JENKINS of Ohio. Is it not a fact that the Senate put it on the shelf by reason of Senator TYDINGS' speech, and he made fun of it because it did not have any yardstick in it or measurement at all? That is what they put in the bill yesterday in the Senate.

Mr. WILSON of Louisiana. We are not responsible for that. Take the Ohio River. We spent over $160,000,000 there, without local contribution, but in this alluvial valley the Government, after close consideration, acknowledged a national responsibility to carry out that project to completion. There are some 30,000 square miles of territory that must carry the drainage of practically 45 percent of the Nation. The local communities there had contributed much more than others will under the basis of the Jenkins amendment. They have already complied with it, and because of that and in acknowledgment of this national obligation we come forward here with a recommendation for the completion of the project. I appeal to the membership against the amendment that will destroy this opportunity.

Mr. WHITTINGTON. Mr. Chairman, will the gentleman yield?

Mr. WILSON of Louisiana. Yes.

Mr. WHITTINGTON. Something has been said about the President's view. Does not the Chief of Engineers recommend this bill, as it is advocated by the committee?

Mr. WILSON of Louisiana. Yes; and in the floodways is where the burden is placed by carrying the water. Take the lower Atchafalaya Basin. There are 60,000 acres in one floodway to carry the water, sometimes as high as a million cubic feet per second. The Government has allotted a little over $2,000,000 to pay for the flowage rights there for all time. In the Eudora floodway there are 922,000 acres, and less than $15,660,000 is allotted to provide for the flowage rights for all time to come. So it is not upon the basis of the other projects. I have advocated those and expect to do so to carry out a comprehensive program. I am free to say that you are getting more relief, more Federal assistance, under the Senate bill for those areas outside of the Mississippi Valley than has been given to the lower Mississippi Valley.

The CHAIRMAN. The time of the gentleman from Louisiana has expired. All time has expired. Under the rule the Committee will rise.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. FLANNAGAN, Chairman of the Committee of the Whole House on the state of the Union, reported that that Committee had had under consideration the bill S. 3531, and, pursuant to House Resolution 561, he reported the same back to the House with sundry amendments adopted in the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered. Is a separate vote demanded on any amendment?

Mr. WILSON of Louisiana. Mr. Speaker, I demand a separate vote upon the Jenkins amendment.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put the other amendments en gros. The question is on agreeing to the remaining amendments.

The amendments were agreed to.

The SPEAKER. The Clerk will report the Jenkins amendment.

The Clerk reported the Jenkins amendment.

The SPEAKER. The question is on agreeing to the amendment.

The question was taken; and on a division (demanded by Mr. JENKINS of Ohio) there were—ayes 74, noes 61.

So the Jenkins amendment was agreed to.

The SPEAKER. The question now is on the third reading of the Senate bill.

The bill was ordered to be read a third time and was read the third time.

The SPEAKER. The question now is on the passage of the bill.

The question was taken; and on a division (demanded by Mr. WHITTINGTON) there were—ayes 88, noes 79.

Mr. SNELL. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 161, nays 156, not voting 109, as follows:

[Roll No. 106]

YEAS—161

Ayers	Dunn, Pa.	McFarlane	Romjue

Chandler	Hancock, N. C.	Pfeifer	

So the bill was passed.

The Clerk announced the following pairs:

On this vote:

Mr. Claiborne (for) with Mr. Bolton (against).
Mr. Chandler (for) with Mr. Kinzer (against).
Mrs. Jenckes of Indiana (for) with Mr. Reilly (against).
Mr. Dear (for) with Mr. Gifford (against).
Mr. Hennings (for) with Mr. Seger (against).
Mr. Dorsey (for) with Mr. Maas (against).
Mr. Boykin (for) with Mr. Hope (against).
Mr. Wood (for) with Mr. Bacharach (against).
Mr. Montet (for) with Mr. Wilson of Pennsylvania (against).

General pairs:

Mr. Boland with Mr. Burnham.
Mr. Doughton with Mr. Treadway.
Mr. Sears with Mr. Carter.
Mr. Cary with Mr. Eaton.
Mr. Samuel B. Hill with Mr. Risk.
Mr. Corning with Mr. Wadsworth.
Mr. Granfield with Mr. Perkins.
Mr. Cullen with Mr. Dirksen.
Mr. Hancock of North Carolina with Mr. Fenerty.
Mr. Green with Mr. Wolfenden.
Mr. Sullivan with Mr. Lord.
Mr. Kelly with Mr. Hartley.
Mr. Mitchell of Tennessee with Mr. Gwynne.
Mr. Clark of North Carolina with Mr. Brewster.
Mr. Beam with Mr. Cavicchia.
Mr. Dingell with Mr. Goodwin.
Mr. Bulwinkle with Mr. Andrew of Massachusetts.
Mr. Kerr with Mr. Doutrich.
Mr. Schuetz with Mr. Gearhart.
Mr. Casey with Mr. Robinson of Utah.
Mr. Gambrill with Mr. Werner.
Mr. Eicher with Mr. Murdock.
Mr. Lee of Oklahoma with Mr. Kee.
Mr. Harter with Mr. Pfeifer.
Mr. Gray of Pennsylvania with Mr. Celler.
Mr. Hook with Mr. Barden.
Mr. Shannon with Mr. Deen.
Mr. McGroarty with Mr. Walter.
Mr. Ferguson with Mr. Wilcox.
Mr. Montague with Mr. Sadowski.
Mr. Chapman with Mr. Barry.
Mr. Peterson of Florida with Mr. Keller.
Mr. Carmichael with Mr. Quinn.
Mr. Caldwell with Mr. Kennedy of New York.
Mr. Schaefer with Mr. Bell.
Mr. McKeough with Mr. Sirovich.
Mr. Rabaut with Mr. Buckley of New York.
Mr. Binderup with Mr. Buck.
Mr. Somers of New York with Mr. Gasque.
Mr. Zioncheck with Mr. Berlin.
Mr. Scrugham with Mr. Adair.
Mr. Oliver with Mr. Duffey of Ohio.
Mr. Utterback with Mr. Brennan.
Mr. Eagle with Mr. Brooks.

Mr. ELLENBOGEN changed his vote from "aye" to "no."

Mr. SANDERS of Texas changed his vote from "no" to "aye."

Mr. DELANEY changed his vote from "no" to "aye."
Mr. THOMASON changed his vote from "no" to "aye."
Mr. McFARLANE changed his vote from "no" to "aye."
Mr. RYAN changed his vote from "no" to "aye."
The result of the vote was announced as above recorded.
On motion by Mr. WILSON of Louisiana, a motion to reconsider the vote by which the bill was passed was laid on the table.

INTERIOR DEPARTMENT APPROPRIATION BILL, 1937

Mr. TAYLOR of Colorado. Mr. Speaker, I call up the bill (H. R. 10630) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1937, and for other purposes, and I move that the House further insist upon its disagreement to amendments 24, 53, and 54, and agree to the conference asked by the Senate.

The Clerk read the title of the bill.

The SPEAKER. The gentleman from Colorado moves that the House further insist on its disagreement to Senate amendments 24, 53, and 54, and agree to the conference asked by the Senate.

The question is on the motion of the gentleman from Colorado.

Mr. AYERS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. AYERS. What is this conference report?

The SPEAKER. The conference report on the Interior Department appropriation bill.

Mr. TAYLOR of Colorado. It is on the three amendments still in dispute between the Senate and the House. We have agreed upon 88 of the amendments, but there are three upon which we have not agreed.

Mr. AYERS. Is the gentleman asking that we yield all the rights that we have on irrigation and reclamation?

Mr. TAYLOR of Colorado. We must go back to conference. We do not yield any of the rights.

Mr. AYERS. I want to know if the chairman of the Committee on Appropriations still maintains his right that the House insist on its disagreement to all of the Indian irrigation program amendments that were put in by the Senate.

Mr. BUCHANAN. I will state that this motion is to appoint conferees to consider those three amendments again. We have forfeited no rights, and before they can be adopted they will have to be brought back here for a separate vote.

Mr. AYERS. But when the gentleman says "we have forfeited no rights", it means that you have not forfeited any right that is against all of us from the irrigation districts. Is that right or not?

Mr. BUCHANAN. We have to come back to the House. When I said "we" I meant the entire membership of the House. Whatever is done has to come back to the House for a vote in the House before anything final can happen.

Mr. AYERS. Does that mean the same steam-roller program that was put over on us Wednesday?

Mr. BUCHANAN. I do not know why the gentleman calls it a "steam-roller program." It means the same character of fight, if you insist on those amendments passing. I will state that to the gentleman.

Mr. TAYLOR of Colorado. This is the regular procedure, and the only course we can adopt is to further insist on our disagreements and have a further conference.

Mr. AYERS. All I want to know is, are we 11 States going to have a chance for our "white alley" or are we going to be subdued by New York and the Northeast and Texas, which State has forgotten its rights to us and has gone "New England." Good-bye, Texas; we thought we were associated, but we were wrong. You belong to New England. We are sorry to lose you, but Tammany says what you shall do. And God forgive you—but do it.

Mr. SNELL. Mr. Speaker, the regular order.

The SPEAKER. The regular order is demanded.

The question is on the motion of the gentleman from Colorado [Mr. TAYLOR].

The motion was agreed to; and the Speaker appointed the following conferees: Mr. TAYLOR of Colorado, Mr. JACOBSEN, Mr. JOHNSON of Oklahoma, Mr. SCRUGHAM, Mr. LAMBERTSON, and Mr. WIGGLESWORTH.

DISCRIMINATION IN MERCHANDISING

Mr. SABATH, from the Committee on Rules, submitted the following report (Rept. No. 2753, H. Res. 523) for printing in the RECORD:

House Resolution 523

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 8442, a bill "Making it unlawful for any person engaged in commerce to discriminate in price or terms of sale between purchasers of commodities of like grade and quality, to prohibit the payment of brokerage or commission under certain conditions, to suppress pseudo-advertising allowances, to provide a presumptive measure of damages in certain cases, and to protect the independent merchant, the public whom he serves, and the manufacturer from whom he buys from exploitation by unfair competitors." And all points of order against said bill are hereby waived. That after general debate, which shall be confined to the bill and continue not to exceed 4 hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on the Judiciary, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the reading of the bill for amendment the Committee shall rise and report the same to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit, with or without instructions.

LOSS TO UNITED STATES GOVERNMENT THROUGH DELIVERY OF CHECKS BY MAIL

Mr. MEAD. Mr. Speaker, I call up the conference report on the bill (H. R. 9496) to protect the United States against loss in the delivery through the mails of checks in payment of benefits provided for by laws administered by the Veterans' Administration, and I ask unanimous consent that the statement may be read in lieu of the report.

The Clerk read the title of the bill.

Mr. BUCHANAN. Mr. Speaker, I make a point of order on the conference report that it includes an appropriation which is contrary to the rules of the House and the Senate.

The SPEAKER. Will the gentleman reserve the point of order until the statement is read?

Mr. BUCHANAN. Yes, Mr. Speaker; I will reserve the point of order.

The SPEAKER. Is there objection to the request of the gentleman from New York [Mr. MEAD] that the statement may be read in lieu of the report?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9496) to protect the United States against loss in the delivery through the mails of checks in payment of benefits provided for by laws administered by the Veterans' Administration, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendments of the Senate, and agree to the same.

JAS. M. MEAD,
DONALD C. DOBBINS,
PHILIP A. GOODWIN,
Managers on the part of the House.

KENNETH MCKELLAR,
CARL HAYDEN,
LYNN J. FRAZIER,
Managers on the part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the bill (H. R. 9496) to protect the United States against loss in the delivery through the mails of checks in payment of benefits provided for by laws administered by the Veterans' Administration, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

The amendments inserted in the bill by the Senate and agreed to by the House conferees add two sections to the bill, as follows:

Section 2, which deals entirely with the mailing of bonds for the payment of the adjusted-service compensation certificates, under an act of Congress recently passed, which legislation is urgently recommended by both the Treasury and the Post Office Departments; and

Section 3, which increases the salaries of the four Assistant Postmasters General from $9,000 to $10,000 per annum. In this

connection it is to be noted that 15 officials, assistants in various capacities to Cabinet officers, are receiving salaries of $10,000 per annum:

Department of State	1
Treasury Department	7
War Department	1
Department of Justice	2
Department of the Interior	1
Department of Agriculture	3

In the so-called independent agencies, where administration is similar in many respects to that of the regular departments, officials in comparable assignments to those of the Assistant Postmasters General are receiving salaries ranging from $10,000 to $12,500 per annum:

Interstate Commerce Commission:	
4 at	$10,000
11 at	12,000
Shipping Board, 3 at	10,000
Federal Power Commission, 4 at	10,000
Federal Trade Commission, 4 at	10,000
U. S. Tariff Commission, 4 at	11,000
General Accounting Office, 1 at	10,000
Board of Tax Appeals, 16 at	10,000
Reconstruction Finance Corporation:	
22 at	10,000
2 at	12,500
Federal Home Loan Bank Board, 6 at	10,000
Veterans' Administration, 1 at	12,000
Federal Communications Commission, 7 at	10,000
International Joint Commission, 3 at	10,000
Mixed Claims Commission, 2 at	10,000
National Recovery Administration, 8 at plus	10,000
Federal Emergency Administration of Public Works, 1 at	10,000
Federal Emergency Relief Administration, 1 at	10,000
Emergency Conservation Works, 1 at	12,000
Farm Credit Administration, 8 at	10,000
Federal Coordinator of Transportation, 6 at plus	10,000
Foreign Trade Adviser and head of Export-Import Banks, 1 at	12,000
Federal Alcohol Control Administration, 3 at	10,000
National Labor Relations Board, 3 at	10,000
Federal Housing Administration, 1 at	10,000
Securities and Exchange Commission, 5 at	10,000

There are approximately 143 officials in the executive branch of the Government in these categories. This group does not include the judicial or legislative branches of the Government.

JAS. M. MEAD,
DONALD C. DOBBINS,
PHILIP A. GOODWIN,
Managers on the part of the House.

The SPEAKER. Will the gentleman from Texas again state his point of order?

Mr. BUCHANAN. Mr. President, I make the point of order against the conference report on the ground that it includes an amendment of the Senate not germane to the bill and on the further ground that the Senate amendment carries an appropriation, which is not permissible on a legislative bill just as, under the rules of the House, legislation is not permissible on an appropriation bill.

The SPEAKER. Does the gentleman from New York desire to be heard on the point of order?

Mr. MEAD. Mr. Speaker, this legislation is for the purpose of enabling the Post Office Department to carry on its work in connection with the distribution and redemption of the adjusted-service certificates.

The House passed the bill some time ago. When it was considered by the Senate Committee on Post Offices and Post Roads an amendment was inserted increasing the salaries of the four Assistant Postmasters General from $9,000 to $10,000 a year. It is not, in my judgment, an appropriation, but is an authorization; and I am advised by the Post Office Department that it will be carried out without requesting an appropriation from this Congress. It will be paid out of savings in the next fiscal year.

Mr. BUCHANAN. Mr. Speaker, will the gentleman yield?

Mr. MEAD. Gladly.

Mr. BUCHANAN. Mr. Speaker, I do not contend that the raising of the salaries of the four Assistant Postmasters General is an appropriation. The appropriation is contained in the other section of the bill where the Postmaster General is authorized to estimate the administrative expense of performing certain duties and authorizing the Secretary of the Treasury to allot the money to the Postmaster General.

Mr. MEAD. With regard to that section of the bill, Mr. Speaker, I do not believe the gentleman from Texas has any objection. His objection is lodged against the last section of the bill which authorizes the increase in salary to the four Assistant Postmasters General. I maintain this is an authorization rather than an appropriation.

The SPEAKER. Had the House acted on that? Was that matter in conference between the two bodies?

Mr. MEAD. The House and Senate conferees agreed——

The SPEAKER. That is not the question. The question of the Chair is whether that matter was in conference between the two bodies at the time the conferees met.

Mr. MEAD. Yes; it was a subject of the conference, brought to the conference by an amendment of the Senate.

Mr. AYERS. Mr. Speaker, will the gentleman yield?

Mr. MEAD. I yield.

Mr. AYERS. The gentleman proposes to raise the salary of the four Assistant Postmasters General but not the salaries of the postmasters, I understand?

Mr. MEAD. It pertains only to the four Assistant Postmasters General.

Mr. AYERS. Does not the gentleman think he should include the postmasters who do the work?

Mr. MEAD. Some postmasters in the field now receive more pay than the Assistant Postmasters General.

Mr. AYERS. I disagree with the gentleman. I think the gentleman should include the postmasters out in the field.

Mr. MEAD. We ought to put them under civil service.

The SPEAKER. The gentleman from New York [Mr. MEAD], chairman of the Committee on the Post Office and Post Roads, presents a conference report signed by the conferees on the part of the Senate and the House. The gentleman from Texas [Mr. BUCHANAN] makes the point of order that the conference report is out of order because the conferees on the part of the House in conference agreed to an amendment of the Senate providing an appropriation contrary to the rules of the House.

Senate amendment no. 1 contains the following language:

The Secretary of the Treasury is authorized to advance, from time to time, to the Postmaster General, from the appropriation contained in the Supplemental Appropriation Act, fiscal year 1936, approved February 11, 1936, for "administrative expenses, adjusted-compensation payment act, 1936, Treasury Department, 1936 and 1937", such sums as are certified by the Postmaster General to be required for the expenses of the Post Office Department in connection with the handling of the bonds issued hereunder. Such bonds—

This amendment also contains the following language:

The Secretary of the Treasury shall reimburse the Postmaster General, from the aforesaid appropriation contained in said supplemental appropriation act, for such postage and registry fees as may be required in connection with such transmittal.

Rule XX, clause 2, of the rules of the House of Representatives, reads as follows:

No amendment of the Senate to a general appropriation bill which would be in violation of the provisions of clause 2 of rule XXI, if said amendment had originated in the House, nor any amendment of the Senate providing for an appropriation upon any bill other than a general appropriation bill, shall be agreed to by the managers on the part of the House unless specific authority to agree to such amendment shall be first given by the House by a separate vote on every such amendment.

It is clear to the Chair that the managers on the part of the House in agreeing in conference to Senate amendment no. 1 violated the provisions of rule XX, inasmuch as the amendment provides an appropriation.

The Chair therefore sustains the point of order.

The Clerk will report the first amendment in disagreement.

Mr. SNELL. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. SNELL. Mr. Speaker, if the conference report is out of order, how can we consider it?

The SPEAKER. The amendments are before the House and must be disposed of.

Mr. SNELL. I supposed that the whole report went out.

The SPEAKER. The report goes out, but that leaves the amendments before the House, and some action must be taken on them. It is for the House to say what action it will take.

Page 3, after line 5, insert:
"SEC. 2. Section 4 of the Adjusted Compensation Payment Act, 1936, is hereby amended by adding at the end thereof the following paragraphs:
"'At the request of the Secretary of the Treasury, the Postmaster General, under such regulations as he may prescribe, shall designate postmasters and other employees of the Post Office Department and of the Postal Service to perform, without extra compensation, such fiscal-agency services as may be desirable and practicable in connection with the redemption and payment of the bonds issued under this section; and the Postmaster General may require each such employee to furnish such bond as he may determine for the faithful performance of such fiscal-agency duties.
"'The Secretary of the Treasury is authorized to advance, from time to time, to the Postmaster General, from the appropriation contained in the Supplemental Appropriation Act, fiscal year 1936, approved February 11, 1936, for "Administrative expenses, Adjusted Compensation Payment Act, 1936, Treasury Department, 1936 and 1937", such sums as are certified by the Postmaster General to be required for the expenses of the Post Office Department in connection with the handling of the bonds issued hereunder. Such bonds, when received by postmasters for purposes of redemption and payment, shall be handled by the postmasters under such special regulations as may be promulgated by the Postmaster General. They shall be transmitted between post offices or from any post office to the Treasury Department, or fiscal agent thereof, without advance payment of any required postage. The Secretary of the Treasury shall reimburse the Postmaster General, from the aforesaid appropriation contained in said Supplemental Appropriation Act, for such postage and registry fees as may be required in connection with such transmittal. Whenever it is proved to the Secretary of the Treasury, by clear and satisfactory evidence, that any such bond is lost, stolen, or destroyed while being so transmitted, the Secretary of the Treasury may, in accordance with such rules and regulations as he may prescribe, issue a duplicate thereof without requiring the furnishing of an indemnity bond.'"

Mr. MAPES (interrupting the reading of the Senate amendment). Mr. Speaker, a point of order.

The SPEAKER. The gentleman will state it.

Mr. MAPES. Mr. Speaker, supplementing what the gentleman from New York [Mr. SNELL] has said, an attempt was made to get this bill before the House by calling up the conference report and the conference report was held out of order. No further action to get the bill before the House has been taken. There has been no request to bring it up in any other way except through the conference report, and the Speaker, very properly I think, has ruled that the conference report is out of order.

The SPEAKER. The conference report was called up by the gentleman from New York [Mr. MEAD]. The conference report has been held to be out of order, which leaves the Senate amendments before the House for consideration. The House must take some action on them.

Mr. MAPES. How do the amendments get before the House for consideration?

The SPEAKER. They are called up by the gentleman from New York [Mr. MEAD].

Mr. MAPES. No attempt has been made by the gentleman from New York [Mr. MEAD], as I understand, to call them up.

The SPEAKER. The Chair, in answer to the gentleman from Michigan, reads from section 3257 of Cannon's Precedents:

When a conference report is ruled out of order the bill and amendments are again before the House as when first presented, and motions relating to amendments and conference are again in order.

The Chair thinks that completely answers the gentleman from Michigan.

Mr. MAPES. That seems to cover the matter.

Mr. LEHLBACH. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. LEHLBACH. Are amendments put on a House bill by the Senate privileged?

The SPEAKER. After the stage of disagreement has been reached they are. For this reason it is necessary that the House take some action upon the amendments at this time.

Mr. LEHLBACH. Is it in order to move that the amendments of the Senate be referred to the appropriate legislative committee?

The SPEAKER. The Chair will pass on that question in due time.

Mr. LEHLBACH. Mr. Speaker, I make such motion at this time.

The SPEAKER. The Chair has recognized the gentleman from New York [Mr. MEAD].

Mr. MEAD. Mr. Speaker, I move that the House recede and concur in the Senate amendment.

Mr. SNELL. Mr. Speaker, is that the first amendment?

The SPEAKER. The first amendment; yes.

Mr. SNELL. Section 2?

The SPEAKER. Section 2.

The motion was agreed to.

The SPEAKER. The Clerk will report the next Senate amendment in disagreement.

The Clerk read as follows:

Page 3, after line 5, amendment no. 2, insert:
"SEC. 3. The salary of each of the four Assistant Postmasters General is hereby fixed at a rate of $10,000 per annum, effective on the date of the passage of this act."

Mr. MEAD. Mr. Speaker, I move that the House recede and concur in the Senate amendment.

Mr. BUCHANAN. Mr. Speaker, I demand a division of that motion.

Mr. MEAD. Mr. Speaker, I yield 5 minutes to the gentleman from Texas [Mr. BUCHANAN].

Mr. BUCHANAN. Mr. Speaker, during this entire session of Congress, so far as it has been within my power, I have objected to and done everything I could to prevent the increase in salary of any Government employee, and so far as I know, unless it happened when I was in the hospital, no salaries have been increased.

Mr. Speaker, this bill went over to the Senate with no salary increases in it. It has been sent back here with salary increases to four Assistant Postmasters General, allowing them an increase of $1,000 each per annum. These Assistant Postmasters General are now receiving $9,000 a year. Their offices cost them nothing. They are handed to them on a silver platter. They are not like the Members who have to pay out several thousand dollars to get elected.

Mr. Speaker, I think this is not the time nor the occasion to start increasing the pay of $9,000-a-year Government employees.

Mr. TAYLOR of South Carolina. Will the gentleman yield?

Mr. BUCHANAN. I yield to the gentleman from South Carolina.

Mr. TAYLOR of South Carolina. Does not the gentleman from Texas think that this tendency would delay the time when we may return the 2 cents postage back to the people of the country?

Mr. BUCHANAN. Maybe so.

Mr. Speaker, I want to call attention to the report of the Senate committee.

Mr. SHORT. Will the gentleman yield?

Mr. BUCHANAN. I yield to the gentleman from Missouri.

Mr. SHORT. Are these increases due to the fact that the Assistant Postmasters General are compelled to do additional work while the Postmaster General himself is traveling all over the country making New Deal speeches?

Mr. BUCHANAN. I cannot answer the gentleman's question, but I may say to him the Senate committee offered two conclusions in justification of these increases, and these conclusions are as follows:

Your committee being of the opinion that the salaries of these four Assistant Postmasters General, $9,000 each, should be the same as other Assistant Secretaries of Cabinet officers, recommend the passage of this section making the salaries $10,000 each.

Now, let us see what are the facts. You know some subcommittees that are anxious to do a particular thing, for some cause that I know not of, often reach conclusions and advance reasons hastily without examining the facts. There is one Assistant Secretary in the Government service who is getting $10,000, and that is The Assistant Secretary of

War. His place was created by statute and his duties were defined by statute. He is given the important post of purchasing all the munitions of war for that Department, and his salary was fixed at $10,000. This is the only Assistant Secretary in the Government getting this salary.

Mr. WHITE. Mr. Speaker, will the gentleman yield?

Mr. BUCHANAN. I yield.

Mr. WHITE. Is not the gentleman overlooking the Under Secretaries?

Mr. BUCHANAN. I said Assistant Secretaries and did not say Under Secretaries or Over Secretaries, or Secretaries either. [Laughter and applause.]

Now, I will read this list of Under Secretaries and Assistant Secretaries:

Under Secretary of Agriculture, Mr. Tugwell, $10,000; and one Assistant Secretary of Agriculture at $9,000.

Department of Commerce, two Assistant Secretaries at $9,000 each.

Interior Department, Under Secretary, $10,000; and two Assistant Secretaries at $8,500 each.

Department of Justice, six Assistant Attorneys General at $9,000 each.

Labor Department, two Assistant Secretaries, one at $9,000 and one at $8,000.

Navy Department, one Assistant Secretary at $9,000.

Post Office Department, four Assistant Postmasters General at $9,000 each.

State Department, one Under Secretary at $10,000, one Assistant Secretary at $9,000, and three Assistant Secretaries at $8,000 each.

Treasury Department, one Under Secretary at $10,000 and three Assistant Secretaries at $9,000 each.

War Department, one Assistant Secretary at $10,000.

Adopt this amendment and every Assistant Secretary throughout the Government service will come in and say, "You have given the Assistant Postmasters General $10,000 each, whether they are principal assistants or not, and you should give us $10,000."

I have never yet heard anyone on the floor of this House say that salaries are too much and that they ought to be decreased. The statement is always made that they are too small and ought to be increased.

[Here the gavel fell.]

Mr. MEAD. Mr. Speaker, I yield 5 minutes to the gentleman from New York [Mr. SNELL].

Mr. SNELL. Mr. Speaker, it seems to me there is a real and important responsibility devolving upon the House here today in the matter presented by the chairman of the Committee on the Post Office and Post Roads. It is really a serious question when you talk about raising salaries at the present time, in view of the present condition of the Federal Treasury. The issue is not just the amount of the salary of these four men, but a question of policy. Is there any reason at the present for raising salaries of all Assistant Secretaries?

The Federal Treasury during the time that the present administration has been in power has actually spent a little more than $2 for every dollar that has been received, to say nothing about the contingent liabilities. This is actual money that has gone out, according to the reports of the Treasury Department.

Your party came into power with a definite promise to the people of the United States, and every one of you said that you accepted your platform 100 percent and went before your constituents with this promise. You have done nothing for the last 3 years but increase salaries and create new positions.

There is no reason that any man on God's footstool can advance for raising these salaries from $9,000 to $10,000. According to the statement which the chairman of the Appropriations Committee has just read, there are 19 other Assistant Secretaries who are entitled to have their pay raised to $10,000 if you are going to raise the four assistants in the Post Office Department. I doubt that any of these assistants are going to resign, and I doubt that there would be any trouble in filling the positions at this salary. If you have any trouble, I will agree to furnish some able men to do the work at that figure. [Laughter.]

I appreciate the fact it is up to the majority here what the House is going to do. You have the votes, and if you have made up your minds that you have no responsibility in the spending of the taxpayers' money, you can do it, but I call the attention of the House and the country to what you are doing today. There is not a single reason in the world why this should be done, and every one of you knows it. The argument that there will be delay in the payment of the soldiers' bonus is so silly that the man who presents such an argument ought to apologize to the House. The only other argument—that the Senate has done this and discharged its conferees—is equally weak. When did we surrender to the Senate all our rights to act according to our own judgment in the matter of spending the taxpayers' money? The committee has put up a pretty poor reason in support of its position, and I trust it will be voted down. [Applause.]

Mr. RICH. Mr. Speaker, will the gentleman yield? I would like to ask the gentleman where he is going to get the money. [Laughter.]

Mr. MEAD. Mr. Speaker, this is a fight against paying $4,000 in the carrying out of a measure that requires an expenditure of over $3,000,000,000.

I expected some opposition to this amendment, and I anticipated that perhaps the question of politics might enter into the discussion.

I want to say to you, however, that I have not heard a word either for or against this bill from the Postmaster General, nor have I been importuned by any Assistant Postmaster General in favor of this legislation.

Let me tell you something about the history of this amendment. It was not considered by our committee when the bill was before us, but was inserted by the Senate committee, by unanimous consent of Republicans and Democrats, after the measure passed the House.

It was taken before the Senate, adopted by Republicans and Democrats without a dissenting vote, and was then sent to conference on the part of the House and the Senate, all in accordance with proper order and procedure. The Senate conferees insisted on its retention, and the House conferees agreed to report it back to the House, where we now have it under consideration.

We are anxious to pass this measure because it is imperative to prepare for payment of the bonus. The conference report has been adopted in the Senate and the Senate conferees have been discharged. There is only one more necessary step, and that is the one now before us. We have but a short time before the bonus payments will be made, and it is necessary that we act expeditiously on this matter.

A question was raised in regard to the payment of salaries for comparable positions in other bureaus or departments. I have here an Official Register of the United States for 1934—and remember that prior to 1934 most of these increases were adopted by the party that preceded the present administration. According to that record there are in comparable positions in various departments and commissions of the Government over 140 men whose salaries range from $10,000 to $12,500 a year.

A break-down to more easy terms will show that there is one of these positions in the State Department, seven in the Treasury Department, one in the War Department, two in the Justice Department, one in the Interior Department, and three in the Department of Agriculture.

In addition to that there are assistants, as follows: 4 in the Interstate Commerce Commission, 3 in the Shipping Board, 16 on the Board of Tax Appeals, 32 in the Reconstruction Finance Corporation, 3 in the Federal Alcohol Administration, 5 in the Securities and Exchange Commission, and so on all the way down the line, according to the list of which I have in my hand. When this salary amendment came before us we discussed it with the representatives of the Bureau of the Budget.

We had no opposition from that source. In fact, I believe I can say to you that we had the approval of that Bureau.

Mr. BUCHANAN. Mr. Speaker, will the gentleman yield?

Mr. MEAD. Yes.

Mr. BUCHANAN. I have had no approval from him, and I discussed it with him one way or the other.

Mr. MEAD. Perhaps the gentleman from Texas would have had that approval if the matter had been before his committee, but, fortunately or unfortunately, it is a matter

our committee had to consider as it was inserted in our bill by the Senate. I claim it is not an unusual request, because the House has gone on record in 140 other cases, granting increases that range all the way up from $10,000 to $12,500 a year.

Let us for a moment inquire into the activities of the various bureaus of the Post Office Department, and then in your mind compare them with the activities of the governmental assistants in other departments. Within the last 10 or 12 years we have loaded the Post Office Department with many difficult tasks and assignments. The Post Office Department has control of ocean-mail contracts and subsidies. We have also given them jurisdiction of domestic and foreign air mail, with all of the ensuing contracts and subsidies needed to keep up that service. We have called upon the Post Office Department to classify, handle, and distribute mail for a large number of Government agencies, a task which was not theirs a few years ago. We have called upon them to distribute, sell, and account for the migratory bird hunters' stamps, amounting to some $600,000 annually and entailing a great deal of detail work. We have authorized the Post Office Department to become the bond-selling agency of the Treasury, and we are now selling approximately $300,000,000 of bonds through the post offices of the United States. And after June 15 the Post Office will be called upon to pay the bonus to some three and a half million veterans. Since October of 1933 the custodial care of 1,800 Government buildings located all over the United States has been taken over from the Treasury Department by the Post Office Department. That work alone costs $20,000,000 and employs thousands of additional workers.

Mr. LUDLOW. Mr. Speaker, will the gentleman yield?

Mr. MEAD. Yes.

Mr. LUDLOW. For the purpose of clarification, just what is the justification for this increase of salary of the Assistant Postmasters General? Is it due to the general increase of the postal business, or is it due exclusively to the increased work imposed upon them by the bonus?

Mr. MEAD. It is my opinion that it was inserted in the bill by the Senate because of the fact that we have assigned to the Post Office Department many additional tasks, and also because the executives of these four bureaus are doing more work with heavier responsibility than is the case in comparable positions in other departments paying higher salaries. It was the merit and the justice of the case that brought about the unanimous adoption of this amendment by both the Republicans and the Democrats in the Senate.

Mr. LUDLOW. Our subcommittee that brings in the regular appropriation bill sat for weeks and weeks and nothing was ever said to our subcommittee in regard to this matter, and, if I am correctly informed, it was never brought before the Committee on the Post Office and Post Roads. Why was it not brought up and treated in the regular way, so that it could be threshed out in the appropriate committee rather than being brought in in this way? I do not agree with our Republican friends who find such welcome diversion in criticism of the Post Office Department from Postmaster General Farley down the line. I think I come into rather close contact with that Department, due to the fact that I am chairman of the Subcommittee on Appropriations for the Post Office and Treasury Departments, and I want to say that the Post Office Department is a well-managed department. It is not a department that runs off after strange fallacies and will-o'-the-wisps. It is conducted on a basis of sound economy and practical efficiency. I wish I might say the same of all of the other Government activities. There is hardly a day when Postmaster General Farley is not assailed by partisan critics, but in this matter, as all others, the proof of the pudding is in the eating. Whatever may be said of Mr. Farley as a politician and a globetrotter, the best evidence that he is a good official is the fine administration he is giving of the Post Office Department.

I know all four of the Assistant Postmasters General whose salaries would be increased $1,000 each by this act. I have sat across the table from them day after day in committee hearings and have thus acquired first-hand knowledge not only of their zeal in the public service but of their personal characteristics. I wish to say that all four of them are fine men and excellent officials, and that they are discharging their public duties in a manner that entitles them to the good opinion of the people of this country.

I am in favor of liberal salaries for these officials, because they are entitled to good salaries on a basis of service performed. But as a member of the Appropriations Committee, believing in orderly procedure, I cannot approve the method adopted to bring about these increases at this time. There has been too much jumping over proper bounds in trying to get appropriations by short-cut methods, and the able chairman of our Appropriations Committee, Mr. BUCHANAN, has very properly taken a firm stand in opposition to such methods. Mr. BUCHANAN stood on this floor the other day and delivered an appeal for the integrity of our budgetary and appropriating system that ought to have appealed tremendously to every Member of this House, and then, with admirable courage, he led a fight that saved the people of this country the enormous sum of $800,000,000, the amount involved in authorizations for irrigation projects which were tacked on to the Interior Department appropriation bill in the other branch of Congress, contrary to every rule of parliamentary procedure, for legislation on an appropriation bill is expressly forbidden. Today Mr. BUCHANAN is again proving his worth to this Nation when he leads this fight to prevent the other body from increasing statutory salaries by amendments brought in at the last hour without debate and virtually without consideration.

There is a right way and a wrong way to do things, and apparently the proponents of these increases chose the wrong way. Our subcommittee which framed the 1937 Post Office and Treasury appropriation bill spent week after week in exhaustive hearings. In those hearings we are not bound by any rules of evidence. The sky is the limit. The testimony brings out everything that is relevant to the Postal Service and many things that are not relevant. But in all of that great volume of testimony, on the record and off the record, not one word was said and not even an intimation was given that the four Assistant Postmasters General were not receiving adequate compensation for their services.

The regular way to bring this matter before Congress would be to submit it to the House Committee on the Post Office and Post Roads, which is the legislative committee having charge of legislation for the Postal Establishment, but as far as I can learn there were no hearings in that quarter and it was never proposed to that committee. Instead we suddenly find these increases attached by a rider in the Senate to a bill where you would least expect them, and where they have no business to be.

I think the Members of the House should stand by the chairman of our Appropriations Committee, Mr. BUCHANAN, who is making such a valiant fight to maintain the integrity of our appropriating and legislative system. If the friends of these capable postal officials will come before our House committees in the regular way and present facts showing that they are entitled to salary increases, I, for one, will be responsive to the merit of their claim, but I do not approve this strange and extraordinary way of trying to attach these increases as a rider to a bill that has no relevancy to salaries in the Postal Service. I dislike to disagree with such good friends as the officials referred to and those Members of Congress who are on the other side of this proposition, but I have a duty to perform, and I am trying to perform it.

Mr. MEAD. I presume, in that connection, but I may be in error, that it is the prerogative of the Senate and of individual Members, just as it is the prerogative of the gentleman's committee or of any other committee of the House, to bring to the attention of the Congress not only this matter but every matter that recommends itself to the individual member or to the committees.

Mr. LUDLOW. Does not the gentleman understand that, if this carries through here, every assistant secretary of every department will come here for an increased appropriation?

Mr. MEAD. That question should have been raised years ago when they increased the salaries of 140 others whose

work, in many instances, in my judgment, is not comparable to the work and responsibility of these four bureau heads.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. MEAD. Yes.

Mr. McCORMACK. Are their salaries of $9,000 fixed by law at the present time?

Mr. MEAD. I think so; yes.

Mr. McCORMACK. If that is so, why should they go to the Committee on Appropriations? They must have an authorization before the matter could be submitted to the Committee on Appropriations.

Mr. MEAD. As I said before, in my judgment, these matters, along with other similar matters, become the responsibility of every Member of the House and the Senate, and I really believe that we are within our authority in considering and approving this amendment.

Mr. TABER. Mr. Speaker, will the gentleman yield?

Mr. MEAD. Yes.

Mr. TABER. The work on the bonus will not last over 2 or 3 months, and these people are being paid what they have been paid for years. There is no real, legitimate reason for any increase.

Mr. MEAD. It is no doubt true that a large part of the bonus payments will be completed in a few months, but it will take many months to complete the task and attend to the numerous details.

I want to finish the account of the added responsibility that I was enumerating to you when I was interrupted. In many instances these are permanent duties. While the bonus task is a temporary and passing one, although a major one, the other matters I am bringing to your attention are permanent tasks assigned to these bureau heads. A number of years ago we organized the Interdepartmental Building Committee, and today the Fourth Assistant Postmaster General is the representative of his Department on that committee. That committee has charge of the spending of a large appropriation in the selection of sites and the construction of Federal buildings in the carrying out of vast public-building programs all over America.

In addition, the Post Office Department conducts the largest bank in the world, the Postal Savings Bank, which comes under the Third Assistant Postmaster General.

Mr. TABER. Mr. Speaker, will the gentleman yield for a question?

Mr. MEAD. I should like to finish my statement, if I may.

Our postal executives conduct the largest business in the world, the postal business, with over a quarter of a million employees. It is the most efficient business in the world, and the performance of the present administration, the record of those four men involved in this small, minor authorization, has earned the approval of this House. When they took over the conduct of the Post Office Department they found a net deficit amounting to approximately $150,000,000 a year, but I am pleased to advise that in a year they took the Post Office Department out of the red and put it in the black. In 1934 the surplus amounted to $12,000,000 a year. In 1935 it amounted to $5,000,000 a year. In 1936 the service will approximately carry itself.

Mr. SNELL. Mr. Speaker, will the gentleman yield?

Mr. MEAD. I must refuse until finishing my statement, and then I shall be glad to yield.

Now, summing up, where in the Federal service is there an administrator, an undersecretary, an assistant secretary, or anyone else, whose duties can compare with the tremendous responsibility lodged in the authority of these four men? They have specific duties. They have duties that are tremendous.

The Congress of the United States on frequent occasions in the passage of measures affecting the Post Office Department, has placed on them the burden of administration in the Postal Service. They have the ocean and air subsidies. They conduct the largest express business in the country. They are the biggest bankers in the country. They are the biggest bond-selling agency in the country. They operate the biggest business on earth, and they have made that business, formerly a drain upon the Treasury, one that is paying its own way. I say to you, if we are paying 143 men in other departments more money than we are paying these four men whose records stand out so well, we ought to adopt this conference report in its entirety and quit quibbling over $4,000, when we are assigning them a task that amounts to $3,000,000,000.

The Senate has disposed of this measure. It has discharged its conferees. The envelopes are being prepared for the disposition of this huge bonus-paying task. We want to take care of it promptly and expeditiously, and I ask you not to hold up the payment of the bonus to the veterans by quibbling over a minor matter contained in the bill that is before us by the approval of both parties in the other Chamber.

Now, Mr. Speaker, I must yield some time to my colleague [Mr. DOBBINS], and therefore I think it would be an imposition to yield to other Members at this time.

I now yield 5 minutes to the gentleman from Illinois.

Mr. DOBBINS. Mr. Speaker, I think, from inquiries that have come to me, there is some misapprehension as to the nature of this amendment. This is not an award to the Assistant Postmasters General of $1,000 a year for their work in helping pay the bonus. This bill, which was carefully studied during the adjournment of Congress, in conference between the Treasury and Post Office officials, was introduced at the very first of this session of Congress. The purpose of the bill is to provide for the use, in this three and one-half billion dollars of bonus payments, of that same form of envelope that has been in use for 50 years in the payment of pensions to Civil War veterans, and later to other veterans. It provides safety in the delivery of these payments, and places a penalty upon any postal employee who delivers them to the wrong person. It is necessary in the administration of this law. The Senate attached to that as a rider this provision increasing, quite justly, in my own individual opinion, the salaries of these four Assistant Postmasters General from $9,000 to $10,000. The conferees met with this statement when they went to the Senate: "This matter passed the Senate unanimously. There was not a dissenting vote on either side of the Chamber. We Senate conferees, representing both sides of the Chamber, united upon it and insist that it remain in the bill." Something more important than that was paramount in the minds of those representing the House. What was uppermost in our minds was this: The bonus payments are supposed to start on the 15th day of June. Any delay in paying them is going to reflect on our Government, and I say to you Members on this side of the aisle, it is going to reflect on our Democratic administration of this Government if the timely distribution of that three and one-half billion dollars is delayed. It is going to be delayed if we insist on the House amendment. It may take a long while to dispose of this matter if we send this bill back to the Senate again.

Mr. SNELL. Does the gentleman mean to tell the House and the country that payment of the bonus will be delayed for one single minute if we do not increase the salaries of these four Assistant Postmasters General?

Mr. DOBBINS. Because of the parliamentary situation——

Mr. SNELL. Answer my question, please.

Mr. DOBBINS. It is not because of that, but because of the parliamentary situation that will ensue if we refuse to concur in the Senate amendment.

Mr. SNELL. I cannot follow the gentleman in his reasoning.

Mr. DOBBINS. Concurrence of the Senate is needed in this bill to provide needed machinery for the payment of the bonus and the Senate may not concur in its adoption unless we adopt this amendment. Mr. Speaker, I cannot yield further.

Mr. SNELL. Could not the Senate recede and adopt the House bill?

Mr. DOBBINS. Yes; but they have dismissed their conferees and would have to go through the procedure all over again. It might take a week or 10 days.

Mr. SNELL. They could appoint new conferees in a minute.

Mr. DOBBINS. When the question of the payment of the adjusted-service certificates was under consideration in Congress the President was not in favor of it, but immediately after the act was passed and became a law he started the machinery in motion for the prompt payment of the bonus. From that day to this the Treasury Department and the Veterans' Administration have been exerting every effort to get this payment out promptly on the 15th day of June, but I seriously apprehend that they cannot get it out promptly unless we adopt the motion of the gentleman from New York.

[Here the gavel fell.]

Mr. TABER. Mr. Speaker, will the gentleman from New York yield me 3 minutes?

Mr. MEAD. Mr. Speaker, I yield 3 minutes to the gentleman from New York [Mr. TABER].

Mr. TABER. Mr. Speaker, there is absolutely nothing to the story that the payment of the bonus will be delayed if we do not adopt this amendment. The bill can go back to the Senate and on Monday the Senate can recede on section 3, pass the bill, and send it to the White House. There is absolutely no question about that; it does not have to go to conference again.

Mr. DOBBINS. Mr. Speaker, will the gentleman yield?

Mr. TABER. I yield.

Mr. DOBBINS. The Senate, of course, could do that, but they will not accept the bill as it passed the House. They will insist on their amendment.

Mr. TABER. They will not insist.

Mr. DOBBINS. We are delaying the payment of the bonus.

Mr. TABER. We are not delaying it a minute.

Turning now to the 140 officers who draw more than $9,000 a year, their salaries were fixed by legislative action of the House after careful and scientific investigation. These positions relate to such administrative bureaus as the Interstate Commerce Commission, the Reconstruction Finance Corporation, and similar branches of government.

I am not going to discuss anything of a political character here because I think it would be unseemly. I will not discuss the question of the administration of the Post Office Department. I could suggest that perhaps the Postmaster General might spend more time there, but I am not going to do that. [Laughter.]

It is absolutely ridiculous for us under these circumstances to increase to $10,000 the salaries of men who have never occupied administrative positions of the character calling for even as much, let alone more, money than they are now receiving as salaries, especially with conditions in the country as they are. I hope the House of Representatives will stand for at least a semblance of economy and vote down these increases.

Mr. MEAD. Mr. Speaker, I have no desire to use any additional time. I merely want to point out that it is not a very serious offense to consider a question like this, because the Republican Party increased the salaries of the Assistant Postmasters General when they were in power.

Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the motion that the House recede from its disagreement to the amendment of the Senate no. 2.

The question was taken; and on a division (demanded by Mr. SNELL) there were—ayes 22, noes 106.

So the motion to recede was rejected.

Mr. BUCHANAN. Mr. Speaker, I move that the House insist upon its disagreement to the amendment of the Senate no. 2.

The motion was agreed to.

A motion to reconsider was laid on the table.

AIR CORPS TECHNICAL SCHOOL

Mr. LEWIS of Colorado. Mr. Speaker, I call up House Resolution 515, a privileged resolution.

The Clerk read as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of S. 3398, an act "to establish the Air Corps Technical School and to acquire certain land in the State of Colorado for use as a site for said Air Corps Technical School and as an aerial gunnery and bombing range for the Army Air Corps." And all points of order against said bill are hereby waived. That after general debate, which shall be confined to the bill and continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Military Affairs, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the reading of the bill for amendment, the Committee shall rise and report the same to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit, with or without instructions.

Mr. LEWIS of Colorado. Mr. Speaker, I yield 30 minutes to the gentleman from Massachusetts [Mr. MARTIN], and at this time I yield myself 10 minutes.

Mr. Speaker, this is an ordinary, open rule for the consideration of S. 3398, which is a bill to establish the Air Corps Technical School in the State of Colorado. The bill provides:

That the Secretary of War be, and he is hereby, authorized to establish in or near Denver, Colo., the Air Corps Technical School and to accept on behalf of the United States, free from encumbrance or conditions and without cost to the United States, for use as a site for the Air Corps Technical School, the title in fee simple to 640 acres of land, more or less, within the city limits of the city of Denver, Colo., including the property known as the "Agnes (Phipps) Memorial Sanitarium", together with existing buildings and equipment located thereon; and also a tract of land within the State of Colorado, suitable for use as an aerial gunnery and bombing range by the Army Air Corps: *Provided*, That in the event a donor is unable to perfect title to any land tendered as a donation, condemnation of such land is authorized in the name of the United States, and payment of any and all awards for title to such land as is condemned, together with the cost of suit, shall be made by the donor.

In short, the bill does two things. It establishes the Army Air Corps Technical School in Denver, Colo., and it authorizes the United States Government to accept as a donation, free of expense, a site of 1 square mile on the edge of the city of Denver, including some valuable buildings and also a bombing and machine-gun range of 100 square miles, 10 miles by 10 miles, on the plains east of the city.

The bill seeks to consummate a report and recommendation of a board of Air Corps officers, which board was appointed by the Chief of the Air Corps by direction of the Secretary of War, to investigate the entire United States in order to find the most suitable place for the permanent location of this school. The function of the Air Corps Technical School is the training of officers and enlisted men in the care, operation, maintenance, and repair of Air Corps equipment, including armament—and particularly machine guns and bomb racks—and also instruction in radio and in aerial photography.

The school is now located at Chanute Field, adjacent to the small town of Rantoul, Ill., and has been so located since 1921. The War Department advises me that the reasons for using Chanute Field were that in 1921 there existed at Chanute Field buildings which could be utilized for this purpose, and that the War Department was without funds to build the school at any other location. Some of the work of this school had previously been performed at St. Paul, Minn., in temporary facilities, which had to be abandoned. A part of the personnel of the school was located at San Antonio, Tex., in a location which also was most desirable to abandon in order that the repair depot at Dallas, Tex., could be consolidated with the supply depot at San Antonio. Therefore, as the most suitable buildings available existed at Chanute Field at that time, and, as the War Department was without funds for any other buildings at any other location, the school was temporarily established at Chanute Field. These buildings were wartime buildings and by this time have become so dilapidated and so outworn that, in any event, whether the school is retained at Chanute Field or

whether it is moved to another location, a new set of buildings must be constructed.

The present location has never been satisfactory for this particular instrumentality. This, of course, is no reflection on that splendid locality in the State of Illinois where the school is now situated.

The present location is in one of the richest, most fertile, and most productive agricultural regions in the United States, if not in the world. However, the high precipitation and the high humidity, which make for productiveness in agriculture, militate against the availability and suitability of this particular location for the particular purposes of the school and its curriculum to which I have referred. The high humidity as well as the haze interferes with photographic work and weather conditions interfere with everyday flying, which should be done in order properly to carry out the curriculum of this school. Furthermore, it is not possible, except at prohibitive expense, to secure an adequate bombing and machine-gun range, which is absolutely essential for the carrying on of the work of this school. The War Department says that is a most essential thing. As illustrating the value of the land where this school is now located, during the war when the Government secured a square mile of land for the purposes of a primary flying school, the price paid by the United States Government was $325 per acre. It would be impracticable at the present time to secure an adequate bombing and machine-gun range at the present location of the school, to wit, a range of 10 miles by 10 miles, or 100 square miles, except at prohibitive expense.

Accordingly, a board of officers was appointed in February 1934 by direction of the Secretary of War for the purpose of making an investigation throughout the country with reference to the most suitable location.

[Here the gavel fell.]

Mr. LEWIS of Colorado. Mr. Speaker, I yield myself 5 additional minutes.

Mr. Speaker, the members of this board of officers were selected because of their high standing in the Air Corps and because of their knowledge of the requirements of the service. They visited 57 cities throughout the United States and collected a large amount of data concerning 18 or 20 localities in addition to those they visited personally. After having studied the matter from February 1934 to August of the same year they presented a confidential report to the Chief of the Air Corps. The Chief of the Air Corps and his assistants in turn studied the report for some 2 months. The report, strongly approved and recommended by the Chief of the Air Corps, was then sent to the General Staff. From October 1934 until March of 1935 it was studied by the various branches of the General Staff and by the Secretary of War. On or about the middle of March of 1935 this report was sent by the Secretary of War to the Military Affairs Committee of the House and of the Senate and made public; at least, its contents were divulged to the Members of the Congress. Needless to say, I was pleased to find that the city of Denver, Colo., had been chosen as the most available and suitable location for this particular instrumentality of the War Department.

I may say that at the outset, and before the board went out on personal inspections, it sent to various communities in the United States a questionnaire indicating what were the general requirements for an ideal site. This questionnaire was received by our people at home, and I was consulted about it. I said to our people at home, "It would seem to me that with our 350 to 360 flying days in the year in Denver, with our excellent all-the-year-round climate, and with the availability on the plains of an area adequate for a bombing and machine-gun range of 100 square miles—10 miles by 10 miles—we should have a very good chance", but I also said, "This is a matter involving the national defense. If we are chosen, fine; if we are not chosen, I hope there will be no complaints from you, because you will not get one bit of support from me if this board of experts decides against us."

Pursuant to the request of the Board for a statement as to the terms upon which the site could be secured, our people said that if perchance the city of Denver should be chosen, Denver would give a square mile on the edge of the city and would install adequate railroad facilities and would give also, without a cent of expense to the United States, 100 square miles on the plains east of the city for a bombing and machine-gun range. At a municipal election held May 21, 1935, the tax-paying electors of Denver voted $750,000 of bonds to purchase the site and bombing range and to install railroad facilities.

I may add that this offer is no better than those made by some other cities. Two or three of my distinguished friends from Texas know full well that their cities made equally good offers, but the Board decided that Denver was the most suitable place for the permanent location of the school.

One thing more, and I am through. This bill was passed by a very large majority in the Senate of the United States. This was after prolonged hearings in the Senate Military Affairs Commitee. Prolonged hearings were also held in the House Military Affairs Committee, and I may say that some of our good friends from Illinois made the objection that this report was incorrect, that it was biased, and that it was absolutely inaccurate, but after hearing all these objections and complaints throughout three prolonged hearings before a subcommittee of the Senate Committee on Military Affairs, the subcommittee unanimously reported to the whole committee that nothing had been found to impugn the accuracy or integrity of the report of the board and the whole Senate committee ratified the action of the subcommittee. Prolonged hearings on the same alleged grounds were had in the House Military Affairs Committee and the House Military Affairs Committee made a favorable report.

The bill and the report are now before you and I trust the House will carry out the recommendation as made. I may add further that during the hearings before the House Military Affairs Committee the chairman of the committee requested an unequivocal statement from the Secretary of War as to his position, and there is printed at pages 8 and 9 of the committee's report a strong, unequivocal statement by the Secretary of War that the War Department favors the enactment of this legislation as it stands.

Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement by Colonel Chaffee, of the General Staff of the Army, made before the Military Affairs Committee of the House of Representatives on January 31, 1936. This statement, which was expressly authorized by the Secretary of War, sets forth the reasons why the War Department favors the enactment of the bill to establish the Army Air Corps Technical School in Denver, Colo. (H. R. 9087, S. 3398):

The War Department has been called upon by your committee for a report upon the advisability of enacting this legislation, H. R. 9087 (S. 3398). The report of the War Department is now in the hands of the Bureau of the Budget in order that we may ascertain whether or not the legislation is in accord with the program of the President.

On the telephone this morning, I endeavored to expedite action by the Bureau of the Budget on the written report, but was informed that it would be some time before the matter could be processed. However, the War Department was authorized to state its own position, with the understanding made clear to the committee that its statement in no wise prejudiced the program of the President.

The Secretary of War, therefore, authorizes me to state under the above conditions that it favors the enactment of this legislation as it stands. The impelling reasons behind the position of the War Department in this matter are as follows:

First, in order to have proper facilities at the school itself it must be entirely rebuilt. Our report shows that it will cost $400,000 less to build these permanent facilties at Denver than it will at Chanute Field.

Second, the site at Denver gives us without charge an extensive bombing range 10 miles square within quick flying distance from the school airdrome. Such a range is absolutely necessary for the proper carrying out of the curriculum of the school. It is of an extent enabling operations from the air with machine guns and live

bombs to be carried on with safety to the population, and it obviates a long flight over a populated area by planes carrying loaded bombs.

Third, from the report of its board, the War Department believes that flying conditions are better for the purposes of this school at Denver than they are at Chanute Field.

Fourth, the War Department places little or no emphasis upon the surrounding amusement facilities at either place for officers. The officer is sufficiently well paid to allow him to organize this for himself or to enter the facilities of the average civilian in either locality. The War Department does give a certain degree of importance to the surrounding facilities for amusement of enlisted men in their off-duty hours, because these men have not the money to go into other than strictly public amusements of low cost. This whole matter, however, is of lesser importance than the other reasons I have given.

The report of the board of Air Corps officers concerning Denver is as follows:

DENVER, COLO.

FOREWORD

The board visited Denver on May 26–28, 1934, and inspected four sites in that vicinity. Three of these sites were rolling and would require a considerable expenditure of funds for grading and drainage. The site considered best is that marked "A" in the attached brief and is generally known as the Agnes (Phipps) Memorial Sanitarium site.

I. SITE

1. Size and shape: The site is 1 mile square and is situated just within the eastern city limits of Denver.

The distance to the center of the city from the northwest corner is 6½ miles by paved road.

2. Character of soil, drainage, and suitability for foundations: The soil in this area is a mixture of sand and loam which drains readily and is suitable for building foundations without the necessity of any piling or concrete mats.

Samples of the soil which the committee states were tested for physical characteristics show that it is capable of producing a solid turf as well as for landscaping.

The average rainfall is only 14.7 inches. This would make it necessary to irrigate the building and housing area in order to grow trees, flowers, shrubs, etc.; however, this can be done.

The site is gently rolling with slight slope to north and west providing for natural drainage.

Mr. Everett S. Huntington, engineer, of the United States Bureau of Reclamation, estimates that the site could be leveled for $25,000. This grading would provide for a 1° slope for two-thirds of the distance from the north edge of the field and one-half-percent grade for the balance.

3. Natural surroundings, terrain, obstacles to flight, possibilities of expansion: The surrounding country is comparatively level and open and provides many emergency landing fields. There are no obstacles to flight in the immediate vicinity of the site.

It was stated that there would be practically no building development in this direction at least for many years. The trend of building construction in Denver is to the northeast and southwest.

4. Bombing and machine-gun range: No specific site was visited by the board, but it was stated that an extensive area could be acquired for a nominal sum within a few miles from the site. This area would be in the mountainous country to the west of the city.

5. Terms of acquisition: Occupying 40 acres of the northwest corner of the tract are several buildings known as the Agnes (Phipps) Memorial Sanitarium. These buildings were constructed around 1906 and have been unocupied for the past 2 years. (For complete description of these buildings, see Denver brief.)

The buildings are in excellent condition, are of pleasing architectural design, and it is estimated that for an expenditure of $100,000 could be made suitable for Air Corps use. It is thought that these buildings could easily be remodeled in the interior to house post headquarters, school headquarters, hospital, and barracks for at least 100 students. In addition, there is a heating plant which could be expanded, and the superintendent's house which would make an excellent junior officers' set of quarters. It is roughly estimated that at least $200,000 could be saved by utilizing these buildings.

On August 7, 1934, Congressman LAWRENCE LEWIS, of Colorado, received the following telegram from the president, Denver Chamber of Commerce:

"Please advise Colonel Yount, chamber of commerce, joined enthusiastically by mayor and Denver City Council, and supported by newspapers, proposes to arrange for outright donation to Government of entire site with present buildings and equipment. Request this be embodied in Denver prospectus and that consideration of Denver be based accordingly. Buildings and equipment, exclusive of land, cost originally $560,000, now conservatively $325,000."

II. CLIMATE

1. Fog and haze: During 1933 there were only 2 days of dense fog.

During the past 42 years the average number of days of dense fog has been 4.

There is an almost total absence of dew in this area and practically no haze.

2. Rain and snow: The average precipitation for the past 60 years is 14.10 inches. Denver may therefore be classified as a dry region.

A very prolific water supply at reasonable rates makes irrigation comparatively inexpensive.

Denver has an average of about 35 inches (unmelted) of snow per year.

It is stated that snow on the ground very rarely interferes with flying.

3. Wind: The average wind velocity for the past 60 years has been 7.4 miles per hour, the prevailing direction being south. Denver is not generally subject to high winds. The highest wind velocity recorded in 1933 was 33 miles per hour.

4. Temperature: Over a 60-year period the average daily maximum temperature was 62.8°, the average daily minimum 37.5°, and the average 50.2°.

During 1933 the highest recorded temperature was 97° and the lowest 16°. During the same period there were 112 days having a minimum temperature of 32° or below and 5 days with a minimum temperature of 0° or below. There were 23 days with a maximum temperature of 90° or above.

The above figures would indicate that in the vicinity of Denver the climate is severe. Due, however, to the altitude (1 mile), Denver has the reputation of having a delightful climate. Neither the heat nor the cold are oppressive due to the low percentage of humidity and the high altitude.

5. Humidity: Over a period of 46 years the relative humidity has been 63 at 6 a. m. and 42 at 6 p. m. Over a period of 16 years the relative humidity at noon has been 39. The Denver climate should therefore be classed as dry. The humidity rate, taken together with the average temperature, accounts for the fine climate both in summer and winter.

III. MORALE FACTORS

1. Relative cost of living: (a) Foodstuffs: The cost of staple foodstuffs appears to be about average. Fresh fruits and vegetables are available in season at reasonable prices. Colorado is noted for its excellent mountain lettuce, Rocky Ford melons, peaches, celery, potatoes, strawberries, and other similar foods.

(b) Other supplies: Denver has excellent shops of every description. The prices appear to be average.

(c) Domestic servants: Domestic servants may be obtained at from $3 to $10 per week, depending upon the nature of the service desired. White servants are generally preferred, although Negroes and orientals are available.

(d) Rentals: Rentals for houses, apartments, and hotel rooms appear to be very reasonable and compare favorably with other cities of the same size.

2. Recreation: The recreational facilities of Denver are superior.

There are 33 moving-picture theaters, located in all sections of the city, and numerous parks where dancing, swimming, and other amusements are available.

There are several bathing beaches and four municipal golf courses in addition to several country clubs. There are numerous public tennis courts.

Due to its proximity to the mountains, Denver has exceptional advantages for hunting and fishing.

The highest mountains are snowcapped the year around, and winter sports are available just a few miles from the city during the colder months.

Summer cottages are reasonable and may be found in the mountains 15 or 20 miles from the city.

Denver maintains several municipal parks in the mountains, which are noted for their scenic beauty.

3. General: (a) Transportation: Adequate paved public highways are available to the site.

Street-railway facilities are available one-fourth mile from the site, and it was stated that they would probably be extended if the school were located in Denver.

The same applies to bus lines.

(b) Brief description of city: Denver has an estimated 1933 population of 300,000, divided as follows: Native white, 84 percent; foreign-born white, 11 percent; Negro, 2½ percent; other, 2½ percent.

The city is known throughout the country as a health center due to its close proximity to the mountains and its altitude of 1 mile.

It is a city of beautiful homes, fine trees and gardens, and excellent paved streets. (For complete description of city, see attached brief.)

(c) Health and sanitation: Denver is one of the foremost health centers in the United States. There are numerous sanitariums specializing in the treatment of tuberculosis. It is the home of Fitzsimons General Hospital, maintained by the Army. The State, county, and municipal health boards appear to be considerably above the average. General hospital facilities are excellent and adequate.

Street cleaning and sewage disposal are excellent. Storm sewers are exceptionally good.

(d) Schools: The school plant of 80 buildings is valued at $22,000,000. There are 62 elementary schools, 10 junior high schools, and 5 senior high schools.

Denver University includes a graduate school, college of liberal arts, department of art, and schools of chemical engineering, electrical engineering, commerce, and law. It has a total enrollment of 3,387.

The University of Colorado has its medical school in Denver, situated at the Colorado General Hospital.

Other schools of higher learning are the Colorado Women's College, Regis College (Catholic), Iliff School of Theology, Loretto Heights College, and many professional, business, and commercial schools. The University of Colorado is at Boulder, 30 miles distant. The Colorado School of Mines is at Golden, 15 miles distant. Denver has several well-known schools of music and art offering day and night courses.

It was stated that no tuition would be charged for Army children in the public schools.

(e) Religious facilities: All denominations are represented, and the buildings are especially fine.

(f) The fire department is modern and would be available to the site if required.

IV. UTILITIES

1. Water: Water may be obtained from the Denver water supply or by the development of shallow or artesian wells at the site.

City water is present at the site, and there is already an artesian well which could be made capable of developing 200 gallons per minute. The present well is drilled to a depth of 953 feet. Another well of similar capacity would be required.

There is a 12-inch city main on the site which is not heavily loaded and which the engineers estimate would provide for the needs of the field, if city water were used. A 30-inch main is 1 mile distant.

There is no question of the sufficiency of water, either city or artesian. The cost of the city water, on a sliding scale, would be between 10 and 14 cents per 1,000 gallons. It is probable that the Government could provide its own artesian water at a saving. Shallow wells 18 feet deep, furnishing irrigation water, can be developed very cheaply. This method of developing cheap irrigation water is used at Fitzsimons Hospital. The city water is of fine quality, neither hard nor soft, and comes from the mountains.

2. Sewerage: An 8-inch sewerage line is already in operation on the site. This line feeds into the main sewerage system of the city of Denver. It is probable that the Government would install its own sewage-disposal plant. If not ,the outlet to the city sewerage system would have to be increased to 18 inches.

3. Fuels—(a) Electricity: Electric power facilities are already on the site and are adequate to supply the needs of the school. The electric power is furnished by the Public Service Co. of Colorado, which has agreed to extend any additional facilities to the site without cost to the Government. The cost of electric power is average and is based on a sliding scale depending upon consumption.

(b) Gas: Natural-gas mains are within one-half mile of the site. Gas is piped from the Amarillo, Tex., fields. The average rate at Fitzsimons Hospital for 1933 was 14.7 cents per 1,000 cubic feet, which is considerably below average. The Public Service Co. of Colorado agrees to extend the gas mains to the site at no expense to the Government.

(c) Coal: Hard and soft coal is available from the Colorado fields. The price is $15 per ton for the hard and around $5 per ton for the soft coal, delivered.

(d) Wood: Wood is expensive—around $15 a cord. Very little wood is used for heating purposes.

(e) Oil: Bunker C. oil, f. o. b. Denver, is quoted at $2.05 per barrel of 42 gallons. White distillate for fuel purposes will vary from 5½ to 8 cents per gallon.

V. TRANSPORTATION AND COMMUNICATIONS

1. Rail: Denver is served by eight railroads, giving service in all directions.

There are no railroad facilities to the proposed site. There are three proposed switch lines, average from 3 to 4 miles in length, each of which would cost from $60,000 to $75,000 to build, not including cost of right-of-way. (For details see p. 35, Denver brief.) The following telegram was received on August 11, 1934:

"We propose to arrange for outright donation to Government for Air Corps Technical School of entire site with present buildings and equipment and with railway trackage to property.

"(Signed) DENVER CHAMBER OF COMMERCE,
"C. A. SHINN, *President*."

2. Bus: Denver has good bus service. The committee stated that bus service to the site would undoubtedly be furnished.

3. Trolley lines: Good service which would undoubtedly be extended to site.

4. Roads: Good paved roads within and out of the city. Paved road now extends to the site.

5. Water: No water transportation.

6, 7, and 8. Telegraph, telephone, and mail: Usual excellent facilities for a city of its size.

VI. GEOGRAPHICAL LOCATION

1. Relation to Air Corps stations: Denver is about 700 miles from the present center of Air Corps population. Additional Air Corps stations on the west coast and the movement of Chanute Field to the West would shift this location closer to Denver.

2. Recruiting areas: The principal recruiting area for the technical school has been in the Middle Western States. In the past, however, the majority of the men who are anxious to be recruited for this school have been willing to present themselves at the school without expense to the Government. This question is therefore not considered a serious one.

3. Supply points: Denver would receive its Air Corps equipment from, and its equipment would be repaired by, the San Antonio air depot, 800 miles distant. Quartermaster supplies would be received primarily from the Chicago depot, 900 miles distant.

4. Altitude and special features: Denver is approximately 1 mile high. In the opinion of the board, this presents both advantages and disadvantages. Take-offs and landings at a high altitude present certain flying hazards. Photographic missions which are normally flown at an average of 10,000 feet above the ground would require an altitude of 15,000 or 16,000 feet above sea level for their accomplishment. High altitude normally means cold winter and some snowfall. On the other hand, it is the opinion of the board that a high altitude station would furnish valuable experience for Air Corps personnel in altitude take-offs and landings and in high-altitude flying. The motors of our photographic planes will undoubtedly be supercharged in the future, and the advantages to be obtained from a high-altitude site would probably more than offset the disadvantages. The mountainous country close by would offer excellent photographic training. There is no high-altitude station in the Air Corps today.

High altitude means a healthful climate. While it is cold in winter, it is pleasant in the summer, and it is a well-known fact that the dry cold of high altitude is not as disagreeable as that at a low level. Air Corps officers who have done a great deal of flying at Denver state that at no time does the cold interfere with flying and that the snow on the ground interferes very little with landing and taking off.

Denver is well located from a strategical point of view, due to its interior location it would not be susceptible to air attack.

VII. CONSTRUCTION AND LABOR COSTS

Building and labor costs: Building costs are average, and the price of labor is that laid down by National Recovery Administration codes.

VIII. SUMMARY

Denver is a fine city of 300,000 inhabitants which the board is certain would take a great interest in the school and would cooperate fully in its support. The type of citizenry is exceptionally high, with the percentage of American-born considerably above average.

Every type of cultural advantage is at hand and readily available.

Recreational facilities are exceptional due to the progressive attitude of the city and to its close proximity to the Rocky Mountains.

The site proposed is excellent and sufficiently close to the city to afford the personnel all of its advantages.

The climate affords all changes of season, and while it has its cold periods in winter, it should not interfere materially with flying operations. The summer climate is good. The altitude has its advantages and its disadvantages, as stated in paragraph VI 4. It is thought that the advantages outweigh the disadvantages. There is practically no fog or haze and normal visibility is very great due to the high altitude.

Denver is not particularly well located with respect to other Air Corps stations. It is 700 miles from the present center of Air Corps population.

Denver has a very low annual rainfall. This is compensated for by an adequate water supply, which is furnished at a reasonable rate and which makes irrigation inexpensive. The soil is fertile when irrigated.

The cost of living, including foodstuffs, servants, and rentals, is average. Building materials and labor are average.

Schools and religious facilities are considerably above average. In fact, they appear to be superior.

All utilities are available and reasonable in cost.

Rail transportation facilities are excellent. Switching facilities to the site would be furnished by the city.

Communications are on a par with other cities of the same size.

Denver has every attribute to make it popular with the commissioned, enlisted, and civilian personnel pertaining to the school.

IX. CONCLUSION

Denver is considered suitable as a location for the Air Corps Technical School for the following reasons, which, taken together, lead to this conclusion:

(a) Fine, large modern city.

(b) Good site which will be presented to the Government, together with several valuable buildings.

(c) Excellent climate and recreational facilities.

(d) Good location for training in altitude flying.

(e) Good strategical location.

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, December 6, 1934.

Subject: Board proceedings re location of Air Corps Technical School.

To: First Lt. Norman D. Brophy, Air Corps, instructor, National Guard, Denver, Colo.

1. A board of Air Corps officers visited Denver, Colo., on May 26–28, 1934, for the inspection of sites in that vicinity as to their suitability for the location of the Air Corps Technical School. The board, under pressure of necessity of inspecting other sites in many parts of the country, was unable to get satisfactory information on the possibilities of an accessible and suitable bombing and gunnery range. It is desired that you furnish this office as soon as practicable with information on this subject. In this connection, the following quotation from the report of the board is furnished you:

"Bombing and machine-gun range: No specific site was visited by the board, but it was stated that an accessible area could be acquired for a nominal sum within a few miles from the site. This area would be in the mountainous country to the west of the city."

2. The general specifications of the site for the Air Corps Technical School state:

"An extensive area on which bombing and machine-gun work can be done is desirable. A water area free from traffic and at least 10 miles square is acceptable. A swamp or other suitable land area of similar proportions used for the purpose must become Government property. It should be uninhabited. The area should not be more than 50 miles from the school site and preferably closer; the approach from the school to the area should be over relatively uninhabited territory for safety reasons; and in the case of a distant area, an emergency landing field should be contained therein."

3. Additional information desired includes a specific location of a bombing and gunnery range in the vicinity of Denver, its size, approaches, landing fields in the area of the range, and any other data you may deem pertinent. The terms upon which a bombing and gunnery site might be obtained should be stated.

4. This matter will be kept absolutely confidential. Those with whom you confer may be informed, if you deem it necessary, that the data now requested is for the purpose of completing the brief submitted by the city of Denver.

By order of the Secretary of War:

ROBERT L. COLLINS,
Adjutant General.

[First endorsement]

OFFICE OF THE AIR CORPS INSTRUCTORS,
COLORADO NATIONAL GUARD, LOWRY FIELD,
Denver, Colo., December 29, 1934.

To: The Adjutant General, Washington, D. C.

1. The following information anent bombing and gunnery range for proposed Air Corps Technical School, Denver, Colo., is hereby submitted:

(a) Description of range:

(1) Size, 10 miles by 10 miles.

(2) Location, approximately 12 miles east by southeast of proposed site of school; 19 miles from city of Denver.

(3) Terrain, slightly rolling prairie land.

(4) Approach to range; no obstructions.

(5) Emergency landing fields: At least four available on range.

(6) Approach from school: Several lanes over uninhabited area, with good emergency fields.

(b) Terms.

The terms upon which bombing and gunnery site can be obtained cannot be stated at this time. I have contacted the chamber of commerce of the city of Denver and they advise me that they will immediately take the matter under consideration and notify me as soon as possible what they will do toward providing this land to the Government. Because of their action with regard to the present site of Fitzsimons General Hospital and their proposed tender of land for the location of the Air Corps Technical School, it is my belief that the city of Denver will provide the gunnery and bombing range without expense to the Federal Government. The chamber of commerce reply anent the subject of terms relative to gunnery and bombing range will be forwarded immediately upon its receipt.

2. After both an aerial and a ground survey of the proposed gunnery and bombing range I am convinced that same is adequate and provides all requirements for its purpose.

NORMAN D. BROPHY,
Captain, Air Corps, Instructor,
Forty-fifth Division Aviation, Colorado National Guard.

Mr. LEWIS of Colorado. It gives me great pleasure at this point to yield 5 minutes to my distinguished friend from Illinois [Mr. DOBBINS].

Mr. LEHLBACH. Mr. Speaker, I also yield the gentleman from Illinois 5 minutes.

Mr. DOBBINS. Mr. Speaker, following a time-honored custom I am going to discuss the merits of the bill rather than the advisability of granting or refusing the rule.

It happens that I have the honor to represent the district where the Air Corps Technical School is now located and where it has been located for many years. It happens by reason of this circumstance that I probably have more familiarity with this controversy and with its inception and with the peculiar reasons that lie back of the controversy than any other man on the floor of this House.

The proposition to move the Air Corps Technical School from Rantoul to somewhere else, no matter where, is not a new one. Our friends from Ohio know that for many years it was advocated that it be moved to Dayton, and as late as 2 years ago the Chief of the Air Corps, in testifying before the War Department Appropriations Subcommittee of this House, said that Dayton was the last choice he had for moving the school. He also stated at that time, and he repeated the statement a year ago, it was not absolutely necessary to move the school at all.

At first, when the moving of this school was proposed, the Army officers were quite frank and open and aboveboard as to their reasons for wanting to move it. They wanted greater social and recreational advantages. Human nature has not changed from that time to this. They still want greater social and recreational opportunities than they feel are available at the present site of the field, but they have learned it is best to subdue or cloak these motives and find some other specious reasons to advance for moving the school. So they come before you and come before the Military Affairs Committee of this House with a report by three Army officers saying that this reason and that and another are reasons why the school should be moved from Rantoul, and in the same breath they advance reasons why Denver above all places is the only place in the world where it could be established. They were absolutely unanimous on that. Independently and collectively, they stated, they had reached the conclusion that Denver is the only place to put this field after investigating 57 cities in the United States that advocated the establishment of the field in their respective localities.

Strange indeed, is it not, that 57 fine cities were bidding for the location and 3 Army officers independently reached the same conclusion in favor of just one of the 57?

They should make some satisfactory explanation why they made such great inconsistencies in their report. Gentlemen, they brought back photographs of our field at Rantoul showing this land with men standing waist deep in water, and presented them to the Secretary of War without any comment whatever. They did not frankly say that the photographs were taken immediately after one of the worst floods that section has ever known.

But sometimes a man will be trapped by his own deception. They overlooked the fact that anyone could tell that these photographs were taken from the air, and that therefore, notwithstanding that condition, the planes from which the pictures were made were taking off from that same field while water stood on parts of it.

Gentlemen, is it not strange that we have got to the pass where our national defense must be entrusted to the tender mercies of a chamber of commerce somewhere in the United States?

This special board, according to their own testimony, in a space of only 39 days visited 34 cities, including Denver, where four sites were supposed to be inspected. Here is the story of their inspection of the Denver sites:

Colonel YOUNT. We arrived in Denver and were met by a small committee of the chamber of commerce. We were invited to a small dinner given at the Denver Club, attended by the president of the chamber of commerce and I think the mayor and four or five prominent citizens. We had a very delightful dinner, at which we discused this school and its purposes.

The next day we were taken on a tour of inspection of the sites which were proposed, and for luncheon we were entertained at the chamber of commerce at a luncheon, I presume, of about 20 men, which was attended by the Governor and several prominent citizens, at which this matter was discussed in a businesslike way, after which there was a small meeting of the executive committee of the chamber of commerce, which was nothing but business.

On the next day we were taken on a tour of the city in order that we might see the parks, the schools, and the churches and have a good idea of the city itself.

We were taken on one short trip out into the mountains to see the recreational areas in that vicinity, and that consisted of our entertainment.

Can you see how, with less than 2 days at their disposal, this poor, overworked board of experts had any time left at Denver for looking into the technical aspects of the proposed locations?

There was brought to my attention about a month ago an issue of the Denver Post published just after the bill had been reported to the House.

Here is what they said in an editorial:

Indications now are that the Army Air School located at Rantoul, Ill., soon will be transferred to Denver. Its location here will mean the investment by the Federal Government of between six and

eight million dollars. The successful campaign for the location of this school in Denver was led by the chamber of commerce.

A news dispatch from Washington in reference to the pending bill published in the same paper on the previous day says:

The Denver Chamber of Commerce has been working steadily in behalf of the bill. Mr. W. B. Redding, an official of the chamber of commerce, has been here for several months.

A member of the chamber of commerce remains here to promote a question concerned with our national defense, or where this school should be located. I say to you that Congress should face its responsibility in this matter, and we should not evade that responsibility by approving a recommendation brought here by a board of Army officers who are deliberately concerned only with the social and recreational aspects of the question that concerns them. The point where this school is located now is the center of the area where the boys come from who attend the school. They are bright young men, high-school graduates, and the waiting list for admission there is long. It takes a year to get into the school after one applies for admission. But two boys came from Colorado last year, while from the eastern half of the United States came about three-fourths of the attendance. It should not be said that the reason but two came from Colorado is because Colorado is so far away from the school, farther away than Illinois, because at the same time 10 came from California, far on the other side of Colorado.

Mr. LUNDEEN. Mr. Speaker, will the gentleman yield?

Mr. DOBBINS. Yes; I am glad to yield to my friend.

Mr. LUNDEEN. Would the gentleman agree with me in this, that we cannot have too many air fields, and this field, being there, should be left there.

Mr. DOBBINS. This field being there should be left there as a matter of justice to this community, and to our great State of Illinois, which is not adequately or proportionately represented in the location of national institutions. It would be an affront to that great State, and would be resented by its citizens and every man who is interested in the welfare of the State to take away from us one of the few such institutions that we have. [Applause.]

Mr. LEHLBACH. Mr. Speaker, I yield 5 minutes to the gentleman from Illinois [Mr. SABATH].

Mr. SABATH. Mr. Speaker, I greatly regret that I am obliged to oppose the special rule which has been presented by my genial and personal friend from Colorado [Mr. LEWIS]. I know he is sincere, but, unfortunately, he is misled by the chamber of commerce of his city. At present I doubt if there is any justification for the transfer of this school in view of the fact that it cannot be done until 1939. I do not see why the resolution should be considered and brought here today under those circumstances. The bill provides that nothing can be done and shall not be done until 1939. Why not then give these great officers another 2 years in which to make an additional investigation. They have changed their recommendations only three times in the last 12 years, to my knowledge. First, they approved the present site, but later on found, as my colleague has stated, the social conditions were not to their liking. It was 12 miles from Urbana and about the same distance from Champaign, Ill., where they have a wonderful State university. I am commencing to feel that these officers are more interested in social affairs and social advantages than they are in endeavoring to serve the Nation, for which they have been originally educated and are now being handsomely provided. It seems to me that they want to have the very best and the most exclusive opportunities for themselves and their families. I regret that these officers should have imposed upon this House by again changing their recommendations. I know that only a few years ago every effort was made to take this school to Dayton, Ohio, because there was already established arrangements for their proper social functions.

Then later on they changed their views again. In 1917 it was found that Rantoul was a most advantageous site and they had the school located there. A majority of the boys come from that section of the country. Most of the enlisted men are obliged to pay their transportation, and why should we call upon these boys who are not fair-weather boys like the officers, to pay additional transportation that would be imposed upon them if the school is moved to Denver. The officers are looking for fair weather, because I read in the report there are 2 more sunny days around Denver than around Rantoul, so they feel they should have the school changed.

Yes, it would appear that the officers lay great stress upon the fact that there are more clear days at Denver than at Rantoul. Do they feel that battles are only fought on clear days?

Mr. Speaker, as I have stated, the underlying reason for the desired change on the part of the officers is that there are limitations to the social activities around Rantoul. The recreational and sports facilities for officers in the community are very restricted and limited as evidenced by the following statement appearing in the War Department board report:

There are no water sports and practically no hunting. Two country clubs at Urbana and Champaign offer limited facilities to officers for golf and tennis.

I concede that the cities of Urbana and Champaign may not compare in grandeur and mountain scenery to Colorado Springs, so close to Denver, where it may be possible greater social advantages and functions would be afforded to the officers.

In conclusion let me state that this House did not ask for this investigation and the change is advocated by these officers mostly for the reasons which I have given. I feel it would be most unfortunate to impose additional hardship on the deserving young men who are endeavoring to obtain schooling to serve the Nation. [Applause.]

Mr. LEHLBACH. Mr. Speaker, I yield 10 minutes to the gentleman from Illinois [Mr. ARENDS].

Mr. ARENDS. Mr. Speaker, on April 29, by a far from unanimous vote, the House Military Affairs Committee reported out Senate bill 3398. Today we consider this bill under a rule allowing 1 hour of general debate. In the time allotted me I desire to bring some facts to your attention regarding this bill and the intent thereof.

In the year 1921 there was established at Rantoul, Ill., an Air Service technical school, commonly known as Chanute Field. In the past 15 years since its beginning this school has served the purpose for which it was intended, that of a technical ground school.

During the past several years, since 1928, there has been much agitation here and there for the removal of this field, requests being made to have it moved anywhere, just so that it would be dislocated from its present site in Illinois. Just where this demand for its removal originated is no longer a question, since a thorough investigation can lead an individual to believe but one thing, namely, that the personnel of the Air Corps would appreciate a different location.

After much bickering and a thumbs-down attitude by the Department, although money was appropriated but never allowed to be used to rehabilitate this school, a finding board was set up to investigate and determine when and where this school might be moved. I am wondering who said this school had to be moved. But the board was organized and proceeded to function. Now I make plain to you at this point, if I may, that I do not question these gentlemen who, headed by Colonel Yount, brought in this report on the board findings. However, discrepancies appear in this report which to my way of thinking can readily raise the question of doubt in anyone's mind who might have the time to read the full report and hearings, as to the necessity for the removal of this field and what might be gained thereby for the cause of the Air Corps.

Since my time is limited, I shall not attempt to give you a digest of the board's report or to go into any detail concerning the hearings on this matter. It is sufficient to state

that during the examination of witnesses before the committee many little side lights on the situation were brought to our attention.

The primary purpose for the removal of the school is given as "the necessity of a bombing range", which range site will be available at Denver. The citizens of Illinois were not informed of the necessity of such a site nor given an opportunity to learn whether additional ground might be made available at or near Chanute Field. Certainly little or no consideration was given the bombing range matter when Dayton, Ohio, the site of the Air Corps engineering center, was being favorably considered as the logical place for the technical school. I am not a prophet nor a prophet's son, so I hesitate to predict, in case the school is moved, as to just how much bombing practice will ever take place at the Denver site. But when we search the record and learn that the percentage of total hours of instruction, of enlisted men, for flying is 2.7 percent—page 69 of the hearings—and that such time for the Regular Army officers is less than 15 percent, one must begin to wonder how or when much bombing can be carried on at such an essentially ground school, regardless of its location.

Much ado was made concerning the climatic conditions in Illinois which it was cited in many instances made flying and photographic aerial instruction almost impossible, to successfully obtain profitable results. Statements of the board show that they obtained weather reports, and so forth, from locations at Springfield and Peoria, Ill., whereas such necessary meteorological reports are available at the school at Rantoul. Then why did they not use their own facts taken from actual conditions of past history as found at Chanute rather than go approximately 100 miles distant to gather such information. Frankly, I do not understand such procedure, and it all tends to leave the impression with me that more care might well have been exercised in determining the report of this board.

The report cites such items as higher cost of food in Illinois, which was disproved. Morale was mentioned as being low at Chanute. It is very true that the state of buildings and equipment at Chanute is in a deplorable condition, which possibly has much to do with any low morale that might exist, but that, of course, is for someone else to stand accountable for besides those in charge at the field. Such conditions exist at many of our posts today.

If at any time in the future much flying time is consumed by either the officers or personnel of such a typical ground school, we wonder if they will only be asked to do such work in the clear, fine air of a State such as Colorado. It might be too bad if, when an emergency arises, that our flyers can only manipulate during the best of air conditions and under certain circumstances. What do you suppose might happen to such flyers in time of war? We recently passed through such an experience when Army flyers attempted to carry the mails. They simply were not trained to meet all and any weather conditions which daily confronted them. Emergency landings can be made most anywhere in Illinois, but can such landings be made in a mountainous country? It is questionable.

The Board in its summary makes this statement. I quote:

The geographical location of Chanute Field is good in relation to other Air Corps activities.

Now, listen, as they also make this frank declaration:

It is also a good strategical location for a school.

Quartermaster supplies are furnished from Chicago, a distance of about 100 miles from the present school site, whereas the tentative site at Denver is about 900 miles from this supply center. Most of the students, approximately 421 out of 446 enlistments, from records at hand, come from points east of Colorado. Illinois has 80; Indiana, 33; Iowa, 19; New York, 21; Pennsylvania, 40; Wisconsin, 11, and so forth. In this connection you should know that when students are discharged from such a school, their travel pay back to the original place of enlistment is granted. Try to imagine the additional expense this will eventually mean to the Government. From the foregoing statement you will readily deduce that Chanute Field is well located as to center of population for demands of such a school.

Mr. Speaker, I might state that I am honest and sincere in my belief that no great benefit is to be derived from a change in location of this technical school. As a member of the Military Affairs Committee I feel sure that I have always shown my willingness and intent to promote any and all plans which have as their purpose the furtherance of necessary national defense. If there might be any such question of national defense involved in this bill, it has not been brought to my attention. If such is the case, I think we of the committee should have so been informed, thereby allowing us to study the matter with such a viewpoint before us.

The officers of the school would, of course, much rather be located at Denver than at Chanute Field, for, as brought out and stated in the hearings, Denver was referred to as "the winter playground and the summer vacation land." I do not blame these officers for their zeal in desiring to move to Denver, but I do question the advisability of our acting on their wishes rather than the necessity and practicability of such a change. It is the duty of Congress to determine the question of removal of this school. Do you think that this Congress should function merely as a body to make necessary appropriations available for the Army and Navy, and then allow these forces the privilege of carrying on as they alone see fit? I cannot subscribe to such procedure. The great State of Illinois is vitally interested in this question before us today. Further investigation of this case might profitably be had. From the best information I have at hand, no appropriation will be available for either site during the coming fiscal year, which means that although the War Department may favor this change, nothing can be done about it at present. In the War Department's letter on this bill it is stated that favorable action thereon will not conflict with the President's program provided no funds are included in the Budget before the fiscal year 1939.

Furthermore, I am opposed to the principle of any chamber of commerce or municipality offering competitive inducement for War or Navy Department activities which might eventually prove detrimental to the best interests of our country.

When a judge issues instructions to a jury which is about to go out for a verdict on a case, he informs them that they must decide without a reasonable doubt. Mr. Speaker, a reasonable doubt on this question before us today does exist in my mind, and I am sure, if acquainted with all facts, that you will find yourself in the same position that I am today. I sincerely hope this bill will be defeated. [Applause.]

Mr. LEWIS of Colorado. Mr. Speaker, I yield 3 minutes to the gentleman from Texas [Mr. DIES].

Mr. DIES. Mr. Speaker, I would not undertake to pass judgment on the suitability of either one of these sites. To do so would require a technical experience and knowledge which I do not possess, and which, so far as I know, no other Member of the House possesses; but I do know that a board of experts charged with the responsibility of selecting suitable sites visited many places in the United States, including my own town.

After careful and exhaustive investigation they arrived at the conclusion that Denver was the proper place. Certainly I would not undertake to place my judgment in opposition to the trained and experienced judgment of this board. Those who were not successful in securing this desirable school should, it seems to me, acquiesce in the judgment of those whose duty it is and whose qualification and training equip them to select these sites. The other body has passed this bill. The Military Affairs Committee of the House has reported it favorably. The Rules Committee has reported a rule. So it seems to me the least we can do is to authorize the consideration of this bill on the floor of the House and give an opportunity to the author and sponsor of the bill to present it on its merits.

[Here the gavel fell.]

Mr. LEWIS of Colorado. Mr. Speaker, I yield 5 minutes to the gentleman from Ohio [Mr. HARLAN].

Mr. HARLAN. Mr. Speaker, this is about the eighth year in which this House has been buffeting back and forth the question of the location of the technical school. During 5 of these years I have appeared and presented all of the claims showing that Wright Field at Dayton, Ohio, is the proper location for this school. I am safe in saying that this field at Dayton has every qualification that Chanute Field has because of its advantageous location. It also has some of the advantages that Denver has. However, a bureau of experts has gone over the United States and weighed all of these possibilities. After 5 years of political jockeying whereby we were getting no place, the net result of all our efforts was that the Air Corps was not having a suitable technical school anywhere. The Chief of Staff and Chief of the Air Corps, as between Chanute Field and Wright Field, testified frankly that Wright Field was the preferable place. The Air Corps and the Army refused to accept or use the appropriation to build up Chanute Field because of that controversial situation. The supporters of Wright Field, under the old conditions, had the merits of the case, and Chanute Field supporters had the capacity to hold up the thing, and as a result that is where we were, and we were getting no place.

Mr. Speaker, the world is in no condition for us to "play horse" with this question any longer. The best judgment of the War Department says that Denver is the place for this field. Our entire Air Corps is going to be of no service to us if we do not have a suitably trained technical school personnel to keep these planes in the air. Our entire Army and defense system is not going to be of any avail to us if we do not have an active Air Corps in the air, and it makes no difference how many planes we have in the shops. In the interest of our country we can no longer afford to permit our ships to remain in the air without an adequately equipped technical school.

I will take second place to no man in this House in fighting for my district as against any other district. I have done so on this question for 5 years; but when my district comes up against the interests of the United States and against the interests of our national defense and against the interests of our own sons who have a good prospect of being dragged into war before very long, I think it is time for us to get a technical school in the United States [applause], and it is time for us to quit considering local interests.

The Federal Government can use Chanute Field for the best purpose to which it is adapted. There is no question about that. I do not know what that is. The Federal Government will use Wright Field, at Dayton, Ohio, for the best purpose to which it is adapted; but they say they want this technical school at a place where they can fly all the time, at a place where their facilities for testing bombing planes and machine guns are unlimited, and that they need the industrial surroundings at Denver. So long as they say that and so long as their own lives are involved in the decision, I am perfectly willing to agree with their verdict.

Mr. LUNDEEN. Mr. Speaker, will the gentleman yield?

Mr. HARLAN. I yield.

Mr. LUNDEEN. Did not the War Department select this other field in the first place? They were satisfied then, were they not?

Mr. HARLAN. This field was selected in 1921 for reasons that do not exist at the present time.

[Here the gavel fell.]

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

Mr. McSWAIN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (S. 3398) to establish the Air Corps Technical School and to acquire certain land in the State of Colorado for use as a site for said Air Corps Technical School and as an aerial gunnery and bombing range for the Army Air Corps.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill S. 3398, with Mr. TARVER in the chair.

The Clerk read the title of the bill.

Mr. McSWAIN. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

The CHAIRMAN. Under the rule the gentleman from South Carolina [Mr. McSWAIN] is recognized for 30 minutes and the gentleman from New Jersey [Mr. McLEAN] for 30 minutes.

Mr. McSWAIN. Mr. Chairman, I yield 10 minutes to my colleague on the committee [Mr. HILL of Alabama].

Mr. HILL of Alabama. Mr. Chairman, I regret to find myself in disagreement with the splendid Representatives in this House from the great State of Illinois, whom I claim among my best friends in this body. I particularly regret to find myself in disagreement with the gentleman from Illinois [Mr. DOBBINS]. I am sure that I express the sentiments of every Member of this body when I say that all of us regret to see him leave this body, as he will, voluntarily, at the end of this session of Congress.

Whatever may be the outcome of the pending bill, I want to testify to the fact that although I do not agree with the gentleman from Illinois [Mr. DOBBINS] on the bill, he has certainly been faithful, diligent, and conscientious at all times in opposing the passage of the bill and the removal of the school from Rantoul, in his district. [Applause.]

We are not interested today, gentlemen, in chambers of commerce; we are not interested in what some newspaper writer may write in a news story, and we cannot let the interest of some community, large or small, in these United States be paramount in the consideration of the question before us. Our concern, first and foremost, must be the interests of the country as a whole, must be what is best for the defense and the safety of our country.

This bill comes here today because Chanute Field, at Rantoul, Ill., is not a suitable place for the technical school of the Air Corps. It does not meet the requirements for the school. The field at Rantoul was taken over by the Government during the World War.

Mr. SABATH. Mr. Chairman, will the gentleman yield?

Mr. HILL of Alabama. I shall try to yield to the gentleman a little later.

The Army at that time had no trained expert personnel to pass on the suitability of these fields. We had no Air Crops. We had a little staff tucked away in the Signal Corps that was trying to do something in the air, but we had no Air Corps such as we have today and have had for the past 10 years; no trained prepared experts; and we had no one qualified as experts to pass on the suitability of these fields. Furthermore, during the war we had to act under the pressure of necessity and haste; we had to take these fields more or less haphazardly. In 1921 the Air Corps Technical School was placed at Chanute Field not because the War Department at that time felt that it was the proper place for the school, not because the War Department wanted to put the school there, but simply and solely because the War Department had no other place to put the school. There were temporary wartime buildings at the field, and the War Department had to house the school somewhere, so it was put there simply because the housing necessary for the school happened to be there. Ever since I have been a member of the Committee on Military Affairs, a period of some 12 years, the War Department has insisted that Chanute Field was not the proper place for the school and has made many different efforts to get the school away from Chanute Field.

Reference has been made to the fact that the War Department has changed its mind, that at one time it wanted to take the school from Chanute Field to Wright Field at Dayton, Ohio. Yes; it is true that conditions were so bad at Chanute Field and the field was so unsuited to the needs of the technical school that the War Department did set up a board to see if the school could not be moved to Wright Field. Wright Field was under the War Department; we

had it, and we thought we might be able to house the school there. The board said, "Yes; as between Chanute Field and Wright Field, send it to Wright Field; do not keep it at Chanute Field." But that did not mean that Wright Field was the best place, and the board did not say so; it was just a matter of the lesser of two evils, so to speak.

Some 2 years ago the War Department, at the suggestion of many Members of Congress, selected a board of officers to study the question and make recommendations as to a proper location for the school. I recall that my distinguished colleague from Alabama [Mr. McDUFFIE] was one who took the matter up in person with the Secretary of War and urged that the War Department select such a board.

The board was composed of three officers, three of the most conscientious, the most competent officers in the Air Corps of the Army. The board went all over the country visiting some 57 cities trying to find the best location for the school. The board came into my State of Alabama, visiting at least three cities, and we tried to persuade the board that the best location for the school was in Alabama, but the board did not agree with us. After carefully studying the needs of the school and spending some several days at Chanute Field, and after making a most painstaking and most thorough investigation, the board unanimously reached the conclusion that the best location for the school was at Denver, Colo. I may say that the two cities found by the board to be next in availability to Denver, Colo., were two cities in the State of my distinguished colleague from Texas [Mr. SANDERS], namely, Dallas and San Antonio. Although these Texas cities were the second and third choices, Senator SHEPPARD, of Texas, chairman of the Senate Military Affairs Committee, was so impressed with the fairness and the thoroughness and the correctness of the report of the board favoring Denver that he led the fight on the floor of the Senate when the bill was passed in the Senate moving the school to Denver.

What is the trouble at Chanute Field? I will tell you. We call the school a technical school. It deals with aircraft equipment and matériel—it deals with machine guns used in airplanes, it deals with bombs and bombing equipment, with cameras and photography.

[Here the gavel fell.]

Mr. McLEAN. Mr. Chairman, I yield 5 minutes to the gentleman from Alabama [Mr. HILL].

Mr. HILL of Alabama. Mr. Chairman, the men in this school have to study this equipment on the ground, but that is not all. After they study the equipment on the ground they must take it in the air, and study it in the air, and practice with it in the air, because oftentimes equipment functions differently at low altitudes than it does at high altitudes; it functions differently oftentimes on the ground from what it does under the stress and strain in the air; metals expand and contract depending on the temperature; and there are many problems of this kind that must be worked out. The only way this school can carry on its training as it should be carried on is by taking these men and the equipment into the air. As it is today the climate, the haze, the fog, the weather conditions are so bad at Chanute Field that in some of the courses the men are not able to finish 50 percent of the flying requirements.

Mr. DOBBINS. Mr. Chairman, will the gentleman yield?

Mr. HILL of Alabama. Not at this point; I have only 5 minutes; I am sorry. Furthermore, you have got to have a bombing range where the men can take these great bombing planes and machine guns and actually fire at targets. They ought to have a range 10 miles square. There is absolutely no way of getting such a range as this at Rantoul or in the State of Illinois, for the State is too densely populated.

The cost of such a range in Illinois is absolutely prohibitive.

Now, what do we find in Denver? We find that the city of Denver is giving the Government a piece of property, or offering the Government a piece of property, which is just as large as the field at Rantoul. In addition thereto there are buildings on the field which the Quartermaster Corps values at $400,000. There is not a single permanent building at Chanute Field. If the school is to remain there, entirely new buildings will have to be built. At Denver there are over $400,000 of permanent buildings already located, and, due to the unusual climate there, there are not over 2 days in a year when flying operations cannot be carried on.

In addition thereto, the school has to have a great bombing range. At Denver, or in its immediate vicinity, we will be able to secure 10 square miles where these men may get the practice that is so essential to their complete education. Furthermore, Denver is a mile above sea level. As the War Department says:

(1) With the advent of the high-powered, highly supercharged aircraft engine, designed to operate at high altitudes, together with highly developed aviation fuel and oil, it has been clearly evident for some time that the basic technical training of officers and men in the care, repair, maintenance, and operation of aircraft material should be carried on in an area more closely simulating atmospheric and climatic conditions encountered in high-altitude flying operations.

Mr. Chairman, 2 or 3 years ago we witnessed in this country the terrible tragedy of the loss of human life when the officers and men of the Air Corps sought to carry the mail. Why did those men lose their lives? Because they had not been properly trained and prepared to use the equipment which was so necessary to protect themselves in flying through the terrible weather. This matter not only goes to the question of the defense of our country and the efficiency of the Air Corps, but involves as well the life and limb of those brave boys who go up into the air in these planes. If we are to meet our responsibility to the whole country, we cannot do less than pass this bill giving to the Air Corps that location for its technical school which the board of experts, the Chief of the Air Corps, the Secretary of War, the Senate, and the majority of your Committee on Military Affairs states is the proper place, the right place, and the suitable place for the school to be located. [Applause.]

[Here the gavel fell.]

Mr. McLEAN. Mr. Chairman, I yield 12 minutes to the gentleman from Vermont [Mr. PLUMLEY].

Mr. PLUMLEY. Mr. Chairman, the report on this bill, which I filed on behalf of the preponderant majority of the committee, pretty well covers the situation. It is a summary of the facts which were made to appear before the Committees of the House and Senate on Military Affairs.

When the "red herrings" of commendable selfish interest, the inclination involved in personal and geographical friendships, social contacts, and political alliances, and other trivialities, superfluities, and generalities which have been drawn across the trail are disposed of, the road leads us, as legislators and thinking men, to the consideration of only one issue: That of national defense and of national safety involved in a recommendation by an Army board of strategy, upon whom rests the proper solution of such questions which, in the opinion of the War Department, are vital and constitute an instrumentality of no secondary importance in the preparation for and maintenance of a reasonable and adequate national defense. When life and the safety of the Nation is at stake, Chanute and Denver are but names. This point must not be minimized, nor lost sight of in our consideration of this measure.

In the first place, Chanute Field was selected as the location for the Air Corps Technical School back in 1921, because there were then buildings existing which could be utilized for this purpose, and the War Department had no funds with which to build a school at any other location. Some of the work done by this school had previously been done at St. Paul in temporary facilities which had to be abandoned. Part of the personnel of the school was at San Antonio, which location was abandoned in order that the repair depot at Dallas, Tex., might be consolidated with the supply depot at San Antonio.

The buildings at Chanute Field were and are wartime buildings, now so dilapidated and outworn as to be positively dangerous for occupancy. If there were any question in your mind as to the suitability, adequacy, and availability of this Chanute Field from the standpoint of the War Department, all questions which arise with respect to this matter ought

to be settled by the fact that board after board has been appointed for the purpose of considering all views and recommendations relative to the question of the location of the Air Corps Technical School elsewhere. This in itself is evidence of the fact that the present location was not considered proper, adequate, or satisfactory.

Recognizing the inadequacy and unsuitability of the present location, the selection of the proper place has been a matter of study for years. The last official action taken by the War Department by order of the Secretary of War with respect to an investigation concerning the selection of a site is found in an order of the Secretary of War to the Chief of the Air Corps of date February 15, 1934, to appoint a board of officers to consider all views and recommendations relative to the question of the location of the Air Corps Technical School and submit a report setting forth the views and recommendations with its conclusions and recommendations.

At the outset, before making any personal inspections, the board of officers prepared a questionnaire and letter of instructions, copies of which were sent to chambers of commerce or designated representatives of many towns and cities in various parts of the United States. In this questionnaire and letter were embodied certain specifications and requirements which, in the light of experience and of recent rapid development of military aviation, the Air Corps and the General Staff regard as characteristics essential to an ideal location for this particular instrumentality—the Air Corps Technical School. The purpose of this questionnaire was to elicit detailed information relative to the proposed sites and the conditions to be found in the neighboring communities and environs in order that such information might be available to the board at the time of its arrival for personal inspection and as an important aid to the board in the preparation of its final detailed report.

The board personally visited 57 cities throughout the United States, inspected proposed sites, and personally gathered a large amount of data in addition to that furnished by the respective local communities. It also received and considered briefs and other information from 25 localities other than those personally visited. Under date of August 15, 1934, the board submitted to the Chief of the Air Corps its confidential and unanimous report and recommendation.

This report and recommendation was checked and studied by the Chief of the Air Corps and was by him approved and recommended in a memorandum dated October 12, 1934. The report and recommendation was then referred to the General Staff, where it was given further careful analysis and consideration. In March 1935 it was transmitted by the War Department to the Military Affairs Committees of the House and Senate.

The board reaches the following conclusions and recommendations:

1. Conclusions: The board concludes that Chanute Field, Rantoul, Ill., is unsuitable as a location for the Air Corps Technical School and that the best location which it has been able to find is at Denver, Colo.

2. Recommendations: The board recommends that the site described in the Denver, Colo., brief be acquired by the War Department and that the Air Corps Technical School be located thereon.

Now, to repeat, may I say the Congress has had under consideration on several occasions the rebuilding of the Air Corps Technical School, now located at Chanute Field, Rantoul, Ill. This school was established at that place in 1921, in order to consolidate in the place then most convenient and in one school the mechanics school, which was located at Kelly Field No. 1, at San Antonio, Tex.; the communications school, then located at Post Field, Fort Sill, Okla.; and the photographic school, then located at Langley Field, Hampton, Va. The governing reasons for the selection of Rantoul, Ill., all things considered, were the availability of buildings on Government-owned land and the convenience of obtaining student personnel.

It is true that in 1928 a plan was considered to move the school to Wright Field, Dayton, Ohio, but after several years of consideration that plan was abandoned. In the meantime, funds appropriated for rebuilding the school were withdrawn in 1933 by Congress, in view of the difficulty of determining where the school had best be located. Efforts made by the War Department since then to obtain funds for rebuilding the school have likewise failed, pending determination of its proper location. The buildings at Chanute Field, which were temporary buildings, constructed during the World War, have deteriorated rapidly in recent years to the extent that all are forced to admit that rehabilitation is no longer practicable or desirable.

Since the difficulty in obtaining funds was inseparably linked with the question of proper location of the school, the War Department, in 1934, presumably at the request of the Chief of the Air Corps, appointed a board of officers to make an extended survey of all suitable sites in this country with a view to recommending the best location for this school, all things considered. The board actually inspected 57 sites and considered a total of 82 sites, and recommended, as preeminently best suited, a site at Denver, Colo. The report of this board of officers is most thorough and convincing; and after detailed analysis in hearings before the subcommittee of the Committee on Military Affairs of the Senate, it still stands as a report which, for comprehensive and logical analysis of all factors involved, cannot be ignored. The Denver site recommended by the War Department board contains material advantages which make it outstanding over other sites for the purpose required. These advantages are clearly set forth in the reports of the Committees on Military Affairs of the Senate and House. The most outstanding advantages are provisions for a gunnery and bombing range within close proximity to the school, a climate which provides the greatest percentage of clear atmosphere for photographic instruction, an altitude which is in keeping with modern training requirements of the school, and buildings up to the value of $400,000.

Since the predominant purpose of the school is to train enlisted mechanics and skilled photographic and communications personnel, the proposed site at Denver, Colo., will provide not alone better facilities but better recreational facilities for the enlisted men. Officers are able to provide for themselves recreational features desired wherever stationed, and the War Department stated that little importance was attached to that feature.

A pertinent advantage to be derived by the Government in the establishment of the school near Denver, as covered by the bill under consideration, is the donation to the Government not alone of the land for the school but also a tract of land for a gunnery and bombing range approximately 10 miles square. For aerial gunnery, in order to insure the safety of personnel on the ground, the tract of land must be large enough to permit effective maneuvering of the aircraft and have an ample safety zone beyond the range of modern .50-caliber aircraft machine guns. The saving to the Government will not alone be approximately $400,000, the difference in cost of reconstructing the school at Denver rather than at Rantoul, Ill., but also the saving in the cost of this large tract of land for gunnery and bombing purposes.

To summarize, a board of practical, as well as technical, experts specially selected because of their integrity, their high attainments in the Air Corps, and their specialized knowledge and skill, devoted 6 months to an intensive study of the availability and suitability of various localities, and personally visited and inspected 57 proposed locations and considered the facilities and advantages of 27 others, in various parts of the United States. Their exhaustive confidential report, after having been checked and studied for 2 months by the Air Corps, was emphatically approved and recommended. The report was then rechecked and restudied throughout 5 months more by the General Staff and by the Secretary of War. After this exhaustive study, extending over 13 months, the report was sent to the Congress for appropriate legislation. The mere submission of the report to the Congress by the Secretary of War constituted a tacit approval thereof by the War Department. But in answer to a direct question by the chairman of your committee, the War Department has given its unequivocal answer that it favors the enactment of this legislation as it stands.

The Army regards this bill as major legislation involving not only the lives of men but also the national defense and hence the national safety. Proper solution of the question transcends personal, partisan, or local interests. It is a national problem. In arriving at its conclusion your committee has been controlled by facts, not by sentiment or by sectional or local considerations. The Air Corps Technical School is a highly important activity in the plan of national defense. It will increase in importance with the development of military aviation. Its permanent location and establishment in a place best suited to the carrying on of its own particular curriculum should be definitely settled without further delay. From the national point of view, it is of minor importance whether the establishment of this school in one place or another will detract from or contribute to the welfare of any section or local community. It is of great, even vital, importance to the national defense that there be selected that location which is best suited for this particular activity, thereby contributing most to the welfare of the United States of America as a whole, to its safety and its adequate defense.

In the opinion of the War Department, in which I concur, the bill involves an important instrumentality in the plan of national defense. It involves a fundamental and underlying question of military strategy, and the War Department, charged with responsibility for the determination of such questions, has said that this field should be located at Denver.

The Secretary of War favors the enactment of this legislation. The War Department has been given to understand and has been authorized to state that its position in nowise prejudices the program of the President.

Personally and officially I do not care to take the responsibility of superimposing my layman's judgment as against that of military technicians, strategists, and experts of the War Department, nor to go against the recommendations of the Secretary of War. I shall follow the recommendation of the War Department, accept its findings and recommendations, and follow its judgment, because of the nature and importance of the questions involved. In taking this position I believe I voice the sentiment of a considerable majority of the Committee on Military Affairs, at whose direction I made the report.

I am reminded in this connection that—

> Those oft are stratagems which errors seem;
> Nor is it Homer nods, but we that dream.

[Applause.]

Mr. McSWAIN. Mr. Chairman, I yield myself 2 minutes.

Mr. Chairman, I think I am as fair and as impartial a judge of this matter as any Member could be, because no city in my district was a candidate for this school, nor have we any Army activities in the district whatsoever. We did have at one time one old recruiting sergeant, and they even took him away from us; so the War Department has no strings on me, yet I am in favor of this recommendation of the War Department.

A large amount of data has been gathered by this board of officers, and I believe they were as fair and as impartial as it is possible for officers to be. I believe their conclusions are justified by facts, and I am willing myself to accept their recommendation. I may say that in the last year or so I visited Chanute Field, and through former visits I am familiar with the situation at Denver, Colo. Since I have no time to go into details, I am asking all my friends and those who have confidence in my judgment with reference to these matters to follow me in my conclusion that it is desirable to establish this school at Denver, Colo.

[Here the gavel fell.]

Mr. McSWAIN. Mr. Chairman, I yield 10 minutes to my friend the distinguished gentleman from Illinois [Mr. DOBBINS].

Mr. McLEAN. Mr. Chairman, when the Seventy-third Congress met it was my great joy to renew a friendship very dear to me, a friendship that had its origin when the gentleman from Illinois [Mr. DOBBINS] and I studied together in law school. June 6 next will be the thirtieth anniversary of the graduation of our class from the law department of the George Washington University. Mr. DOBBINS, at the end of the present session, will retire voluntarily from Congress to resume his active law practice, and, if I know him as I think I do, to give to his home folks a large portion of his time and of himself in useful, unselfish, and patriotic public service. He brought to the House of Representatives a wide experience in the Postal Service born of many years as an inspector in that branch of our Government and an equipment for the public service gained by many years in the practice of law, and we have come to respect him for his sincerity and industry. He goes from us enriched by the experience he has had here and with all our good wishes. He will leave with us that same respect and esteem, that same affectionate regard, that he left with us who knew him so well as a student in his youthful days.

Mr. Chairman, it is my great privilege under the circumstances to yield to the gentleman from Illinois [Mr. DOBBINS] the balance of my time. [Applause.]

Mr. DOBBINS. Mr. Chairman, I am sure you realize I am deeply appreciative of this tribute that comes to me from the gentleman on the other side of the aisle. It comes as a surprise, but none the less it is appreciated. I am also grateful for the compliments paid by the ranking majority Member of the Military Affairs Committee. It is true that I am soon to leave this Chamber, but I leave it with most pleasant recollections of the confidence I enjoyed from my colleagues, not only during the times we found ourselves in agreement, but during those times when unfortunately we found it necessary to disagree.

Mr. LEWIS of Colorado. Will the gentleman yield?

Mr. DOBBINS. I yield to the gentleman from Colorado.

Mr. LEWIS of Colorado. Mr. Chairman, may I say that the fine things said by the gentleman from New Jersey [Mr. MCLEAN] are most heartily shared by all of us from the West, and although we may differ on some matters of policy, we all regret that Mr. DOBBINS, of his own motion, has refused to be a candidate for reelection. We all wish him the best of success in whatever field he may engage. [Applause.]

Mr. DOBBINS. Mr. Chairman, I hope the Members do not get the idea from these generous eulogies that this is a funeral service. [Laughter.] In this case the corpse is very much alive and kicking, and expects to win his point today. He expects to win it deservedly upon the facts in the case.

You were told that in early life I chose the practice of law as my vocation. I have applied that to a study of this so-called evidence which has been discussed before you today, and I intend to let you have the benefit of that study of this very peculiar report that lies in front of the chairman but which I suspect he has never read. I think only one or two Members of this House have read it. I grant that my good colleague from Colorado has read it, and I have read it, but aside from that I challenge anyone to tell me he has read that testimony throughout, and I fancy that as my colleague from Colorado recalls that evidence there are many things in there he wishes were not there.

They talk to you about a board of experts. Can any man apply to himself the title of expert and thenceforth be accepted as one? What is an expert? In this matter he is a man who understands the science of aviation, the science of military aviation and all the problems that go with it. There was a chairman of this board, Lieutenant Colonel Yount. He has been in my hearing several times when I have demonstrated the faults of his report, and never once has he rendered an explanation of them. Perhaps he is within the hearing of my voice right now. This so-called expert who brings to you a report saying that a field 10 miles square, containing 100 square miles, is the absolute minimum for a bombing field, at the outset of this investigation of various sites stated while conducting an investigation at Rantoul that a half square mile, a mere half section, was adequate for the purposes of a bombing field and machine-gun range; and the other two alleged experts belonging to that board sat there with him and did not

contradict or correct the statement. Why, there is hardly a man on the floor of this House today, nonexpert though he may be, who does not know that a half section of land is not adequate for a machine-gun and bombing range. I see the chairman of the committee pointing his hand straight up in the air and indicating that all that is necessary is to drop a bomb straight down and you can hit a half section of land; but that is not the way, I may say to my expert chairman, bombing is done in the Army. A bomb is dropped from a fast-moving plane and a plane that may be 10,000 or more feet in the air. As it is released it travels forward with the speed of the plane, and may land half a mile or more beyond a line perpendicular to where it was released.

Mr. McSWAIN. Mr. Chairman, will the distinguished gentleman yield?

Mr. DOBBINS. I yield, indeed, to the splendid chairman of the Military Affairs Committee.

Mr. McSWAIN. Will not the gentleman admit that he must have misinterpreted entirely the gesticulation I was making?

Mr. DOBBINS. I saw the gentleman, and thought I could correctly interpret his gesture and whispered comment.

Mr. McSWAIN. I submit the gentleman did, but he cannot read my mind, and he did not hear me say anything. [Laughter.]

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. DOBBINS. I yield to the gentleman from Texas.

Mr. BLANTON. What is the distance from Chicago to Denver—something like 900 miles?

Mr. DOBBINS. About 900 miles.

Mr. BLANTON. Is there not plenty of room and need to keep this bombing field where it is and within the 2 years put another one out in Denver?

Mr. DOBBINS. If Denver must have one, there is plenty of room there for one, I am sure.

Mr. BLANTON. I am sure another one 2 years from now would not be too many.

Mr. DOBBINS. I do not think so, but let me tell my friend from Texas that the Army has a bombing field in California, a large bombing field, and it does not use it.

Mr. BLANTON. That is about 600 miles away from Denver.

Mr. DOBBINS. Yes; and it has one at Fort Knox in Kentucky, and our boys from Chanute Field go down there 10 days in the year. They pack up their trucks and go down there and practice bombing. That is all the time they have chosen to require, and I assume it is enough.

Experts will tell you that the best bombing and machine-gun practicing is done over water, shooting at the shadow of the plane in the water, which darts about rapidly and furnishes an excellent target, instead of a fixed target, such as you use if you fly over land. Water is there in abundance just touching the State of Illinois, and only 100 miles away from this field is the whole southern tip of Lake Michigan, not with 100 square miles but 10,000 square miles, on which there is little commerce and which is under the control of the War Department, to be used as it pleases. Within 50 miles of Chanute Field are the Kankakee marshes, where all the land you want can be purchased for from $15 to $25 an acre. Oh, no; it is not the need for a bombing field that motivates our experts. If 100 square miles were essential for their purposes as a military requirement, why did not these experts know it when they set out upon this mission?

Oh, General Foulois told the Appropriations Committee shortly after this board had been set up that great care had been taken in the selection of these men and that an effort had been made to get men who would not be prejudiced against Chanute Field. I do not know why he was so careful to avoid prejudice unless he was conscious that a prejudice existed. This is a very strange statement for the general to make, but let me read what he said just before this board was selected:

> What I am hoping to do is to have a board that knows nothing about it.

I think he got such a board. [Laughter.]

Mr. Chairman, I am now going to yield to the Member who prepared the majority report of the committee, my friend, the gentleman from Vermont [Mr. PLUMLEY], who would not yield to me. I want to ask him whether or not before this report was prepared, the gentleman from Vermont had seen the letter sent to his committee by the Secretary of War, dated February 24, 1936.

Mr. PLUMLEY. I think I heard the gentleman from Illinois refer to it.

Mr. DOBBINS. Did the gentleman ever see the letter?

Mr. PLUMLEY. I do not think I saw the letter.

Mr. DOBBINS. The letter was addressed to the chairman of the committee. Does the gentleman know whether it was read before his committee?

Mr. PLUMLEY. I heard the gentleman refer to it.

Mr. DOBBINS. Is that the first you ever heard of it?

Mr. PLUMLEY. Yes.

Mr. DOBBINS. I am surprised, because there appears in the report of the committee a statement from a colonel in the War Department saying that the War Department favors the passage of the bill.

Why did not the letter from the Secretary of War appear in the report? Here is what the Secretary of War says at the conclusion, after discussing the bill.

He says the transfer and construction will entail an expenditure of something over $7,000,000, and then he concludes by saying that the passage of the bill would not conflict with the financial program of the President provided the expense thereof be not included in the War Department budget prior to the fiscal year 1939.

Subject to the above limitation, he writes, the War Department approves the bill. Why was not that put in the report, instead of what some understrapper said? Why should we have to dig it out of the files of the Military Affairs Committee? I do not know, I submit it to my colleagues for their consideration.

The gentleman from Alabama [Mr. HILL] says it is a matter of life and death, that the country is going to the demnition bowwows if this field is not transferred. Is not it strange that it will not be a matter of life and death for 2 years? For the Secretary of War advocates no moving of the school before 1939.

Mr. LUCAS. Will the gentleman yield?

Mr. DOBBINS. I am glad to yield to my colleague.

Mr. LUCAS. Does the gentleman think that if this field was located in either of their respective districts these gentlemen would object to the transfer?

Mr. DOBBINS. Oh, I would not impute bad faith to them. They have been very fair in dealing with me. But I suspect that if one of them had the present field located in his district he would be just as diligent in inquiring into the real facts of the situation and as reluctant to accept biased conclusions of so-called experts in the matter as I have been.

I discovered as a result of my examination and pointed out to this committee 15 of the grossest misrepresentations of conditions at Chanute Field that could be imagined.

Mr. PLUMLEY. Will the gentleman yield?

Mr. DOBBINS. I yield.

Mr. PLUMLEY. Is it not a fact that this bill is solely one to authorize the selection of a site?

Mr. DOBBINS. It is solely for a purpose which you gentlemen on your side of the Chamber have been condemning for the last 3 years, to rubber stamp a recommendation to carry out the desire on the part of certain Army officers to acquire for themselves greater social and recreational opportunities.

Mr. O'MALLEY. Will the gentleman yield?

Mr. DOBBINS. Yes; gladly.

Mr. O'MALLEY. Is the Chanute Field available for Reserve officers?

Mr. DOBBINS. Yes. Chanute Field is close to the center of population in this country.

Mr. O'MALLEY. In my State the only place the Reserve officers can get their training is down there, and they do not want to go out to Colorado to get it.

Mr. DOBBINS. Mr. Chairman, a great deal of talk has been indulged in about the poor climate of Illinois. Why, the colonel from the War Department admitted, as the facts compelled him to admit, that there is not any better flying place in the country than in Illinois. There are emergency landing fields available everywhere, and they are available only in rare instances in Colorado. They never have mentioned this fact, that the students attending that school will have to travel on an average of about 900 miles or 1,000 miles farther to get to the school if it is moved to the West away from the center of population, and the cost of that every year will be from $25,000 to $50,000. They have not mentioned the question or told this Committee and have made no calculation upon the subject of the cost of transporting quartermaster supplies to this school if it is moved to Denver. They did comment on the fact that the quartermaster supplies would still come from the quartermaster's depot at Chicago, if it is moved out there, and that matériel and flying equipment must still come from Dayton, 900 miles farther away from Denver than Chanute is. Yet these experts are ready to spend the money of the people which this Congress must appropriate and which this Congress must find by taxation, and they gave no thought and no calculation to the amount of that or the increased upkeep cost of this new location.

Mr. MAY. Mr. Chairman, will the gentleman yield?

Mr. DOBBINS. Yes, indeed.

Mr. MAY. The gentleman perhaps knows as a matter of fact that I as one member of the Military Affairs Committee signed the minority report, the only one that I have signed since I have been in Congress. I signed that after reading carefully several times the report of this board on this particular ground, and I want to read to the gentleman from that report:

> There are no water sports and practically no hunting. Two country clubs at Urbana and Champaign offer limited facilities to officers for golf and tennis.

Mr. DOBBINS. Why bring that up? Why embarrass further these discomfited gentlemen?

Mr. MAY. After reading that carefully I made up my mind that the motive back of it was not the training of these boys in a mechanical understanding of this plant, after they had testified that 90 percent of all the work they do is on the ground.

Mr. DOBBINS. Not 90 percent, but 99 percent.

Mr. MAY. That is right.

Mr. DOBBINS. When I read that it made me mad. I know those golf courses and I know that they are good. I asked them what they meant by limited facilities, and their reply in the hearings was that as nonresident members they were not allowed to vote in the annual elections. Think of that!

Mr. O'MALLEY. Then it becomes a fact that you are not furnishing the right kind of social life at Chanute Field, and perhaps they can get a lot better social life in Colorado?

Mr. DOBBINS. Oh, Army officers are human just like the rest of us. The social advantages of Rantoul are not quite equal to what they are in Milwaukee or in the splendid cities of Kentucky or in my own cities of Urbana and Champaign, but they are only 14 miles away from the latter community, and since that prejudice was first formed, transportation facilities between my community and the field have greatly improved.

Mr. MEEKS. Mr. Chairman, will the gentleman yield?

Mr. DOBBINS. Yes. I am glad to yield to my colleague and neighbor.

Mr. MEEKS. The gentleman knows something about drainage. Something is said in the report about that. Knowing that the gentleman has had a great amount of experience with drainage matters in the State of Illinois and in the vicinity of this field, would he kindly make some statement in regard to that?

Mr. DOBBINS. I thank the gentleman for his observation, because that involves 1 of a list of 15 errors that I fear I am not going to find time to point out in detail. They did say in their report that the fall across Chanute Field is insufficient for adequate drainage. They admitted, when testifying in the Senate committee, that 10 feet to a mile is adequate for drainage, and then they submitted the data placed there in front of the chairman, which includes a geological survey map of this square mile occupied by Chanute Field, showing indisputably that the fall across that field is 15 feet to the mile. Also, they said that the cost of living at Rantoul is far greater than it is at Denver. My good friend Mr. LEWIS showed by tables he placed in the RECORD that it is about the same, and I think that gives Denver a break, for my belief is we can live much more cheaply in Illinois than you can in Colorado. They also said the temperature was excessively hot, and that 60 days in the year it got above 90. That was not true. They did not even know that the temperature is regularly taken and recorded right there on the field. So they went over to Springfield, 100 miles away. They did not know, these experts, that at Chanute Field the Army Signal Corps maintains a sort of Weather Bureau service; and when that was brought to their attention, what did they say? They acted just like all pseudo experts do; they were all tangled up.

They said, "Oh, those readings were made by privates, and we could not rely on them." [Laughter.] That was their answer to that.

They said the water there was bad and would not yield to treatment. That was conclusively refuted by the expert testimony of reliable water-service engineers.

On the proposed Denver field they submitted two estimates of the cost of grading that field, where the ground levels have a variable elevation of more than 50 feet. There was an estimate of $25,000 and an estimate of $75,000. They generously accepted the $25,000 estimate. Later on, in their testimony before the Military Affairs Committees, they admitted that it would cost $100,000.

They say in this wonderful expert report, that insect pests are a nuisance at Chanute Field. The only testimony in this record here is by a medical officer who says the insects do not constitute a nuisance. In their report they said that the respiratory disease rate is excessive at Chanute. The medical officer testified to the exact opposite—that the respiratory diseases there were not excessive or different from what they were elsewhere. They testified as to the area of the bombing range, of which I have told you, first saying that one-half square mile was adequate, and later that a hundred square miles was necessary. There you find that old trick of determining just what you want and then afterward writing the specifications, so that that is the only thing you can get. It is a trick, I understand, that has been practiced before even in our great War Department.

Then there was the ridiculing of our country clubs. They did not find golf facilities there. There were not swimming facilities.

They said they had to have a field where they could take off in the prevailing wind without any obstructions. The prevailing wind at this field in Denver is from the south. The square mile immediately south of this proposed field is occupied by a cemetery with tombstones on it, and my nonexpert opinion is that it would be a very poor place in which to make an emergency landing. [Laughter.] But, above all, to cap the climax, here comes our good friend, Mr. HILL of Alabama, saying it is necessary to put this school at Denver because it has a high elevation, and the flyers can go up high. Well, how high is the sky at Rantoul? [Laughter and applause.]

The CHAIRMAN. The time of the gentleman from Illinois [Mr. DOBBINS] has expired.

Mr. McSWAIN. Mr. Chairman, I yield 8 minutes to my colleague from Pennsylvania [Mr. FADDIS], a member of the committee.

Mr. FADDIS. Mr. Chairman, I am sorry I do not have time to go into the matter of paying compliments, as I would like, indeed, to pay extended compliments to our distinguished colleague the gentleman from Illinois [Mr. DOBBINS], but I must get to the matter at hand. I fear, however, that the vote upon this matter will be based more upon paying a

compliment to him than upon the real merits of the legislation.

Summing up this matter, it resolves itself into this question: A board of officers of the Air Corps of the United States Army was appointed to decide upon a proper site for the Air Corps Technical Training School. After extended examination of a great many localities throughout the United States, they handed in a very extensive and complete report.

Mr. SABATH. Mr. Chairman, will the gentleman yield?

Mr. FADDIS. I cannot yield. I do not have the time.

This report has been quoted in part today. I want to call the attention of the Members of this Committee to the fact that there is a great deal more to the report than that which has been quoted by the opponents of this legislation. This report is very thorough and is composed of a great many other subjects than that having to do with the recreational facilities at this field. It takes up the site. It takes up the climatic conditions, the moral factors, utilities, transportation and communication, geographical location, construction and labor costs, and then a general summary.

The same headings were gone into both as to the Denver site and as to the Rantoul site. I assure you that the Committee on Military Affairs approached this matter with a great deal of deliberation, and that they approached it with a great deal of reluctance insofar as they were up against the responsibility of making a decision as to whether this field should, in the interest of the service, in the interest of national defense, be moved from its present location to another one.

There has been an attempt to becloud the issue. There has been an attempt to lead the minds of this Committee off of the question at issue by referring to that part of the report having to do with the recreational facilities. There has been an attempt to impeach the sincerity of the board and belittle their motives. This is a most unworthy move, as I am sure that the board acted in accordance with their best judgment and with the utmost sincerity. There has been an attempt to imply that the board was influenced in its decision by the Denver Chamber of Commerce. That is an unworthy insinuation. The one essential point in the entire matter is, will the moving of this field be for the improvement of our system of national defense?

Let us just for a moment look into the purpose of this school. The Members of this Committee will remember their college or high-school days and their various studies. Let us take, for instance, physics. When you studied physics you studied the theoretical side and then that study was supplemented by practical demonstrations in the subject matter covered in the study of the theory. The practical demonstration was for the purpose of fixing in your mind what you had studied in theory. It was important that it come in proper time and sequence. This school is run exactly on that same plan. The students study the theoretical side of the question and that study is supplemented with practical demonstrations. You all know how important it is in such a course, that when you have studied the theoretical side, that the practical demonstrations shall be carried out at the proper time and in the proper sequence.

What your Committee on Military Affairs took into consideration above all other things was the very fact that in this course of instruction, while they are pursuing this theoretical instruction, if the weather is not proper to follow it up at the proper time with practical demonstrations, then the students have lost a great deal of the value of the course. The evidence presented to the committee was overwhelming that such is a frequent occurrence. The evidence before the committee showed that in a great many instances students had left that school where they had completed the theoretical course, but had been unable to complete more than 50 percent of the practical course. Their course in such cases was only three-fourths complete.

As to the letter from the Secretary of War, part of it was read and, of course, part of it was not. I wish to read from the letter of the Secretary of War, dated February 24, 1936, in the third paragraph:

> The above report was carefully studied in the War Department. The War Department arrived at the conclusion that the board's rating of the Denver field was fair and accurate, and that the site of the Chanute Field is, as reported by the board, unsuitable for the purpose.
>
> Nevertheless, in view of the interest which had been shown in the matter by the Congress, the War Department transmitted this report to your committee without recommendation but with an expression of hope for an early decision in the matter.
>
> The need for some action in respect to construction of an Air Corps technical school is critical. It is the opinion of the War Department that action to determine the matter should not longer be delayed. The proposed bill offers what the War Department considers an admirable solution. There is a marked lack of Air Corps establishments in the Rocky Mountains. For this reason alone, in addition to the many advantages enumerated by the board, the location at Denver of such a school, with airdrome and bombing and gunnery ranges available for transient units, is considered desirable.

This board was appointed by order of the Secretary of War and pursuant to its duties has recommended the change in good faith to increase the efficiency in our Air Corps.

Another important consideration is the relative cost of making either of the two locations into a suitable school. At Rantoul we must build from the ground up and in addition furnish a bombing range 10 miles square. Taking an average of the figures furnished for the RECORD by the gentleman from Illinois [Mr. DOBBINS], this range will cost $1,280,000. At Denver it will be furnished free. A site for the school will be furnished free at Denver, and this site will have in addition a building worth $400,000. This makes an item in favor of the proposed new location of $1,680,000, a very considerable sum.

The CHAIRMAN. All time has expired. The Clerk will read the bill for amendment.

The Clerk read as follows:

> *Be it enacted, etc.*, That the Secretary of War be, and he is hereby, authorized to establish in or near Denver, Colo., the Air Corps Technical School and to accept on behalf of the United States, free from encumbrance or conditions and without cost to the United States, for use as a site for the Air Corps Technical School, the title in fee simple to 640 acres of land, more or less, within the city limits of the city of Denver, Colo., including the property known as the Agnes (Phipps) Memorial Sanitarium, together with existing buildings and equipment located thereon; and also a tract of land within the State of Colorado, suitable for use as an aerial gunnery and bombing range by the Army Air Corps: *Provided*, That in the event a donor is unable to perfect title to any land tendered as a donation, condemnation of such land is authorized in the name of the United States, and payment of any and all awards for title to such land as is condemned, together with the cost of suit, shall be made by the donor.

Mr. SABATH. Mr. Chairman, this is an important matter. I think we ought to have a quorum present. Mr. Chairman, I make the point of order there is not a quorum present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and two Members are present, a quorum.

Mr. LUCAS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I yield to no individual in my advocacy of an adequate national defense, and, for a number of years, as a Reserve officer in the Army and as a member of the Illinois National Guard at the present time, I have taken considerable interest in this very important national question. I know something about the subject matter in hand. Camp Grant, Ill., is one of the most important and up-to-date Army camps existing in America. Every year they have 2 weeks of training with some 15 or 20 airplanes doing all kinds of maneuvering and stunts. We have a sufficient range to take care of all of the bombing practice necessary for those planes; yet, Mr. Chairman, to show the insignificance of that part of Army maneuvers at this particular time in our history, I have failed to see a single bomb dropped from a plane during the last 2 years at Camp Grant.

I have heard considerable about the air, the sky, the invisibility, the clouds, and the low ceiling around Rantoul, Ill. I wonder if we were met with a similar argument when the same generals from the Army testified some 2 or 3 years ago that the weather conditions around Dayton, Ohio, warranted the removal of this school from Rantoul, Ill. At that

time they wanted to move it into Ohio, where they had the same character of climatic and atmospheric conditions and with a population density the same as we have in Illinois. Within 2 years, however, we find the same group recommending that the field go west instead of east.

I am particularly interested in the observations that have been made by my distinguished colleague from Illinois with regard to the recreational and social duties of these men connected with the Army. I know something about that, too, Mr. Chairman. That is the last thing this House should consider when it comes to transferring a school like the one at Rantoul away from that spot and to some place in the West. I agree with the distinguished gentleman from Texas [Mr. BLANTON] that if there is anything this country needs in addition to the fine program of defense that has been given us charitably by Republicans and Democrats alike during the present administration, it is a greater air force, more air schools, and not the transfer of a single one. As a Member of this House I would be happy to vote for any kind of an appropriation that would give Denver the type of school it seeks at the present time; but we in Illinois are asking that you not take away something that has been with us for a period of 20 years, an institution that was established in the beginning by the War Department as a school worth while and one that we believe is still worth while for the people of Illinois and this Nation from the standpoint of national defense. [Applause.]

[Here the gavel fell.]

Mr. McSWAIN. Mr. Chairman, I rise in opposition to the pro-forma amendment.

Mr. Chairman, I move that all debate on this amendment and on the bill close in 5 minutes.

The motion was agreed to.

Mr. McSWAIN. Mr. Chairman, I took only a couple of minutes on the bill, and did not expect, of course, this motion would be made to amend in this way. I thought we would come immediately to a consideration of the merits of the bill.

As I have said, and as you gentlemen know, I am in no sense at any time the echo of the War Department or any board of officers; but having heard this whole thing in and out for the last 8 or 10 years, being familiar with the ground, being familiar with the problem that confronts the Air Corps in the training of its officers and its enlisted personnel, I am convinced that it is to the interest of national defense that there be established at Denver, in accordance with the recommendation of this board of officers, an Air Corps technical training school.

The passage of this bill does not of necessity mean that there will not be any Army activities hereafter at Rantoul, Ill., at what is now known as the Chanute Field. This bill does not say it shall be removed. This bill does not say that Chanute Field shall be closed. The land there belongs to the Government of the United States and was bought by the Government at a good price; as a matter of fact, for more than it would bring today.

Mr. Chairman, I want to say it is good land from a farm point of view. The land around there is as fertile as I ever saw anywhere, and it would be prohibitive to think of acquiring a bombing range which would include such valuable farm land as is located in that part of the country.

Let me give you a little information from a financial point of view. The buildings alone, which Denver offers to give the Government absolutely free, will save an expenditure of over $400,000. We must have a bombing range. There is no doubt about that. It is true, as stated, that we now have a bombing range in California, and it is being used now. I have seen them dropping bombs myself out there within the last 8 months. I was out there last October.

Mr. Chairman, if we were to acquire the necessary area for a bombing range anywhere within a practical distance of Chanute Field it would require the expenditure of an additional $1,280,000. Add that to the $400,000 which the Government will save in the buildings already constructed out in Denver and there is an advantage of $1,640,000 in favor of Denver.

[Here the gavel fell.]

Mr. MAY. Mr. Chairman, I offer a preferential motion.

The Clerk read as follows:

By Mr. MAY: I move that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken out.

Mr. MAY. Mr. Chairman, as I stated a while ago, in the 6 years I have been a member of the Committee on Military Affairs I have never filed a minority or dissenting report. I have studied this case very carefully, however, and I am very reluctant to take a stand as between my colleagues from the State of Illinois and the State of Colorado. I have always believed in the rule that protects the under dog, and I am usually on his side of the fight.

Mr. Chairman, for 15 years this school has been maintained at Rantoul, Ill. Two or three efforts have been made to remove it from this location. This is perhaps the third effort.

Mr. Chairman, I want to answer very briefly, if I can, the argument made by my distinguished chairman, with whom I dislike very much to disagree, in regard to the question of finances. I might stop here to observe that if I were in his place at the end of the Seventy-fourth Congress of the United States I would apologize to the country and the Congress for raising a question about the small sum of $400,000.

Mr. McSWAIN. Well, I will apologize, if it will satisfy the gentleman.

Mr. MAY. The gentleman stated there would be a gain of $400,000 in connection with the buildings located at Denver and that added to another sum would make a difference of $1,200,000. According to the testimony given by one of the Army officers the difference in cost between leaving this school at Rantoul without any additional improvements there and taking it to Denver and building a new school is $6,758,000. You will find this statement at the bottom of page 68 of the hearings had by the House Military Affairs Committee. In other words, that is $6,758,000 in favor of leaving the school at Rantoul, Ill., instead of taking it up root and branch and moving it 700 or 1,000 miles west so that these Army officers may have the benefit of a golf course or a tennis court. The prairies of Illinois are not broad enough for their use.

Mr. Chairman, I am opposed to this bill because the testimony shows very conclusively that this school should not be moved. I asked about the question of atmospheric conditions so far as the two fields are concerned, and it was shown that there is very slight difference. Furthermore, the evidence shows quite conclusively that more than 95 percent of the activities of these students are in the mechanics on the ground and I am more interested in seeing that the young air-corps students learn something in the way of a useful career than I am that someone has a better and more desirable golf course. Finally, Mr. Chairman, may I refer to a personal consideration by which I have not been influenced, but to which I am pleased to refer. This school is located in the district so long and so ably represented by our distinguished colleague [Mr. DOBBINS], and he has fought such a gallant fight to retain the school at Rantoul, and his zeal and good judgment as one personally familiar with the situation entitles his views to great weight in the determination of this important matter. He is leaving the House at the end of this session and I am sure he not only carries with him the esteem and high regard of all his colleagues, but of him his people can truthfully say, "Well done, good and faithful servant." We must not send him down to defeat in this last great battle for his home community. We will not, and I shall do my small part by voting against this bill, which ought not to pass. [Applause.]

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. TARVER, Chairman of the Committee of the Whole House on the state of the Union, reported that that Committee, having had under consideration the bill (S.

3398) to establish the Air Corps Technical School and to acquire certain land in the State of Colorado for use as a site for said Air Corps Technical School and as an aerial gunnery and bombing range for the Army Air Corps, pursuant to House Resolution 515, he reported the same back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the third reading of the Senate bill.

The bill was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and on a division (demanded by Mr. McSWAIN) there were—ayes 38, noes 97.

Mr. McSWAIN. Mr. Speaker, I object to the vote on the ground there is not a quorum present.

The SPEAKER. The Chair will count. [After counting.] One hundred and fifty-seven Members are present, not a quorum.

The Doorkeeper will close the doors, the Sergeant at Arms will notify the absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 81, nays 206, answered "present" 1, not voting 138, as follows:

[Roll No. 107]

So the bill was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. McCormack (for) with Mr. Dirksen (against).
Mr. Richards (for) with Mr. Chandler (against).
Mr. Colmer (for) with Mr. Schuetz (against).
Mr. Duncan (for) with Mr. Schaefer (against).
Mr. Hope (for) with Mr. Kelly (against).
Mr. Dorsey (for) with Mr. Beam (against).

Until further notice:

Mr. Scrugham with Mr. Hamlin.
Mr. Reilly with Mr. Caldwell.
Mr. Peterson of Florida with Mr. Rogers of Oklahoma.
Mr. Carmichael with Mr. Kee.
Mr. Deen with Mr. Robertson of Utah.
Mr. Sirovich with Mr. McGroarty.
Mr. Utterback with Mr. Eagle.
Mr. Duffey of Ohio with Mr. Sandlin.
Mr. Zioncheck with Mr. Sanders of Louisiana.
Mr. Berlin with Mr. Cross of Texas.
Mr. Parks with Mr. Oliver.
Mr. Dunn of Mississippi with Mr. Brooks.
Mr. Lesinski with Mr. Moritz.
Mr. Doughton with Mr. Treadway.
Mr. Woodrum with Mr. Perkins.
Mr. Cary with Mr. Lord.
Mr. Green with Mr. Bacharach.
Mr. O'Connor with Mr. Darrow.
Mr. Sears with Mr. Gifford.
Mr. Cullen with Mr. Stewart.
Mr. Montague with Mr. Andrew of Massachusetts.
Mr. Vinson of Georgia with Mr. Woodruff.
Mr. Clark of North Carolina with Mr. Bolton.
Mr. Bulwinkle with Mr. Eaton.
Mr. Gambrill with Mr. Thurston.
Mr. Hancock of North Carolina with Mr. Brewster.
Mr. Rayburn with Mr. Fish.
Mr. Samuel B. Hill with Mr. Hollister.
Mr. Kerr with Mr. Maas.
Mr. Lambeth with Mr. Seger.
Mr. Wilcox with Mr. Risk.
Mr. Mitchell of Tennessee with Mr. Carter.
Mr. Dingell with Mr. Doutrich.
Mr. Boykin with Mr. Cavicchia.
Mr. DeRouen with Mr. Goodwin.
Mr. Dickstein with Mr. Hartley.
Mr. Driscoll with Mr. Fenerty.
Mr. Buck with Mr. Kinzer.
Mr. Nichols with Mr. Englebright.
Mr. Ferguson with Mr. Gwynne.
Mr. Celler with Mr. Higgins of Connecticut.
Mr. Mansfield with Mr. Marcantonio.

Mr. Hook with Mr. Withrow.
Mr. Dietrich with Mr. Higgins of Massachusetts.
Mr. Quinn with Mr. Gillette.
Mr. Barden with Mr. Houston.
Mr. Sadowski with Mr. Claiborne.
Mr. Lee of Oklahoma with Mr. Sweeney.
Mr. Montet with Mr. Murdock.
Mr. Werner with Mr. Wood.
Mr. Stubbs with Mr. Kopplemann.
Mr. Curley with Mr. Scott.
Mr. Chapman with Mr. Healey.
Mr. O'Neal with Mr. Gasque.
Mr. Brennan with Mr. Hennings.
Mr. Shanley with Mr. Dear.
Mr. McKeough with Mr. Dockweiler.
Mr. Shannon with Mr. Disney.
Mr. Rabaut with Mrs. Jenckes of Indiana.
Mr. Gray of Pennsylvania with Mr. Buckley of New York.

The result of the vote was announced as above recorded.

On motion of Mr. DOBBINS, a motion to reconsider the vote by which the bill was rejected was laid on the table.

MR. AND MRS. A. S. MULL

Mr. RAMSPECK. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 8069) for the relief of Mr. and Mrs. A. S. Mull, with a Senate amendment, and concur in the Senate amendment.

The Clerk read the Senate amendment, as follows:

Page 1, line 5, strike out "$5,000" and insert "$4,000."

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

The Senate amendment was concurred in, and a motion to reconsider was laid on the table.

PERMISSION TO ADDRESS THE HOUSE

Mr. TABER. Mr. Speaker, I ask unanimous consent that on Monday next, after the reading of the Journal and disposition of matters on the Speaker's table, I may be permitted to address the House for 10 minutes.

Mr. MAVERICK. I object, Mr. Speaker.

Mr. KNUTSON. Would the gentleman object to a similar request from me?

Mr. MAVERICK. I am objecting because the "red rider" bill is coming up Monday.

STATE PARK IN IOWA

Mr. BIERMANN. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H. R. 11929) granting to the State of Iowa for State park purposes certain land of the United States in Clayton County, Iowa.

Mr. SNELL. Mr. Speaker, reserving the right to object, I think the gentleman from Iowa should at least tell us what this bill does and what is the emergency for its passage at the present time.

Mr. BIERMANN. Mr. Speaker, this bill deals with some land that a lady named Mrs. Munn and her son, Dr. Munn, gave to the United States Government a few years ago for park purposes. It was to be under the authority of the Biological Survey. They admittedly have not done a good job of taking care of it for park purposes, and this bill would transfer the land to the Iowa Conservation Commission, which is our State park board. There is not a penny of expense involved, and the Committee on Agriculture has unanimously reported it out.

Mr. TOBEY. Mr. Speaker, if the gentleman will permit, I may say to the gentleman from New York [Mr. SNELL] that the Committee on Agriculture unanimously favors the bill. The committee went over it carefully yesterday morning.

Mr. SNELL. And there is no reason why this transfer should not be made?

Mr. TOBEY. No.

Mr. KNUTSON. It is a meritorious bill, and I hope the gentleman will withdraw his objection.

Mr. SNELL. I have no objection to the bill, but I wanted an explanation of its purpose.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That there is hereby granted to the State of Iowa, upon the conditions and limitations hereinafter expressed, the following-described land of the United States lying and being in the Upper Mississippi River Wild Life and Fish Refuge, in Clayton County, Iowa, aggregating 544.27 acres, more or less, to be held and administered by said State for the purposes of a State public park:

Lots 2, 3, and 4, section 35, township 95 north, range 3 west, fifth principal meridian (excepting, however, from said lot 2 a strip of land on the north side 8 chains wide at the east end and 12 chains wide at the west end, containing 28.72 acres, more or less; and also excepting from said lots 2, 3, and 4, a strip of land containing 6.25 acres, more or less, being the right-of-way of the Chicago, Milwaukee, St. Paul & Pacific Railway), the parcel hereby conveyed containing, according to survey, 127.73 acres, more or less.

Lot 21, block 11; lot 21, block 13; lots 7, 8, 12, 14, and 17, block 14; and lots 4, 5, 6, 7, 8, and 9 block 42; all situate in the James McGregor, Jr., addition to the town of McGregor, Iowa, containing according to survey 1.57 acres, more or less.

A parcel of land in section 22 and 27, township 95 north, range 3 west, fifth principal meridian, described as follows:

Beginning at corner 1, the center of section 27, an established fence corner; thence south 89°23′ east, with quarter-section line, 18.93 chains to corner 2, a 2-by-2-by-15-inch oak stake beside fence corner of land formerly owned by Pearl Johnson; thence with boundary of land formerly owned by Pearl Johnson, north 44° east 7.98 chains to corner 3, an elm post 5 inches in diameter, 4 feet above ground; thence south 54° east exactly 5 chains to corner 4, an elm post 4 inches in diameter, 4 feet above ground; thence south 44° west exactly 4 chains to corner 5, an elm stake 3 inches in diameter, 1 foot above ground; thence south 89°23′ east, with quarter-section line and leaving land formerly owned by Pearl Johnson, 14.60 chains to corner 6, the quarter section between sections 26 and 27, a 6-by-6-by-48-inch post above ground, scribed "US", and a 1½-by-15-inch iron pipe above ground, in a mound of stone, a 10-inch red oak bears north 35° west thirty-eight one-hundredths, blazed and scribed "BT 5–2"; thence north, with the line between sections 26 and 27, 37.90 chains approximate, a 4-by-4-by-48-inch fir post in mound of stone on southwest side of road, exactly 40 chains to the line between sections 22 and 27, exactly 43 chains to corner 7, a point on west bank of the Mississippi River and in the east line of section 22; thence north 28°11′ west, with west bank of the Mississippi River, 5.30 chains to corner 8, in the south line of "C" Street of the town of McGregor; thence south 86°48′ west, with south line of "C" Street, 4.20 chains to corner 9, a 2-by-2-by-12-inch ash stake, above ground, at a point determined as the northeast corner of the unnumbered town lot owned by Eva Jordan; thence south 3°12′ east, with the east line of the Eva Jordan lot as determined by this survey, 1.51 chains to corner 10, a 2-by-2-by-12-inch ash stake; thence with four lines in rear of block 14, south 86°48′ west, 10.27 chains to corner 11, a point; thence south 77°21′ west, 4.19 chains to corner 12, a point; thence north 49°38′ west, forty-two one-hundredths chain to corner 13, the east corner of lot 19, block 14, a 4-by-4-by-36-inch fir post above ground in a mound of stone, scribed "US Corner 5–8"; thence south 40°22′ west, 6.19 chains to the line between sections 22 and 27, 6.33 chains to corner 14, the east corner of lot 1, block 13, a 7-by-7-by-36-inch butternut post above ground, scribed "US 5–9", in a mound of stone; thence south 49°38′ east, 1.51 chains to corner 15, a 9-inch white oak tree with a 5-by-5-by-24-inch ironwood post above ground, scribed "US 5–10", in a mound of stone, beside it, a 15-inch red oak bears north 50° east eighteen one-hundredths, blazed and scribed "BT 5–10"; thence south 40°22′ west, 1.51 chains to corner 16, an 8-by-8-by-36-inch ironwood post above ground, scribed "US 5–11", in mound of stone; thence north 49°38′ west, 1.51 chains to corner 17, a 1-by-4-by-36-inch oak stake above ground, at the east corner of lot 3, block 13; thence south 40°22′ west 18.75 chains to corner 18, the east corner of lot 5, block 11; thence south 49°38′ east 1.59 chains to corner 19, a 2-by-2-by-12-inch elm stake above ground, in mound of stone; thence south 0°24′ east, 1.66 chains to corner 20, a 2-by-2-by-12-inch elm stake; thence south 20° east 1.11 chains to corner 21, a 2-by-2-by-12-inch oak stake on the north line of Fayette Street; thence east, with the north line of Fayette Street, 2.83 chains to corner 22, at the intersection with the east line of State Street; thence south 0°24′ east, with the east line of State Street, 9.09 chains to corner 23, at the intersection with the south line of Howard Street, a 4-by-4-by-36-inch fir post above ground, scribed "US Cor. 5–18", beside a 24-inch red oak; thence west 6.36 chains to corner 24, in the quarter-section line between the northwest quarter and the northeast quarter of section 27, a 4-by-4-by-36-inch fir post above ground, scribed "US Cor 5–19", a 14-inch white oak bears south 20° east sixty one-hundredths, blazed and scribed "BT–19"; thence south 0°24′ east, with the quarter-section line between the northwest quarter and the northeast quarter of section 27, 4.53 chains to corner 25, a 4-by-4-by-36-inch fir post above ground, scribed "US Cor 5–20", an 8-inch hickory bears north 85° west fifty one-hundredths, blazed and scribed "BT 5–20"; thence north 70°37′ west 4.36 chains to corner 26, a 2-by-2-by-12-inch elm stake above ground; thence south 19°23′ west, with line in rear of block 42, seventy-six one-hundredths chain to the northeast corner of lot 1, block 42, 8.42 chains to corner 27, in the quarter-section line, a 6-by-6-by-48-inch post above ground, in mound of stone; thence south 89°23′ east 6.85 chains to the place of beginning (excepting therefrom a circular piece of ground, 2.27 chains in diameter surrounding the McGregor City Water Reservoir, containing forty-one one-hundredths acre, more or less; and a strip of land containing 1.50 acres, more or less, being the right-of-way of the Chicago, Milwaukee, St. Paul & Pacific Railway), the parcel hereby conveyed containing according to survey 152.35 acres, more or less.

Lots 6, 7, 8, 12, 13, 14, 15, 16, 17, and 18, block 30; lots 1, 2, 3, 4, 5, 6, 7, west half lot 9, all of lots 10, 11, 12, 13, 14, and 15, block 33; lots 1, 2, 3, 4, 5, 9, 10, 11, and 12 block 36; all situate in the James McGregor, Jr., addition to the town of McGregor, containing according to survey 3.72 acres, more or less.

A certain parcel of land in the NW¼ sec. 27, T. 95 N., R. 3 W., fifth principal meridian, described as follows:

Beginning at corner 1, the quarter corner between sections 27 and 28, an established fence corner with a 1½ by 12-inch iron pipe above ground, beside it; thence south 89°23′ E., with the quarter-section line between the NW¼ and the SW¼ of section 27, 11.16 chains to corner 2, an established fence corner; thence north 18°14′ E., 13.31 chains to corner 3, an established fence corner with a 4 by 4 by 36-inch hickory post above ground, scribed "US 6–3", beside it, a 10-inch hickory bears north 25° west 42 blazed and scribed "BT 6–3"; thence south 70°57′ E. 3.93 chains to corner 4, the northwest corner of lot 1, block 37, town of McGregor, thence north 19°3′ E., with rear line of block 36, 10.93 chains to corner 5, a 2 by 2 by 12-inch ash stake above ground, marked "US 6–5", in the south line of Elm Street; thence north 68°55′ W., with south line of Elm Street, 10.44 chains to corner 6, a 3 by 3 by 12-inch ash stake above ground, marked "US 6–6", at the northeast corner of lot 1, block 33; thence south 21°5′ W., with two lines in rear of block 33 1.55 chains to corner 7, a 4 by 4 by 36-inch fir post above ground, scribed "US Cor 6–7", an 8-inch hickory bears south 30° W. .70 blazed and scribed "BT 6–7"; thence south 73°25′ W. 12.80 chains to corner 8, a point in Spring Creek on the line between sections 27 and 28, a witness corner falls fifteen east on bank of creek, a 4 by 4 by 40-inch fir post above ground, scribed "US Cor 6–8", in a mound of stone, a 30-inch elm bears south eighteen; thence south 0°2′ E., with line between sections 27 and 28, 20.25 chains to the place of beginning, containing, according to survey, 38.55 acres, more or less.

Lots 13, 14, 15, and 16, block 18; lots 1, 2, 3, 4, 5, 6, 9, 10, 11, 12, 13, 14, and the east 20 feet of lot 15, block 26, all situate in the James McGregor, Jr., addition to the town of McGregor, Iowa, containing, according to survey, 1.84 acres, more or less.

A certain parcel of real estate in sections 22 and 27, T. 95 N., R. 3 W., fifth principal meridian, described as follows:

Beginning at corner 1, the point where the line between sections 21 and 22 intersects the south line of the Giard claim, an established fence corner; thence S. 0°2′ E., with line between sections 21 and 22, 9.07 chains to corner 2, a point in fence line; thence S. 69°11′ E., parallel to and 3.40 chains northeast of the northeast side of block 27, 10.13 chains to the line between sections 22 and 27, 18.07 chains to corner 3, the west side of Cemetery Road and northeast corner of the Chapin lands, a 4-by-4-by-36-inch fir post above ground, scribed "US Cor 1–3", beside an established fence corner; thence S. 20°49′ W., 3.41 chains to corner 4, the northeast corner of lot 17, block 26; thence S. 69°11′ E., with the rear line of block 26, 12.12 chains to corner 5, a 1-by-12-inch iron pipe above ground at the rear corner to blocks 18 and 26; thence S. 82°22′ E., with rear line of block 18, 2.85 chains to corner 6, a 1-by-12-inch pipe above ground and an 8-by-8-by-48-inch oak post above ground, scribed "US 1–6", in mound of stones; thence N. 49°47′ W., 1.47 chains to corner 7, a 5-by-5-by-24-inch basswood post above ground, scribed "US 1–8", in mound of stones; thence N. 40°13′ E., 3.03 chains to corner 8, a 5-by-5-by-30-inch basswood post above ground, scribed "US 1–8", in mound of stones; thence S. 49°47′ E., 3.27 chains to corner 9, a 2-by-2-by-15-inch oak stake above ground, at the rear corner common to lots 4 and 5, block 18; thence N. 40°13′′ E. with rear line of blocks 18 and 17, 12.51 chains to the line between sections 27 and 22, 14.46 chains to corner 10, a 2-by-2-by-15-inch oak stake above ground; thence N. 49°47′ W., 2.11 chains to corner 11, a 2-by-2-by-15-inch oak stake above ground; thence N. 40°13′ east 1.14 chains to corner 12, a 2-by-2-by-12-inch oak stake above ground, on the line between lots 5 and 6, block 20; thence north 49°47′ west 1.96 chains to corner 13, the rear corner common to lots 5 and 6, block 20; thence south 40°13′ west with rear line of said lot 6, 1.25 chains to corner 14, an established fence corner in the northwest side of lot 6, block 20; thence north 59°12′ west 1.44 chains to corner 15, a stake; thence north 30°48′ east 1.51 chains to corner 16, in the rear line of block 21 at a point 1.71 chains westerly of the south corner of lot 1, block 21; thence north 59°12′ west with the rear line of block 21, 15.19 chains to corner 17, a 7-by-7-by-48-inch oak post above ground, scribed "US 1–17", on the south line of the Giard claim; thence south 87°49′ west, with the south line of the Giard claim, 25.86 chains to the place of beginning (excepting, however, therefrom, 12.19 acres, more or less, described as follows: Beginning at corner 1, a chiseled cross and mound of stones, on the extreme southwest point of the rock bluff northwest from what is known as Market Square in the town of McGregor, the intersection of Garnavillo Avenue and Buell Avenue bears south 10°35′ east, 5.88 chains distant; thence north 24°40′ west 7.94 chains to corner 2, an established fence corner; thence north 44°10′ east 6.17 chains to corner 3, a 4-by-4-by-36-inch fir post above ground, scribed "US 3–X", in a mound of stones; thence north exactly 64° east 3.50 chains to corner 4, a 4-by-4-by-42-inch fir post above ground, scribed "US 4–X", in mound of stones, on rock point at brink of bluff; thence south 53°50′ east 10.47 chains to corner 5, a 3-by-3-by-36-inch oak post above ground and a 2-by-12-inch iron pipe above ground, in mound of stones which is on brink of bluff over brick schoolhouse, thence south exactly 34° west 2.34 chains to corner 6, a 4-by-4-by-42-inch fir post above ground, scribed "US 6–X", in mound of stones and beside a chiseled cross on a large boulder; thence south exactly 55° west 4.70 chains to corner 7, a 3-by-3-by-18-inch oak stake above ground; thence south 71°55′ west 7.77 chains to the place of beginning) the parcel hereby conveyed containing, according to survey, 53.58 acres, more or less, subject to any existing rights or easements for roads over or across the above-described land.

Lots 4, 5, and 6, block 46, in the James McGregor, Jr., addition to the town of McGregor, Iowa, containing according to survey thirty-four one-hundredths acre, more or less.

A certain parcel of land in the southeast 160 acres of the Giard claim, and within what would be section 22, township 95 north, range 3 west, fifth principal meridian, described as follows:

Beginning at corner 1, the rear corner common to lots 9 and 10, block 3, town of McGregor, or 1.51 chains northwesterly from the south corner of the Goodie Garden Confectionary Building; thence north 48°53′ W., 6.08 chains to corner 2, a 1-by-12-inch galvanized iron pipe above ground, in a mound of stone; thence north 79°5′ W., 8.34 chains to corner 3, in the rear line of block 46 and sixty-nine one-hundredths chain southeast of the north corner of said block 46; thence south 38°53′ E., with the rear line of blocks 46 and 45, 6.26 chains to corner 4, the rear corner common to lots 8 and 9, block 45; thence south 21°43′ E., with two rear lines of block 45, 3.17 chains to corner 5, a point; thence south 49°38′ E., 2.62 chains to corner 6, the east corner of lot 1, block 45, a 4-by-4-by-36-inch hickory post above ground, scribed "US 3–5", a 10-inch oak bears north 45° E., twenty-nine one-hundredths chain blazed and scribed "BT 3–5", an 8-inch hickory bears north 55° W., thirty one-hundredths chain, blazed and scribed "BT 3–5"; thence south 40°22′ W., with the southeast line of block 45, 1.51 chains to corner 7, the south corner of lot 1, block 45; thence north 88°59′ E., with the north line of "A" street, 2.34 chains to corner 8, in the rear line of block 3; thence north 40°22′ E., with the rear line of block 3, 6.56 chains to the place of beginning, containing according to survey 6.11 acres, more or less.

A certain parcel of land, situated in lot 9 of the southeast 160 acres of the Giard claim and within what would be section 22, township 95 north, range 3 west, fifth principal meridian, described as follows:

Beginning at corner 1, a point in the north line of said lot 9 and 11.35 chains east of the northwest corner thereof, being the north corner common to the Munn lands and the Lorang property, a 5-by-5-by-48-inch white oak post above ground, in a mound of stone, a 20-inch white oak bears south 67° east, sixty one-hundredths chain, blazed and scribed "BT 2–1", a 10-inch hickory bears south 6° east, eighty-nine one-hundredths chain, blazed and scribed "BT–21"; thence north 89°59′ east, with the north line of said lot 9, 20.87 chains to corner 2, a 10-by-10-by-32-inch oak post above ground, scribed "US 2–2", and a 1½-by-15-inch pipe above ground, in a mound of stone, at the northeast corner of said lot 9, a 16-inch white oak bears south 20° west, thirty-six one-hundredths chain, blazed and scribed "BT 2–2"; thence south 8°35′ east, with line between lot 9 and lot 8 of southeast 160 acres of Giard Claim, 6.89 chains to corner 3, the northwest corner of lot 7, a 1-by-12-inch iron pipe above ground, between trees with old blazes, a 10-inch twin black oak bears south 38° west, eight one-hundredths chain, scribed "BT 2–3", an 18-inch black oak bears north 10° west, thirty-four one-hundredths chain, scribed "BT 2–3"; thence south 58°14′ west with line between Munn lands and property of the Northeastern Iowa Outers Association, 20.04 chains to corner 4, a 6-by-6-by-42-inch basswood post above ground, in a mound of stones, in the line between lots 9 and 10, a 12-inch butternut bears south 28° east, thirty-five one-hundredths chain, blazed and scribed "BT 2–4", a 20-inch sycamore bears north 68° east, forty-one one-hundredths chain, blazed and scribed "BT 2–4"; thence north 29°51′ west, with two lines common to lots 9 and 10, 9.11 chains to corner 5, a point in said line; thence north 69°15′ west, thirty-five one-hundredths chain to corner 6, a 5-by-36-inch ash post above ground, in mound of stone, the south corner common to the Munn lands and the Lorang property; thence north, with the line between Lorang and leaving the line between lots 9 and 10, 3.46 chains to a 4-by-4-by-42-inch fir post above ground, scribed "US 3.46" with arrow pointing south, being on the north side of the Heights Road, 9.33 chains to the place of beginning, containing 26.62 acres, more or less, subject to any existing rights or easements for roads over or across the land above described.

Lots 4, 5, 6, 7, 8, and 9, block 48, in James McGregor, Jr., addition to the town of McGregor, Iowa (excepting therefrom a strip of land being the right-of-way of the Chicago, Milwaukee, St. Paul & Pacific Ry.), the parcel hereby conveyed containing according to survey sixty-nine one-hundredths acre, more or less.

Lot 7, excepting a strip 1 chain in width along the west side, in the southeast 160 acres of the Giard claim and within what would be section 22, township 95 north, range 3 west, fifth principal meridian, described as follows:

Beginning at corner 1, a 2-by-12-inch iron pipe above ground in a mound of stone, and on the north line of said lot 7, one chain easterly from the northwest corner thereof; thence south 9°7′ east, parallel with and 1 chain east of the west line of lot 7, 6.19 chains to corner 2, a point on brink of cliff in the south line of lot 7; thence north 82°30′ east, with line between lot 7 and lot 6, 3.08 chains to a 4-by-4-by-36-inch fir post above ground, scribed "US 4–3", in mound of stone, on west side of McGregor-Marquette Road, 4.44 chains to corner 3, the corner common to lots 6 and 7 and block 48 of the James McGregor, Jr., addition to the town of McGregor; thence north 8°15′ west, with the line between lot 7 and block 48, 5.72 chains to corner 4, the corner common to lots 7 and 8 and block 48 of the town of McGregor; thence south

88°30' west, with the line between lots 7 and 8, 1.94 chains to a 4-by-4-by-36-inch fir post above ground, scribed "US 4-4", in mound of stone, on west side of McGregor-Marquette Road, 4.58 chains to the place of beginning, containing, according to survey, 2.68 acres, more or less, subject to existing easements for roads and railroads.

A strip of land 4½ chains wide along the north side of lot 1, section 11, township 94 north, range 3 west, fifth principal meridian (excepting therefrom a strip of land containing sixty-five one-hundredths acre, being the right-of-way of the Chicago, Milwaukee, St. Paul & Pacific Ry.), the parcel thereby conveyed containing according to survey 10.89 acres, more or less.

Lot 4, section 11, township 94 north, range 3 west, fifth principal meridian (excepting therefrom a strip of land containing 3.09 acres being the right-of-way of the Chicago, Milwaukee, St. Paul & Pacific Ry.), the parcel hereby conveyed containing according to survey 42.36 acres, more or less.

Lot 1 and the north half of lot 2, section 23, township 94 north, range 3 west, fifth principal meridian (excepting therefrom a strip of land containing 7.56 acres, being the right-of-way of the Chicago, Milwaukee, St. Paul & Pacific Ry.), the parcel hereby conveyed containing according to survey 75.24 acres, more or less.

The State shall improve and maintain the said land for such purpose, and not otherwise, and shall provide adequate conveniences for the public. No fee or other charge shall ever be imposed or exacted for admission of the public to the park or for use and enjoyment of the park by the public under such reasonable regulations as may be prescribed by the State or its authorized officials. The State shall sedulously safeguard the wildlife in the park from molestation and destruction, and shall do everything reasonably necessary to safeguard the park from injury by fire, or otherwise, and shall preserve the timber and other natural growth in the park from depredation and destruction. In the event the State shall fail to maintain the aforesaid granted land as a State park under the conditions and limitations herein prescribed, or upon abandonment of the park by the State, said land and all improvements thereon shall revert to the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AWARD POSTHUMOUSLY OF DISTINGUISHED SERVICE MEDAL TO MAJ. GEN. CLARENCE RANSOM EDWARDS

Mr. CONNERY. Mr. Speaker, I ask unanimous consent for the present consideration of the joint resolution (H. J. Res. 570) authorizing the President of the United States to award posthumously a Distinguished Service Medal to Maj. Gen. Clarence Ransom Edwards.

Mr. WIGGLESWORTH. Mr. Speaker, reserving the right to object, I shall, of course, not object. I simply want to congratulate and commend my good friend and colleague the gentleman from Massachusetts [Mr. CONNERY] and the members of the Committee on Military Affairs for making is possible to pass this legislation today.

During the closing years of his life, Maj. Gen. Clarence R. Edwards, beloved commander of the Twenty-sixth Division, was a distinguished resident of the district which I have the honor to represent. It was he, perhaps as much as any other individual, who made it possible for me to come to Congress. I loved him as a friend. I revere his memory.

No figure of the World War holds a position in Massachusetts comparable to that held by General Edwards. His broad understanding and sympathy for all with whom he came in contact, his outstanding capacity for leadership, his long, brilliant career in the service of the Nation won for him an undying place in the hearts of New England.

The passage of this resolution will do honor, not only to a great character, an outstanding figure of the World War, but to each and every man among the thousands privileged to serve under his command and to contribute to the unforgettable fighting record of the "Yankee Division." [Applause.]

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Clerk read the joint resolution, as follows:

House Joint Resolution 570

Resolved, etc., That the President of the United States is hereby authorized to award, posthumously, in the name of Congress, a Distinguished Service Medal to Maj. Gen. Clarence Ransom Edwards, who died February 14, 1931, after having organized the Twenty-sixth Division and commanded it with distinction during all but 18 days of its active service at the front. The high qualities of leadership and unfailing devotion to duty displayed by him were responsible for the marked esprit and morale of his command. To his marked tactical ability and energy are largely due the brilliant successes achieved by the Twenty-sixth National Guard Division during its operations against the enemy from February 4, 1918, to November 11, 1918.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

LEAVE TO ADDRESS THE HOUSE

Mr. CHRISTIANSON. Mr. Speaker, I ask unanimous consent that on Tuesday next, immediately after the reading of the Journal and the disposition of business on the Speaker's desk, I be permitted to address the House for 10 minutes.

The SPEAKER. Is there objection?

There was no objection.

EXTENSION OF REMARKS

Mr. LEWIS of Colorado. Mr. Speaker, I ask unanimous consent to print after my remarks today the report of the board of Air Corps officers on the city of Denver.

The SPEAKER. Is there objection?

There was no objection.

"PLAIN TALK", BY STUDEBAKER, COMMISSIONER OF EDUCATION. A BOOK REVIEW

Mr. MAVERICK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

PARALLELS IN HISTORY—"PLAIN TALK"

Mr. MAVERICK. Mr. Speaker, there are parallels in history: At Valley Forge George Washington read an appeal from Tom Paine, that bolstered his wavering troops; today a book, Plain Talk, written by John W. Studebaker, United States Commissioner of Education, is printed at a similar period in American history, to bolster the teachers of today.

Washington was at Valley Forge. The soldiers were hungry and sullen. In modern parlance we would say that it was "zero weather"—but it was bitter cold; the men walked in the ice and the snow, leaving bloody tracks. They had not seen the sight of money for many a day and they were discouraged.

Congress in Philadelphia paid no attention to the Army in its death struggle. No aid was sent in the form of supplies; no money—probably it could not get any money. George Washington was in desperation. Stories came to him of members of the Continental Congress attending parties—with Tories—in Philadelphia.

"THESE ARE THE TIMES THAT TRY MEN'S SOULS"

In the midst of all this there came to him Tom Paine's The American Crisis. It began with these stirring words: "These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country * * *."

And there came out more flashing, burning, fighting words which brought life to the soldiers' hearts and minds. The shivering soldiers cheered, and the Revolution went on until freedom was won.

All over the Thirteen Colonies Tom Paine's writings were read. Every little settlement or hamlet read his words, and these words, describing the situation, and showing the rights to which the people were entitled, kept the fires of liberty burning. It brought encouragement to the people.

"These are the times that try men's souls"—today, too, we must face a fight which many regard as harder than the Revolution. We now face distortion of the truth, plain misrepresentation, lies about our ancestors, falsehoods concerning our Constitution—propaganda of all sorts from reactionary elements, to make us betray, as Benedict Arnold did, the cause of justice and freedom of our own people.

FREEDOM AND PROPAGANDA—LIBERTY AND DISHONEST ADVERTISING

Plain Talk is a book which distinguishes freedom of thought from propaganda, liberty of speech from dishonest advertising, and tells teachers—and by teachers I mean anyone who tries to teach by giving impartial facts, or anyone who wants to learn by receiving facts impartially—of their rights under the law and of common sense. It goes further, and indicates the teacher has a duty to teach.

THE BILL OF RIGHTS

Let me again mention the Revolution. After it came the Constitution. Selfish men would have put over a mere contract for the preservation of property, omitting entirely any semblance of the Bill of Rights. But the influence of Tom Paine, Thomas Jefferson, and the other great men of that day was so strong that a Bill of Rights was written into the fundamental law of the Constitution. The American people were not to be deprived of freedom of religion, speech, assembly, and press.

Today these rights are as fundamental and as necessary as they were 160 years ago. We have had 6 years of depression and continued unemployment, and we are faced with a new American crisis. In Tom Paine's day there was scarcity and a reason for it. Today we have starvation in the midst of plenty and no reason—or at least no excuse—for it.

So there's one thing at least that we ought to have, and that is freedom of discussion. This is not only reaffirmed by Mr. Studebaker in Plain Talk but it is demanded, and a wise method of adult education and adult forums is proposed.

COMMUNISM AND FASCISM; RAINBOW ROADS

If we do not follow the road of the American Bill of Rights and the democratic processes, then we destroy our democracy. And right now, the American people are facing several different roads. Two of them look good to some, but at the end of each is a mirage or rainbow.

One of these is fascism, or what would in this country develop into military gangsterism; the other is communism. Both of these call for dictatorship and are opposed to American ideals of government. Neither of these roads is satisfactory.

THE MIDDLE ROAD—DEMOCRACY—EDUCATION—LIBERTY

There is still another road, the road that we have traveled before, and that's the road of democracy, or what we might call the "middle road." It's a rough and rocky road, this parliamentary government—but it has always been found to suit people who love free government better.

However rocky and rough the road, it has by its side free schools and places where Americans may congregate and worship their God freely—where people may criticize each other and the Government, and where they may pray, print, and publish what they please. And until just recently it was not a crime for Americans to teach freely.

Democracy is doomed—that's the bunk. We can preserve it if we want to. Other countries which gave up what little democracy they had did so willingly. Some say we must give it up on account of conditions. Some say because of unemployment; others just have the jitters and would go out slaying imaginary Communists and radicals, and I presume others would go shooting Fascists who do not exist.

A BARBAROUS LAW WHICH INSULTS KNOWLEDGE

In the United States today there are such organizations as the American Liberty League, which have no other purpose than to abridge the fundamental rights vouchsafed to every American in the Constitution. Laws have been adopted to curb freedom of speech and freedom of teaching in the States.

In the District of Columbia there exists a law known as the "red rider", one of the most uncivilized and barbarous laws every passed in the history of any government. This "red rider" has no parallel in the entire world's history and no such law has ever existed or exists now, except in the District of Columbia—that is, where one first takes an oath of allegiance and then must be constantly humiliated week after week and month after month by being forced to take additional oaths.

PLAIN TALK—GIVES BACKBONE TO TEACHERS

In view of all this, it is fortunate that a book should be published like Plain Talk. I got a copy and the price intrigued me. I wondered how one could be sold so cheaply. I had not read very much before I said, "Every teacher in this country ought to have a copy." Teachers are a timid lot—and why not? They have been banged over the head by every special interest, every fanatic, every witch burner, every enemy of democracy, every braying ignoramus, for years and years. They have lost their jobs for telling the truth; they have been bamboozled and persecuted to the limit.

TELLS HOW TO MEET THE SITUATION

The book has a splendid introduction by Morse Cartwright, Director of the American Association for Adult Education. Mr. Cartwright tells us that the author, John W. Studebaker, is not only United States Commissioner of Education, but the outstanding advocate of public discussion in the country. He points out that our ideals of democracy were of Anglo-Saxon origin and "were transferred through fire and sword" to our Revolutionary Government.

He reminds us that there were two documents, not one: the Declaration of Independence as well as the Constitution of the United States, and that the former came into American history bringing a new conception of liberty to the young nation and to a none-too-hopeful world; and he further reminds us that the Bill of Rights is as much a part of the Constitution as its other parts.

NATIONAL HOME LIBRARY FOUNDATION

One hundred thousand copies of this book have been made available by the National Home Library Foundation in Washington. This organization, like the American Association for Adult Education, is a cooperative, and non-profit-making undertaking. It has, in the past 4 years, published and distributed, without any thought of profit, nearly 5 million good books at a price within the reach of everyone. Plain Talk, like most of the other millions of books published, costs a quarter, but is a full fledged, A-1, well-bound book, and not a loosely bound, paper-covered affair. The program and policies of the foundation are carried out by a group of 66 of the most distinguished authors, educators, historians, and scientists living today. Its president and editor is Sherman Mittell. He is an idealist who has refused persistently during the 4 years he has guided the foundation's home-library program, to accept a salary higher than $25 per week. But, with his idealism, he has combined a talent for organizing the best minds of America to work toward a common goal—a better informed and more civilized nation.

Plain Talk has been hailed by the National Education Association as the new bill of rights—the American teachers' bill of rights. It ought not to be necessary in a free country to have to print any such book, but at this stage of our national history it becomes more and more necessary to have such a book in every teacher's or other person's hands who cares anything for liberty.

NATIONAL EDUCATION ASSOCIATION PRAISES

In this month's issue of the Journal of the National Education Association, reaching over 250,000 American teachers, there is an editorial which deserves quotation.

It says:

A century ago Horace Mann labored for universal free schools so ably that he has been called the founder of our American system of public education. He and his followers have made elementary schooling universal and secondary schooling nearly so. But that is not enough under the conditions of today to save democracy from confusion and disintegration.

Now comes a new prophet with vision to sense democracy's present need, with the gift of expression, with a genius for organization, and the courage of action which we have long associated with Horace Mann. It is the highest good fortune that this new leader, John W. Studebaker, is United States Commissioner of Education. It would be hard to overestimate the significance of his sustained championship of universal, tax-supported education of adults in the pressing problems of democracy.

This book is especially valuable for summer-school classes, for high schools and colleges, for parent-teacher associations, and for reading groups of every kind in home, school, church, and community.

Every citizen should have an opportunity to study this book.

Notice it says every citizen should read this book. In this I agree—for all persons should know their rights.

MILLION TEACHERS POTENT POLITICAL INFLUENCE

It is good indeed for the American teachers that there is an outstanding champion of academic freedom and that

he is placed as Commissioner of Education for the whole United States of America. This is a high office. And from this high office he strikes out with his book, Plain Talk, in a simple way, with hard rights and lefts, and pulls no punches. He is speaking for over a million American teachers who are rising now for their right to teach and to impart knowledge; to maintain their self-respect, and to really earn their money as giving learning to the children of America.

These teachers are one of the most potent political influences in America, and it is well that the Commissioner of Education comes clean, asserting their rights, telling them that such words as "liberty" can be distorted for sinister ends—explaining what liberty is.

This book shows that liberty is not an empty phrase. It is something precious, something active, and Studebaker realizes that in this complicated industrial civilization, more than ever we must maintain our democratic liberties because if man is to become not even a machine but a mere slave of a machine, life will not be worth living.

ROBE THEMSELVES IN NATIONAL COLORS

Dr. Studebaker knows every American teacher and parent ought to realize that the forces of privilege and those who robe themselves in national colors are making every effort to get control of the public-school system. This has been exposed a half-dozen times by numerous bodies and by the Federal Trade Commission in official investigations and reports. And this is true whether they control powerful chains of newspapers or vast monopolies.

These special interests attempt to distort other freedoms with some sort of misleading, snappy phraseology or labels or mottoes. People should be wary of all this word twisting and false propaganda. "Red riders" and teachers' oath laws fool nobody. They are sponsored for no other reason than to bully the teaching profession.

Remembering some of the goings-on in Germany and Italy, and the destruction of the teaching profession and the labor movement there, a child can see what they are after. And it is a pleasure to read Plain Talk and find in it American definitions of what American liberties ought to mean.

WHAT IS FREEDOM, AND WHO GETS IT?

In Dr. Studebaker's own words, we get an inkling of that meaning:

Freedom to the music lover is the opportunity to hear music. It doesn't satisfy him to be told he is free to hear lectures. That isn't freedom to him. He may not like to hear lectures. Freedom to the hungry is the chance to get bread. To point out to the man in search of a next meal that he lives in a free country where he may say anything he likes doesn't ordinarily make him feel free. If he can't use his right of free speech to get what he desperately wants, that right simply doesn't spell freedom to him.

Again—

One thing is certain, and that is, that democracy belongs to the people who can make it work. We have a right to expect public education to provide for the social intelligence necessary to make democracy work in our complicated age.

He asks a pregnant question:

How can we plan to make public education serve as a genuine bulwark of democracy?

His answer:

Let us keep clearly in mind the fact that the greatest enemy of democratic government is civic ignorance. Those who propose overthrowing democracy for some form of dictatorship are powerless to gain adherents if democracy is working reasonably well in its original function, "the pursuit of life, liberty, and happiness", for the mass of citizens. We deceive ourselves if we try to defend democracy by gagging its critics, as much as we deluded ourselves when we thought we could extend democracy by a World War.

KNOWLEDGE; SOIL CONSERVATION

Speaking of necessity of public discussion in reference to any subject, he says:

Take for example, in this connection, our modern problem of agriculture. Land is a means to the end of growing things by which process the farmer makes his living. Ignorance and apathy concerning soil conservation have brought us to the lamentable state where the forces of wind and water are carrying many of our farms away. We now rush to diffuse understanding of how to protect and preserve that precious top soil. It is a job for public education, and this year a great campaign of education on soil conservation is being planned, using more than 5,000 rural high schools as centers for instruction.

THE GAG KILLS DEMOCRACY

Concerning the gag, Mr. Studebaker says:

What may happen if we fail to do these two things? Will our democracy be overthrown? I think not. Overthrow is not the right word. Disintegration is more likely to set in, or we might say more properly that democracy will commit suicide.

If we neglect our line of defense, and permit freedom of expression to be curbed, even by majority consent, we no longer have democracy. We have a form of autocracy. Political power is no longer in the hands of the people, but rather in the hands of the officials who happen to be in office when civil liberties are curtailed. They may or may not use their power over the civil rights of the people to protect themselves and their policies from criticism and to perpetuate themselves in office.

Nevertheless, practically speaking, democracy does not and cannot exist where the rights of free speech, free press, and free assemblage are gone. By suppressing minorities and gagging discussion we determine that if such minorities have sufficient vitality to enlist large numbers of people their only recourse is violence.

When the mass of the people no longer hold the power to accept or reject minority proposals at the polls, we cannot know when a minority becomes a majority on any issue. In America we have no supreme authority which decides what is good for the people. When such an authority is established, we have dictatorship. Our faith is plainly rested upon the assumption that the people can be trusted to decide what is good for them, and must be left free to choose what they consider good from among the alternatives open to them. If anybody argues that the people cannot be trusted to decide for themselves, he questions the very foundation of democracy itself.

Again:

World-wide economic depression has challenged all democracy with crises. No democracy can long entertain such a breakdown in the social and economic life of the people. If democracy fails to solve the problems of unemployment, poverty, and distress, it cannot survive.

BRANDEIS—MASTER FIGHTER, MASTER BUILDER

Mr. Justice Brandeis is a great American and concerns this story. He has not always been "Mr. Justice." As a young man he was not only a master fighter for human rights but a master builder for human life. He exposed the insurance racket in Massachusetts; he was the father of the savings, loan, and insurance laws of the State of Massachusetts wherein families can protect themselves cheaply and safely. His achievements long before he became a Justice were substantially for the whole American people. On the Court he has not become an ossified automaton who has lost contact with the heart and soul of America.

It is important for teachers, students, citizens of all kinds to know this: that they have a friend in court. He is a man old in the concept of maturity and wisdom, but youthful and joyous of heart insofar as his ideas concern progress and human liberty. He is a man who quietly lashes himself to the mast of a ship in a roaring sea and quietly writes down on a piece of paper the truth and the thunder of his soul.

THINK AS YOU WILL—SPEAK AS YOU THINK

The jacket of Plain Talk quotes Mr. Justice Brandeis on his opinion in Whitney against California. He said in that opinion:

Those who won our independence believed that the final end of the State was to make men free to develop their faculties, and that in its government the deliberative forces should prevail over the arbitrary. They valued liberty both as an end and as a means. They believed liberty to be the secret of happiness and courage to be the secret of liberty. They believed that freedom to think as you will and to speak as you think are means indispensable to the discovery and spread of political truth; that without free speech and assembly discussion would be futile; that with them discussion affords ordinarily adequate protection against the dissemination of noxious doctrine; that the greatest menace to freedom is an inert people; that public discussion is a political duty; and that this should be a fundamental principle of the American Government.

REPRESSION BREEDS HATE—HATE MENACES STABLE GOVERNMENT

They recognized the risks to which all human institutions are subject. But they knew that order cannot be secured merely through fear of punishment for its infraction; that it is hazardous to discourage thought, hope, and imagination; that fear breeds repression; that repression breeds hate; that hate menaces stable government; that the path of safety lies in the opportunity to discuss freely supposed grievances and proposed remedies; and that the fitting remedy for evil counsels is good ones.

Believing in the power of reason as applied through public discussion, they eschewed silence coerced by law—the argument of force in its worst form. Recognizing the occasional tyrannies of governing majorities, they amended the Constitution so that free speech and assembly should be guaranteed.

FOREFATHERS DID NOT FEAR POLITICAL CHANGE

Those who won our independence by revolution were not cowards. They did not fear political change. They did not exalt order at the cost of liberty. To courageous, self-reliant men, with confidence in the power of free and fearless reasoning applied through the processes of popular government, no danger flowing from speech can be deemed clear and present, unless the incidence of the evil apprehended is so imminent that it may befall before there is opportunity for full discussion.

REMEDY FOR FALSEHOODS AND FALLACIES—MORE SPEECH

If there be time to expose through discussion the falsehood and fallacies, to avert the evil by the processes of education, the remedy to be applied is more speech, not enforced silence. Only an emergency can justify repression. Such must be the rule if authority is to be reconciled with freedom. Such, in my opinion, is the command of the Constitution. It is therefore always open to Americans to challenge a law abridging free speech and assembly by showng that there was no emergency justifying it.—Justice Brandeis, in concurring opinion, *Whitney* v. *California*, 1927.

DEMOCRACY—THAT'S WHAT WE WANT

The American people, our teachers, our thinkers, must stand up and claim and demand perfectly obvious rights. We cannot solve any of our problems except by constant and patient search and discussion, as Mr. Studebaker says in Plain Talk. Our problems are so vast that there is no one man nor group of men who can give us an answer, and hence we do not want an oligarchy of selfish men like the Liberty League nor any one man to rule us.

It is true that there have been more inroads on freedom of speech and upon the human mind than ever before, but we still know that the American people should solve their own problems, and this can only be done by the full freedom of thought and discussion.

SPANISH WAR VETERANS' LEGISLATION—$10,000 FOR EVERY SPANISH WAR VETERAN DEATH CAUSED BY ECONOMY ACT—$102,000,000 TAKEN FROM SPANISH WAR VETERANS BY ECONOMY ACT MUST BE REFUNDED

Mr. LUNDEEN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. LUNDEEN. Mr. Speaker, I am introducing a bill, H. R. 12918, to provide indemnity benefits of $10,000 to dependents of veterans of the Spanish-American War whose death resulted from the so-called Economy Act of March 20, 1933.

There were 271,765 Spanish War veterans living on January 1, 1936; according to the Veterans' Administration, of these 177,533 were receiving pensions. Each month about 500 of our Spanish War comrades pass into the Great Beyond. In a few more years their number will compare with the approximately 10,300 Civil War veterans now on the pension rolls, who are dying at the rate of 300 a month.

No one knows how many deaths of Spanish War veterans were the result of the vicious, cruel, and inhuman so-called Economy Act of March 20, 1933. There is a record of 853 deaths from suicide among the group of 44,678 cases where pension is being paid by the Veterans' Administration to the dependents of deceased Spanish War veterans. Here is the Veterans' Administration estimate on the number of Spanish War veteran deaths from 1931 through 1935:

1931	4,835
1932	5,117
1933	5,423
1934	6,140
1935	6,503
Total	28,018

Congressman WILLIAM P. CONNERY on June 10, 1933, stated on the floor of the House that according to a Boston newspaper 12 Massachusetts veterans had committed suicide up to that time as a result of the Economy Act.

In addition to suicides caused by the Economy Act, there were deaths caused by worry over financial matters or lack of medical care. The Veterans' Administration does not have information available concerning these causes of death.

BILL TO REFUND PENSIONS TAKEN FROM SPANISH WAR VETERANS BY ECONOMY ACT

On August 15, 1935, 2 days after pre-Economy Act Spanish War pensions were restored, I introduced a bill (H. R. 9145) to provide for the refunding of all benefits to Spanish War veterans and their widows and dependents, of which they were deprived by the Economy Act between the dates of March 20, 1933, and August 13, 1935. During that period of time a total amount of $101,912,194.47 was taken from Spanish War veterans and their dependents by the Economy Act. This amount, according to the Veterans' Administration, was divided between veterans and dependents in this way:

Spanish-American War veterans: $246,380,893.92 would have been paid from March 1933 to July 1935, inclusive, had no Economy Act been passed; $160,785,722.92 was actually paid from March 1933 to July 1935, inclusive; difference, $85,595,171, amount taken from Spanish War veterans by Economy Act from March 1933 to July 1935, inclusive.

Spanish-American War dependents: $42,480,343.23 would have been paid between March 1933 and July 1935, inclusive, had no Economy Act been passed; $26,163,319.76 was actually paid between March 1933 and July 1935 inclusive; difference: $16,317,023.47 taken from dependents by Economy Act.

The total amount taken from Spanish War comrades and their dependents, $101,912,194.47, is about one-tenth of the amount appropriated for war and war preparations in this present year of peace.

Both these bills should be passed. H. R. 9145, to refund pensions taken from Spanish-American War veterans and their dependents while the Economy Act was in force, and H. R. 12918, the bill I am introducing, providing a $10,000 indemnity for dependents of Spanish War veterans whose death is directly or indirectly the result of the Economy Act.

WHAT UNCLE SAM GAINED IN THE SPANISH-AMERICAN WAR

Any cost to the Government which will result from the passage of the Lundeen Spanish War veterans' indemnity bill is insignificant compared with the huge gains Uncle Sam made as a result of the war in which these men were willing to lay down their lives. As a result of the Spanish-American War, Spain lost Cuba, Puerto Rico, Guam, and the Philippines. The islands and possessions gained were among the richest in the world. The war cost the United States about a billion dollars. The value of the possessions we gained was more than thirty billion. The Spanish-American War put $30 in Uncle Sam's pocket for every dollar spent.

WAS THE ECONOMY ACT CONSTITUTIONAL?

There is some doubt as to whether Congress constitutionally had the power to take from the veterans the pensions it had by previous legislation agreed to pay. The constitutionality of the act has never been tested. When Spanish War veterans were placed on the pension rolls it was their understanding that they had a lifetime contract with the United States Government. They incurred their own obligations accordingly. They budgeted their incomes. Many of them bought furniture and homes on the installment plan. They counted on the income that had years ago been promised them by the Federal Government, whose obligations are supposed to be kept.

In the case of *Perry* v. *United States* (no. 532, gold-clause cases, decided Feb. 18, 1935), Chief Justice Hughes stated:

By virtue of the power to borrow money "on the credit of the United States", the Congress is authorized to pledge that credit as an assurance of payment as stipulated, as the highest assurance the Government can give, its plighted faith. To say that the Congress may withdraw or ignore that pledge is to assume that the

Constitution contemplates a vain promise, a pledge having no other sanction than the pleasure and convenience of the pledgor. This Court has given no sanction to such a conception of the obligations of our Government.

The gold-clause cases decision just quoted also mentioned the binding quality of the obligations of the Government as presented in the *Sinking Fund cases* (99 U. S. 700, 718, 719), in which the question was whether certain action was warranted by a reservation to Congress of the right to amend the charter of a railroad company. Chief Justice Hughes, in referring to that case, stated:

While the particular action was sustained under the right of amendment, the Court took occasion to state emphatically the obligatory character of the contracts of the United States. The Court said: "The United States are as much bound by their contracts as are individuals. If they repudiate their obligations, it is as much repudiation, with all the wrong and reproach that term implies, as it would be if the repudiator had been a State or a municipality or a citizen."

When the United States, with constitutional authority, makes contracts, it has rights and incurs responsibilities similar to those of individuals who are parties to such instruments. There is no difference, said the Court in *United States* v. *Bank of the Metropolis* (15 Pet. 377, 392), except that the United States cannot be sued without its consent.

CONGRESS CANNOT ABROGATE WAR-RISK INSURANCE CONTRACTS

In *Lynch* v. *United States* (292 U. S. 571, 580), there was a question of attempted abrogation by the Economy Act, of outstanding war-risk insurance policies which were contracts of the United States. In this case, the Court also quoted the "sinking fund cases", stating:

Punctilious fulfillment of contractual obligations is essential to the maintenance of the credit of public as well as private debtors. No doubt there was in March 1933, great need of economy. In the administration of all Government business, economy had become urgent because of lessened revenues and the heavy obligations to be issued in the hope of relieving widespread distress. Congress was free to reduce gratuities deemed excessive. But Congress was without power to reduce expenditures by abrogating contractual obligations of the United States. To abrogate contracts in the attempt to lessen Government expenditure, would be not the practice of economy, but an act of repudiation.

OTHER SPANISH-AMERICAN WAR BILLS—BILLS TO REPEAL ECONOMY ACT

On May 2, 1933, during the Seventy-third Congress, I introduced H. R. 5393, the first bill to repeal the entire Economy Act. When the Seventy-fourth Congress opened on January 3, 1935, I again introduced the same bill, as H. R. 2825, to repeal the entire Economy Act, and the same day I introduced H. R. 2828 to repeal that part of the Economy Act affecting Spanish War veterans and their dependents. A similar bill, to repeal that part of the Economy Act affecting Spanish War veterans and their dependents, was introduced by Congressman MARTIN F. SMITH, of Washington, and became a law on August 13, 1935. This restored the rates of pension in effect before the passage of the Economy Act on March 20, 1933.

SPANISH WAR VETERANS SHOULD BE ON SAME BASIS AS CIVIL WAR VETERANS

Spanish-American War veterans are now approaching an average age of 62. Their number is being reduced at the rate of 500 per month. They should now be placed on the same basis as Civil War veterans during the declining years of their life. With this view in mind, I introduced in the Seventy-third Congress, and again the opening day of the present Seventy-fourth Congress, on January 3, 1935, a bill, H. R. 1404, to place Spanish War veterans on the same basis as Civil War veterans for pension purposes.

BRIEF SUMMARY OF LEGISLATION AFFECTING SPANISH-AMERICAN WAR VETERANS FROM MARCH 20, 1933, TO AUGUST 13, 1935

Since the passage of the act of August 13, 1935, restoring pensions, the old pre-Economy Act rates are again effective. The provisions of the Economy Act of March 20, 1933, and other economy legislation were administered by the Veterans' Administration. From time to time the President and the Administrator of Veterans' Affairs issued regulations and orders indicating how these laws were to be enforced. As a result of these administrative orders, the status of Spanish War veterans pensions, therefore, shifted slightly from time to time during the period March 20, 1933, until August 13, 1935.

However, during the period of March 1933 to August 13, 1935, Spanish War veterans' pensions passed through five different major stages:

FIRST STAGE—BEFORE ECONOMY ACT

Before the passage of the Economy Act of March 20, 1933, the old rates of pay were in effect. Until 1920 all Spanish War veterans who were drawing pensions had established service connection in accordance with the requirements of the old so-called general law. On June 5, 1920, the Spanish War service pension law was passed. Under this law there was no distinction between service-connected and non-service-connected disabilities. Any Spanish War veteran who applied could receive a pension for varying rates of disability or for age. The same applies for the laws of May 1, 1926, and June 2, 1930, which increased the rates of pension until the maximum of $60 was reached for permanent and total disability, except in cases where the aid and attendance of another person was required, when a maximum of $72 was allowed.

Thousands of Spanish War veterans dropped their claims of service connection under the old general law and applied for the more liberal pension granted under the later laws without regard to service connection. For that reason, prior to the Economy Act, out of about 195,000 Spanish War veterans on the pension rolls, only 600 were recorded as service connected. These 600 merely had neglected to apply for pensions under the new and more liberal law.

Prior to March 20, 1933, the great majority of Spanish War veterans receiving pensions for 90 days or more of service were paid on this scale:

For Spanish War veterans, on basis of disability—per month

10-percent disability	$20
25-percent disability	25
50-percent disability	35
75-percent disability	50
100-percent disability	60
If aid and attendance of another person is needed	72

For Spanish War veterans, on age alone, regardless of disability—per month

Age 62	$30
Age 68	40
Age 72	50
Age 75	60

Spanish War widows received $30 per month, with $6 for each dependent under the age of 16.

SECOND STAGE—ECONOMY ACT, MARCH 20, 1933

Under the Economy Act all Spanish War veterans whose disabilities were not shown to be service-connected, except those over the age of 62 and those who could prove permanent and total disability, were scheduled to be dropped from pension rolls.

The so-called presumptive clause, regulation 12 of the Executive orders under the Economy Act, recognized that Spanish War veterans would be at a decided disadvantage in proving their disabilities to be service connected. This clause stated that these men shall continue to receive a pension under the act at the rate being paid them on the date of enactment of the Economy Act—

It being presumed that the injury or disease causing the disability was incurred in the line of duty in the active military or naval service during * * * the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection.

The burden of proof was to be on the Veterans' Administration to show that the disability was not service connected, but in practice, at least in many cases, Spanish War veterans found the burden of proof on themselves. Little or no consideration was given to this presumption clause.

Under the Economy Act Spanish War veterans who could prove service connection were paid at the same rate as World War veterans whose cases were service connected. The difficulty for Spanish War veterans was that only a very small percentage could prove service connection 35 years after the war, and hundreds of them died before they had a chance to prove service connection. An amendment offered to the independent offices appropriation bill in June 1933 to

prevent reduction of Spanish War pensions more than 25 percent was defeated.

THIRD STAGE—$15 PER MONTH ALLOWED FOR VETERANS IN NEED OVER 55

A slight modification of the Economy Act as it affected Spanish War veterans was made in the Independent Offices Appropriation Act passed in June 1933. This provision stated:

Notwithstanding any of the provisions of Public Law No. 2, Seventy-third Congress (the Economy Act), any veteran of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection, who served 90 days or more, was honorably discharged from the service, is 55 years of age or over, is 50-percent disabled, and in need as defined by the President, shall be paid a pension of not less than $15 per month.

This meant that Spanish War veterans who were over 55 years of age and 50-percent disabled could be sure of a $15-a-month pension—if they could qualify under a need clause.

FOURTH STAGE—ACT OF MARCH 28, 1934—75-PERCENT RESTORATION

The act of March 28, 1934, provided that Spanish War pensions should be restored to 75 percent of the amount each veteran received prior to the passage of the Economy Act. This was a frank admission that the Economy Act, at least as it affected Spanish War veterans, was a failure. It had brought misery and despair to thousands of Spanish War veterans and their dependents, and public resentment was aroused. The act and all its regulations, as far as they affected Spanish War veterans, were repealed, and the old laws were made the basis for the act of March 28, 1934. This new act was in effect until August 13, 1935.

FIFTH STAGE—ACT OF AUGUST 13, 1935—FULL RESTORATION

The repeal of the Economy Act as it affected Spanish War veterans was completed by the act of August 13, 1935, which was the Smith bill, already mentioned. The Smith bill was a copy of the Lundeen bill, the first bill to repeal the Economy Act as it applied to Spanish War veterans. This act places back on the statute books all the Spanish War pension schedules in effect as of March 19, 1933.

Although we can never restore the lives that have been lost or erase the long months of anxiety and destitution thrust upon thousands of our comrades by economy hysteria in 1933, at least we can say the Economy Act as it affects Spanish War veterans is repealed. Those of us who fought against this vicious, cruel, and inhuman act from the first can truly say we have won a great victory.

LUNDEEN BILLS FOR SPANISH WAR VETERANS

In concluding my remarks I wish to say that during the present Congress I have introduced four bills for the benefit of Spanish War veterans:

First. A bill (H. R. 2828) to repeal the Economy Act as it affected Spanish War veterans. A bill similar to this became a law on August 13, 1935.

Second. A bill (H. R. 1404) to place Spanish War veterans on the same basis as Civil War veterans, paying pensions of $75 to $100.

Third. A bill (H. R. 9145) to refund to Spanish War veterans and their dependents the sums taken from them while the Economy Act was in force. This would mean $85,595,171 to Spanish War veterans and $16,317,023.47 to their dependents.

Fourth. A bill (H. R. 12918) to provide an idemnity of $10,000 to dependents of Spanish War veterans whose death resulted from the vicious, cruel, and inhuman Economy Act.

I am a Spanish War veteran, having served in Company B, Twelfth Minnesota Volunteer Infantry. I will continue my efforts on behalf of my comrades as long as I have the honor to represent them in Congress.

TEXT OF LUNDEEN BILLS

Spanish War veterans' indemnity bill:

[H. R. 12918, House of Representatives, 74th Cong., 2d sess.]

A bill to provide indemnity benefits to dependents of veterans of the Spanish-American War who died as a result of the enforcement of the so-called Economy Act of March 20, 1933, and for other purposes

Be it enacted, etc., That the sum of $10,000 shall be paid to the dependent of any deceased veteran of the Spanish-American War (including the Philippine Insurrection and the Boxer Rebellion) who was entitled to benefits under the pension laws in force on March 19, 1933, and who died on or after March 20, 1933, and on or before August 31, 1935, if it appears to the satisfaction of the Indemnity Board provided for in section 2 of this act that the application in the case of such veteran of any of the provisions relating to veterans' benefits in the act entitled "An act to maintain the credit of the United States Government", approved March 20, 1933, or any act amendatory thereof or supplementary thereto, was a factor substantially contributing to his death. A dependent may receive the benefits of this act by an application claiming the benefits thereof filed with the Indemnity Board.

An application not filed on or before July 1, 1937, shall be void.

Sec. 2. (a) The President is authorized to appoint five members for an Indemnity Board, which shall have jurisdiction of applications under this act. The members of such board shall not be, or have been within 2 years prior to appointment, in the employ of the Veterans' Administration. They may be appointed without regard to the civil-service laws, and their compensation may be fixed without regard to the Classification Act of 1923, as amended. Such board shall determine, on all available evidence, the question whether the death of the veteran was caused in the manner specified in section 1 of this act, and shall in their decisions resolve all reasonable doubts in favor of the applicant. The decisions of any such board shall be final.

(b) For the purposes of this act such board or any member thereof is authorized to hold hearings, administer oaths, and require the attendance and testimony of witnesses or the production of books, papers, documents, or other evidence, or the taking of depositions before any designated individual competent to administer oaths.

(c) Such board may appoint and fix the compensation, subject to the civil-service laws and to the Classification Act of 1923, as amended, of such employees, and may make such expenditures, including expenditures for actual and necessary travel and subsistence expenses of members, employees, and witnesses (not exceeding $7 for subsistence expense for any one person for any one calendar day), rent of quarters at the seat of Government and elsewhere, for personal services at the seat of Government and elsewhere, and for printing and binding, as are necessary for the efficient execution of its duties under this act. The expenses of the board shall be allowed and paid upon the presentation of itemized vouchers therefor approved by the chairman of the board.

(d) The board herein provided for shall cease to exist upon the completion of its duties under this act, and upon such completion all records, equipment, and property in its possession shall be transferred to the Veterans' Administration.

Sec. 3. (a) Upon final favorable decision upon any application made under this act the Indemnity Board shall certify such decision and transfer the records relating to the application to the Administrator of Veterans' Affairs. The Administrator shall cause the payments of benefits under this act to be made to the dependent of the veteran, and shall determine all questions arising under this act except the question referred to the Indemnity Board under sections 1 and 2 of this act. The Administrator shall not make any payments under this act to any person other than the eligible dependent, or such representative thereof, as the Administrator shall by regulation prescribe.

(b) No right to payment under this act shall be assignable or serve as security for any loan, and any assignment or loan made in violation of the provisions of this subsection shall be held void. No sum payable under this act shall be subject to attachment, levy, or seizure under any legal or equitable process, or to National or State taxation, and no deduction on account of any indebtedness of the veteran to the United States shall be made from any sum payable under this act.

Sec. 4. (a) Benefits under this act shall be paid to dependents of the veteran in the following order of preference:

(1) To the widow.

(2) If no widow entitled to payment, then to the children, share and share alike.

(3) If no widow or children entitled to payment, then to the mother.

(4) If no widow, children, or mother entitled to payment, then to the father.

(b) No payment under this act shall be made to a widow if she has remarried before making and filing application, or if at the time of the death of the veteran was living apart from him by reason of her own lawful act.

(c) Payment under this act shall be made to a child if under 18 years of age at the time of the death of the veteran.

(d) No payment under this act shall be made to a mother or father unless dependent at the time of the death of the veteran, or if at the time of the death of the veteran the mother was unmarried or over 60 years of age, or the father was over 60 years of age, such mother or father, respectively, shall be presumed to have been dependent.

Sec. 5. As used in this act—

(a) The term "dependent" means a widow, widower, child, father, or mother;

(b) The term "child" includes (1) a legitimate child; (2) a child legally adopted; (3) a stepchild, if a member of the veteran's household; (4) an illegitimate child, but, as to the father only, if acknowledged in writing signed by him, or if he has been judicially ordered or decreed to contribute to such child's support,

or has been judicially decreed to be the putative father of such child;

(c) The terms "father" and "mother" include stepfathers and stepmothers, fathers and mothers through adoption, and persons who have, for a period of not less than 1 year, stood in loco parentis to the veteran at any time prior to the beginning of his service; and

(d) The term "widow" includes widower.

SEC. 6. Whoever knowingly makes any false or fraudulent statement of a material fact in any application made under any provision of this act, or under any regulation made under this act, shall, upon conviction thereof, be fined not more than $1,000, or imprisoned not more than 2 years, or both.

SEC. 7. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this act.

Bill to refund pensions taken from Spanish War veterans by the Economy Act:

[H. R. 9145, House of Representatives, 74th Cong., 1st sess.]

A bill to provide for the refunding of all benefits to Spanish-American War veterans and their widows and dependents of which they were deprived by the so-called Economy Acts for the period between March 20, 1933, and August 13, 1935

Be it enacted, etc., That the act entitled "An act granting pensions to veterans of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection, their widows and dependents, and for other purposes", approved August 13, 1935, shall take effect retroactively as of March 20, 1933. All awards and grants of benefits in force on March 19, 1933, under the laws reenacted by such act of August 13, 1935, shall be in full force and effect from March 20, 1933, unless hereafter modified or repealed pursuant to such laws, except in cases where the right to payment under such laws has ceased by reason of the happening of a contingency referred to in such laws. Subject to the same exceptions, benefits accruing under such awards and grants for the period between March 20, 1933, and August 13, 1935, shall be paid without application, after deduction of any like benefits received under pension laws in force during such period.

In the case of any person in receipt of benefits under any of the acts repealed by such act of August 13, 1935, such benefits shall not be reduced or discontinued by reason of the enactment of such act of August 13, 1935.

SEC. 2. Any claim for benefits under the laws reenacted by such act of August 13, 1935, pending on March 19, 1933, may be considered and determined under such laws without any renewal of such claim by the applicant, and any claim for benefits under any act or part of an act repealed by such act of August 13, 1935, pending on August 12, 1935, may be considered and determined as a claim for benefits under the laws reenacted by such act of August 13, 1935. In case of any such claim the applicant shall be afforded an opportunity to present supplementary evidence and to have a new physical examination before his claim is determined, and shall be given notice of such opportunity. Benefits awarded under any such claim shall begin to accrue on the date of filing such claim.

Bill to place Spanish War veterans on same basis as Civil War veterans:

[H. R. 1404, House of Representatives, 74th Cong., 1st sess.]

A bill granting pensions and increases of pensions to certain soldiers, sailors, and nurses of the War with Spain, the Philippine Insurrection, and the China Relief Expedition, and their widows and dependents, and for other purposes

Be it enacted, etc., That all persons who served 90 days or more in the military or naval service of the United States during the War with Spain, the Philippine Insurrection, or the China Relief Expedition, between April 21, 1898, and July 4, 1902, and who have been honorably discharged therefrom, or who, having served less than 90 days, were discharged for disease or disability incurred in the service and in line of duty, shall be entitled to, and shall be paid, a pension at the rate of $75 per month: *Provided*, That any person who served 90 days or more in the military or naval service of the United States during the War with Spain, the Philippine Insurrection, or the China Relief Expedition between April 21, 1898, and July 4, 1902, and has been honorably discharged therefrom, or having served less than 90 days was discharged for a disease or disability contracted in the service and in the line of duty, and who is now or hereafter may become by reason of age, physical or mental disability, helpless or blind, or so nearly helpless or blind, as to require the regular aid and attendance of another person, shall be entitled to and shall be paid a pension at the rate of $100 per month.

SEC. 2. The widow of any officer or enlisted man who served 90 days or more in the military or naval service of the United States during the War with Spain, the Philippine Insurrection, or the China Relief Expedition, between April 21, 1898, and July 4, 1902, inclusive (service to be computed from the date of enlistment to date of discharge, and all leaves of absence and furloughs under General Orders, No. 130, August 29, 1898, War Department, to be included in determining the period of pensionable service), and was honorably discharged from such service, or, regardless of length of service, was discharged for, or died in service of, a disease or disability incurred in the service in line of duty (such widow having married such soldier, sailor, or marine prior to Sept. 1, 1922), shall, upon due proof of her husband's death, without proving his death to be the result of his service, be placed upon the pension roll at the rate of $30 per month during her widowhood: *Provided*, That a widow who is now, or may hereafter reach the age of 70 years shall be entitled to and shall be paid a pension at the rate of $40 per month: *Provided further*, That the widow or remarried widow of any person who served 90 days or more in the military or naval service of the United States during the War with Spain, the Philippine Insurrection, or the China Relief Expedition between April 24, 1898, and July 4, 1902, and having been honorably discharged therefrom, or who having served less than 90 days was discharged for disease or disability incurred in the service and in line of duty (such widow or remarried widow having been the wife of such soldier, sailor, or marine during the period of his service in said wars) shall be entitled to and shall be paid a pension at the rate of $50 per month.

SEC. 3. The provisions of the foregoing section shall apply to a former widow of any officer or enlisted man who rendered service as hereinbefore described and who was honorably discharged, or died in service due to disability or disease incurred in the service in line of duty (such widow having remarried either once or more after the death of the soldier, sailor, or marine) if it be shown that such subsequent or successive marriage or marriages has or have been dissolved, either by the death of the husband or husbands or by divorce on any ground except adultery on the part of the wife, and any such former widow shall be entitled to and be paid a pension at the rate of $30 per month. Any such former widow or any widow mentioned in this section or the preceding section shall also be paid $6 per month for each child under 16 years of age of such officer or enlisted man, and in case there be no widow or one not entitled to pension under any law granting additional pension to minor children, the minor children under 16 years of age of such officer or enlisted man shall be entitled to the pension herein provided for the widow, and in the event of the death or remarriage of the widow or forfeiture of the widow's title to pension, the pension shall continue from the date of such death, remarriage, or forfeiture to such child or children of such officer or enlisted man until the age of 16: *Provided*, That in case a minor child is insane, idiotic, or otherwise mentally or physically helpless the pension shall continue during the life of such child or during the period of such disability; and this proviso shall apply to all pensions heretofore granted or hereafter granted under this or any former statute: *Provided further*, That when a pension has been granted to an insane, idiotic, or otherwise helpless child, or to a child or children under the age of 16 years, a widow or former widow shall not be entitled to a pension under this act until the pension to such child or children terminates, unless such child or children be a member or members of her family and cared for by her; and upon the granting of pension to such widow or former widow payment of pension to such child or children shall cease, and this proviso shall apply to all claims arising under this or any other act.

SEC. 4. The pension or increased rate of pension provided for in this act shall commence from the date of filing application therefor in the Veterans' Administration after the approval of this act, in such form as may be prescribed by the Administrator of Veterans' Affairs provided they are entitled to a pension under the provisions of this act, and the issue of a check in payment of a pension for which the execution and submission of a voucher was not required shall constitute payment in the event of the death of the pensioner on or after the last day of the period covered by such check, and it shall not be canceled, but shall become an asset of the estate of the deceased pensioner.

SEC. 5. Nothing contained in this act shall be held to affect or diminish the additional pension to those on the roll designated as the "Army and Navy Medal of Honor Roll", as provided by the act of April 27, 1916, but any pension or increase of pension herein provided for shall be in addition thereto, and no pension heretofore granted under any act, public or private, shall be reduced by anything in this act.

SEC. 6. No claim agent, attorney, or other person engaged in preparing, presenting, or prosecuting any claim under the provisions of this act shall, directly or indirectly, contract for, demand, receive, or retain any fee for such services in preparing, presenting, or prosecuting claims when claimant is already on the pension rolls under the act of May 1, 1926, or any other prior pensions acts: *Provided*, That no claim agent, attorney, or other persons engaged in preparing, presenting, or prosecuting any original pension claim for, demand, receive, or retain for such services in preparing, presenting, or prosecuting such original pension claim, a sum in excess of $10, which sum shall be payable upon the order of the Administrator of Veterans' Affairs under such rules and regulations as he may deem proper to make; and no claim agent, attorney, or other person shall contract for, demand, receive, or retain a fee for services in preparing, presenting, or prosecuting claims for increase of pension under the provisions of this act; and any person who shall, directly or indirectly, or otherwise, contract for, demand, or retain a fee for services in preparing, presenting, or prosecuting any claim under this act, or shall wrongfully withhold from the pensioner or claimant the whole or any part of the pension allowed or due to such pensioner or claimant under this act, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall, for each and every offense, be fined not exceeding $500 or be imprisoned not exceeding 1 year, or both, in the discretion of the court.

SEC. 7. That all acts and parts of acts in conflict with or inconsistent with the provisions of this act are hereby modified and amended only so far and to the extent as herein specifically provided and stated.

Bill to repeal Economy Act as it affected Spanish War veterans:

[H. R. 2828, House of Representatives, 74th Cong., 1st sess.]

A bill to restore benefits for veterans of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection, and for other purposes

Be it enacted, etc., That so much of title I of the act entitled "An act to maintain the credit of the United States Government", approved March 20, 1933, as amended, and of all acts or parts of acts amending or supplementing such act, as relates to veterans and widows and dependents of veterans of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection, is hereby repealed.

SEC. 2. (a) All public laws granting medical or hospital treatment, domiciliary care, compensation, and other allowances, pensions, or retirement pay to veterans and the dependents of veterans of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection, which were repealed by section 17 of title I of such act of March 20, 1933, are hereby reenacted to read as such laws read on March 19, 1933, with the same force and effect as such laws had on such date with respect to veterans of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection.

(b) All awards and grants of monetary benefits in force on March 19, 1933, under the laws reenacted by this section, shall be in full force and effect from the effective date of this act until modified or revoked pursuant to such laws, except in cases where the right to payment under such laws has ceased by reason of the happening of a contingency referred to in such laws.

(c) All claims for benefits under the laws reenacted by this section pending on March 19, 1933, may be considered and determined under such laws without any renewal of any such claim by the applicant, but such applicant shall be afforded an opportunity to present supplementary evidence and to have a new physical examination before his claim is determined, and shall be given notice of such opportunity. Benefits awarded under any claim pending on, or filed after, the date of enactment of this act shall begin to accrue on the effective date of this act, or the date of the filing of the claim, whichever is the later date.

SEC. 3. This act shall take effect on the first day of the calendar month next following the month during which this act is enacted.

Bill to repeal entire Economy Act:

[H. R. 2825, House of Representatives, 74th Cong., 1st sess.]

A bill to repeal Economy Act approved March 20, 1933, and for other purposes

Be it enacted, etc., That such provisions of the act entitled "An act to maintain the credit of the United States Government", approved March 20, 1933 (otherwise known as the "Economy Act", which repeals all public laws granting medical or hospital treatment, domiciliary care, compensation, and other allowances, pension, disability allowance, or retirement pay to veterans and the dependents of veterans of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection, and the World War, or to former members of the military or naval service, except so far as they relate to persons who served prior to the Spanish-American War and to the dependents of such persons, and the retirement of officers and enlisted men of the Regular Army, Navy, Marine Corps, or Coast Guard, which gives to the President of the United States the power to issue regulations under which certain classes of persons may be paid a pension, and under which the salaries of Federal employees have been reduced as much as 15 percent) and of all acts or parts of acts amending or supplementing such act, as have not heretofore been repealed, are hereby repealed, and all laws or provisions of law amended or repealed by such act of March 20, 1933, or by such amendatory or supplementary acts or parts of acts, not heretofore reenacted, are hereby reenacted to read as such laws or provisions of law read prior to March 20, 1933.

SEC. 2. This act shall take effect on the first day of the first calendar month following the month in which this act is enacted.

DR. TOWNSEND AND THE TOWNSEND MOVEMENT

Mr. BURDICK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. BURDICK. Mr. Speaker, when the Bell resolution to investigate the Townsend old-age-pension organization came before the House, I was one of the three who voted against it by a standing vote. I did that for the reason that I did not believe the Congress should spend $50,000 to investigate this poor people's organization, when the Members of Congress were aware of the direct expenditure of funds here in Washington to stop the will of the people.

I refer to the fact that the power companies last year spent something over $3,000,000 to prevent the passage of the holding-company bill. This sum was not spent in organizing a movement, but for the direct and specific purpose of unlawfully preventing legislation which the people demanded. A committee was set up in the House to investigate this matter, but nothing has been done, and I can confidently predict nothing will be done.

Dr. Townsend and his associates have spent no money to prevent legislation which the people demanded. They have spent a large sum of money in organizing a national movement to secure legislation that millions of people want. The money came from the people, and it is reported in the news items that something like $1,000,000 has been contributed. That seems to be the sin that has been committed by Dr. Townsend—that he collected a million dollars from poor people. The next sin, according to the newspaper accounts, is that the people who contributed this money got nothing for it, and Dr. Townsend, therefore, must have gotten the money. Let us see what the facts are.

First. Dr. Townsend and Mr. R. E. Clements founded an idea of old-age pensions. It is immaterial where they got the idea—whether they originated it themselves or whether they borrowed it from somebody else. The fact remains they put out the idea in a way which got the attention of the people.

The one thing about the Townsend plan which gave it such tremendous momentum was the fact that it placed the responsibility for the protection of the aged on the Federal Government. Under the plan, the aged, wherever they are in the United States, are eligible to receive benefits. Under any other plan the aged must established a "legal residence" in some locality. They cannot move—they must remain glued to the spot if they are to be eligible for pension benefits.

Again, under other plans, and under the Social Security Act, the aged cannot qualify unless they can prove they are paupers and have neither relatives nor friends able to support them.

In other words, the Townsend plan put the plan of old-age security on a high, dignified, and honorable plane and removed it from the standard of a shameful, groveling, and abject begging position.

Second. While at the head of it, Dr. Townsend and his associates built a great organization numbering many millions of people in every State of the Union. The building of this organization was of immense value to the aged people and others interested in the welfare of the aged. When it is said that this organization gave the people nothing back for their $1,000,000, I say that statement is absolutely untrue. The fact that this organization exists and has existed for the past 2 years has been of real value to the people fighting for justice for the aged.

To unite 5,000,000 people in one movement by the membership method on an expense of $1,000,000 is a most moderate cost. If there are 10,000,000 members, then the cost is still less. In any event, the leaders built the organization at a cost of not to exceed 25 cents per member. I have had experience in organizing the people of a State, and I found it could not be done for 50 cents per member if the organizers were to eat and sleep. Dr. Townsend says he has not over $500 left in money and no property. I believe it. No man living could put over an organization such as the Townsend organization is for less than a million dollars. Whatever the people put in the organization spent, and that is what they should have done.

Some say that the Townsend organization as now organized has been of no value to the people who believe in old-age pensions. I desire to dispute that statement forcefully. Is there anyone in this country who can honestly say that the Townsend organization did not influence the passage of the only law to protect the aged we have on the statute books of the United States? I personally know, as a Member of Congress, that the Townsend movement did influence the passage of the social-security bill. The appeal was made that the social-security bill would prevent the passage of the Townsend plan. That argument was used in my own case. I refused to be swayed by it and voted against the social-security bill. I was sure it would turn out to be nothing but

a starvation dole, and that is just exactly what it has turned out to be in my State. There is no pension about it; it is a relief dole, and before an aged person can get any of the dole he is required to deed his property over to the commissioners in charge of the plan, no matter how little value the property has.

But even though the Social Security Act is a dole, it is better than what we ever had before. We must make the social-security bill more liberal—we must make it possible in this country for the aged to receive respectable pensions for the few years they have to live after reaching the age of 60 years. The one organization that will bring this about is not the power lobby, the Chamber of Commerce of the United States, the Liberty League, or the Democrats, or the Republicans—it will be the Townsend organization.

During both sessions of Congress the McGroarty bill has been before the House. It was sponsored by one of the finest men in public life today, Hon. JOHN STEVEN MCGROARTY, of California. His bill was the official Townsend bill, and I know how hard MCGROARTY has worked to get this bill before the House for debate. It cannot come up until 218 Members will sign a petition to bring it up.

This Townsend organization is larger now than Townsend ever was—he could not stop it if he wanted to, and he does not want to. Like the leaders in the past, he can be attacked, he can be belittled, he can even be persecuted, but the movement will go on. The more he is abused or persecuted, the more vitality the movement will show. The reason why this is true is because the cause he has fostered is right, it is just, and from this movement will finally come a law that will treat the aged of this country as they should be treated by a great Government that has long neglected one of its most important functions.

The money to build this great movement has come from the people—it has not been supplied by some slush-fund contributor who intends to corrupt Members of Congress. It has come from the people, and I am sure the contributors are proud of what they have been able to give. In return for their sacrifices they have built a great militant organization that has and will continue to build a public opinion so strong in this country in favor of adequate old-age pensions that some Congress in the not far-distanct future will provide the remedy.

The organization may not have spent all of this money wisely in every particular; someone more versed in business might have done better. The fact remains, however, that they have built in this country the largest organization in our history on the least amount of money of any organization expense known so far. The best endorsement for Townsend is that today he has no money, no property. The people never have petitioned Congress to investigate the movement—they are satisfied, so I venture to say that Congress has little right to rush into the fray to determine who put in a dime and what was done with it.

There is one outstanding fact now well established, and that is that none of this $1,000,000 was used unlawfully or corruptly to influence Members of Congress. Can that much be said for the power company? Again, I ask, why drop this power-lobby expenditure of $3,000,000 to corrupt Congress, and start out with guns drawn to chase down the dimes Dr. Townsend used to build public opinion in favor of a just cause.

In my opinion, the sponsors of the present investigation were not as much concerned with the protection of those who contributed their dimes and nickels as they were in trying to prevent those dimes and nickels from being used against their reelection as Members of Congress.

Millions will be raised and poured into the coffers of the Republicans and the Democrats to carry on the coming campaign. Will Congress later appropriate $50,000 to investigate who put in the money, whether it was wisely spent, whether some employee got too much salary, or whether the candidates for the Presidency rode in a new Buick or an old Lincoln automobile? Nothing like it will be undertaken.

Just plain old-fashioned horse sense should dictate that Congress has enough to do to attend to its own business and let the people of this country have an organization of their own, financed by themselves and directed toward a worthy and justifiable end.

In closing this statement, let me say that if Dr. Townsend had not talked a third party, no investigation would have been undertaken. The old parties will stand for almost anything as long as a third party is not suggested. Both old parties know each other. When necessary they can sleep in the same bed and rest comfortably. Just as soon, however, as someone suggests a third party, then the permanency of the old parties is put in jeopardy, and they rush at their common enemy with a concerted attack. Their reign has been threatened—their right to rule over the destinies of the American people is questioned. They dread the loss of this power—their very political lives are at stake (so they believe), and their combined attack is savage and desperate.

There is one power, however, that neither of the old parties can withstand. They are powerless before it, and that is the power of public opinion. The Townsend movement is building public opinion and will express itself, no matter who desires or attempts to divert or destroy that opinion.

Finally, that public opinion will be so definitely fixed in this country that Congress will respond to it. When that day comes, the people's fight for a just pension system will end, but not until then. How long the Townsend movement will remain depends on how long it will take Congress to make up its mind to grant to the aged of this country just, honorable, and adequate security.

Congress is wasting its time and the taxpayers' money in trying to stamp out this movement by investigations. No amount of calumny heaped upon the head of Dr. Townsend will stop the movement—any such procedure would actually increase the people's zeal for the movement.

I may be mistaken in my forecast of the future, but I will venture to guess that the people are about to investigate Congress. If I am correct, then, as Members of Congress, we should remember the Golden Rule: "Do unto others as ye would others should do unto you."

CIVILIAN CONSERVATION CORPS

Mr. KENNEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. KENNEY. Mr. Speaker, it has been a source of gratification to me that I had the privilege of serving as a member of the committee which undertook successfully to extend the life of the Civilian Conservation Corps. Its benefits are noteworthy in my State and throughout the Nation. To its responsible head I wish to pay compliment in recognition of his able, effective direction of its activities. My colleagues in the House of Representatives and I with them appreciate the great achievement of the Director of Emergency Conservation Work, Robert Fechner.

In operation more than 3 years, the Civilian Conservation Corps program was created by an act of Congress approved March 31, 1933, and extended by the Emergency Relief Appropriation Act of 1935. The legislation was designed to relieve acute distress by supplying productive employment primarily to young men whose families were on public-relief rolls, to provide for the restoration and protection of our country's natural resources, and to aid in the stimulation of business recovery through supplying a market for large quantities of foodstuffs, clothing, heavy machinery, automotive equipment, and other supplies.

By Executive Order No. 6101, April 3, 1933, President Roosevelt established the office of Emergency Conservation Work and named Mr. Robert Fechner, of Boston, as director. In the order the President directed the War, Interior, Agriculture, and Labor Departments to assist the Director in carrying out the provisions of the act. To make the law effective, a Nation-wide chain of work camps was established in the forests, parks, and fields of the country. By July 1, 1933, camps had been established in every State. The camps have been limited to unmarried men between the ages of 17 and 28, to war vet-

erans who may be enrolled regardless of age or marital status, and to a limited number of experienced men living in the vicinity of each camp.

The Director of Emergency Conservation Work has throughout been responsible for the execution of the C. C. C. program. Four Government departments—Labor, War, Interior, and Agriculture—cooperate in its operation. The Director coordinates the functions performed by these departments through an advisory council composed of one representative from each department. These council members act as liaison officers between the Director and the cooperating departments.

During the time that the Civilian Conservation Corps has been functioning more than 1,600,000 persons have been given employment under the program. At present approximately 350,000 men are enrolled in the corps. These men are working out of 2,107 camps.

Enrolled men have benefited greatly in health and morale as a result of outdoor life, good food, regular hours, and steady work, which characterize the Civilian Conservation Corps program. Care of the health of the C. C. C. enrollees starts at the time of enrollment, as only those men are selected who can stand the work in the forests and who are free from contagious disease. When the enrollees are accepted they are sent at once to camps and are kept under careful medical supervision. Smallpox and typhoid vaccinations are given immediately.

A medical officer is assigned to each camp to look after the health of the young men. Not only does he take care of the sick and the injured, but he is responsible for the sanitation of the camp, the protection of the water supply, seeing that the men get proper food and bathing facilities, providing first-aid instructions, and giving lectures on personal hygiene and disease prevention.

The men are housed, for the most part, in barracks of either portable or permanent type. Sleeping quarters are carefully heated and ventilated in order to prevent the spread of communicable diseases, especially of the respiratory type. Besides the buildings constructed to shelter the enrollees, the camps have mess halls, recreation halls, and administrative buildings.

Veterinary officers are used to inspect meat and dairy products. These veterinarians inspect slaughterhouses, packing plants, dairy farms, and creameries to see that the food comes from the right kind of places. The food itself is inspected to see that it comes up to specifications and answers sanitary requirements.

The great majority of the enrollees leave the corps better equipped in every way to face the problems of modern life than before their service. Most of them have acquired new skills which open additional job opportunities.

The cash allotments of enrollees to dependent families have made it possible for many families to be entirely removed from public-relief rolls. Many other families have been materially assisted. The consensus of opinion is that the ultimate results of Emergency Conservation Work will prove of lasting value, not only to the men of the Civilian Conservation Corps but also to the entire Nation.

In my State of New Jersey there are now 36 Civilian Conservation Corps camps engaged in forest protection and improvement, park development, soil-conservation projects, and mosquito-control work. With an average of 162 enrolled men in a camp, a total of approximately 5,832 men will be working this summer on C. C. C. projects in New Jersey. About 4,000 additional New Jersey men will be located on C. C. C. projects in other States.

In the period from April 5, 1933, to April 1, 1936, fully 47,835 New Jersey citizens were given employment by the Civilian Conservation Corps. Of these, 43,043 were enrolled men. Nonenrolled personnel included those employed in supervisory, technical, clerical, professional, or similar capacities, or who were engaged in the construction and maintenance of camps or other skilled and unskilled labor. As of March 1, 1936, there were 10,176 New Jersey enrollees in the corps.

Total obligations for operations of the C. C. C. in New Jersey through March 20, 1936, approximated $17,443,000. They were incurred for compensation to enrollees and supervisory employees and purchase of materials, supplies, shelter, foodstuffs, clothing equipment, transportation, and the like. Almost every type of industry has benefited through expenditures made by the Civilian Conservation Corps. Of the total amount of money earned by New Jersey enrollees, $4,762,000 was sent home to dependents in the form of allotments. The basic cash allowance of each enrolled man in the corps is $30 a month. All of the young men and many war veterans allotted and still allot from $22 to $25 of their monthly cash allowances to needy dependents. These allotments are mailed direct to the families of the boys by the War Department. Besides receiving cash allowances which permit them to contribute substantially to the support of their families, New Jersey enrollees are housed, fed, clothed, given medical care, and afforded recreational and educational opportunities.

Included in the 36 camps being operated in New Jersey are 12 in State forests, 3 in private forests, 7 on mosquito-control projects, 3 on soil-erosion prevention projects under the supervision of the Soil Conservation Service, 9 on State and National parks, and 2 on conservation projects on military reservations.

In the course of the past 3 years the C. C. C. have accomplished a great deal in the upbuilding of New Jersey's forest resources. Carried on by companies assigned to State and private forests this work has been supervised by the United States Forest Service in cooperation with the State conservation authorities. Large areas of New Jersey were originally covered with good pine forest, but they have been cut over year after year until the growth of pitch pine has become seriously impaired. However, there are still many reproductive trees in the area, and through the labors of the C. C. C., including collection of cones, planting, and extensive prevention measures against fires, the forests are being brought back into productivity. More than 5,000 acres have been planted with trees, and the C. C. C. has put in more than 10,000 man-days on nursery work growing seedlings for further reforestation. More than 7,000 tree seeds have been collected.

To increase the area accessible for fire control the C. C. C. has built a total of 279 miles of truck trails and 61 miles of foot trails. These also serve to provide access to many scenic and historic sites in the forests and parks for the benefit of the people of New Jersey. To further enhance the value of New Jersey's forests, timber-stand improvement work has been completed over an area of 25,922 acres. The C. C. C. has constructed 383 miles of firebreaks. These are lanes cut through forested areas to serve as barriers to halt the progress of spreading fires. Fire hazards have been cleared from 12,568 acres of woodland. Timber estimates have been made over an area of 11,780 acres, and enrollees have spent 10,220 man-days on tree-surgery activities.

New Jersey forests, like other forested areas in the East, are threatened with serious destruction caused by tree-insect pests and tree diseases. The C. C. C. men in New Jersey are conducting an intensive campaign against the ravages of the gypsy moth, the white pine blister rust, and the Dutch elm disease. White-pine blister rust and Dutch elm disease control operations have been carried on over 36,269 acres, and a total of 5,611 acres have been scouted for the eggs of the gypsy moth.

C. C. C. activities also include mosquito-control operations, which involved the digging of 14,360 lineal yards of ditches and the staking of 16,000 yards, carried on over an area of 11,427 acres. The camp at Teterboro, in my district, is performing a long-needed service in its efforts to eradicate the notorious New Jersey mosquito from the meadows of the Hackensack River. As a part of the work, salt and woodland marshes and stagnant, polluted pools are drained by a series of ditches. Such work has not impaired but has increased the value of such areas as wildlife breeding and feeding grounds.

A Civilian Conservation Corps company has been assigned to the development of the Morristown National Historical Park at Morristown. Activities of the C. C. C. in this area have been of wide scope, including work in forestry, archeology, landscaping, and guiding visitors. The park constitutes the site of the encampment of the Continental Armies in the Revolutionary War during the winters of 1777–79.

The Wick and Guerin houses, both eighteenth century dwellings associated with the Morristown encampment of the Continental Army, have been restored. Brigade encampment sites of the Continental Army have been suitably marked. Signs, made and erected by C. C. C. enrollees, show positions, composition of the brigades, names of commanding officers, and the time of encampment in the Jockey Hollow area of the park.

Dutch-elm disease control has been of prime importance in this area to prevent its spreading throughout the park and to adjacent areas. Removal of dead chestnuts has improved the appearance of the park and furnished material for cabins, fences, and picnic campfires.

Twelve C. C. C. camps have been engaged in work on State and local parks at one time or another during the past 3 years. This work is supervised by the National Park Service in cooperation with State and local park and conservation authorities. All of the New Jersey parks serve the metropolitan populations of New York, Philadelphia, or Camden. The work of the C. C. C. in New Jersey parks has consequently been of unusual value in affording greater use of these heretofore unplanned and undeveloped recreational facilities. This has been especially true of the camps in Bergen and Camden Counties.

An average of approximately 400 C. C. C. men have worked in the New Jersey section of the Palisades Interstate Park. In the lower portion of the park, which is a spot of natural beauty, the main work has been on the talus slope, which can be seen from the Hudson River. This slope has in some places been eroded by the elements and by the river tide. The lower area is being preserved for its recreational as well as its scenic value. It is in my congressional district, directly opposite New York City, and attracts a large number of visitors. The work in this park is now being continued by one company of 162 men.

Another 400 men were assigned to the development of High Point State Park, which is under the jurisdiction of the High Point Park Commission. This park covers an area of some 11,000 acres, for the most part a wooded section on the top of a ridge. A point of special interest in this area is the so-called cedar swamp, where grows, among other species, a variety of white cedar not usually seen in that part of the country. Prior to the establishment of the C. C. C. camps only a small area in the immediate vicinity of the point had been used for camping, bathing, and picnicking. This area has been greatly extended by the work of the two companies. About 10 to 12 miles of park roads have been built, and more is contemplated to make accessible other areas for recreation. All these operations are working toward a well-planned program, which not only opens this area to recreation but also preserves its natural character.

The boys have nearly finished one dam which will create a lake of some 20 acres, and another dam is under construction which will provide a lake of some 40 acres. These lakes will not only enhance the scenic value of the park but will serve as reservoirs in time of fire, and their banks will provide sites for camps. Development of picnic areas and special overlook points is also planned.

The company located in Parvin State Park near Vineland, an area of nearly 1,000 acres, is laying out interesting nature trails through the cedar swamps and other woods. In the past this park has been used chiefly for bathing, camping, and picnicking, in the vicinity of Parvin's mill pond. The C. C. C. boys have razed a group of unsightly buildings and have turned the site into a well-planned camping area. Plans are afoot for developing the beach through building a new bathhouse and a group of utility buildings.

A small ravine at one side of the park, called the Thundergust, is being developed as a narrow half-mile lake to be utilized for campers and picnickers.

Another C. C. C. company is located in Voorhees State Park at High Bridge. This park, on the edge of the New Jersey highlands, is interesting mainly for its scenic values from park drives and picnicking areas. Considerable reforestation has been undertaken here.

An average of 400 men were assigned to the Cooper River and Great Egg Harbor parkways in Camden County during the past 3 years. One company is reclaiming the silt-filled Cooper River, which at one time was navigable as far as Haddonfield. The other company, which was doing similar work in the Great Egg Harbor stream, completed its general development program last summer and was withdrawn. These two parkways are part of a proposed parkway across New Jersey from Camden to Atlantic City.

Twin camps were established in the South Mountain Reservation at Orange to develop this reservation for general recreational use. Improvements under way include the construction of park roads, guard rails, and incidental shelters. One company was moved out of this park last month.

A total of 400 men is working in Union County in cooperation with the Union County Park Commission. One company is situated in Watchung Reservation and is doing work similar to that undertaken at South Mountain. The other is working along the Rahway River, reclaiming the silt-filled stream and developing recreational facilities along its course.

The character and location of the camps now in operation in New Jersey and for which my State is the richer in its resources are as follows:

Camp designation	Land ownership (National, State, or private)	County location	Post-office address
S–51	State	Sussex County	Branchville.
S–52	do	Burlington County	New Lisbon.
S–53	do	Cape May County	Woodbine.
S–54	do	Passaic County	Butler.
S–55	do	Burlington County	New Gretna.
S–56	do	Atlantic County	Mays Landing.
S–59	do	Burlington County	New Lisbon.
S–60	do	do	Chatsworth.
S–62	do	Warren County	Hackettstown.
MC–63	Private	Cape May County	Tuckahoe.
MC–64	do	Morris County	Morristown.
P–65	do	do	Danville.
P–66	do	Passaic County	Hewitt.
P–67	do	Somerset County	Raritan.
S–70	State	Passaic County	Oak Ridge.
S–71	do	Sussex County	Branchville.
S–72	do	Gloucester County	Glassboro.
MC–73	Private	Cape May County	Dias Creek.
MC–74	do	Cumberland County	Cedarville.
MC–75	do	Atlantic County	Port Republic.
MC–76	do	Ocean County	Manchahawkin.
MC–79	do	Bergen County	Hasbrook Heights.
SCS–1	do	Hunterdon County	Clinton.
SCS–2	do	Monmouth County	Freehold.
SCS–3	do	Burlington County	Wrightstown.
NP–1	Morristown National Historical Park.	Morris County	Municipal Building, Morristown.
SP–1	High Point State Park	Sussex County	Sussex, R. F. D.
SP–4	Parvin State Park	Salem County	Norma.
SP–5	Voorhees State Park	Hunterdon County	High Bridge.
SP–7	Essex State Park	Essex County	Orange.
SP–8	High Point State Park	Sussex County	Sussex, R. F. D.
SP–10	Camden State Park	Camden County	Haddonfield.
SP–12	Palisades State Park	Bergen County	Englewood.
SP–13	Rahway River Parkway	Union County	Cranford.
Army–2	Military Reservation	Burlington County	Camp Dix.
Army–3	do	Monmouth County	Fort Hancock.

AWARD POSTHUMOUSLY OF THE DISTINGUISHED SERVICE MEDAL TO THE LATE MAJ. GEN. CLARENCE R. EDWARDS

Mr. CITRON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. CITRON. Mr. Speaker, from my State came many of the men who served in the Twenty-sixth Division under the leadership of a great general, the late Clarence R. Edwards. They will appreciate the award posthumously of a Distinguished Service Medal to the great leader of that division more so than even a personal award to themselves.

The Gold Star Mothers and the relatives and friends of the men in that division will also consider the passage of this resolution a deserving tribute to the man they learned to know and love in the years following the war. Clarence R. Edwards loved his men in the war and maintained an interest in their welfare after the armistice and up to the time of his death.

To all who came to know him, General Edwards was a great friend, loyal citizen, and trustworthy adviser. From the statements and letters to me of men who knew him on the battlefield or who made his acquaintanceship since the war, I know the devotion and respect which these men held for him during his life and which has increased since his death.

Our distinguished colleague from Massachusetts, Hon. WILLIAM P. CONNERY, is to be commended for sponsoring House Joint Resolution 570, making this award. The people of the State of Connecticut are proud of the record of the Twenty-sixth Division and its late war leader, whom we are honoring. As a Member at Large from that State, I can only, in my humble fashion, express their thanks for the thoughtfulness and sincerity of Mr. CONNERY for introducing and moving the passage of this resolution.

THE FIFTH NATIONAL SCHOOL-SAFETY PATROL PARADE

Mr. CHURCH. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD at this point.

The SPEAKER. Is there objection?

There was no objection.

Mr. CHURCH. Mr. Speaker, tomorrow the city of Washington will witness the fifth national school-safety patrol parade, under the auspices of the American Automobile Association. All of us recognize the important part that school patrols have played in the protection of the lives of the children of America.

Mr. Speaker, I think we should take this opportunity to commend the youth for their work, and it is our duty to encourage them by public recognition. We should commend those who sponsor the school patrol organizations, and an expression is due those who are responsible for the fifth national school safety patrol parade.

During the year 1935, 36,000 persons were killed by automobile accidents and 1,000,000 were injured. It is an appalling death rate, due in large part to negligence and nonenforcement of our motor vehicle laws. By safety education programs, proper law enforcement, and engineering efforts this death rate by automobile accidents can be appreciably reduced.

It is with a great deal of pride that I call attention to the fact that as a result of its educational, engineering, and law-enforcement programs my home town of Evanston, Ill., was recently awarded the 1935 title of "the safest city in the United States." A contest was conducted by the National Safety Council among 801 cities in the United States, and for the third time in 4 successive years the grand prize went to Evanston, which has a population of about 65,000.

Eight hundred and one cities reported to the National Safety Council on their accidents during 1935. Their reports showed that the national average of accidents was 18.1 per 100,000 population. The city of Evanston, however, last year had only 2.9 per 100,000 as an average.

Naturally I am proud of the city. It is the "safest city in the United States." I call attention to its record for safety, not only because of my just pride but because I think it clearly indicates what can be accomplished by civic pride on the part of the people and by a proper educational and law-enforcement program. It is indicative of how fundamentally important the fifth national school-safety patrol parade tomorrow in Washington is as a factor toward a reduction in accidental deaths. It is something in which all of us should take a real interest.

STOP LYNCHING NOW

Mr. FORD of California. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD at this point.

The SPEAKER. Is there objection?

There was no objection.

Mr. FORD of California. Mr. Speaker, as the sponsor of H. R. 2776, a bill to assure to persons within the jurisdiction of every State the equal protection of the laws and to punish the crime of lynching, I hope the Members of this House give my bill sincere and unbiased consideration. Similar bills have been before Congress many times, but either apathy, prejudice, or a question as to constitutionality has prevented passage.

Surely there is no Member of this House who will defend lynching. All agree that it is a disgrace to this Nation; that it puts to shame our sense of justice, of decency, of humanity. But many argue that efforts to abolish it must be left to the individual States. With this I totally disagree.

Lynching has long disgraced this Nation. The States have had the power to deal with it; to pass drastic laws to insure punishment to all having a part in any lynching, including those public officials who by their remissness, their cowardice, their criminal collusion with the mob, permit lynchings to occur. But nothing has been done. Lynching is unchecked.

On April 28 a Negro farmer by the name of Lint Shaw was shot to death at Colbert, Ga., by a mob of 40 men, 8 hours before he was to go on trial on a charge of attempted criminal assault. This man had been saved from a mob about 2 weeks before at Danielsville, Ga., when Superior Judge Berry I. Mosely single-handedly broke up the mob with a speech from the steps of the jail. The man was then rushed by a National Guard unit to Atlanta for safekeeping. After a week or 10 days he was returned to Danielsville for trial before the same judge who had saved him from the mob, but when the citizens heard of his presence in the jail they became menacing and he was moved to Royston, Ga., from which jail he was removed by the mob and lynched near Colbert.

Weak efforts had been made to save Shaw by moving him from one jail to another. But when brought back for trial he was taken by a mob from the jail at Royston, Ga., and lynched near Colbert. The State of Georgia proved itself unable to cope with the situation. If H. R. 2776 were made a law, the fear of quick and sure punishment would have prevented the cowardly mob from committing this abominable crime.

On April 29 Willie Kees, 19, was taken from the city marshal of Lepanto, Ark., and shot to death by a masked mob. Kees was said to have attempted an attack on a white woman April 18, but, curiously enough, at that time he was only warned to leave town. He returned on April 27, and the lynching was the result. He was arrested by the city marshal the morning of April 29 and was taken from that officer while the two were on the way to the jail.

On May 3 John Ruskin, a farm hand, was shot to death by a mob of 200 men at Pavo, Ga. He was charged with the slaying of a white man. He was not brought to trial; he was not heard on the charge; he was, instead, murdered by an infuriated mob.

I could recite instance after instance of mob violence. And in every case the facts are the same: The mob either

intimidates the local law-enforcement officers and takes the accused by force, or these local officers connive at the crime. And no punishment follows.

Most progressives have come to the conclusion that the power of the Federal Government must be used if this worst of all crimes is to be stamped out.

Do not be deceived by the cry of unconstitutionality. Eminent lawyers declare that this bill is constitutional. If we are to be estopped from this effort to stamp out lynching on the grounds that the Constitution will not permit it, then our guaranties of liberty, of trial by due process of law, of orderly government in the United States are lost.

I have no hesitancy in saying that the cry of unconstitutionality is being used right now to prevent the passage of progressive measures in the interest of the common people. It is a partisan move, and all liberals should unite to condemn it. The Constitution is a charter of liberties, subject to interpretation as new issues arise. It was not intended to remain unchanged. Without frequent amendments, this Nation would long ago have become disrupted. Without freely exercising the right to amend the Constitution, we would have had neither the thirteenth, fourteenth, or fifteenth amendments, which means that we would still have slavery in the United States.

In my opinion the danger to our liberties today comes not from passing measures that may later be declared unconstitutional but in refusing to press liberal and enlightened legislation on the specious and partisan cry that it is unconstitutional.

We must face the issue squarely. We must be bold enough to pass progressive measures, such as the antilynching bill, and to leave it to the Supreme Court to decide the moot question as to constitutionality. If the decision is adverse—and many of our best attorneys say it will not be adverse—we shall then face the issue of a constitutional amendment.

To raise the cry of unconstitutionality for partisan reasons is indefensible. Yet that is being done. I think no true lover of the Constitution, white or black, will be deceived by this specious outcry.

THE WORKS PROGRAM

Mr. MORAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein an address by the W. P. A. administrator in the State of Maine.

The SPEAKER. Is there objection?

There was no objection.

Mr. MORAN. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following address by Albert Abrahamson, Maine works-progress administrator, before the Woodfords Club, at Portland, April 24, 1936:

According to the newspapers, you were addressed last month by a college dean who asked you not to blame the colleges of this country for the activities of "brain trusters" recruited from their faculties. When I read the story I was reminded of the famous sign always posted in the saloons and dance halls of early western communities. In bold, black letters over the piano there was this request, "Don't shoot the piano player; he's doing the best he can."

Since Dean Marriner made his speech there has been a bull market in "brain trusters." The Republican Party, after building up a good issue of opposition to "visionary, inexperienced, impractical professors", has now a "brain trust" of its own. Its leader is a former student of Felix Frankfurter. Two of its members are retired Harvard professors. Another—and please keep this secret—once campaigned for a Socialist candidate for the board of aldermen in Buffalo. What is most significant of all, however, is that all the members of the Republican "brain trust" are being paid at least $200 per week. I confidently predict that little boys will soon transfer their ambitions from wanting to be President to wanting to be an economics professor.

It is a real pleasure to appear before the Woodfords Club. While I know nothing about your organization, I do know Mr. Mathes, your president, who is director of finance and reports for the Maine W. P. A. He is doing a thorough, efficient, and gratifying job. If Government service could always be blessed with the services of persons like Mr. Mathes, there would be far less complaint about the lack of efficiency and integrity in public life. Of course, there are complaints about Mr. Mathes. I am repeatedly told that he is a Republican. But who am I to take such a complaint seriously? I am accused not only of being a Republican but, in addition, I have been called many other names, which I shall not repeat.

My subject tonight is the works program. I intend to sketch briefly the background of the program and the way it is working out in Maine.

One cannot start such a discussion without again calling attention to the most troublesome tendency in the current economic scene—increased industrial production does not bring with it increased industrial employment. This tendency has serious implications. According to the March survey of business, recently released by the American Federation of Labor, "When production outstrips buying power, sooner or later the increase in production must stop for want of a market. When this happens men are laid off, profits decline, and depression follows. It is important for labor to recognize that the next depression begins here and now, while we are recovering from the last."

At the turn of the year I took an economist's holiday, and spent a great deal of time reading the business reviews of the year 1935, published in newspapers and magazines. A man from Mars might have thought all was well—until he looked at the figures on employment and unemployment. Production had been increasing in almost every line—in heavy as well as light industries and in consumers' goods as well as producers' goods. Some industries, indeed, showed the greatest production ever. The construction industry, regarded by many observers as the most important index, showed gratifying progress. Corporate profits increased in 1935 by an estimated 47 percent, and were reflected in a booming stock market. All along the economic front there was and is apparent prosperity. I say "apparent prosperity" advisedly, for, in my opinion, there is no real prosperity as long as approximately 10,000,000 people are without jobs and derive their support from their own reserves, from family and friends, or from organized charity—either public or private.

What is prosperity, anyway? Have we ever really experienced it? Many persons now yearn for the good old days of 1929 as if economic conditions at that time were ideal. Yet there is abundant evidence that in 1929 there were many economic sections unblessed by good times. Farmers as a group were certainly not prosperous in 1929. The New England textile industry was having its difficulties even before processing taxes and unionization were introduced. The bituminous-coal industry was definitely sick. Several millions were unemployed throughout the country in 1929, even though no one knew or cared how many. Additionally millions of families, although employed, were existing on incomes far below the amounts believed necessary to yield a decent standard of living.

In 1929 several skeptical writers investigated the genuineness of our prosperity. Some of you may recall Stuart Chase's Prosperity: Fact or Myth, a popularization of several more serious studies, including Recent Economic Changes and Middletown. In this book Chase proved rather conclusively that prosperity was distinctly an unevenly distributed state, both geographically and by economic groups. There was another significant book written a bit earlier by Miss Clinch Calkins. It was called Some Folks Won't Work, the title being a repetition of a comment frequently made by persons when they were informed of the fact several millions were out of work. Miss Calkins showed definitely that prosperity did not mean employment for all, and that in most instances unemployment was not a voluntary state, but a form of economic slavery imposed by a chaotic business organization. The conclusion seems fairly clear that prosperity, 1929 model, was no economic paradise for millions of our citizens. We were, of course, better off than any other country, but we were still far removed from the standard of living to be expected in a country overflowing with the milk of natural resources and the honey of human ingenuity.

If prosperity in 1929 had faults, they were at least below the surface. But our 1936 prosperity shows its fundamental weakness so that all may see. Our present joblessness is more acute, more evident, and more hopeless. Until quite recently it was hoped that recovery in production would be accompanied by the absorption of most of the jobless. Yet we have the restored production, and we still have the bulk of our unemployment. Optimists speak glibly of "natural forces" bringing about reemployment and want nothing more than a prolonged "breathing spell." Realists are concerned lest the breathing spell become a sinking spell, and wonder whether there will ever be substantial reemployment.

No one denies that increased automobile production means more employment in Detroit, or that employment in general improves with increased production. The trouble is that there is not enough absorption. And the reasons are fairly apparent.

1. Much of our present employment is described by the high-sounding word "technological." Business, seeking profit, has always been anxious to produce cheaply. Labor cost is a large part of the cost of production. Machines have displaced expensive labor. Workers have been taught methods of speeding production. The net result is invariably fewer employment opportunities. Let me be specific. Raymond Clapper, writing in the New York World-Telegram, recently says:

"During a private discussion of unemployment here this week Senator GUFFEY, of Pennsylvania, said the steel industry is spending millions of dollars installing labor-saving machinery.

"Take the new strip-sheet steel mills being erected around Pittsburgh. The old-type mill using hand labor needed a force of 375 men working around the clock. They could produce 60,000 tons a year. The new-type mill needs only 126 men—one-third as

many. It will produce as much in a month as the old-type mill in a year.

"This isn't a move to increase capacity. The industry has been operating at less than 50 percent capacity. It never has operated at full capacity. Obviously, the purpose of these improved installations is not to produce more steel but to use fewer men.

"The National Industrial Conference Board says that if industrial activity reaches the 1929 level again it will absorb only about one-third of the unemployed. So where are we getting?"

All of us can add further illustrations. We know the effects of the dial telephone in reducing work opportunities for girls. We know that talking movies and the radio threw thousands of musicians out of work. Mergers and consolidations are present everywhere—and generally they mean that one job grows where two jobs grew before. Industries still flit about New England, bringing booms to some sections, and leaving others in distress. Nationally, industries also move about without regard for consequences to labor.

It is possible to argue that eventually, and in the long run, such improvements mean lower prices, that lower prices mean greater consumption, and that greater consumption means more jobs. This virtuous cycle is satisfactory intellectual fodder for those who think in terms of the long run. But the worker has to eat every day, and to him the long run may be long enough to result in starvation.

Two. A less important cause of our present situation lies in the perfectly justifiable practice on the part of industry of dismissing its least efficient men first when hard times come. Those that remain produce more abundantly in any case, but they are also driven harder during depressions, and are aided by machines so that they produce even more. The reabsorption of the least efficient is consequently postponed. This aggravates the problem. It also offers hope that a sudden increase in production will absorb large numbers, for a doubling of production will necessitate more than a doubling of workers, since the workers added are admittedly less efficient. This boom in production is, some hope, just around that eternal corner.

Three. A further reason for the swelling of the numbers of the unemployed arises from the fact each year since 1929, 600,000 persons have grown up and become available in the labor market at a time when the demand for labor was falling. Between 4,000,000 and 5,000,000 persons have thus been added to the toll taken by technology and depression. These young people present a peculiarly distressing situation. They have neither skill nor economic background. A special effort is being made to meet their problems through the National Youth Administration, which derives its funds from the $4,800,000,000 Emergency Relief Appropriation Act of 1935.

These factors account in part, I believe, for our present state of jobless prosperity. There used to be complaints about "profitless prosperity", but our present situation strikes me as infinitely worse. And this leads us to the next problem: What can be done about it?

2. I envy those simple souls who would leave the unemployed alone and rely upon the functioning of brutal laws of economic survival and upon the hope that private industry will eventually absorb the relatively few worthy unemployed. Most of the unemployed are shiftless, it is claimed, and they should be left alone. The proponents of such a policy will never admit that this means distress to the point of starvation, that it means the application of economic survival principles long since abandoned by civilized persons in the fields of physical health, and that it means punishing persons who are in trouble through no fault of their own. We care for the physically sick—or, at least, we make the effort with the admittedly imperfect instruments at our command. Is not economic distress fully as worthy of society's attention? I do not think there is need of arguing at any length about its desirability. I suggest that you consider what would happen if we were to stop all forms of relief to the unemployed and then decide for yourselves whether this is the proper policy in an allegedly civilized era.

Many of you probably feel that while a pure laissez-faire attitude is unthinkable, the problem can best be handled through private charity and local governmental aid. However much this approach may be preferred in normal times, it seems to be fairly clear that at the present time neither private charity nor local units of government have the resources to perform the task. Certainly the overwhelming evidence that comes to me from Maine communities is that even with Federal aid there are not enough resources to meet the demands. There is hardly a community in the State that does not constantly ask for more assistance. I suspect that this is inevitable; that no matter how much the Federal Government does, no matter what its rules and regulations are, no matter how thoroughly a relief load is absorbed, there will always be disgruntled local officials asking for more. And it is quite amazing to read those letters which complain in one sentence at the tyranny and stupidity of Federal aid and in the very next sentence ask for more of it.

There is a further suggestion for handling relief through what is commonly called the Federal dole. This theory is widely held, and some of my best friends are constantly presenting it to me. This school of thought admits that men suffer in times like these. It admits that society has a responsibility. It doubts that private industry, private charity, and local governments can do much at the moment. Admitting all this, it nevertheless insists that the cost of Federal relief be kept at a minimum. People should be fed, clothed, and housed in extremely modest fashion. They should, furthermore, remain at home and wait for the revival of private industry.

The chief argument in favor of this plan is its apparent cheapness in a money sense. Against such a policy may be suggested the tremendous loss in both human and money costs. Direct relief means a complete demoralization of individual and family life. It involves a tremendous waste of human resources and skills. Here are millions of men, many of whom are able, eager, and skilled. Here, at the same time, are jobs to be done. Roads, bridges, parks, sidewalks, and playgrounds need repair and await construction. Precious historical documents need preservation and analysis. Challenging problems demand investigation. Why not join the manpower and the social needs? For a little more than the cost of the dole, society will derive unquestioned advantages and individuals will acquire, retain, and improve invaluable skills and abilities. And the cost of the results is the amount by which the expenditure for such a program exceeds the cost of direct aid.

This is the theory behind the Federal works program. How has the program been applied in Maine?

3. The works program of the Roosevelt administration was designed to give employment to 3,500,000 employable persons who have been so wounded by the depression that they have been forced to accept public relief. Actually the number employed under the program reached 3,800,000 at one time. It is assumed that the local governments and private charity, while unable to care for all the unfortunates, will nevertheless care for all the unemployables and some of the employables. It is also intended that persons who still have savings, or other means of support, will yield to those who had reached the end of their resources. I emphasize these points, for there is much misunderstanding as to why some unemployed received employment while others do not. The attempt has been made to care only for the most extreme cases. In doing this, elaborate machinery set up under Maine E. R. A. for investigation as to the needs of applicants. The results of these investigations were made available to W. P. A., and the list of eligibles comes from this source.

The Emergency Relief Appropriation Act of 1935 allotted $4,800,000,000 to care for these 3,500,000 persons for a year. Because of delay in transition from earlier programs, some of this money was given to E. R. A. in the several States to continue that program until the works program began to function. The rest of the money has been given to various agencies by a board of allotment headed by President Roosevelt. To avoid the complications of vast sums, I shall confine my discussion of the program to Maine.

W. P. A. has two distinct functions: (1) It has charge of coordinating and planning the activities of all the agencies using funds from the act; (2) it operates projects of its own where other agencies have not absorbed the relief load. In Maine we keep one eye on the certified relief load and the other on the labor demands of agencies (like Quoddy or the Resettlement Administration) operating under the act. Where there are gaps we devise projects of our own within the limits of our funds.

Thus far approximately $28,000,000 of the $4,800,000,000 has been allotted to Maine. Of this sum, $4,000,000 went to E. R. A. This left $24,000,000 for the works program proper. The allotments by agencies have been roughly as follows:

Agency	Sum	Percentage
War Department (Quoddy)	$7,000,000	29
Works Progress Administration (including $2,000,000 for flood)	6,000,000	25
Bureau of Public Roads	4,000,000	17
Civilian Conservation Corps	4,000,000	17
Public Works Administration	1,000,000	4
Resettlement Rahabilitation	1,000,000	4
Others (Census, Department of Labor, Soil Erision, etc.)	1,000,000	4
Total	24,000,000	100

The War Department appropriation is being devoted to building Quoddy, and 2,500 persons are now employed on that project. Of this number, 1,500 are from the relief rolls. There are approximately 3,000 boys at C. C. C. camps doing sundry useful works in the field of conservation. The Bureau of Public Roads, while employing approximately 500 now, will employ between 1,500 and 2,000 in the spring, not only in the construction of roads but additionally in the elimination of grade crossings. The P. W. A. is embarking on a heavy construction program financed by combinations of loans and grants. The Resettlement Administration is developing Camden and Acadia National Parks. It is also developing park areas at Naples, Weld, Liberty, Old Town, and Edmunds. Fifteen hundred workers are already at work on these projects.

I mention these other agencies because their existence is not widely recognized at the moment, as far as providing jobs is concerned. But in a month or so they will constitute a more important part of the program. All over the State they will employ between 4,000 and 5,000 workers, most of whom will come from W. P. A. projects. In accordance with our attitude that we are in no sense first claimants on the labor supply, we are glad to terminate our own projects when the labor on them is demanded by other agencies operating under the act.

My own concern is naturally with W. P. A. projects. Approximately half our efforts are devoted to the construction and improvements of roads not cared for by other programs. The remainder of our men and money is being applied to other projects, including the improvement and construction of sidewalks, sewers, playgrounds, and airports. Recognizing the importance to Maine of its tourist trade, we are continuing work on the largest fish hatchery in the world at Gray and a fish ladder at Veazie. For unskilled women our typical project is a sewing room, with the product going to those in distress. The distribution of such material, as well as of other surplus commodities furnished by the Federal Surplus Relief Corporation, is in the hands of the State department of health and welfare.

Occasionally we are able to build structures like the Community Building in Rockland, now under construction. We are also building a tourist-information building in Portland. Our ability to do this depends on the extent to which materials are contributed by the sponsors and the availability of skilled laborers, for with us there is always present the necessity of maximizing employment. If large sums are spent for materials, there is less remaining for wage payment.

The recent flood has given us a new field of usefulness. When the flood came 2,000 W. P. A. workers were engaged in efforts to save life and property and to meet emergency conditions engendered by flood. Now we are swinging into permanent repair and replacement of public property damaged by flood. Two million dollars have been allotted for this purpose, and since we have already submitted projects over this sum, another million is being made available. Already 23 projects, employing 660 persons, are in operation, and we will shortly enlarge our activities. In all road and bridge projects we are in close contact with the State highway department.

The flood changed our program radically. Previously our main concern was with the labor supply, and we devised projects to provide employment for a particular group. Now we have a job to do, and we must find the labor. Because of this, we are empowered, when necessary, to go beyond the relief rolls to obtain the proper personnel.

Such projects answer in part the problem of the manual laborer—both skilled and unskilled. But what about the person who normally works with his brain or who applies highly developed technical skills? It is quite the fashion now to ridicule white-collar projects. Yet to me the development of projects for this class constitutes one of the most gratifying sections of our work. There is great dismay in finding an accountant digging ditches because he felt that he could not get work if he applied as an accountant. And there is a genuine satisfaction in transferring such a man to a white-collar project and enabling him to work in his regular field. This incident has actually taken place, and is not isolated. Nor is it confined to men. Trained women have been taken from sewing rooms and put at work more in harmony with their background and training.

The latest figures available show that approximately 1,000 men and women are at work on white-collar projects. Because this work strikes me as extremely important, I should like to tell you what is being done. One hundred and twenty-one trained musicians are giving concerts from time to time throughout the State. Twelve artists are engaged in various projects. Some of them are working in conjunction with the safety campaign now being conducted by the State of Maine. One of them is painting a mural based on Mother Goose at the Children's Hospital in Portland. Another recently completed the painting of a clipper ship which was presented to Rockland High School. There is also a group of 37 actors, giving performances at C. C. C. camps and other public and quasi-public institutions. All of these persons were selected carefully after impartial groups had passed on their professional qualifications. They are not amateurs, but qualified persons who normally earn their livings at the several callings.

There is also a writers' project of 67 which is engaged in preparing part of a national guidebook to be published later. The history and attractions of Maine will be presented in it as a direct result of this project, and there will also be a byproduct of material that will be useful for local and State purposes.

The Maine State Planning Board is enabled to continue its work under our program, and 30 members of its staff are paid from W. P. A. funds. A survey of Federal archives is being conducted, and 50 Maine persons are participating. The Bureau of Labor Statistics is employing 26 people to make a study of consumption of goods in Portland. There are 162 persons engaged in educational projects, including nursery schools, literacy classes, and adult education.

All through the State, finally, approximately 150 persons are at work on projects sponsored locally. These include research into town records, the survey of property, and other works which have been requested by the local officials concerned.

In this field, as in others, we are making every possible effort to fuse the labor supply, its peculiar skills, and the needs of the State into a product that will be of greatest value to all concerned. Naturally, we have our problems and our difficulties. Civil wars break out in towns over the problem of who shall be timekeeper on a project. Sponsors are rarely satisfied and always ask for more. There is present that small fringe that is on the lookout for an opportunity to chisel and cheat. In moments of despair we wonder whether anything we do is right. But we try to do what we think is fair and honorable, fully realizing that universal approbation and satisfaction are luxuries reserved for persons other than those administering relief.

I have tried to give you some idea of what we are doing and why we are doing it. In general, the plan and program seem worth while. Not unmindful of its shortcomings, I suggest that if you "know of a better 'ole, go to it."

4. What of the future of relief? The present program will be over in large part by June 30. What then? And what about the next year? The answer to these questions depends, of course, on what Congress does to the suggestions made by President Roosevelt. All we can do is make a few comments based on the facts of economic life about us.

The first fact is that Federal aid in some form must continue at least for the next few years. Private industry, the States, and the localities are not yet in a position to assume the burden. I do not believe that the next administration can ignore the demands for Federal aid in 1937. Whether the next President is Mr. Roosevelt, or a Republican, or a Socialist, Federal relief will go on. Republican candidates may talk about Budget balancing, but they will not deny the reality of the human suffering that is inevitable without some form of Federal aid.

While positive of the need for Federal aid, I am willing to admit that the sort of aid and its amount are open to doubt and discussion. As to the type of program, my own feeling is that the sort of thing now being done by W. P. A. is a relatively happy solution. But I can see the validity of the claims, both of those who want direct relief—the dole—and of those who want large, expensive, monumental projects. In both theory and expense the present program is a compromise between these two.

As to the extent of Federal aid, I expect eventual contraction, with a gradual lightening of the burden to the Federal Government. I look forward to some relief from the social-security legislation, which will probably need modification, and from the gradual assumption on the part of the States and localities of their predepression activities in the field of relief. But these are only expectations. What will actually take place depends, of course, on answers given to more fundamental questions. Are we going back to laissez-faire, and economic liberty? Or are we to move in the direction of conscious social control over economic and social activity? Or, more probably, are we to continue to try combinations of both? The final answer to these questions is just one more of those sweet mysteries of life.

ATTORNEY FEES

Mr. COSTELLO. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting therein a letter from Judge Green, of the United States Court of Claims, concerning attorneys' fees in cases before that court.

The SPEAKER. Is there objection?

There was no objection.

Mr. COSTELLO. Mr. Speaker and Members of the House, through inadvertence, certain remarks appearing in the daily RECORD, at page 7725, concerning the allowance of attorney fees have been attributed to me, although I was not the author of those remarks. It has always been my policy to make certain that the attorney fees granted in any private bill on the calendar should be maintained at a minimum and at no time should they exceed 10 percent. I have adopted this policy not only because it is in keeping with the custom of the House but also because it is my opinion that when the Congress is granting relief to an individual due to loss or damages sustained, then such relief should be given to the beneficiary in its entirety as far as possible.

In order that the Members may be informed as to the policy of the Court of Claims in the matter of granting fees to attorneys, I am inserting the letter of Judge William R. Green, which letter was addressed to me in this connection. The statement to which the letter refers was made by another Member of the House upon information which he had received and which he believed to be correct. The letter follows:

UNITED STATES COURT OF CLAIMS,
Washington, D. C., May 20, 1936.

Hon. JOHN M. COSTELLO,
House Office Building, Washington, D. C.

MY DEAR MR. COSTELLO: I notice in today's RECORD that you made a statement at yesterday's session of the House that it was the practice and custom of the Court of Claims to allow a 20-percent attorney's fee, referring to cases in which judgment was awarded.

I have no doubt that you made this statement upon information which you considered absolutely reliable. Nevertheless, it is erroneous. The Court of Claims has no authority to allow any attorney fees whatever except in cases where a case is referred to it by bill and the bill specially authorizes the court to allow attorney fees. This does not happen in 1 case in 500, probably out of

the cases of all kinds before the court in one in a thousand. I have no recollection of such a provision being made in any except in some Indian cases. Even then nothing over 10 percent is allowed. The chief justice, who has been on the bench 30 years, informs me that he does not know of any case in which more than 10 percent was allowed and that in most of them the amount allowed was less.

Thinking that you would like to know the exact facts in the matter, I am writing this letter.

Very respectfully yours,

WM. R. GREEN.

ADJOURNMENT OVER

Mr. BANKHEAD. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection?

There was no objection.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. BUCK, for 1 day, on account of official business.

To Mr. DEEN, for the balance of the week, on account of illness.

To Mr. CURLEY, for 5 days, on account of important business.

To Mr. DUNN of Mississippi, for 3 weeks, on account of important business.

To Mr. DRISCOLL, for 2 days, on account of important business.

To Mr. WOOD, indefinitely, on account of important business.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 925. An act to carry into effect the findings of the Court of Claims in the case of William W. Danenhower; and

S. 1360. An act for the relief of the estate of Teresa de Prevost.

ADJOURNMENT

Mr. BANKHEAD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 30 minutes p. m.) the House, under its previous order, adjourned until Monday, May 25, 1936, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

851. Under clause 2 of rule XXIV a letter from the Secretary of State, transmitting a translation of a letter dated March 20, 1936, addressed to The Honorable Congress of the United States of North America, by the Commission of the Mexican Library of Congress, in which the commission requests the cooperation of the Congress of the United States, was taken from the Speaker's table and referred to the Committee on Foreign Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. WILSON of Louisiana: Committee on Flood Control. H. R. 12416. A bill to authorize funds for the prosecution of works for flood control against flood disasters along the Battenkill in New York; with amendment (Rept. No. 2737). Referred to the Committee of the Whole House on the state of the Union.

Mr. WILSON of Louisiana: Committee on Flood Control. H. R. 12418. A bill to authorize funds for the prosecution of works for flood control against flood disasters along the Mettowee River in New York; with amendment (Rept. No. 2738). Referred to the Committee of the Whole House on the state of the Union.

Mr. WILSON of Louisiana: Committee on Flood Control. H. R. 12458. A bill authorizing a preliminary examination of the Intracoastal Waterway throughout Broward County, Fla.; without amendment (Rept. No. 2739). Referred to the Committee of the Whole House on the state of the Union.

Mr. WILSON of Louisiana: Committee on Flood Control. H. R. 12490. A bill authorizing a preliminary survey examination of the Levisa Fork of Big Sandy River in the vicinity of the Breaks of Sandy; with amendment (Rept. No. 2740). Referred to the Committee of the Whole House on the state of the Union.

Mr. WILSON of Louisiana: Committee on Flood Control. H. R. 12509. A bill providing for a survey of the Colorado River, Tex., above the county line between Coke and Runnels Counties; with amendment (Rept. No. 2741). Referred to the Committee of the Whole House on the state of the Union.

Mr. WILSON of Louisiana: Committee on Flood Control. H. R. 12554. A bill authorizing an examination and survey of the Black and Moose Rivers and their tributaries in Herkimer, Lewis, Jefferson, Oneida, and Hamilton Counties, N. Y.; with amendment (Rept. No. 2742). Referred to the Committee of the Whole House on the state of the Union.

Mr. SMITH of Virginia: Committee on Rules. House Resolution 522. Resolution providing for the consideration of H. R. 12027; without amendment (Rept. No. 2743). Referred to the House Calendar.

Mr. BLAND: Committee on Merchant Marine and Fisheries. H. R. 12734. A bill to amend an act entitled "An act to distribute the commissioned line and engineer officers of the Coast Guard in grades, and for other purposes", approved January 12, 1923; without amendment (Rept. No. 2744). Referred to the Committee of the Whole House on the state of the Union.

Mr. SCHULTE: Committee on the District of Columbia. S. 3514. An act to regulate the manufacturing, dispensing, selling, and possession of narcotic drugs in the District of Columbia; with amendment (Rept. No. 2745). Referred to the Committee of the Whole House on the state of the Union.

Mrs. NORTON: Committee on the District of Columbia. H. R. 12355. A bill to authorize wrestling in the District of Columbia, and for other purposes; with amendment (Rept. No. 2747). Referred to the Committee of the Whole House on the state of the Union.

Mrs. NORTON: Committee on the District of Columbia. H. R. 12495. A bill to amend an act entitled "An act to provide for vocational rehabilitation of disabled residents of the District of Columbia, and for other purposes" (Public, No. 801, 70th Cong.); without amendment (Rept. No. 2748). Referred to the Committee of the Whole House on the state of the Union.

Mrs. NORTON: Committee on the District of Columbia. H. R. 12532. A bill to authorize the furnishing of steam from the Central Heating Plant to the District of Columbia; without amendment (Rept. No. 2749). Referred to the Committee of the Whole House on the state of the Union.

Mrs. O'DAY: Committee on Immigration and Naturalization. H. R. 12762. A bill to extend the definition of an alien veteran, for naturalization purposes only, so as to include certain alien enemies and nationals of Turkey and Bulgaria who rendered active service in United States armed forces with personal record of loyalty to the United States, and for other purposes; with amendment (Rept. No. 2750). Referred to the Committee of the Whole House on the state of the Union.

Mrs. NORTON: Committee on the District of Columbia. House Joint Resolution 588. Joint resolution for the designation of certain streets or avenues in the Mall as Ohio, Missouri, Oklahoma, and Maine Avenues; without amendment (Rept. No. 2751). Referred to the House Calendar.

Mr. CARPENTER: Committee on the District of Columbia. S. 3976. An act to amend the act approved February 27, 1931, known as the District of Columbia Traffic Act; without amendment (Rept. No. 2752). Referred to the House Calendar.

Mr. SABATH: Committee on Rules. House Resolution 523. Resolution providing for the consideration of H. R. 8442; without amendment (Rept. No. 2753). Referred to the House Calendar.

Mr. DOXEY: Committee on Agriculture. H. R. 5168. A bill authorizing the Secretary of Agriculture to convey certain lands to the Maryland-National Capital Park and Planning Commission, of Maryland, for park purposes; with amendment (Rept. No. 2754). Referred to the Committee of the Whole House on the state of the Union.

Mr. CHAPMAN: Committee on Interstate and Foreign Commerce. S. 5. An act to prevent the adulteration, misbranding, and false advertising of food, drugs, devices, and cosmetics in interstate, foreign, and other commerce subject to the jurisdiction of the United States, for the purposes of safeguarding the public health, preventing deceit upon the purchasing public, and for other purposes; with amendment (Rept. No. 2755). Referred to the Committee of the Whole House on the state of the Union.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2756. Report on the disposition of executive papers in the Post Office Department. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2757. Report on the disposition of executive papers in the War Department. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2758. Report on the disposition of executive papers in the Department of Agriculture. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2759. Report on the disposition of executive papers in the Treasury Department. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2760. Report on the disposition of executive papers in the United States Employees' Compensation Commission. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2761. Report on the disposition of executive papers in the Federal Reserve Board. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2762. Report on the disposition of executive papers in the Department of Commerce. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2763. Report on the disposition of executive papers in the United States Veterans' Bureau. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2764. Report on the disposition of executive papers in the Federal Trade Commission. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2765. Report on the disposition of executive papers in the Civil Service Commission. Ordered to be printed.

Mr. COLDEN: Committee on Disposition of Executive Papers. House Report 2766. Report on the disposition of executive papers in the Department of State. Ordered to be printed.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mrs. NORTON: Committee on the District of Columbia. H. R. 11522. A bill to amend the charter of the National Union Insurance Co. of Washington in the District of Columbia; with amendment (Rept. No. 2746). Referred to the Committee of the Whole House.

Mr. EVANS: Committee on Claims. H. R. 10876. A bill for the relief of Adele Fowlkes; with amendment (Rept. No. 2767). Referred to the Committee of the Whole House.

Mr. TOLAN: Committee on Claims. H. R. 8418. A bill for the relief of the estate of Catherine Harkins, deceased; with amendment (Rept. No. 2768). Referred to the Committee of the Whole House.

Mr. SMITH of Washington: Committee on Claims. H. R. 8274. A bill for the relief of Bertha M. Harris; with amendment (Rept. No. 2769). Referred to the Committee of the Whole House.

Mr. RYAN: Committee on Claims. H. R. 11869. A bill for the relief of William L. Jenkins; without amendment (Rept. No. 2770). Referred to the Committee of the Whole House.

Mr. RYAN: Committee on Claims. H. R. 11860. A bill to provide an additional sum for the reimbursement of certain officers and enlisted men of the Navy and Marine Corps for personal property lost, damaged, or destroyed as a result of the earthquake which occurred at Managua, Nicaragua, on March 31, 1931; without amendment (Rept. No. 2771). Referred to the Committee of the Whole House.

Mr. SEGER: Committee on Claims. H. R. 11863. A bill for the relief of Clark F. Potts and Charles H. Barker; without amendment (Rept. No. 2772). Referred to the Committee of the Whole House.

Mr. BEITER: Committee on War Claims. H. R. 10504. A bill for the relief of Booth & Co., Inc., a Delaware corporation; without amendment (Rept. No. 2773). Referred to the Committee of the Whole House.

Mr. BEITER: Committee on War Claims. H. R. 12311. A bill for the relief of the P. L. Andrews Corporation; without amendment (Rept. No. 2774). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BLOOM: A bill (H. R. 12827) to prescribe the effective date of naturalization in certain cases; to the Committee on Immigration and Naturalization.

By Mr. DUNN of Pennsylvania: A bill (H. R. 12828) to provide a pension of $60 per month for all men and women in the United States and its possessions who have attained the age of 55 years and whose incomes are less than $1,200 per year; to the Committee on Ways and Means.

By Mr. BACON: A bill (H. R. 12829) to extend the civil-service merit system by placing the position of postmaster in first-, second-, and third-class offices in the competitive classified service; to provide for promotion within the Postal Service to the position of postmaster as a reward for merit, and for other purposes; to the Committee on the Civil Service.

By Mr. GILLETTE: A bill (H. R. 12830) to amend the act of May 17, 1910, entitled "An act to establish a permanent Commission of Fine Arts"; to the Committee on the Library.

By Mr. KOPPLEMANN: A bill (H. R. 12831) to authorize the coinage of 50-cent pieces in commemoration of the three hundredth anniversary of the founding of Hartford, Conn.; to the Committee on Coinage, Weights, and Measures.

By Mr. SMITH of West Virginia: A bill (H. R. 12832) to authorize the disposition of the naval ordnance plant, South Charleston, W. Va., and for other purposes; to the Committee on Naval Affairs.

By Mr. SUTPHIN: A bill (H. R. 12833) to assure to persons within the jurisdiction of every State, the equal protection of the laws, by discouraging, preventing, and punishing the crime of lynching; to the Committee on the Judiciary.

By Mr. TOLAN: A bill (H. R. 12834) to authorize the Secretary of the Treasury to purchase the building now used as a post office in Yosemite National Park, Calif.; to the Committee on Public Buildings and Grounds.

By Mr. SCOTT: A bill (H. R. 12835) to provide financial assistance to the States and political subdivisions thereof, to the District of Columbia, or any Territory of the United States for the elimination of slums, for the construction of decent, safe, and sanitary dwellings at low rentals for families of low income, and for the reduction of unemployment and the stimulation of business activity, and for other purposes; to the Committee on Ways and Means.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Massachusetts regarding the permission into this country of persons discriminated against in Germany; to the Committee on Immigration and Naturalization.

Also, memorial of the Legislature of the State of Massachusetts favoring the establishment of a permanent Civilian Conservation Corps; to the Committee on Labor.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. McCORMACK: A bill (H. R. 12836) for the relief of Katherine M. Devenny; to the Committee on Claims.

By Mr. THURSTON: A bill (H. R. 12837) for the relief of Effie Garton; to the Committee on Claims.

By Mr. WHITE: A bill (H. R. 12838) for the relief of Ida A. Gunderson and her three minor daughters; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

10951. By Mr. CROWTHER: Petition of citizens of Amsterdam, N. Y., requesting favorable action on House bill 11609; to the Committee on Interstate and Foreign Commerce.

10952. By Mr. KENNEY: Resolution adopted by the Truckmen's Store Door Committee of New York, memorializing the President, Members of Congress, Secretary of Labor, Interstate Commerce Commission, and the American Federation of Labor to repeal door-to-door delivery; to the Committee on Interstate and Foreign Commerce.

10953. Also, resolution of the Eastern Bergen Italo-American Independent Club, Fort Lee, N. J., favoring the adult-education program at their meeting on May 15; to the Committee on Education.

10954. By Mr. KOCIALKOWSKI: Petition of the City Council of the City of Chicago, favoring the enactment of the United States Housing Act of 1936 (S. 4424 and H. R. 12164); to the Committee on Banking and Currency.

10955. By Mr. KOPPLEMANN: Petition of residents of Hartford County, Conn., asking immediate construction by the Federal Government of the comprehensive system of flood-control dams for the Connecticut Valley, recommended by Army Engineer Corps; Federal Government survey of Connecticut River to determine what measures are to provide for the improvement of the run-off in times of flood and for restoring and raising necessary dikes; to the Committee on Flood Control.

10956. By Mr. KRAMER: Resolution of the Central Labor Council of Alameda County, relative to danger to miners from silica dust and urging Federal laws to prevent further disaster as that which occurred at Gauley Bridge, W. Va., etc.; to the Committee on Mines and Mining.

10957. By Mr. McCORMACK: Memorial of the General Court of Massachusetts, memorializing the President and Congress of the United States in favor of the permanency of the Civilian Conservation Corps; to the Committee on Labor.

10959. By Mr. PATMAN: Petition of H. B. Williams and 13 others, voicing 100-percent approval of the Townsend pension plan; to the Committee on Ways and Means.

10960. Also, petition of W. S. Chance and 12 others, voicing 100-percent approval of the Townsend pension plan; to the Committee on Ways and Means.

10961. By the SPEAKER: Petition of the Bookkeepers', Stenographers', and Accountants' Union, No. 12646, American Federation of Labor; to the Committee on Banking and Currency.

10962. Also, petition of the International Longshoremen's Association, Local No. 231; to the Committee on the Judiciary.

10963. Also, petition of the city of Youngstown, Ohio; to the Committee on Banking and Currency.

10964. Also, petition of the city of Youngstown, Ohio; to the Committee on Education.

SENATE

MONDAY, MAY 25, 1936

(Legislative day of Tuesday, May 12, 1936)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

THE JOURNAL

On request of Mr. ROBINSON, and by unanimous consent, the reading of the Journal of the proceedings of the calendar day Thursday, May 21, 1936, was dispensed with, and the Journal was approved.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries.

CALL OF THE ROLL

Mr. LEWIS. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Adams	Clark	Holt	Overton
Ashurst	Connally	Johnson	Pittman
Austin	Coolidge	Keyes	Pope
Bachman	Copeland	King	Radcliffe
Bailey	Couzens	La Follette	Reynolds
Barkley	Davis	Lewis	Robinson
Benson	Dieterich	Lonergan	Russell
Bilbo	Donahey	Long	Schwellenbach
Black	Duffy	McAdoo	Sheppard
Bone	Fletcher	McGill	Shipstead
Borah	Frazier	McKellar	Smith
Brown	George	McNary	Steiwer
Bulkley	Gerry	Maloney	Thomas, Utah
Bulow	Gibson	Metcalf	Townsend
Burke	Glass	Minton	Truman
Byrd	Guffey	Murphy	Tydings
Byrnes	Hale	Murray	Vandenberg
Capper	Harrison	Neely	Van Nuys
Caraway	Hastings	Norris	Walsh
Carey	Hatch	Nye	Wheeler
Chavez	Hayden	O'Mahoney	White

Mr. NEELY. Mr. President, I have been requested to announce that the Senator from Alabama [Mr. BANKHEAD], the Senator from Colorado [Mr. COSTIGAN], and the Senator from Nevada [Mr. McCARRAN] are absent because of illness, and that the junior Senator from Oklahoma [Mr. GORE], the Senator from Kentucky [Mr. LOGAN], the Senator from New Jersey [Mr. MOORE], the senior Senator from Oklahoma [Mr. THOMAS], and the Senator from New York [Mr. WAGNER] are unavoidably detained from the Senate.

Mr. AUSTIN. I announce that the Senator from Iowa [Mr. DICKINSON] and the Senator from New Jersey [Mr. BARBOUR] are necessarily absent.

The VICE PRESIDENT. Eighty-four Senators have answered to their names. A quorum is present.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its reading clerks, announced that the House had passed without amendment the following bills of the Senate:

S. 3118. An act to provide for the creation of the Perry's Victory and International Peace Memorial National Monument, on Put-in-Bay, South Bass Island, in the State of Ohio, and for other purposes; and

S. 4448. An act to authorize the coinage of 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the issuance of the charter to the city of Lynchburg, Va.

The message also announced that the House had passed the following bills of the Senate, each with amendments, in which it requested the concurrence of the Senate:

S. 3531. An act to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928; and

S. 4023. An act to provide for the continuation of trading in unlisted securities upon national securities exchanges, for the registration of over-the-counter brokers and dealers, for the filing of current information and periodic reports by issuers, and for other purposes.

The message further announced that the House had agreed to the amendment of the Senate to the following bill and joint resolution of the House:

H. R. 8069. An act for the relief of Mr. and Mrs. A. S. Mull; and

H. J. Res. 439. Joint resolution authorizing the erection in the Department of Labor Building of a memorial to the officers of the Immigration and Naturalization Service and Immigration Border Patrol who, while on active duty, lost their lives under heroic or tragic circumstances.

The message also announced that the House had disagreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9496) to protect the United States against loss in the delivery through the mails of checks in payment of benefits provided for by laws administered by the Veterans' Administration; that the House had receded from its disagreement to the amendment of the Senate numbered 1 to the said bill and concurred therein; and that the House insisted upon its disagreement to the amendment of the Senate numbered 2 to the said bill.

The message further announced that the House had further insisted upon its disagreement to the amendments of the Senate numbered 24, 53, and 54 to the bill (H. R. 10630) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1937, and for other purposes, agreed to the further conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. TAYLOR of Colorado, Mr. JACOBSEN, Mr. JOHNSON of Oklahoma, Mr. SCRUGHAM, Mr. LAMBERTSON, and Mr. WIGGLESWORTH were appointed managers on the part of the House at the further conference.

The message also announced that the House had passed the following bill and joint resolution, in which it requested the concurrence of the Senate:

H. R. 11929. An act granting to the State of Iowa for State park purposes certain land of the United States in Clayton County, Iowa; and

H. J. Res. 570. Joint resolution authorizing the President of the United States to award posthumously a Distinguished Service Medal to Maj. Gen. Clarence Ransom Edwards.

ENROLLED BILLS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Vice President:

S. 537. An act for the relief of C. O. Meyer;

S. 920. An act for the relief of Ruth J. Barnes; and

S. 3789. An act authorizing the Secretary of Commerce to convey the Charleston Army Base Terminal to the city of Charleston, S. C.

SUPPLEMENTAL ESTIMATE, HOUSE OF REPRESENTATIVES (S. DOC. NO. 244)

The VICE PRESIDENT laid before the Senate a communication from the President of the United States, transmitting a supplemental estimate of appropriation for the legislative establishment, House of Representatives, fiscal year 1937, amounting to $20,000, which, with the accompanying papers, was referred to the Committee on Appropriations and ordered to be printed.

SUPPLEMENTAL ESTIMATES, UNITED STATES TARIFF COMMISSION (S. DOC. NO. 243)

The VICE PRESIDENT laid before the Senate a communication from the President of the United States, transmitting a supplemental estimate of appropriation for the United States Tariff Commission, fiscal year 1936, amounting to $4,000, which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

INTERNATIONAL EXCHANGE OF PUBLICATIONS

The VICE PRESIDENT laid before the Senate a letter from the Secretary of State, transmitting translation of a letter dated March 20, 1936, addressed to the Congress by the Commission of Mexican Library of Congress, Mexico, D. F., requesting the cooperation of Congress in the matter of the exchange of certain books and documents pertaining to the international exchange of official and other publications, which, with the accompanying paper, was referred to the Committee on Foreign Relations.

REPORTS ON THE TEXTILE INDUSTRY

The VICE PRESIDENT laid before the Senate a letter from the Chairman of the Federal Trade Commission, transmitting a report of the Commission entitled "The Textile Industry in the First Half of 1935—Part I—The Cotton Textile Industry", and also copies of reports previously issued by the Commission on the textile industry, which, with the accompanying papers, was referred to the Committee on Education and Labor.

REPORT ON COTTON CLOTH

The VICE PRESIDENT laid before the Senate a letter from the Acting Chairman of the United States Tariff Commission, transmitting, pursuant to Senate Resolution 104 (submitted by Mr. METCALF, and agreed to on Mar. 29, 1935), a report relative to changes in import duties necessary to equalize differences in foreign and domestic costs of production of certain types of cotton cloth, which, with the accompanying report, was referred to the Committee on Finance.

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate the following concurrent resolution of the Legislature of the State of New York, which was referred to the Committee on Finance:

Whereas the farmers of the State of New York as well as farmers throughout the United States are known to be in straitened circumstances by reason of their inability to market farm products at a sufficient price to pay for the cost of production; and

Whereas the State and Federal Governments, recognizing this fact are, and for several years past have been, attempting to remedy this situation, by crop control, subsidies, and loans to farmers with varied success; and

Whereas the policy of Government protection for farmers from a ruinous influx of cheap foreign farm products by adequate tariff regulations has been, since the formation of these United States, demonstrated to be the only sound and effective method solving the farmers' problem; and

Whereas in conformity with this policy there is now a tariff duty of 3 cents a pound on imported coconut oil which is used in direct competition with domestic dairy, corn, and cotton products; and

Whereas there is now a concerted attempt to have said tariff duty removed or reduced to permit unhampered flooding of this country with coconut oil: Now, therefore, be it

Resolved (if the assembly concur), That it is the sense of the Legislature of the State of New York that the tariff duty on coconut oil should not be reduced below a minimum of 3 cents a pound and that the Congress of the United States be, and it hereby is, respectfully memorialized to retain said tariff duty at not less than 3 cents a pound; and be it further

Resolved (if the assembly concur), That a copy of this resolution be transmitted to the Clerk of the House of Representatives and the Secretary of the Senate and to each Member of Congress elected from the State of New York and that the latter use their united efforts to obtain the retention of a 3-cent-per-pound tariff duty on imported coconut oil.

The VICE PRESIDENT also laid before the Senate a telegram from E. O. Hanson, mayor of Santa Barbara, Calif., requesting permission to appear before Congress relative to the activities of the W. P. A. in the city of Santa Barbara, which was referred to the Committee on Appropriations.

He also laid before the Senate a resolution adopted by the national officers of the National Association Federal Employees, New York City, N. Y., favoring the enactment of the so-called Pearson bill, being the bill (H. R. 9258) to create United States Civil Service Boards of Appeals, which was referred to the Committee on Civil Service.

He also laid before the Senate resolutions adopted by the Municipal Housing Board of Jacksonville, Fla.; the Council of the City of Chicago, and the Illinois State Housing Board, Chicago, both in the State of Illinois; the Council of the City of Cambridge, Mass.; and the Council of the City of Youngstown, and Local No. 19366, Office Workers'

Union of Cleveland, both in the State of Ohio, favoring the prompt enactment of Senate bill 4424, known as the Wagner-Ellenbogen low-cost housing bill, which were referred to the Committee on Education and Labor.

He also laid before the Senate a resolution adopted by the National Society United States Daughters of 1812, favoring the enactment of legislation providing for the display of the American flag of dimensions approved by the flag code and displayed in accordance with that code at all public assemblages, which was referred to the Committee on the Judiciary.

He also laid before the Senate a letter from Ernesto C. Quiñones, of Santurce, P. R., relative to citizenship and immigration problems pertaining to Puerto Rico, which was referred to the Committee on Territories and Insular Affairs.

SUGAR PRODUCTION AND QUOTAS

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the RECORD and appropriately referred resolutions adopted by the board of directors of the Farmers and Manufacturers Beet Sugar Association at a meeting in Saginaw, Mich., Tuesday, May 19, 1936, with reference to pending sugar legislation.

There being no objection, the resolutions were referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

FARMERS AND MANUFACTURERS BEET SUGAR ASSOCIATION,
Saginaw, Mich., May 20, 1936.

At a meeting of the board of directors of the Farmers and Manufacturers Beet Sugar Association, held Tuesday, May 19, 1936, the following resolution was unanimously adopted:

"Whereas it has now been definitely and finally determined that any act of Congress which by its terms seeks to control, limit, or regulate the business of mining, manufacturing, crop growing, or other local industry is unconstitutional and void; and

"Whereas accordingly any act of Congress which seeks by its terms to limit, control, or regulate, either directly or indirectly, the domestic production of sugar beets, sugar cane, or the products thereof, would likewise be unconstitutional and void; and

"Whereas for the protection of domestic producers and processors of sugar beets and sugar cane it is desirable that some legal and constitutional control legislation be passed at this session of Congress which by its terms will control by quotas the amount of sugar that may be brought or imported into continental United States from the offshore producing areas, and yet not seek to effect, either directly or indirectly, any limitation on domestic production: Now therefore

"This association favors and approves the principles of quota control as set forth in the following bills now introduced in Congress, namely: Vandenberg bill (S. 4423), Overton bill (S. 4560), Woodruff bill (H. R. 12225), and Kniffin bill (H. R. 12295), and the principles of benefit payments as embodied in the following bills now introduced in Congress, namely: Overton bill (S. 4560), Kniffin bill (H. R. 12294), and respectfully urges upon the Representatives in Congress from the States of Ohio, Michigan, Indiana, and Wisconsin that the principles embodied in the afore-mentioned bills be enacted into law before the adjournment of the present session of Congress."

After the adjournment of the meeting of the board of directors of the association, the grower members of the board of directors met independently and unanimously passed the following resolution:

"To protect the welfare of continental producers and processors of sugar beets and sugar cane and domestic consumers of sugar, we, the farmer directors of the Farmers and Manufacturers Beet Sugar Association, representing more than 25,000 sugar-beet growers, endorse the principles set forth in the Vandenberg (S. 4423), Overton (S. 4560), Woodruff (H. R. 12225), Kniffin (H. R. 12295) sugar-quota bills, and the Overton (S. 4560), Kniffin (H. R. 12294) benefit-payment bills, and respectfully urge the passage of legislation at this session of Congress to make effective these principles, which maintain the American market for the American farmer, in the firm belief and conviction that we are justly entitled to the same."

ARTHUR A. SCHUPP,
Executive Secretary.

REPORTS OF COMMITTEES

Mr. SHEPPARD, from the Committee on Military Affairs, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 4491. A bill for the relief of Arthur Lee Dasher (Rept. No. 2077); and

S. 4652. A bill to provide for the administration of the United States Soldiers' Home (Rept. No. 2078).

Mr. SHEPPARD also, from the Committee on Military Affairs, to which was referred the bill (S. 4565) to authorize the sale, under provisions of the act of March 12, 1926 (Public, No. 45), of surplus War Department real property, reported it with amendments and submitted a report (No. 2086) thereon.

Mr. SHEPPARD also, from the Committee on Commerce, to which was referred the bill (S. 4632) providing for a survey of the Colorado River, Tex., above the county line between Coke and Runnels Counties, reported it with amendments and submitted a report (No. 2083) thereon.

He also, from the same committee, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 4549. A bill authorizing the State Highway Board of the State of Georgia to replace, reconstruct, or repair the free highway bridge across the Savannah River at or near the city of Augusta, Ga. (Rept. No. 2093); and

H. R. 12370. A bill to authorize a preliminary examination of Big Blue River and its tributaries with a view to the control of their floods (Rept. No. 2094).

Mr. THOMAS of Utah, from the Committee on Military Affairs, to which was referred the bill (H. R. 11969) to promote national defense by organizing the Air Reserve Training Corps, reported it without amendment, and submitted a report (No. 2079) thereon.

Mr. WALSH, from the Committee on Education and Labor, to which was referred the bill (S. 4671) to amend the act approved February 1, 1928, concerning actions on account of death or personal injury within places under exclusive jurisdiction of the United States, reported it without amendment and submitted a report (No. 2080) thereon.

Mr. O'MAHONEY, from the Committee on the Judiciary, to which was referred the bill (S. 3700) for the relief of the State of Massachusetts, reported it without amendment and submitted a report (No. 2082) thereon.

Mr. AUSTIN, from the Committee on the Judiciary, to which was referred the bill (H. R. 11616) to fix the compensation of the Director of the Federal Bureau of Investigation, reported it without amendment and submitted a report (No. 2084) thereon.

Mr. JOHNSON, from the Committee on Naval Affairs, to which was referred the joint resolution (S. J. Res. 251) granting the consent of Congress to the city and county of San Francisco to construct a causeway and highways on Yerba Buena Island in San Francisco Bay, and for other purposes, reported it with an amendment and submitted a report (No. 2085) thereon.

Mr. WAGNER, from the Committee on Public Lands and Surveys, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

S. 4346. A bill granting to the State of Iowa for State park purposes certain land of the United States in Clayton County, Iowa (Rept. No. 2087);

H. R. 1997. A bill to amend Public Law No. 425, Seventy-second Congress, providing for the selection of certain lands in the State of California for the use of the California State park system, approved March 3, 1933 (Rept. No. 2088);

H. R. 2737. A bill extending and continuing to January 12, 1938, the provisions of the act entitled "An act authorizing the Secretary of the Interior to determine and confirm by patent in the nature of a deed of quitclaim the title to lots in the city of Pensacola, Fla.", approved January 12, 1925 (Rept. No. 2089);

H. R. 5722. A bill to provide for the addition or additions of certain lands to the Colonial National Monument in the State of Virginia (Rept. No. 2090);

H. R. 8074. A bill to amend the act of March 3, 1925, relating to Fort McHenry (Rept. No. 2091); and

H. R. 8312. A bill to add certain lands to the Rogue River National Forest in the State of Oregon (Rept. No. 2092).

Mr. PITTMAN, from the Committee on Foreign Relations, to which was referred the joint resolution (S. J. Res. 267) authorizing the President to invite foreign countries to participate in the New York World's Fair, 1939, Inc., in the city of New York during the year 1939, reported it without amendment.

INVESTIGATION OF UNEMPLOYMENT AND RELIEF

Mr. HATCH, from the Committee on the Judiciary, to which was referred the resolution (S. Res. 241) creating a special committee to investigate unemployment and relief (submitted by Mr. HATCH on Mar. 2, 1936), reported it with amendments and submitted a report (No. 2081) thereon, and, under the rule, the resolution was referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

INVESTIGATION OF HEALTH CONDITIONS IN METAL MINING—REPORT

Mr. MURRAY. Mr. President, I submit a report adopted by the Committee on Education and Labor, presented to it by a subcommittee, on Senate Concurrent Resolution 34, submitted by me and proposing to create a joint committee to investigate conditions in metal mining. I request that this report be printed in the CONGRESSIONAL RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

The Committee on Education and Labor, to whom was referred Senate Concurrent Resolution 34, to create a joint committee to investigate conditions in metal mining, having considered the same, adopted as its report the report of a subcommittee appointed to investigate the matter, as follows:

Senate Concurrent Resolution 34 concerns the alarming conditions in metalliferous mining to which miners are subjected, such as rock dust, powder fumes, gases, foul air, and extreme heat, inducing silicosis and tuberculosis, which in turn results in inability to work, terrible agony, and premature death.

The findings of this subcommittee show that the Bureau of Mines in the United States Department of Interior has been acutely aware for some years of this problem of pulmonary afflictions caused by such conditions in both metalliferous and coal mines, and that such Bureau has been attempting with the cooperation of mine operators to devise methods of overcoming these unfortunate conditions. It appears that very fine particles of silica and other rock dust lodge in the lungs of miners causing abrasions and scar tissue, weakening their lungs and decreasing respirational capacity, making them easy prey to frequent colds and tuberculosis induced by extremes of heat and humidity. A continued exposure to the rock dust will in itself so injure the lungs as to cause eventually great difficulty in breathing, accompanied by terrible pain and followed by early death.

Among possible methods of overcoming these conditions are wet drilling and ventilation, the former to prevent dust from flying in the course of mining operations and the latter to carry off the gases and polluted air present in mines as well as to relieve the conditions of extreme heat and humidity. In spite of the general awareness of these evils, it is apparent that systematic and organized research will disclose more intimate knowledge of this dust disease, popularly known as silicosis, and its incidental evils, as well as revealing more efficient methods of combating and preventing the conditions leading to it. For instance, it appears that the use of water in mines to avoid the pervasion of dust in the air is not altogether satisfactory since its presence greatly increases humidity which in turn leads to pulmonary trouble.

It has been disclosed to the subcommittee that silicosis occurs not only in metaliferous mining but also in coal mining and tunneling and in many branches of industry not associated with underground mining at all. A pamplet recently issued by the Division of Labor Standards, United States Department of Labor, shows that it is also found in industries using abrasives, in sandblasting, brick and pottery making, glass making, sand pulverizing, metal grinding, granite and slate quarrying, stone polishing and finishing, and in foundry and steel works.

The subcommittee found that State legislation concerning the correction of conditions leading to silicosis or dust disease and compensation for workmen afflicted by this disease is rare, and that such legislation as there is does not deal adequately with the problem. It found that what preventive steps have been taken have resulted largely from the desire of certain mine operators and industrialists to better conditions in their plants.

It appears that the United States Department of Labor has recently initiated a Nation-wide investigation of this silicosis problem in an endeavor to ascertain the real nature of the disease, its causes, and the most effective means of controlling and preventing it. Secretary Perkins recently called a conference of leading doctors, engineers, economists, insurance experts, and representatives of employee and employer groups to take up these questions as well as that of properly compensating workers who have suffered and will suffer from the effects of this disease. Accordingly she has appointed five committees of experts under the Division of Labor Standards in the Department of Labor to study and report on the various aspects of this problem, namely, a committee on prevention of silicosis through medical control, a committee on prevention of silicosis through engineering control, a committee on regulatory and administrative phases of the silicosis problem, as well as a committee to correlate the work of these other four. These committees will study the various aspects of these problems with the cooperation of operators and industrialists, State industrial and compensation agencies, clinics and doctors, and State and Federal public-health services. The reports resulting from this national program will be submitted at the reconvention of the National Silicosis Conference, probably sometime next autumn.

In view of the present disorganized state of information on this silicosis problem, especially since a systematic undertaking to procure the necessary data on all its aspects has been launched and will reach completion during the current year, this subcommittee believes it would be advisable to defer action on Senate Concurrent Resolution 34 until the next session of Congress. Investigation has shown that the need for action is vital but that the problem is so intricate and far-reaching, extending so far beyond the field of metalliferous mining into general industry, as not to be fully understood and dealt with without the further information which is now being secured.

The subject matter of this concurrent resolution is one of greatest importance. An announcement has very recently been made that the Department of Labor has instituted a comprehensive study of the subject and will consider the extent of any proposed legislation in the event it is found that it may be a subject for Federal regulation.

Furthermore, this special committee believes that there are constitutional questions involved that must be given consideration in connection with any proposed legislation. It is, therefore, recommended that the action by the committee on the concurrent resolution be deferred until the next session of Congress and reintroduced for further consideration.

DAVID I. WALSH,
Chairman, Committee on Education and Labor, and Chairman of Subcommittee.
JAMES E. MURRAY,
JAMES J. DAVIS.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. NEELY:

A bill (S. 4677) for the relief of Ruth Floyd Jacokes; to the Committee on Claims.

By Mr. DAVIS:

A bill (S. 4678) to reinstate John Frederic Blandy as a midshipman in the United States Naval Academy; to the Committee on Naval Affairs.

By Mr. NYE:

A bill (S. 4679) to authorize the coinage of 50-cent pieces in commemoration of the founding of the International Peace Garden, at the international boundary line between the United States and Canada, in the Turtle Mountains of North Dakota and Manitoba; to the Committee on Banking and Currency.

By Mr. LA FOLLETTE:

A bill (S. 4680) authorizing the State of Wisconsin to construct, maintain, and operate a free highway bridge across the Mississippi River at or near La Crosse, La Crosse County, Wis.; to the Committee on Commerce.

By Mr. METCALF:

A bill (S. 4681) granting a pension to Emma S. Boutwell (with accompanying papers); to the Committee on Pensions.

By Mr. DUFFY (by request):

A bill (S. 4682) authorizing superannuation disability pay for alien employees of the Panama Canal; to the Committee on Interoceanic Canals.

By Mr. HATCH:

A bill (S. 4683) to amend section 3 of the Adjusted-Compensation Payment Act, 1936; to the Committee on Finance.

By Mr. METCALF (for Mr. BARBOUR):

A bill (S. 4684) for the relief of the First, Second, and Third National Steamship Cos.; to the Committee on Claims.

By Mr. SMITH:

A bill (S. 4685) to provide for the use of net weights in interstate and foreign commerce transactions in cotton, to provide for the standardization of bale covering for cotton, and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. SHEPPARD:

A bill (S. 4686) to amend the act known as the Federal Credit Union Act, approved June 26, 1934; to the Committee on Banking and Currency.

By Mr. COPELAND:

A bill (S. 4687) to extend the laws governing inspection of vessels, and for other purposes; to the Committee on Commerce.

By Mr. WHEELER:

A joint resolution (S. J. Res. 271) amending and repealing certain sections of the Emergency Railroad Transportation Act, 1933, and extending the effective period of such act, and for other purposes; to the Committee on Interstate Commerce.

PUERTO RICAN INDEPENDENCE

Mr. TYDINGS. I introduce for appropriate reference a joint resolution providing for the appointment of a committee to study the question of Puerto Rican independence, the committee to be composed of 17 members, 1 member to be appointed by the President, 1 by the President of the Senate, 1 by the Speaker of the House of Representatives, 1 by the Secretary of State, 1 by the Secretary of the Interior, and 1 member by the central executive authority of each of the 4 major registered political parties in Puerto Rico, and so forth.

The VICE PRESIDENT. Without objection, the joint resolution will be received and appropriately referred.

The joint resolution (S. J. Res. 270) to provide for the appointment of a committee to study the question of Puerto Rican independence was read twice by its title and referred to the Committee on Territories and Insular Affairs.

HOUSE BILL AND JOINT RESOLUTION

The following bill and joint resolution were each read twice by their titles and ordered to be placed on the calendar or referred as indicated below:

H. R. 11929. An act granting to the State of Iowa for State park purposes certain land of the United States in Clayton County, Iowa; to the calendar.

H. J. Res. 570. Joint resolution authorizing the President of the United States to award posthumously a Distinguished Service Medal to Maj. Gen. Clarence Ransom Edwards; to the Committee on Military Affairs.

INTERNAL-REVENUE TAXATION—AMENDMENT

Mr. SCHWELLENBACH submitted an amendment intended to be proposed by him to the bill (H. R. 12395) to provide revenue, equalize taxation, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

RELIEF TO GOVERNMENT CONTRACTORS—AMENDMENT

Mr. LONERGAN submitted an amendment intended to be proposed by him to the bill (S. 4377) to amend an act approved June 16, 1934, entitled "An act to provide relief to Government contractors whose costs of performance were increased as a result of compliance with the act approved June 16, 1933, and for other purposes", which was referred to the Committee on Education and Labor and ordered to be printed.

THE AMERICAN MERCHANT MARINE—AMENDMENTS

Mr. FLETCHER submitted amendments intended to be proposed by him to proposed amendments submitted by Mr. COPELAND, Mr. GUFFEY, and Mr. GIBSON to the bill (H. R. 8555) to develop a strong American merchant marine, to promote the commerce of the United States, to aid national defense, and for other purposes, which were ordered to lie on the table and to be printed.

AMENDMENT TO FIRST DEFICIENCY APPROPRIATION BILL

Mr. McNARY submitted an amendment intended to be proposed by him to House bill 12624, the first deficiency appropriation bill, 1936, which was referred to the Committee on Appropriations and ordered to be printed, as follows:

On page 21, line 21, immediately preceding the figure "$156,750,000", to insert the following: "And the acquisition of lands for National and State forests"; and on page 21, line 24, to strike out the last comma and add the words "including forestry."

PRINTING OF TAX HEARINGS BEFORE THE FINANCE COMMITTEE

Mr. HARRISON submitted the following concurrent resolution (S. Con. Res. 40), which was referred to the Committee on Printing:

Resolved by the Senate (the House of Representatives concurring), That, in accordance with paragraph 3 of section 2 of the Printing Act approved March 1, 1907, the Committee on Finance of the Senate be, and is hereby, empowered to have printed for its use 1,000 additional copies of the hearings held before the said committee during the current session on the bill "The Revenue Act of 1936."

NAVAL APPROPRIATIONS—CONFERENCE REPORT

Mr. BYRNES submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12527) "making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1937, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 6, 7, 10, 11, 12, 13, 15, 21, 28, and 34.

That the House recede from its disagreement to the amendments of the Senate numbered 2, 3, 4, 5, 8, 9, 14, 18, 19, 20, 22, 24, 25, 26, 27, 29, 31, 32, 33, and 35, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,147,500"; and the Senate agree to the same.

Amendment numbered 16: That the House recede from its disagreement to the amendment of the Senate numbered 16, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$3,395,300"; and the Senate agree to the same.

Amendment numbered 17: That the House recede from its disagreement to the amendment of the Senate numbered 17, and agree to the same with an amendment, as follows: In lieu of the matter inserted by said amendment, insert the following: "including plant, $1,500,000"; and the Senate agree to the same.

Amendment numbered 23: That the House recede from its disagreement to the amendment of the Senate numbered 23, and agree to the same with an amendment, as follows:

Restore the matter stricken out by said amendment, amended to read as follows: ": *Provided further*, That no part of this appropriation shall be used for the construction of a factory for the manufacture of airplanes"; and the Senate agree to the same.

Amendment numbered 30: That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment, as follows: In lieu of the sum proposed insert: "$7,645,575"; and the Senate agree to the same.

Amendment numbered 36: That the House recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment, as follows: In lieu of the sum proposed insert: "$3,985,509"; and the Senate agree to the same.

JAMES F. BYRNES,

CLARENCE J. McLEOD,
J. WILLIAM DITTER,
Managers on the part of the House.

The report was agreed to.

LAKE CHAMPLAIN BRIDGE COMMISSION

Mr. SHEPPARD. Mr. President, I ask permission for the consideration at this time of a joint resolution for the creation of a commission by the States of New York and Vermont for the purpose of building a bridge across Lake Champlain. It is necessary that the papers be signed by June 1. It is a matter of great urgency, and I ask for the immediate consideration of the joint resolution.

The VICE PRESIDENT. The clerk will report the joint resolution by title.

The LEGISLATIVE CLERK. A joint resolution (S. J. Res. 262) granting the consent of Congress to the States of New York and Vermont to enter into an agreement amending the agreement between such States consented to by Congress in Public Resolution No. 9, Seventieth Congress, relating to the creation of the Lake Champlain Bridge Commission.

The VICE PRESIDENT. Is there objection to the request of the Senator from Texas that the Senate give unanimous consent for the present consideration of the joint resolution?

Mr. ROBINSON. Mr. President, I understand that the joint resolution has been unanimously reported by the Committee on Commerce?

Mr. SHEPPARD. It has been unanimously reported by that committee.

Mr. ROBINSON. May I ask if the joint resolution was referred to the Department of Agriculture?

Mr. SHEPPARD. All bridge bills are referred to the Department of Agriculture in order that the Bureau of Public Roads may pass on the proposed bridges. They are also referred to the War Department in order that the engineers may pass upon the effect of the proposed bridges on navigation.

Mr. ROBINSON. I have no objection to the present consideration of the joint resolution.

There being no objection, the joint resolution was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That the consent of Congress is hereby granted to the States of New York and Vermont to enter into the amendatory agreement executed on April 1, 1936, by the commissioners duly appointed on the part of such States, amending the original agreement entered into by such States for the creation of the Lake Champlain Bridge Commission, which original agreement was consented to by Congress by Public Resolution No. 9, Seventieth Congress, approved February 16, 1928, and every part and article of such amendatory agreement is hereby ratified, approved, and confirmed: *Provided*, That nothing therein contained shall be construed as impairing or in any manner affecting any right or jurisdiction of the United States in and over the region which forms the subject of such amendatory agreement; which amendatory agreement is as follows:

Whereas the States of New York and Vermont heretofore and on the 11th day of May 1927 entered into an agreement or compact, duly authorized by law, creating the Lake Champlain Bridge Commission; and

Whereas the legislatures of said States have authorized their respective commissioners to enter into an agreement or compact amending said existing agreement or compact: Now, therefore,

The said States of New York and Vermont do hereby enter into the following agreement, to wit:

The agreement heretofore made between the State of New York and the State of Vermont pursuant to chapter 321 of the laws of 1927 of the State of New York, entitled "An act authorizing designated authorities in behalf of the State of New York to enter into an agreement or compact with designated authorities of the State of Vermont for the creation of the Lake Champlain Bridge Commission, the establishment of the Lake Champlain Bridge Commission, and the defining of the powers and duties of such commission and making an appropriation for such purposes", and no. 139 of the acts of 1927 of the State of Vermont, entitled: "An act ratifying a proposed agreement or compact between the State of Vermont and the State of New York relating to the creation of the Lake Champlain Bridge Commission and providing for carrying out the provisions of said agreement or compact", as the same was amended by the agreement or compact entered into the 30th day of March 1935 by and under the authority of chapter 201 of the laws of 1933, as amended by chapter 355 of the laws of 1935 of the State of New York, and by and under the authority of no. 209 of the acts of the General Assembly of the State of Vermont of 1935, entitled "An act authorizing an agreement or compact between the State of Vermont and the State of New York to amend the existing agreement or compact between said States creating the Lake Champlain Bridge Commission, in relation to the construction of a new bridge across Lake Champlain, the issuance of bonds by said commission, and providing for the payment of said bonds", approved by the Governor February 27, 1935, as amended by no. 210 of the acts of 1935 of the General Assembly of the State of Vermont, approved by the Governor March 21, 1935, is hereby amended by adding thereto the following articles:

ARTICLE XXXVI

The Lake Champlain Bridge Commission shall have power and is hereby authorized to issue its negotiable bonds in addition to those issued prior to March 1, 1933, for the purpose of refunding its bonds issued before said date: *Provided, however*, That the aggregate principal amount of such bonds so issued to pay off and refund its bonds issued before said date shall not exceed the aggregate principal amount of the bonds so retired.

ARTICLE XXXVII

Such commission shall have power and is hereby authorized to call for payment and to pay its bonds issued before March 1, 1933, in accordance with the terms under which said bonds were issued and for such purposes to use any funds which it has or shall have in reserves and sinking fund and in investments at the time said bonds are called for payment, notwithstanding any provision heretofore set forth in this or any previous compact or agreement.

ARTICLE XXXVIII

The bonds issued under authority of article XXXVI shall be authorized by resolution of such commission and shall bear such date or dates, mature at such time or times, not exceeding 50 years from their respective dates, bear interest at such rate or rates, not exceeding 5 percent per annum payable semiannually, be in such denominations, be in such form, either coupon or registered, carry such registration privileges, be executed in such manner, be payable in such medium of payment, at such place or places, and be subject to such terms of redemption as such resolution or resolutions may provide. Said bonds may be sold at public or private sale for such price or prices as such commission shall determine, provided that the interest cost to maturity of the money received for any issue of said bonds shall not exceed 5 percent per annum.

2. Neither the members of such commission nor any person executing said bonds shall be liable personally on said bonds or be subject to any personal liability or accountability by reason of the issuance thereof.

3. The bonds issued under the authority of article XXXVI shall constitute a first lien upon the property, tolls, and revenues pledged to secure the bonds issued by such commission prior to March 1, 1933, and subject to the terms of any agreement made or to be made with holders of bonds issued by such commission under article XXVI of the amendments to this compact shall be a lien upon the tolls and revenues of the bridge referred to as the Rouses Point Bridge, and in accordance with subdivision 4 of article XXVI of the amendments to this compact any of such tolls and revenues which would otherwise have been payable into the State treasuries of the two States may be pledged to the payment of said bonds.

4. Said bonds shall not be a debt of the State of New York or of the State of Vermont, and neither State shall be liable thereon, nor shall they be payable out of any funds other than those of such commission.

5. Said bonds shall be exempt from taxation, and are hereby made securities in which all public officers and bodies of each State and of its municipal subdivisions, all insurance companies and associations, all savings banks and savings institutions, including savings and loan associations, executors, administrators, guardians, trustees, and all other fiduciaries in each State may properly and legally invest the funds within their control.

6. Such commission shall have power out of any funds available therefor to purchase any bonds issued by it at a price not more than the redemption price thereof at the time of such purchase with accrued interest.

ARTICLE XXXIX

Such commission shall have the power to apply to the Congress of the United States or any department of the United States for consent or approval of this compact as amended; but in the absence of such consent by Congress and until the same shall have been secured, this compact, as amended, shall be binding upon the State of New York when ratified by it and the State of Vermont when ratified by it, without the consent of Congress, to cooperate for the purposes enumerated in this agreement and in the manner herein provided and for all purposes that it legally may be.

In witness whereof, by and under the authority of chapters 73 and 219 of the Laws of 1936 of the State of New York, and by and under the authority of Public Act No. 19 of the acts and resolves passed by the General Assembly of the State of Vermont at the special session 1935–36, approved by the Governor December 14, 1935, we have signed this compact or agreement in duplicate this 1st day of April 1936.

SEC. 2. The right to alter, amend, or repeal this joint resolution is hereby expressly reserved.

LOCAL RESPONSIBILITY FOR WELFARE SUPPORT

Mr. VANDENBERG. Mr. President, the Associated Press this morning reports a stimulating demonstration of recurrent local self-reliance in the matter of relief. I refer to the statement from New York by J. Reuben Clark, first counselor in the first presidency of the Latter-Day Saints Church. It ought to be a matter of challenging significance, it seems to me, that this great organization thus proposes to return to the principles of home responsibility for welfare support. In far lesser degree, but in conformity with the principles involved, I have been arguing for a restoration of State responsibility and State control in the matter of relief administration. I have endeavored to prove that the restoration of State responsibility would materially reduce the costs and the exploitation of relief. One of the reasons why I am confident this would be the result—and if it would be the result, Mr. President, instead of passing another bill imposing additional taxes of $500,000,000, or $600,000,000, or $700,000,000, we might well anticipate economies of a like amount as an alternative course—one of the reasons why I think this could be the result is stated most succinctly by Mr. Clark in the newspaper dispatch from which I quote as follows:

Man may have no compunction in taking aid from the Government, but if he has to take it from his brother or neighbor it probably will be a very different picture.

I ask that the article in question be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 25, 1936]

PLAN FOR CARE OF OWN NEEDY IS ANNOUNCED BY MORMONS—88,000 INDIGENT TO BE TAKEN OFF UNITED STATES ROLLS AND GIVEN AID—OCTOBER 1 SET AS DATE FOR NEW PROGRAM—LEADER SAYS HANDLING OF PUBLIC RELIEF IS TOO INDIRECT

NEW YORK, May 24.—The Mormon Church will remove its 88,000 needy members from public relief rolls and support them itself, J. Reuben Clark, first counselor in the first presidency of the Latter-Day Saints Church and former Ambassador to Mexico, announced tonight.

"Our aim is by October 1 to accumulate enough food, shelter, and clothing to care for those who cannot care for themselves", Clark stated at a Mormon Church service here.

"The plan includes provision for those who have nothing to do something useful in return for that which they get", he said. "The president of the church feels it is time we got back to first principles and cared for our own."

Clark said he expected no difficulty in carrying out the work if the 750,000 Mormons in the United States "abide by the church teachings." He predicted it would be of spiritual benefit to all members.

Clark said he was not critical of Government relief, but said any mistakes in public relief administration were due to far-away management.

"Man may have no compunction in taking aid from the Government", he said, "but if he has to take it from his brother or neighbor it probably will be a very different picture."

ALL TO CONTRIBUTE

Clark said each Mormon will be expected to contribute the cost of two meals on the monthly fast day and the tithes rule, contribution of one-tenth of a member's income, will be enforced.

The procedure during the summer, Clark added, would be to take Mormons off home relief first and later to take the others off work relief.

"I believe $1,000,000 a year will take care of the task", he said, "and as for the cost, it will cost us only 45 percent of what it costs the Government to care for these needy, because ours will be a service of love, and none of these persons doing the work will be paid."

Agencies for carrying on the work already are functioning in the church, he explained. Chiefs in each ward will be the bishop and his two councilors. The districts, subdivisions of wards, will be scoured by teachers to determine the needy.

The women's relief society will continue its work both in aiding the needy and soliciting aid.

"The male population of the church, including the elders and priests, will have as their duty the obligation to see that no one suffers", Clark said.

BANKING AND CURRENCY COMMITTEE WORK—ADDRESS BY SENATOR BULKLEY

Mr. FLETCHER. Mr. President, I ask unanimous consent to have inserted in the RECORD the splendid radio address delivered by the Senator from Ohio [Mr. BULKLEY] on the 5th instant on the subject of the work of the Committee on Banking and Currency.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From the very beginning of the Roosevelt administration the work of the Committees on Banking and Currency of both the Senate and House has been of unusual scope and importance. Numerous bank failures from 1924 on had prepared the way for the general break-down of 1929, and the great crash of that year had caused so many more bank failures and had so weakened the position of all banks that by March 1933 the situation was desperate indeed.

The Senate Committee on Banking and Currency had already been engaged for 2 years in a study of the faults and weaknesses in the structure and administration of our banking system, which had caused or at least substantially contributed to the unsound credit inflation which led up to the financial disaster of 1929. A bill had been drafted in the committee for the purpose of preventing the speculative use of the credit of the Federal Reserve system, and this bill had passed the Senate during the early months of 1933, but failed of final enactment into law.

In March 1933 the administration and the Congress were confronted with a wholly desperate situation. It was necessary to meet not only the problem of removing from our banking system the faults which had in the past caused trouble, but it was absolutely necessary to meet also the problem of tiding over a financial situation which was so bad as to endanger the very existence of our whole banking system. The President closed all the banks in the country before he could even convene the Congress in extraordinary session, and the very first act of the Seventy-third Congress was the Emergency Banking Act of March 9, 1933, which brought about a reexamination of all banks and a reopening of as many of them as could safely be reopened. This act provided for the appointment of conservators and liquidators to protect the interests of the millions of bank depositors. It also provided the authority for the nationalization of gold, which was shortly thereafter accomplished by Presidential proclamation. This proclamation prohibited gold exports and called for the deposit with the Government of all gold and gold certificates held in this country. This took the United States off the gold standard, and for some months our dollar had no legal fixed gold content.

These acts laid the foundation for subsequent legislation authorizing the President to change the gold content of the dollar. Soon after came the resolution approved June 5, 1933, declaring contracts specifying payment in gold of specific weight and fineness to be against public policy and making all United States currency legal tender at face value. Further legislation in January 1934 was necessary to complete the nationalization of gold and fix the rights of Federal Reserve banks with respect to their gold reserves. This was immediately followed by a proclamation of the President fixing the gold content of the dollar at approximately 59 percent of the previous gold content, and so the gold standard was theoretically restored, but neither the act nor the proclamation restored to our currency its absolute redeemability in gold.

Following shortly after the Emergency Banking Act of March 9, the important general Banking Act of 1933 was enacted. This was the act which substantially embodied the results of the 2 years' study of the banking situation by the Senate Banking and Currency Committee. The broad purpose of this law was to place restrictions upon the operating policy of the Federal Reserve banks and member banks in the Federal Reserve System; to limit them to the extension of credit for ordinary business purposes as distinguished from support of speculative transactions. The act also separated national banks and all member banks of the Federal Reserve System from the investment-banking business, whether such business was conducted directly or through affiliates. The affiliate relation was sharply curtailed and the unsound practices connected with affiliate operations were prohibited. This act also set up for the first time a system of deposit insurance. This system has been perfected by amendments carried in the Banking Act of 1935, and each depositor in any of the 14,300 banks which are now members of the system is insured up to the amount of $5,000 in the Federal Deposit Insurance Corporation.

Bank failures, which aggregated about twenty-three hundred in the year 1931 and nearly fifteen hundred in 1932, have been practically eliminated and there have been but few banks closed since the reopening in the spring of 1933. Since the Federal Deposit Insurance Corporation commenced business in 1934, only 53 insured banks with total liabilities aggregating about $13,000,000 have closed, and in these cases all small depositors have been promptly reimbursed by the Federal Deposit Insurance Corporation. The ultimate loss to the Corporation is not yet determined, but will probably be about $5,000,000. Of course, the deposit insurance system has not yet been put to any severe strain. Up to this time, however, the position of the Corporation looks very strong. In establishing the Federal Deposit Insurance Corporation the Congress provided that $150,000,000 should be contributed from the United States Treasury, and the Federal Reserve banks were required to contribute one-half of their surplus accounts which brought $140,000,000 into the Corporation. In addition to this, a total of $40,000,000 has been received from the constituent member banks in payment of premiums on deposit insurance. The temporary insurance plan was wound up on the 30th of last June with no premium cost whatever to the member banks, and all amounts theretofore paid were credited as payments on premiums accruing after July 1, 1935. So small have been the losses and expenses of operation that after all these have been paid the Corporation could, if it were wound up today, repay the entire $150,000,000 contributed by the Treasury, the $140,000,000 contributed by the Federal Reserve banks, the $40,000,000 premiums paid by the member banks, and still have enough left over to pay a 3-percent dividend on the Government and Federal Reserve bank interest in the Corporation.

The Federal Deposit Insurance Corporation has done much more for the banking system than merely to make good losses in closed banks. Its examinations of many thousands of banks and its insistence upon new capital for some of them have been important factors in strengthening the banking situation throughout the country. This work of the Corporation has resulted in additional capital being provided for at least 6,000 banks which needed it. In every such case additional capital is subscribed and paid in the local community, and in many cases there was a stock subscription from the Reconstruction Finance Corporation.

The Banking Act of 1935 not only definitely and permanently established the deposit-insurance system and strengthened its basic law, but it provided a further strengthening of the Federal Reserve banking laws, and reorganized the open-market operations of the Federal Reserve System so as to increase the measure of public control and public responsibility for the administration of national monetary policy. This act not only changed the name of the Federal Reserve Board to the Board of Governors of the Federal Reserve System, but also provided a substantial reorganization of the Board by bringing to an end the service of all members of the Board, so that the Board was reconstituted with a large proportion of new members as of February 1, 1936. The terms of office of the members were lengthened, and salaries increased, with a view to increasing the independence and nonpolitical aspect of the Board.

Further efforts to put the Government sufficiently in control of financial operations in the country to prevent a recurrence of the events which led up to the panic of 1929 are represented by the Securities Act of 1933 and the Securities Exchange Act of 1934, both of which were formulated and reported by the Senate

Banking and Currency Committee, the latter as a result of a very extensive investigation by that committee concerning stock-exchange practices. As a result of these two acts the Securities Exchange Commission, created by the act of 1934, is given general supervision of the issuance of securities, and also over trading on security exchanges of the Nation, and by brokers and dealers who are members of such exchanges. It is much to be hoped that with strong and capable supervision by the Board of Governors of the Federal System and by the Securities Exchange Commission, the country may be saved in the future from the development of such practices as led to disaster in the past.

The Senate Banking and Currency Committee has had to concern itself not only with the problem of preventing the continuance and recurrence of unsound practices but has also been very greatly concerned with the problem of saving the masses of borrowers from the ruin which threatened to result from the pressure of an excessively heavy debt structure. A beginning in dealing with this problem had been made in the previous administration by the establishment of a Government agency, the Reconstruction Finance Corporation, to provide assistance to sound banks, railroads, and insurance companies which were endangered by the unusual pressure incident to the financial collapse. The activities of this Corporation were continued under the present administration and greatly extended so as to give to the Corporation the authority and the means to help business institutions and private borrowers more generally. The funds used by the Reconstruction Finance Corporation are all supplied by the Treasury. Interest at the rate of 2¾ percent is paid on Treasury advances, and the Corporation has paid into the Treasury on account of interest more than $150,000,000. The average rate charged on loans made by the Corporation is 4 percent, which is regarded as a low rate of interest.

The Reconstruction Finance Corporation has rebuilt the Nation's banking structure by investing upward of a billion dollars of new capital in more than 6,000 banks, State and National. This Reconstruction Finance Corporation work under the Roosevelt administration has been an important factor in making our banking system stronger and safer than ever before.

The Reconstruction Finance Corporation has loaned more than $6,000,000,000 to businesses of every character. Three billion five hundred million of this has already been repaid. The activities of the Reconstruction Finance Corporation have been helpful, directly or indirectly, to literally every citizen of the United States. There will be no loss to the taxpayer from these vast operations.

In addition to the Reconstruction Finance Corporation, two other Government agencies have been set up to serve important classes of borrowers. The Home Owners' Loan Corporation was established to relieve distressed mortgagors who were in danger of having their homes foreclosed. In order to qualify for a loan from this Government corporation it was necessary for the applicant to show that he was actually in distress and unable to satisfy the requirements of his existing mortgage. Yet the operation was in no sense a charitable one, as the applicant was also required to show that he had some income or earnings to enable him to support a new mortgage to be given to the Home Owners' Loan Corporation. The emergency with respect to foreclosures of homes is now believed to be past, and for some months the Home Owners' Loan Corporation has not been receiving any new applications. Within a few weeks it will make the last of its loans on applications already pending, and from then on it will continue in business only to hold and gradually to liquidate the mortgages which it has already made. It has made loans in excess of $3,000,000,000 and directly saved more than a million of American homes from foreclosure. It is hard to imagine what disastrous business effect and what disastrous social effect would have followed from the foreclosure sale of a million American homes. Yet it is fair to say that, beyond this vast number of homes which the Corporation has saved by its own direct action, it has also saved a very large additional number by the effect of its operations in restoring confidence in the real-estate market.

A very large percentage of interest and amortization payments, about 70 percent, is being made to the Home Owners' Loan Corporation by its borrowers without delinquency, notwithstanding that each and every one of these borrowers was in distress with his previous loan when he first made his mortgage to the Corporation. There will, of course, be foreclosures and some losses, and it is entirely too early yet to predict with confidence just how well this operation will ultimately work out. The Corporation, however, has been able to borrow money by sales on the market of its bonds, which are unconditionally guaranteed as to principal and interest by the United States Government, at a very low rate of interest. The latest financing was a sale of bonds bearing only 2¼-percent interest, and these are quoted on the market somewhat above par. The Corporation's mortgage loans are made at a rate of 5 percent, a lower rate than had previously been available to the small-home owner. Yet there is a substantial margin between the interest the Corporation pays to its bondholders and that which it receives from its borrowers. There is a real possibility that this margin may be sufficient to meet all expenses and losses. Only time will tell.

The Farm Credit Act of 1933 consolidated under one agency, the administration of the Federal land banks, Farm Board, intermediate credit banks, production credit corporations, cooperative credit agencies, and general emergency farm relief, such as that represented by seed loans. This Farm Credit Administration has saved from foreclosure a vast number of farms, and now owns almost one-half of the number of farm mortgages in the United States. More than $2,000,000,000 have been advanced on about three quarters of a million individual mortgage loans. The Farm Credit Administration has made mortgage loans during a period of less than 3 years in an amount more than the total loaned by the Federal land banks in the 16 years of their operation prior to the spring of 1933. The grand total amount loaned by the Farm Credit Administration during these 3 years is over three and one-half billions of dollars.

The Banking and Currency Committee has also given much attention to the further development of private lending in the housing field, and in order to stimulate it, it has created the Federal Housing Administration which has, in less than 2 years, insured $368,000,000 of loans for renovation of houses and small business properties. These operations have undoubtedly stimulated a large additional amount of private expenditures for renovation. Long-time mortgages have been accepted for insurance to the amount of $264,000,000, and it is believed that the investment of private capital in housing enterprises will be greatly stimulated by the further operation of this system.

We have also been concerned with the extension of building-and-loan operations into parts of the country not adequately served by existing building-and-loan associations. And so, in connection with the Federal Housing Act of 1933, the incorporation of Federal savings and loan associations supported by stock subscriptions from the United States Treasury was authorized, and over a thousand of these Federal savings and loan associations are already in operation, providing needed credit facilities where they were not available before. These new Federal associations have assets of over $500,000,000, less than one-fifth of which was contributed by the Government. During the past year they made loans on homes to the amount of $125,000,000, or more than all banks and insurance companies combined.

We have also provided, through the Federal Savings and Loan Insurance Corporation, for the insurance of accounts in building-and-loan associations. Insurance has been granted to over 1,200 associations, representing about 1,000,000 savers and over $750,000,000 of accounts insured.

The legislation which we have been reviewing and which has been sponsored by the Committee on Banking and Currency during the past 3 years has been of extraordinary importance. The amount of it within so brief a time is, I believe, unprecedented, and some of the legislation is of an unprecedented character. Some of it has been the subject of controversy. Some features of it may prove unwise, but on the whole it seems so far to be proving sound. It has brought a great change in the national outlook. Our banking and financial structure has been remarkably strengthened. Where there was chaos, there is order. Where there was despair, there is now confidence.

NATIONAL ISSUES—ADDRESS BY SENATOR BYRNES

Mr. ROBINSON. Mr. President, I ask unanimous consent to have printed in the RECORD a very instructive speech delivered by the Senator from South Carolina [Mr. BYRNES] on the occasion of the Democratic convention at Columbia, S. C., May 20, 1936.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Under the rules of the Democratic Party of South Carolina a State convention is held in every general-election year. This year there are no candidates for Governor or other State offices to be elected. The only candidates to be voted for other than aspirants for local offices are those who seek to serve as Presidential electors, United States Senators, and United States Congressmen. Therefore any declaration by this convention of the views of the Democracy of South Carolina must necessarily be devoted in great part to issues affecting the administration of the United States Government.

We cannot consider national issues without recalling the days preceding March 4, 1933. For 12 years the Republican Party had been in continuous and complete control of the Government. As a result of their abuse of power, the business of the Nation was paralyzed and fear gripped the hearts of our people. Bank clearings decreased in every State, and credit facilities were denied. Gold was being shipped out of the country. People were withdrawing funds from the banks, and banks were closing their doors, until finally, on the morning of March 4, 1933, a moratorium against the withdrawal of deposits existed in every State in the Union. The railroads were facing bankruptcy, and Government operation was urged as the only solution. As their securities decreased in value, life-insurance companies were in distress, and no man knew whether his insurance policy was worth the paper upon which it was written. Mortgages were being foreclosed upon the homes of the people of the cities and of the country. In the West, as the hammer of the auctioneer fell and people were driven from their homes, mobs stormed courthouses and in some cases judges suffered physical violence. Agriculture was paralyzed. Cotton was selling for 5 cents per pound, tobacco for 9 cents, and wheat for 30 cents per bushel. It was estimated that 16,000,000 men walked the streets seeking employment, and in the great cities of the country hungry men searched the garbage cans.

In New York City one night in January 1933, in company with a group of Senators and Congressmen, I was at the home of Governor Roosevelt discussing the legislative program to follow his inauguration. We heard a noise. It sounded like the cry of a

mob. Afterward we learned that several thousand persons had been stopped by policemen a block from the Governor's home. They wanted to gather before his door and present to him and to the group of legislators a request for food to relieve their hunger. They were hungry men. Hungry men are dangerous men.

The former President of the United States, Mr. Hoover, may not recall the serious conditions then existing, but I recall that just before the adjournment of Congress in 1932 he sent word to a subcommittee of which I was a member, that while he advocated a reduction in the compensation of all Government employees, that an exception should be made as to the enlisted personnel of the Army and Navy, because he did not know what would happen in the next few months and he did not want to have to rely upon an Army that might be dissatisfied because of a reduction in compensation.

In other lands, conditions would have been ripe for revolution, but the people of this land, who believed in a change of policy by government, sought that change not by force of arms but in the only way I hope there will ever be a change in our Government—by the free expression of the will of the people at the ballot box. The people spoke. The Republican administration was repudiated. Herbert Hoover was relegated to private life, and the control of the Government was transferred to the Democratic Party under the leadership of Franklin D. Roosevelt.

At that time there was no criticism of Roosevelt by big business. And, while cries of assistance came from all the people, none cried louder or longer than those who possessed great wealth. With one accord they declared that the emergency was as great, if not greater, than any war emergency; that the ordinary processes of government could not be relied upon. They begged that the President of the United States do something—do anything—to save them and their property. Something was done. Action was substituted for inaction. The President ordered that all banks remain closed until assurance could be given, as a result of examination, that those permitted to open would remain open. The Government loaned money to many banks holding assets that were sound but frozen, in order to enable such banks to open. The people of wealth who had been shipping gold out of the country regained confidence; the savings of the people were returned to the banks; bank deposits continued to grow until today they are greater than ever before in our banking history. In South Carolina deposits in National and State banks increased from $74,522,000 in 1939 to $120,814,000 in 1935, and because of the action of this administration in guaranteeing deposits the people now feel that the money they deposited in the banks they can get out of the banks.

The Democratic administration could follow no beaten path. Those paths had been followed and had led into a wilderness of distress. We had to blaze new trails in the effort to save the Nation and its people. We enacted laws having for their object the restoration of the purchasing power of the people by providing jobs for the unemployed, increasing the compensation of those who were still employed, and by increasing the price of agricultural commodities so that those who had borrowed money would be able to pay their debts with the same kind of dollar they had borrowed.

As a result of the agricultural legislation, cotton, instead of selling for 5 cents per pound, is now selling for 11½ cents. Tobacco, instead of selling for 9 cents per pound, has sold for more than 23 cents per pound. Wheat, instead of bringing 30 cents a bushel, has been selling for approximately 95 cents a bushel.

Of the 16,000,000 men who walked the streets in idleness, more than 5,000,000 have secured jobs in private industry, and the others have been provided for by Government. The labor provisions of N. R. A. resulted in increasing the compensation and shortening the work hours of wage earners. By the decision of the Supreme Court it was abolished, but the labor standards established as a result of that legislation continue in most industries, and wage earners are receiving a fairer share of the profits. The railroads are no longer threatened with bankruptcy. Insurance companies are solvent and prosperous. A permanent banking law was enacted, fair to the banks and, at the same time, placing greater control over the issuance of currency, where the Constitution provided it should be placed—in the hands of the people.

By the Securities Act corrupt promoters have been prohibited from unloading worthless securities upon a confiding people, and by other legislation banks are prohibited from lending the money of their depositors upon worthless securities of foreign governments. Reciprocal-trade agreements have been concluded with 12 governments, lessening tariff barriers.

The Labor Relations Board has been established to arbitrate the controversies between capital and labor, and by the Wagner Act and other legislation labor has been given greater recognition than it has ever received at the hands of any administration in the political history of America.

Farm mortgages have been refinanced, and borrowers now have a long period in which to pay their obligations and are paying a rate of interest as low as 3½ percent. Mortgages on homes in the cities have also been refinanced at 5-percent interest. The annual saving to the people by reduced interest rates will amount to millions of dollars. As these mortgages have been refinanced, an amount has been included to cover unpaid taxes, and the payment of these taxes has enabled the State, county, and city governments to function and pay their employees with something other than script. Let us consider conditions in South Carolina:

In South Carolina the receipts from the sale of the principal farm products in 1932 amounted to $46,219,000. In 1935 the receipts amounted to $92,026,000, an increase of almost 100 percent.

In 1932 the total construction of all kinds in South Carolina amounted to $7,658,800. In 1935 it amounted to $18,493,300.

When people file income-tax returns with the United States Government for tax purposes, you can rest assured that they do not overstate their incomes. In 1933 the total income tax paid in South Carolina was $1,108,624; in 1935 it was $2,976,370, or an increase of 168 percent.

From January 1933 to January 1, 1936, the United States Government paid to the farmers of South Carolina in rental and benefit payments $21,823,284. Of this amount $18,046,506 has been paid on account of cotton, $3,221,464 to tobacco growers, and the balance on account of corn, hogs, and peanuts.

But, say the Republicans, we admit conditions have improved, but too much money is paid to farmers, and you are destroying their "rugged individualism." Well, for three-quarters of a century the farmers of the South have been forced by Republican administrations to contribute to the enrichment of the manufacturers of the North. Never before has the Federal Government paid them a dollar or used its powers to increase the price of their commodities. The farmers have nothing against rugged individualism, but they are awfully tired of "ragged individualism." They may not approve of everything done by some local officials in the name of the Government, but they appreciate the fight Franklin D. Roosevelt has made and is still making against great odds to give to them increased purchasing power, so they can enjoy some of the comforts enjoyed by other people.

New Deal recovery is not restricted to South Carolina. It is being felt throughout the land, and all citizens, even those who now so severely denounce the Roosevelt administration, have been its beneficiaries. Let me give you a few percentages contrasting conditions under the New Deal and under the Old Deal.

Between January 1, 1935, and January 1, 1936, industrial production advanced 51 percent, steel production advanced 257 percent, auto registrations advanced 326 percent. Between January 1, 1933, and December 1, 1935, the dollar value of exports advanced 33 percent and imports 37 percent.

Listed stocks on our security exchanges advanced 134 percent from March 1, 1933, to January 1, 1936. Listed bonds during that period advanced 22 percent.

Finally, for the benefit of our utility friends, who are so worried about the final effect of the Santee-Cooper and Buzzard's Roost projects, let me say that from January 1, 1933, to January 1, 1936, power production increased 19 percent.

In view of this remarkable record of achievement it is difficult to understand the vicious attacks that have been made upon the President and the Democratic administration, unless you recall our political history. For three-quarters of a century, with the exception of 16 years, the Republican Party was in control of the United States Government. Possibly because they were in control, they concentrated great power in the administration of the Federal Government. Through the instrumentality of tariff subsidies and expenditure for public works, the Federal Government developed certain sections of the country controlled by the dominant party, leaving other sections at the mercy of the favored States. These acts of Government contributed to the accumulation of great fortunes in the hands of a few individuals, and these few individuals in turn, used that wealth to continue the Republican Party in control of the Government in order that they might continue to enrich themselves at the expense of the masses of the people.

Among these favored citizens there are a few who have an appreciation of the great responsibility which rests upon them by reason of their wealth. But they are few. To the great majority a new deal means an end to the old deal by which they accumulated their fortunes. They are opposed to that change. They have organized to make war upon this administration because it seeks to give an opportunity to the average man. They are content to let your Government nominally exist in the city of Washington, but they want to return to the financial barons of America the power to dictate the policies of the Government.

What are their arguments against the administration? They say we have increased the national debt. We have; but not one of them is fair enough to say that of the increased debt four and one-half billion dollars is invested in loans secured by mortgages over the farms and homes of America; by liens upon cotton and the assets of banks, and by the securities of States, counties, and cities, and other liens. These loans are so secured that the Government of the United States will not lose a dollar. Some of the securities have already been sold at a profit to the Government.

In their effort to destroy confidence they assert that the credit of the Government is in danger. The fact is, under this administration Government credit is so good that outstanding obligations have been refinanced at a rate of interest as low as 1½ percent.

But say these Republicans and Liberty Leaguers: "You failed to live up to your campaign pledge to reduce expenditures by 25 percent." Every schoolboy knows that after the platform was adopted in June 1932, because of the incompetency and inefficiency of the Hoover administration, the conditions which I have heretofore described and which no one could have anticipated, made it impossible to reduce expenditures. And the last to make this charge should be those who most often make it, namely, the presidents of banks, railroads, insurance companies, and corporations, who, in the dark days of 1933, came to Washington and borrowed millions of dollars from Government agencies in order to save themselves.

As these gentlemen came to Washington with hats in hand and tears in their eyes, begging for financial assistance from the Government, I wonder what they would have said had President Roosevelt told them: "I believe that you need assistance. I believe that the Government must act in order to save the Nation and its people; but in our platform adopted 9 months ago we said we would reduce expenditures, and therefore we must stand by that declaration even though the Government itself should fail."

But they say: "The Supreme Court has held unconstitutional some of the legislation enacted." Well the Republicans should know that during the administration of one of the patron saints of their party, President Lincoln, eight acts were declared unconstitutional, and during the administration of President Grant five were declared unconstitutional.

In every case recently decided by the Court, with one exception, the Supreme Court has been divided. If the Justices of the Supreme Court cannot agree as to whether a law is constitutional, how can you expect the Congress to agree? However, this should be remembered: The Agricultural Adjustment Administration Act which was declared unconstitutional passed the Senate with only six Republican votes against it.

When all other arguments are exhausted, they declare that, in any event, we have spent too much money for relief. A relief bill passed the House 10 days ago. Republicans offered some amendments but not one of them dared to offer an amendment to reduce the appropriation for relief purposes by a single dollar. We must remember that the United States Government never entered into this field of relief until the States of the Union, through their legislatures and their Governors, placed the problem on the doorsteps of the Congress. The original act provided that not a dollar could be advanced to any State until the Governor certified that the State, its subdivisions and its charitable organizations, were unable to care for their needy and their unemployed. And when they denounce this legislation, let me say: When the bill appropriating $4,880,000,000 for relief and work projects was considered in the Senate, if every Democrat had walked out of the Chamber—if not a single Democrat had voted—the bill would have been passed.

The President, through his appointees, has endeavored to administer this fund wisely. Of course, he has made mistakes, and every man appointed to administer it will inevitably make mistakes. If you open your doors and listen to the pleas of those who come asking your aid, no matter how good a judge you may be of human nature, you are bound to make mistakes and give aid to some undeserving people. The more undeserving they are, the more experience they have had in pleading for assistance and the more plausible they are. But because you may make a mistake, are you going to refuse to respond to every plea for assistance?

The President of the United States and Democratic Senators and Congressmen know that expenditures for relief constitute a political liability. We appreciate that some men out of employment who cannot secure a job are dissatisfied. Even when a man is given a job, we know that the political demagogue will try to convince him that he really is entitled to a better job. These dispensers of discord exist everywhere. You recall the parable of the laborers in the vineyard. When the householder went to the market place early in the morning and found men idle, he hired them upon the agreement to work for a penny a day. At the third hour he found others idle and hired them, agreeing to pay whatsoever was right. Again at the sixth, the ninth, and even at the eleventh hour he found men who said they had been idle all the day because no man would hire them. He gave them employment, agreeing to pay whatever was right. When evening came he knew that those hired at the eleventh hour could not live on the compensation to which they would be entitled for the short time they worked, and he therefore gave to all of the laborers a penny. Whereupon those employed in the earlier hours, even though they received the amount for which they had contracted to work, murmured against the goodman of the house. In like manner there are those who are today employed upon public projects and who, because some other person they believe less efficient receives the same compensation, murmur against the Government that is endeavoring to provide them with employment in order to give them food and shelter.

You know, I am satisfied that at the vineyard described in the Scriptures there was a political agitator who caused the laborers to become dissatisfied with the compensation for which they had contracted, and at times I entertain the suspicion that in South Carolina today there are lineal descendants of that agitator who spend their time trying to arouse dissatisfaction in the hearts of the people for whom the Government is endeavoring to provide employment.

The willingness of some persons to disregard human suffering is not new. We are told that long, long ago, on the road to Jericho, there lay a man wounded and suffering. He was in need. That was relief case no. 1. I imagine that the clergyman who passed without heeding his appeals contented himself with the thought that it was a case for the community chest or Salvation Army. Doubtless the Levite who passed and ignored the cry for assistance feared that if he granted relief he would not be able to balance his budget. But fortunately there came a Good Samaritan, who heeded the cries of the unfortunate man. He did not stop to consider budgets. He took him to an inn, paid for his keep, and then, because his credit was good, pledged that credit for whatever amount was necessary to relieve the suffering of a human being. There comes a time in the life of a government, as in the life of an individual, when the spirit of the Samaritan must influence our actions and we must place the relief of human beings above the balancing of budgets.

Direct relief is now the duty of local governments. The Federal Government, however, is seeking to furnish jobs to the unemployed. The Republicans and some disgruntled Democrats charge that they are being employed upon projects of no value. I have no doubt that some projects are of doubtful value because they are applied for by human beings and selected by human beings and they will make mistakes. But judge the truth of their statements, not by what is said to be taking place elsewhere but by what is being done in your own State.

Is it a waste to build a hospital in Laurens and Orangeburg, a courthouse in Richland County, dormitories at The Citadel and at Clemson College? Is it a waste to build farm-to-market roads? Is it a waste to build schoolhouses in rural districts? Is it a waste to advance money to the State of South Carolina to enable it to keep open its rural schools and to give employment to teachers? Is it a waste to make loans to the receivers of closed banks so that they can pay dividends to the depositors? Is it a waste to provide funds for rural electrification to make life more comfortable upon the farms and induce the young men and young women to remain upon the farms? Is it a waste to provide for the Civilian Conservation camps? These camps came to the rescue of young men at a time when they were at the crossroads of life. Without this assistance many of them might have been induced in despair to follow a life of crime. In these camps they have received physical training and moral training. They have been prepared for the battles of life. It cost money, but if it saved these boys it is worth every dollar spent.

This is not the only assistance that has been provided. The Social Security Act was passed to assist the States in caring for the unemployables who were formerly the beneficiaries of relief. Under it the Government will lend financial assistance to the States, but the States have absolute power to control and direct the expenditures.

There is nothing sadder than the plight of an old man and old woman who have no means of support. They certainly cannot secure employment in old age. The depression of the last few years exhausted the savings of a majority of the people. It is the duty and the privilege of children to care for their aged parents. But in many cases where children themselves have dependents it is impossible, and an old man and an old woman, feeling themselves in the way, often pray for the coming of the end. In those cases where need exists and families cannot take care of these old people, Government, through the instrumentalities of this law, will help to make their last days upon earth comfortable and happy days.

Who will dissent from the provisions to take care of the blind? Certainly they cannot earn an income. Unless loved ones care for them, they must go to the street corner, and while holding pencils in one hand, with the other ring a bell, in the hope of awakening a response in the hearts of those who pass by.

What constructive program have the Republicans and the disgruntled Democrats associated with them offered the people? The record will show that in the Congress—certainly in the Senate—a majority of the Republicans have voted for practically every legislative enactment of this administration. When they talk about economy, I tell you that only one amendment to reduce an appropriation has been offered by a Republican Senator during the last 3 years. You have never heard of them advocating new taxes. Well, if they have done nothing to reduce appropriations and nothing to raise taxes, how can they talk about balancing budgets?

In 1935 when we initiated the legislation they now criticize, what plan did the Republicans, either in or out of public life, offer as a substitute? What would they have done then? What would they now repeal? Will they foreclose the mortgages upon the farms and the homes of the people? Will they force upon the market the cotton which is held by the Government as security for loans? Will they discontinue the agricultural program?

The American Liberty League has been called the American Cellophane League, because it is a Du Pont product and because you can easily see through it. At least, we can clearly see through one activity of Mr. Du Pont and his associates.

The testimony before the Black committee shows that they have been practicing the policy of "sharing the wealth." They have advanced thousands of dollars to organizations organized for the sole purpose of attacking the administration. These organizations are masquerading under various names. In the South, one organization secured a most liberal contribution to create discord among Democrats. And then we learned that from the same source money had come to finance the Talmadge convention in Georgia.

A new party was to be formed, the "Jeffersonian Party." By others it was called the "grass-root convention." The Black committee discovered that the roots extended all the way from Macon, Ga., to Delaware, and into the treasury of the Du Ponts. By this time I think the Du Ponts have learned that they are wasting their money in endeavoring to divide the solid South.

Yesterday morning we heard from Mr. Hoover. He declared he was not a candidate for the Republican nomination. "But", said Mr. Hoover—and when a man says "but" that is where the trouble begins—"But", said Mr. Hoover, "it is significant that almost three-fourths of the delegates to the convention are uninstructed and these splendid men and women have no purpose other than to select the best man to serve the Nation in the greatest crisis it has confronted in two generations."

Now, if that isn't a fine appeal to the uninstructed delegates, I never heard one. He is wrong. The greatest crisis that has confronted the country in two generations was the crisis for which he was responsible and which culminated in the closing days of his administration. The large percentage of uninstructed delegates to the Republican convention is due simply to the crisis in the Republican Party. Never in the last two generations has that great political party been so lacking in leadership. This large percentage of delegates is uninstructed because the Republicans do not know for whom they should instruct their delegates to vote.

Every Democrat has just as much right to criticize our Democratic President as I have to praise him. When a party comes into power at a time and under such circumstances as those which faced us in 1933 it was inevitable that we would be forced to do many things as to the wisdom of which men might justly differ. Though I have participated in what has been done by the Congress, I do not approve of every law that has been enacted, nor have I been in accord with every view and act of the President. If today he has any regard for me, I believe it is due in great measure to the fact that when I disagree with him I tell him so; and I and every other Member of the Senate or House have ever found him willing to hear and consider our views. However, we must recognize that no administration can be judged by any one law, nor can a President be judged by his views upon any one question. The record of a Congress or of a President must be judged as a whole. The spirit of Democracy is that we fight our battles within the party and abide by the will of the majority. My earnest hope is that when this convention has spoken and the national convention has spoken those honest and sincere Democrats who have criticized the administration because of some one or two measures will, after consdering the record as a whole, determine to wholeheartedly support the nominee of their party.

But, my friends, no man can be neutral. As a citizen, he has a duty to perform. He is either for us or against us. If, after the convention has spoken, a man who calls himself a Democrat, intends to criticize the nominee of the Democratic Party and the Democratic administration; if he intends to befoul his own nest and give aid and comfort to the enemy, then he should have the courage of his convictions and "take a walk." However, when he starts walking, he should know where he is going. This year there are going to be no "Hoovercrats" and no other kind of "crats" except Democrats. If a man determines to leave the house of his fathers and start walking, he will find no resting place until he nestles in the arms of Joe Tolbert and his gang of patriots.

In politics, we have heard much of the friends of the working men. I want to see how many friends there are of these "walking men." To the end that we may know the sentiment of South Carolina Democrats, I hope this convention will consider a resolution unqualifiedly endorsing the administration, and pledging the delegates of South Carolina to support the renomination of Franklin D. Roosevelt. If in the convention there are those who favor other candidates, I hope they will offer a substitute resolution. Then, I hope there will be a standing vote. I have no doubt about the result. I hope the press will announce that result so that the people of the Nation may know that the few newspapers and individuals in South Carolina who have for 3 years, day after day, and week after week, denounced the President of the United States and the Democratic administration, do not represent the true sentiment of our people; that South Carolina, the strongest Democratic State in the Union, remains true to the Democratic Party and remains loyal to Franklin D. Roosevelt.

THE ADMINISTRATION'S AGRICULTURAL ACHIEVEMENTS—ADDRESS BY SENATOR BULOW

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Senator from South Dakota [Mr. BULOW] on May 22, 1936, on the subject of the Administration's Agricultural Achievements.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Most of my life has been devoted to wrestling with agriculture problems, and therefore I am more interested in farm conditions than any other. When the farmers of the Nation are in a healthy and thriving condition the people of the Nation thrive, and this thrift is Nation-wide and not confined to farming localities. When the farmer is down and out no one thrives. The effort that the Roosevelt administration has made to be helpful to agriculture has no parallel in American history. The vision of President Roosevelt with respect to agriculture, the basic industry of our Nation, goes far beyond that of any other President. The fact that the Nation depends upon those citizens who are engaged in the production of grains, fibers, and meats has been taken as a matter of course, and perhaps because of the fact that most of the citizenry of this country were engaged in these enterprises, it might be said that this was everyone's business and therefore no one's business, and therefore no prior administration made a sympathetic study of the farmer's problem.

It may seem paradoxial to say that when Mr. Roosevelt became President not only the farmers of the country, but also those engaged in other industrial pursuits, were starving in a land of plenty; yet that was a fact. The farmer for some years had not received cost of production for the food that he produced to feed the Nation, and this situation could not continue. The farmer who produces the food that keeps the Nation alive must have cost of production plus a profit.

The Roosevelt plus-profit program was inaugurated to bring this about and the 3 years of this administration reflect a most gratifying result. The work, though showing splendid results, is not ended; the job is not complete but a good beginning has been made and agriculture sees the dawn of a grander day. The time on this occasion does not even permit a full reference to the many activities of this administration—agricultural achievements in behalf of those who till the soil, but the sum total of these achievements are realized by everyone and point with an unerring finger to a star of hope. The critics of the administration do not condemn the agricultural program as a whole but pick out specific things and say this, that, or the other thing was wrong, even though the medicine prescribed cured the patient; yet the medicine prescribed was the wrong medicine, so they say, but they write no prescription of their own. The farm problem is as big as the Nation and the Roosevelt vision is not focused on one locality to the exclusion of others but is a Nation-wide view taking in the entire national picture in which every one is reflected. A nation as large as ours has conflicting interests and different views that must be harmonized and blended into a harmonious whole. A program that is beneficial to some sections of the country is not so beneficial, in fact may be harmful to other sections, and it becomes the duty of an administration in guiding our national destiny to harmonize these conflicting interests as much as possible into a program of national welfare affecting all of our people and making all classes subservient to the general welfare.

The present administration is making a more conscientious attempt to do this than has ever heretofore been made in the history of our Republic. To give you an illustration and a concrete example of conflict between a local and a national view, let me say that at the present time I am receiving complaints from the people of South Dakota, the State I have the honor to represent in part in the Senate, against importations into this country from Canada under the reciprocal trade agreement. It is difficult for our people to reconcile the policy of curtailing home production of grain and meats and permitting importations from foreign countries. The people of my State feel some objection to a Federal program that provides for a reduction in home production of grain and meats and then permits the importation of wheat and beef from Canada. Representing the people of my State and having only the picture of South Dakota in mind, I share in their objections and from the viewpoint of my State it is hard to reconcile the two propositions. But that is a local and State view and not a national picture. My State is basically agricultural and we exchange our products for the products of industry of other States and foreign nations. We are interested in exchanging our products with the people of sister States and foreign nations. The ideal situation to us would be if we could market our surplus products in jurisdictions outside of our State upon our own terms and without competition in these outside jurisdictions as to the products that we produce but that is not the way trade negotiations are conducted. It takes two agreeing minds to make a trade among individuals and the same rule maintains among nations. If I want to trade with my neighbor, I must accept something that he has in return for the horse I trade him.

If we want to sell our automobiles and other products of industry to the Canadians, we must accept something that the Canadians have in return, and whatever that something is, on account of the diversified industries of our country, it of necessity will be stepping on somebody's toes and be objectionable to someone. I do not like the importation of wheat and beef from Canada or from anywhere else in competition with the people from my State, but I do not subscribe to the fear expressed by the critics of the administration and of the New Deal that those importations are going to ruin us. In exchange for these importations we are expecting to export an equal amount of some of our national products. The law of trade balance must govern and, over a period of time, exports and imports must balance.

Neither am I alarmed at the comparative figures constantly quoted by the critics of the administration as to the amount of imports in 1936, compared to a similar period in 1932, before the New Deal came into existence. In 1932, before we had the New Deal, we did not import very much from Canada nor from anywhere else, because nobody had any money to buy imports. Our people could not even sell their home products. There was no market. We were all starving to death in a land of plenty. The New Deal has changed this picture. Let me suggest to those who are constantly lambasting the administration's whole agricultural policy, that they reflect on agriculture's condition before the advent of the New Deal. I don't believe any thinking American willingly wants to go back to those terrifying days of prior administrations.

As before indicated, I hold no particular brief for the so-called Canadian reciprocal treaty, and I regret the importations of wheat and beef in competition with the people of my State, and I wish that the situation might be otherwise. I wish that we might be able to make a treaty not only with Canada but with all the other nations, by the terms of which Canada and these other nations would agree to buy everything that we had to sell at a price we demanded without our agreeing to buy anything from them in return. But that manifestly cannot be done. That would be an ideal treaty from our viewpoint, but even that kind of a treaty would not meet with the approval of some of the critics of the New Deal.

Let us not become too much exercised or too much alarmed about this treaty with Canada ruining the agricultural interests of this country. A careful reading of the treaty provisions will disclose to the fair-minded person that it is not a one-sided affair and that the benefits that this country will derive at least will equal the benefits derived therefrom by the Canadian people. The agreed fixed quotas will prevent any form of dumping, and we ought not to get too much alarmed until we really are hurt. Even if it should be conceded that this treaty was not in the best interest of some agricultural States, it will not be of major importance but minor when we survey the entire administration agricultural achievements as brought about by the entire New Deal program in saving not only the farming industry but the entire national economic structure from total wreckage.

After all, the farmer is far better off under the New Deal selling wheat at a dollar a bushel and beef cattle for 10 cents a pound against this so-called Canadian competition than to be selling wheat for 30 cents a bushel and beef for 3 cents per pound under the "old deal" without such competition.

THE UNITED STATES SUPREME COURT—ADDRESS BY GOVERNOR OLSON

Mr. WHEELER. Mr. President, I ask leave to have printed in the RECORD an address delivered by Governor Olson, of Minnesota, before the Farmer-Labor State convention at St. Paul, Minn., March 27, 1936, relative to the United States Supreme Court.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Minnesota Leader of Apr. 4, 1936]

OLSON RAPS SUPREME COURT "USURPATION"—ADDRESS BY GOV. FLOYD B. OLSON, OF MINNESOTA, BEFORE THE FARMER-LABOR STATE CONVENTION AT ST. PAUL, MINN., MARCH 27, 1936

A tremendous and concerted effort is being made by those who champion the perpetual continuation of the present social and economic system to place a halo around the members of the Supreme Court of the United States and to create an impression that the members of that Court and the inferior Federal courts are supermen who sit like all-wise oracles upon the top of some imaginary Mount Olympus, unaffected and uninfluenced by the hopes, aspirations, and prejudices of the more common mortals who inhabit the valleys of the earth.

CRITICISM OF COURT

Added to this endeavor is the further endeavor to place those who criticize the Court in the position of dangerous enemies of the Nation and its continued existence. If one were to believe these contentions, one would conclude that today is the first time when the Court has been the subject of criticism by the people of the United States. Before undertaking an analysis of the Supreme Court and its members and a criticism of its conduct, let us consult the history of the United States and see whether or not this allegedly sacrosanct body has ever before been attacked because of its conduct and if ever before its motives have been impugned.

When we consult history we find a long list of distinguished Americans who have inveighed against the tribunal in language far more critical and bordering more upon invective than any language used during the present time in criticizing the Court. I call the roll:

Following the decision of the Supreme Court in *Marbury* v. *Madison*, where it assumed the powers to nullify acts of Congress upon the ground that they were not consistent with the Constitution, Thomas Jefferson, the author of the Declaration of Independence, and the outstanding champion in all American history of human rights and liberties, said: "But the opinion which gives the judges the right to decide what laws are constitutional and what not, not only for themselves in their own sphere of action but for the legislative and executive also in their spheres, would make the judiciary a despotic branch." So impressive was the stern criticism of Jefferson that it held the Supreme Court of the United States in check for some 55 years, during which time it did not undertake to nullify any act of Congress.

RAPPED BY G. O. P. PAPER

What did the Republican Party of the United States, which is now endeavoring to picture the Supreme Court as the holy of holies, say in the past about that Court? After the Dred Scott decision, in which the right of Congress to abolish slavery in the Territories was set aside by the Supreme Court, the outstanding newspaper spokesman of that party, the New York Tribune, said:

"The long-trumpeted decision having been held over from last year in order not too flagrantly to alarm and exasperate the free States on the eve of an important Presidential election is entitled to just so much moral weight as would be the judgment of a majority congregated in any Washington barroom. It is a dictum prescribed by the stump to the bench."

It further said:

"The vote stood 7 to 2, the 5 slaveholders and 2 doughfaces making up the 7."

COURT OF INJUSTICE

The New York Independent, another Republican newspaper, in an editorial headed "The decision of the Supreme Court is the moral assassination of a race and cannot be obeyed", said:

"The moment the supreme judicial court becomes a court of injustice, a court to carry schemes of oppression against classes of men by forced constructions of the Constitution, that moment its claim to obedience ceases. The moment it becomes the court of a political party and not of the United States, and promulgates falsehoods, that moment its decisions cease to be binding and impeachment, not obedience, belongs to it. The decision is a deliberate iniquity. It is not a mistake, but it is a deliberate, willful perversion for a particular purpose, and that purpose the sanction and perpetuity of human slavery. If the people obey this decision they disobey God."

The Republican Legislature of Maine adopted a resolution stating "that the extrajudicial opinion of the Supreme Court in the case of Dred Scott is not binding in law or conscience upon the Government or citizens of the United States."

The foregoing quoted language not only denoted wanton disrespect for the decision of the Supreme Court and for its members, but it actually counseled rebellion against the mandates of that Court.

The great Abraham Lincoln commenting upon the decision said: "If the policy of the Government upon vital questions affecting the whole people is to be irrevocably fixed by the decisions of the Supreme Court the instant they are made in ordinary litigation between parties in personal actions, the people have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that eminent tribunal."

The Democratic Party in 1895 and 1896 did not hesitate to use similar language in denouncing the decision of the Supreme Court declaring the Federal income-tax law unconstitutional by a vote of 5 to 4. Many years before the Supreme Court had held such a law constitutional—in fact, in the original decision in 1895, the vote was 5 to 4 in favor of the constitutionality of the income-tax law, but upon reargument, one judge changed his mind and his vote, with the resultant unconstitutionality of the law.

Theodore Roosevelt repeatedly attacked the assumptions of power by the Supreme Court and advocated the overruling of judicial decisions on constitutional questions by recall.

Even though history did not inform us of the repeated criticisms of the Supreme Court in the past, the exercise of our constitutional right of free speech and the upholding of the principle that the people are sovereign, and not the Court, not only justifies, but demands that criticism shall be made of that body for its exercise of powers in a manner contrary to the principles of a democracy.

"It is not my purpose here to denounce the Court nor even to approach the use of language similar to that used upon occasions in the past by critics of the Court. While I dispute the constitutional right of the Supreme Court to nullify acts of Congress, I am willing to assume that because of its exercise of that power over a long period of years that power has become imbedded in our American system of government and I accept it as such. It is not the jurisdiction of the Court that I challenge here, but its use of its jurisdiction."

A TRIBUNAL OF MEN

The claim that this tribunal is one merely of powers is erroneous. It is fundamentally and essentially a tribunal of men. Those men are not supermen. Providence has not gifted them with any capacities foreign to other men. They are subject to the same prejudices and passions and the same influences as other men. Acting as men in the interpretation of the Constitution with reference to legislative acts designed to change the social and economic status of the people of a State or of the Nation, they determine the constitutionality of that legislation not from anything that appears in the written Constitution but from their own ideas as to whether or not the legislation is wise and proper.

My contention is proven beyond a reasonable doubt by the very fact that the men who sit upon that Court continually disagree as to the interpretation of the Constitution with reference to social and economic legislation.

DISPUTES JUSTICES' CLAIMS

These men, acting as such, have sought continually to implant in the minds of the people the idea that their decisions are determined entirely from a reading of the written Constitution of the United States. For example, the claim of Justice Roberts in the A. A. A. decision that the Court lays the law beside the Constitution and determines whether or not the law squares with the Constitution is mere legalistic hypocrisy, because there is no living being who can place a law effecting social and economic change alongside the Constitution and find any definite statement in the Constitution authorizing or forbidding that law.

Can Justice Roberts find any reference in the Constitution to the control of agricultural production? Of course not. The Constitution is a document written in general terms, and, while it is easy for its readers to determine that the use of the word "two" in specifying the number of Senators from each State means two, when the reader comes to words and phrases such as "reasonable", "persons", "property", "necessary and proper", "due process of law", privileges and immunities", the Constitution has, as one judge very aptly said, "a convenient vagueness." Not even the Court has ever undertaken to define those terms in an all-inclusive definition.

JUDGE'S VIEW REFLECTED

The phrase "necessary and proper" means to the reading judge what he thinks it ought to mean in the light of his own viewpoint of life, and of social and economic conditions. So with

"due process of law." What is "property"? What emphasis should be laid upon the word "property" in the Constitution when property rights come into conflict with the rights to life, liberty, and the pursuit of happiness? Which is the end to be attained in our system of government—life and liberty, or property? Is property a means to the end that we may have life, liberty, and the pursuit of happiness, or is it an end in itself to which life, liberty, and the pursuit of happiness must yield? What is a "person?" The Court says it includes corporations, but the Constitution does not so state.

These are but a few of the innumerable questions arising in the interpretation of the written constitution. When a judge undertakes to interpret words of general import in the Constitution, can he do other than interpret them in the light of his own convictions and his own experiences? In other words, in interpreting the Constitution he interprets it not from the lessons of law, but from the lessons of life; and when he does so, of necessity, and because he is a mere human being, he interprets legislation in the light of what he believes to be wise and proper. If he be conservative in his thoughts he will interpret the Constitution from a conservative social and economic viewpoint; if liberal, from a liberal viewpoint. In fact, that has been the history of the decisions of the Supreme Court of the United States.

CHARGES CONSERVATIVE BIAS

If we examine the decisions of that Court we find conclusively that it has interpreted legislation, State and National, not only with a conservative viewpoint, but with a conservative bias.

The Supreme Court set aside the so-called A. A. A. legislation upon the ground that the powers undertaken to be exercised therein by Congress were powers held exclusively by the States. Many of my listeners would join with me in challenging the wisdom of the Agricultural Adjustment Act, but the wisdom of the act is none of the business of the Supreme Court.

CITES NORTH DAKOTA CASE

In the case of the North Dakota Grain Grading and Inspection Act decided in 1922, the Supreme Court of the United States took a position diametrically opposite to the one taken in the A. A. A. case. And curiously enough, the vote in both cases was the same—6 to 3. In 1919 the legislature of North Dakota undertook to stop the systematic defrauding of farmers in the purchase of their grain in North Dakota by establishing a State system of licensing, and of inspection, grading and weighing, and by requiring a purchaser of grain either to pay separately for the dockage on the grain, or to return the same to the farmer.

The Court held that because most of the wheat in North Dakota was shipped in interstate commerce, the law was a burden upon interstate commerce and therefore beyond the power of the legislature of North Dakota to enact. What is true of wheat in North Dakota is true of wheat all over the United States, and what is true of wheat all over the United States is true of every other basic agricultural commodity; that is, that the bulk of that commodity produced within a State is shipped beyond the borders of the producing State.

FOR FAIR PRODUCTION PRICE

The only way to regulate production or to undertake to provide a fair price for the producer of agricultural commodities is by the exercise of the taxing power or by other regulations. Under the A. A. A. decision, the Supreme Court said that the power of regulating production was exclusively one to be used by the States. Under the North Dakota grain decision, it said in substance that every attempt by a State to regulate the production and sale of agricultural commodities constituted a burden upon interstate commerce and was beyond the powers of the States.

And so in the A. A. A. case the astute members of the majority undertook to nullify the act of Congress by asserting a right exclusively enjoyable by the States, which right the Supreme Court of the United States had already taken away from the States.

A conservative majority has continually interpreted the Constitution with respect to social and economic legislation so as to favor the rights of property as against the rights of the human being. I do not charge that they have been corrupt in so doing. I do charge that they have so held because that is their social and economic conception of what should be in this Nation.

The Congress of the United States declared that all combinations and trusts in restraint of trade were unlawful and criminal. The Supreme Court of the United States in an adroit opinion of a divided Court, held in substance that there were good trusts and bad trusts, and that the good trusts were not subject to the sanctions of the Sherman Act.

COURT MAKING LAW

That was not interpretation of a law. That was lawmaking. That was for the benefit of monopoly. On the other hand, they read into the Sherman Act an interpretation that labor unions engaged collectively in a strike were operating in restraint of trade and in violation of the Sherman antitrust law. That was more lawmaking, but this time it was against the human right of collective action by human beings seeking to attain a better standard of living through better wages and through better working conditions.

GENERAL-WELFARE CLAUSE

In the Lochner case the Supreme Court held that the State of New York had no right to limit the working hours in bake shops to 60 hours per week because it interfered with the free opportunity of contract. There is nothing in the Constitution about wages or working hours, but there is a general-welfare clause, which the Court could have applied with greater force in sustaining the law.

The Supreme Court has laid the cold hand of despair not only upon State legislation tending to benefit cooperative enterprise, as in the Frost cotton-gin case, and upon protection of the consumer in the Nebraska bread-labeling case, and in the Oklahoma ice case, but it has sought to perpetuate the institution of child labor by nullifying an act of Congress forbidding the shipment in interstate commerce of goods manufactured within a State through the labor of children.

Just as in the Dred Scott decision it sought to perpetuate the institution of Negro slavery, so has it subsequently undertaken to perpetuate, insofar as its powers can so perpetuate, the institution of child slavery. Even beyond that, its decisions have tended to perpetuate the economic slavery of the producing groups of the United States.

It is of no avail for the champions of the Court to point to the fact that the acts of the legislatures of the several States pertaining to social and economic matters which have been set aside by the Court are comparatively few in number. It is not so much the number of those which have been set aside that is important. It is the great amount of legislation that never was passed by the legislatures which would have been passed were it not for these barriers that have been set up by the Supreme Court in a comparatively small number of cases in which it has held acts of State legislatures to be inconsistent with the Federal Constitution.

CONTRASTS DECISIONS

If anyone doubts the viewpoint of the present court with reference to the protection of property, he need but read the decision in the North Dakota tax case recently handed down, and contrast it with the decision in the Baltimore utility case made only a few years ago.

In the North Dakota tax case the majority opinion declared that the State of North Dakota, in valuing a railroad for the purpose of taxation was obliged to take into consideration the effect of the depression upon the reduction in valuation of its holdings, even though the railroad in North Dakota was taxed upon the same basis and under the same principles as every other citizen and corporation in the State. In the Baltimore utility case, the Supreme Court held that in determining the valuation of the utility for the purpose of fixing rates to be charged the public, that the local government could not take into consideration the effect of the depression upon the reduction in the valuation of the property of the utility.

LEGAL NO MAN'S LAND

By reason of the nullification of acts of Congress and the restraints placed upon the legislatures of the several States in their endeavors to promote the welfare of the citizens of this Nation, the Supreme Court has created a legalistic no man's land within the boundaries of which no representative institution of the people of this country may trespass, because of the "no trespassing" and "no admittance" signs erected by the Supreme Court. Within that no man's land of legal jurisprudence is found all the fundamental problems, all the social and economic oppressions, all the denials of the pursuit of happiness, to which the American people are now subject.

REMADE BY COURT

This situation has been created because the Court has remade the Constitution. The cry of the reactionaries that we "return to the Constitution" is as silly as would be futile our endeavors to so return if we desired. There is no constitution of the founding fathers to return to. It has been remade by the Supreme Court, sitting as a continuous constitutional convention.

Is it only the liberals and radicals of this Nation that so contend? Let us call the roll. Let us see what so-called respectable citizens have said about the exercise of its powers by the Supreme Court.

President Taft said, in substance, that the Constitution was being constantly remolded in the light of the interpretations of it by the Court.

The present Chief Justice Charles Evans Hughes, said:

"The Constitution is what the judges say it is."

And then we have the following statement: "The Supreme Court is a continuous constitutional convention" from none other than Mr. James Beck, counsel in chief of the Liberty League of America.

In addition to the mandates and dictates of the Supreme Court, we are confronted with a huge mass of decisions on the rights of citizens, and interpretations of State and Federal constitutions, by about 200 judicial satraps who preside over the inferior Federal courts. And all of these members of a judicial oligarchy, holding office for life, are operating and decreeing and dictating without any check whatsoever upon their actions by the people of the United States, either directly or through their representatives in the legislative and executive branches of the Government.

That any branch of the American Government should operate without any check whatsoever is contrary to the fundamental principles not only of the Government of the United States, but of any democracy. How then can we check the judiciary?

FOR CHECKS ON COURT

Some desire a check through a constitutional provision which shall require the votes of at least seven of the nine members of the Supreme Court in order to set aside an act of Congress. Some groups advocate a constitutional amendment which will provide that the decisions of the Supreme Court declaring an act of Congress unconstitutional may be overruled or vetoed by a vote of two-thirds of the Members of Congress.

As a means of checking autocratic power these proposals are worthy of great consideration, but one must not overlook the fact that with the potential growth of fascism in this Nation, we could conceivably have a Fascist-minded Congress which would pass sedition laws and other laws interfering with our civil liberties, and that it would be impossible to obtain seven votes on the Supreme Court to set aside those laws. Or if the other possible check be instituted, the sedition laws set aside by the Supreme Court might be reenacted by a two-thirds vote of a Fascist Congress.

It seems to me, therefore, that the most effective means of checking the despotism of the Federal judiciary is to adopt the same check with reference to them that is used by most of the States with reference to State judges—that is, a limited term of office rather than a life term of office.

I propose therefore an amendment to the Constitution of the United States which shall provide that members of the Supreme Court of the United States and its inferior courts shall hold office for a term not to exceed 10 years, and that they shall continue to be appointed by the President, with the advice and consent of the Senate.

It is difficult to determine the presence or lack of ability and the presence or absence of partisanship in a man when he is originally being proposed for appointment to the Federal bench, but after he has served any considerable period as a member of that bench it is not difficult to analyze his capacity and impartiality, or the lack of it. It has been difficult to prevent the original appointment of men who were allegedly biased in their viewpoints, but it has not been difficult to prevent the promotion of members of the Federal bench whose judicial conduct has disclosed a lack of fairness. I need but cite the cases of Parker, Wilkinson, and McIntosh to sustain the claim just made.

CONSTITUTION SILENT

And the proposal is not answered by claiming that it runs counter to the conclusions of the so-called founding fathers, because there is no convincing proof that the founding fathers, in conferring a life term upon members of the Federal judiciary, intended that that judiciary should exercise the power to nullify acts of Congress. In fact, the Constitution itself, in which that power must be found, is absolutely silent on the subject.

And the proposal is not answered by the claim that we would thereby deprive the Federal judiciary of its independence, because independence without check is the equivalent of dictatorship. There is no branch of the American Government that can be absolutely independent of the people, unless we cast aside the fundamental doctrine of popular sovereignty which is the very basis of the American form of government.

STATE JUDGES' TERMS LIMITED

And to challenge the proposal upon the ground that it would subject the members of the Federal judiciary who are subject to reappointment, to outside influence, is to insult the integrity and fairness of every State judge in the State of Minnesota and in all the other States where they are appointed and elected for a definite term of years.

If we appoint them for a definite term, the people will have a check upon them by being able to protest when their terms expire and they are proposed for reappointment.

To fail to take steps to curb the ever-increasing domination of the Federal Court over our Government and our lives is to resign ourselves to the dictatorship of a tribunal having all the attributes of kingship except hereditary succession, and possessing greater powers than any king.

WOMEN'S BUYING POWER—KEY TO RECOVERY

Mr. WHEELER. Mr. President, on Wednesday, May 20, 1936, Hon. I. M. Ornburn, secretary-treasurer of the union-label-trades department of the American Federation of Labor, and Hon. John M. Baer, former Representative from North Dakota, engaged in a dialogue discussion on the subject of the Union Label over the national network of the National Broadcasting Co. Mr. Ornburn is an authority on the subject, and I believe all the Members of the Senate will undoubtedly wish to read this brief discussion. I ask unanimous consent that the discussion may be printed in the CONGRESSIONAL RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Mr. BAER. In leading up to the principal topic of this discussion, I shall ask Mr. Ornburn a few questions, the answers to which, I believe, will give us an important background to his final conclusions.

Mr. Ornburn has always been an ardent advocate of union-label goods and union services. He also has taken a firm American position by consistently urging the buying public to purchase domestic-made goods in preference to foreign-made products. He holds that just so long as one American worker is out of a job American money should be spent for the merchandise of our own industries instead of sending it abroad to buy goods of European and oriental nations.

This problem of foreign buying concerns not only organized labor but it is one that should concern every citizen who works for a living, as well as the taxpayers who are footing the bill for taking care of the 20,000,000 persons now on relief.

It gives me great pleasure to introduce Mr. I. M. Ornburn, one of America's outstanding labor leaders and advocates of "America first." Mr. Ornburn, how can we increase the purchasing power of the masses of the people?

Mr. ORNBURN. There is only one way. It is to increase wages. Wages can best be increased through organization of workers into labor unions. Organized labor has been the single force in raising wage standards in America. The so-called white-collar workers, as well as the unskilled laborers, would still be working long hours for a dollar a day if it were not for the collective efforts of members of labor unions.

The State and National Governments in some instances have set minimum wages, but they have always been initiated through the efforts of labor unions.

Congressman CONNERY, an ardent supporter of union labor, recently wrote into the Works Progress Administration appropriation bill a provision which will require that prevailing wages be paid on Federal relief projects. Such action forces the Federal Government to pay the union scale of wages. Uncle Sam should set an example for private employers by paying the highest wages.

Mr. BAER. How can we obtain employment for the 12,000,000 jobless workers?

Mr. ORNBURN. The only answer is to shorten working hours. Here again the organized-labor movement has been the greatest factor in decreasing the workday and workweek for unorganized workers as well as for union men. Working hours can be written into the contracts between private industry and labor unions.

The productive power of the worker through the use of machinery has increased faster than his buying power. That is the cause of increasing unemployment. There is nothing so disheartening as to see an honest man, willing to work, but unable to obtain a job that will keep his family in ordinary comfort.

Mr. BAER. How can workers safeguard the wages and hours obtained through collective bargaining by labor unions?

Mr. ORNBURN. Organized workers can maintain American labor standards only by buying their own products. These products bear the union label, which is a guaranty that they are union made and it is also the best assurance that they are American made.

Mr. BAER. What is the key to recovery, Mr. Ornburn?

Mr. ORNBURN. The women's buying power, which is estimated at about four-fifths of the wage earner's income, is the key to recovery.

Mr. BAER. Are the women members of the labor unionist's family organized?

Mr. ORNBURN. Yes, indeed; wives of labor unionists have formed women's auxiliaries to the various national and international labor unions of the American Federation of Labor, and also the standard railway brotherhoods. Just last month representatives of the various women's auxiliaries met in Washington and formed the American Federation of Women's Auxiliaries of Labor. It is merely a coordination of the various women's auxiliary movements of American labor. It is destined to be one of the most powerful groups in America. There are now over 2,000,000 members of these ladies' unions, and the potential power of these women and their friends in the market place is greater than any other organized group of society.

Mr. BAER. How can the women help America to recover from this disastrous depression?

Mr. ORNBURN. I wish I were able to effectively emphasize the power that is in the purse of these women. They are able through their purchases for the ordinary household to revolutionize our entire industrial system. Many of these women, however, have come to realize that by patronizing only firms which display the union label, shop card, and button can they protect the wages, hours, and the jobs of their husbands. When the 7,000,000 wives of organized workers come to a full realization of their economic power and also urge their neighbors to buy union-label goods and patronize union services, then the industries of this country will be compelled to recognize the principles of collective bargaining. If firms do not recognize labor unions, which means higher wages, shorter hours, and better working conditions, then they will not be able to sell their products. I emphasize the women's auxiliaries because the members of these organizations are the wives and other members of the labor unionist's family and naturally will take a greater interest in his welfare. There are other women's organizations and also union-label leagues that have many women members. These ladies are doing splendid work for the union label at the present time. The combined membership of these women's organized groups will, I know, create a vast demand for union-label goods and union services within the next year. They know that it is the only way out. They know that the union label is constitutional, and therefore will not be hampered by decisions of our courts. They further know that only by patronizing the firms that recognize labor unions and display the union label, shop card, and button can they uphold American standards and protect the jobs of their breadwinners.

The union label trades department confidently announces that from now on the wives of the unionists will buy collectively in the same degree that their husbands bargain collectively.

Mr. BAER. Will the industries that become unionized receive any benefits from the display of the union label, Mr. Ornburn?

Mr. ORNBURN. Yes; there are mutual benefits to be derived from a labor-union agreement and the use of the union label. We have received numerous letters from large manufacturers who have

stated that they increased their sales immediately upon the display of the union label. Allow me to quote from a letter received from Rolland E. Friedman, president of the American Chemical & Cosmetic Co. of Indianapolis. Mr. Friedman says:

"We known that the fact that our products are union made and that our plant is 100 percent organized has been the reason for the tremendous demand for our barber supplies and cosmetics. This company has shown an average of 400-percent increase each month in its sales. It is due to the cooperation we have received from members of organized labor."

Mr. BAER. If we do not shorten working hours, what will be the result?

Mr. ORNBURN. With the increase in population and the use of machinery unemployment will grow to such an extent that half of the workers will be on doles.

Mr. BAER. Do you think that the union label alone will solve our economic problem?

Mr. ORNBURN. Yes; it will; because the union label is the emblem of a great cause. That cause stands for definite principles, which are higher wages, shorter hours, and greater social justice. One cannot divorce the union label from the labor-union movement. When all the remedies of organized labor are taken as a whole we find that it has set forth the only constructive program for solving our economic ills.

Mr. BAER. But what if these principles are not adopted by American industry?

Mr. ORNBURN. Then America will face a general panic, which will be far more severe than the so-called depression through which we are now passing.

If unemployment continues to increase and something permanent is not done to remedy it, I doubt if enough revenue can be raised by the Government to take care of the idle workers and their dependents. The great majority of unemployables normally supported by workers when they have employment at decent wages are also thrown on relief.

Merchandise and other commodities in themselves are not wealth. It is not until all consumers have sufficient buying power to purchase goods that they become wealth.

America must utilize every possible means to retain its position in the industrial world. We cannot retain our high standards of living if we do not cut off the competition of foreign manufacturers and give the masses of the people sufficient buying power to balance our consumption with our production.

Mr. BAER. What will happen if we do not shut out cheap foreign products?

Mr. ORNBURN. It will destroy American industry and increase our breadlines.

Mr. BAER. If the Federal Government does not eliminate the sweatshop and other unfair products in its own purchases, what will happen?

Mr. ORNBURN. It will destroy the labor conditions of American workers, because many industries point to the Government as a standard when promoting the general sale of their products.

America's wealth is not the gold in its vaults nor the savings in its banks. It is the goods and commodities that labor and farmers produce. When Americans buy foreign-manufactured goods and farm commodities they are increasing the wealth of other nations, creating a surplus at home, and thus decreasing our own wealth.

The purchasers of imported goods are supporting Hitlerism, fascism, and other "ismites" of foreign countries.

Since the Supreme Court has declared the new-deal acts unconstitutional, the only channel through which the American worker can obtain economic freedom is through labor unions.

I implore the workers of America to join a labor union of their own craft, and the wives of the workers to buy only union-label goods. This will do more to offset communism, on the one hand, and dictatorships, on the other, here in our own beloved land of America, than any other single remedy.

The union-label trades is a department of the American Federation of Labor and is the clearing house for information and publicity about union labels, shop cards, and working buttons. These emblems are authorized by the American Federation of Labor for labor unions that display insignia to designate their products or services.

For those who are not familiar with what I mean, the union label is a symbol which is displayed by means of a cloth or paper label, stamp, or other imprint upon products to indicate that they are made in unionized shops, factories, and other industrial establishments.

A shop card is a sign card which is displayed in the window or on the wall of all shops and business places whose employees are unionized.

Working buttons are similar to the insignia of lodges or fraternal orders and are worn in the same manner. The working button gives assurance that the services are rendered by a member of a labor union.

Many forward-looking businessmen have come to realize that increased purchasing power can be obtained only through increasing the income of the wage earner.

Mr. Lucius Tilley, Jr., president of the Rich Maid Manufacturing Co., of Richmond, Va., who, by the way, is a large manufacturer of union-made products, recently stated: "The only way that our Nation can recover is for American business to cooperate with the American Federation of Labor in raising the wages and reducing the hours of American workers."

We were greatly pleased with the response we received from our last broadcast over this national network. Thousands of letters asking for copies of the address and the Union Label Directory came in from all parts of the country. We were especially gratified to receive numerous requests from high-school and college students who desired to obtain information regarding organized labor and union-made products.

We also received requests from college professors who expressed a desire to make the union label a part of their course in economics.

We are anxious to have authentic facts about the American Federation of Labor and the union label, shop card, and button placed in every public library, high school, and university in this country. We prefer to have these facts go out from an official source rather than having distorted statements about organized labor sent out by the propaganda bureaus of the powerful monopolies antagonistic to organized labor.

No course in economics is complete without this information about the American Federation of Labor, which has been the principal factor in bringing about shorter hours, better wages, and more decent living conditions for the average worker.

Economics itself is the effort of man to obtain a living. Surely the effort of organized labor to obtain a better living for American workers is a very vital factor in the economics of our national life.

The union-label trades department is receiving encouraging reports from all parts of the Nation. Here is a message that we received today from the Union Label League of Alameda County in California:

"The demand for union-made products has jumped over 100 percent in the past 8 months, and reports reaching this office show that the merchants are being hard put to keep up with the demands made upon them, not only for the lines already carried but for new lines which have come into the market."

From the Austin Trades Council, of Austin, Tex., comes the encouraging report that—

"The Austin Trades Council is finally making organized labor felt in this community, and prospects look bright for a fast growth during this year. We have succeeded in getting interest created in a union-label league, and they are really working. They already have 200 signers to our pledge 'I promise to buy only from firms that display the union label, shop card, and button.' We have just started, but, believe me, we are going to start something."

From Barre, Vt., this message comes from Brother Cecil V. Crawford, secretary of the Vermont Federation of Labor:

"The labor movement in Vermont is taking a renewed interest in the union label, shop card, and button and any information that you could send us from time to time will be highly appreciated and used to advantage."

From John Burdoft, a merchant of Morgantown, W. Va., we received the following:

"I sell clothes, but I want to know where I can get the union-made lines, for I see where other stores are selling them. I am going to talk union-made every day."

In these new-deal days when the administration desires to have a certain bill passed in Congress, it is called "must" legislation. There are two measures that organized labor should like to see on the "must" list. One is the Walsh bill, which provides that any firm that sells any products to the United States Government shall maintain a fair labor standard in its industry. The other bill is the Black 30-hour-week measure.

Workers must register and vote to elect their friends and defeat their enemies. It is the only way to obtain Members of Congress who will support necessary labor laws.

There are some "musts" for workers in the economic, as well as the legislative field. They are absolutely indispensable if workers hope to retain their jobs, maintain the present wage scale, and uphold American standards.

Members of labor unions must spend their union-earned money for union-label goods and union services. Each day of the year organized workers spend $2,000,000. If this amount is not spent for their own products and their own services, their jobs will be scarcer and wages will be cut lower and lower.

Workers must organize into labor unions.

Workers must buy union-made goods and union services.

Workers must wake up before it is too late.

REGULATION OF COMMODITY EXCHANGES

The VICE PRESIDENT. The Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H. R. 6772) to amend the Grain Futures Act to prevent and remove obstructions and burdens upon interstate commerce in grains and other commodities by regulating transactions therein on commodity-future exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes.

Mr. SMITH. Mr. President, I ask that the formal reading of the bill be dispensed with, that the bill be read for amendments, and that committee amendments be acted upon before individual amendments are offered and considered.

The VICE PRESIDENT. Is there objection to the request of the Senator from South Carolina? The Chair hears none, and it is so ordered.

Mr. SMITH. Mr. President, I think a preliminary statement is necessary. The bill involves a subject which developed before the committee and will probably develop on the

floor considerable discussion. There has been a unanimous sentiment in the committee that some regulations governing the great market places of the country are essential for the public welfare, essential for those who consume and essential for those who produce.

The Grain Futures Act, which is now the law and is now proposed to be amended by the pending bill, proved upon actual test to contain certain features of essential regulation which were insufficient and inoperative. A bill proposing to amend these shortcomings was introduced in the House, passed the House, came to the Senate, was referred to the proper committee, reported at the last session, and is now on the calendar. Certain interested parties wanted the bill discussed in the committee so their interests might be clearly understood by the committee. That privilege was granted without having the bill referred back to the committee. Members of a subcommittee heard the complaint or the suggestions of those interested in the grain features of the law. In pursuance of those suggestions extended hearings were held and the subcommittee recommended to the full committee certain changes which were approved by the full committee.

For 90 days hearings were held on the cotton-exchange feature. Certain flagrant abuses were made manifest. The time consumed in the hearings made it impossible for all Senators to acquaint themselves with what was brought out before the committee. The last session was a busy session of Congress.

Those who take the trouble to study the economic situation in our country recognize that the two great elements which enter into the welfare of our people are food and clothing. The West supplies the former and the South the latter, in great part.

There have grown up in the commodity futures exchanges abuses which must be regulated either voluntarily by the exchanges themselves or by the enactment of a law which expresses the will of Congress in reference thereto. After due deliberation, the committee this morning recommended certain amendments to the pending bill, the amendments pertaining to what is known as the Cotton Futures Act. It is proposed to add them to the pending bill, though they deal only with practices in cotton trading which are manifestly detrimental and unfair and which tend to burden and repress free and unlimited trading in this great commodity. To my great gratification, the committee this morning reported these amendments.

For the guidance of those who are listening to what I have to say about the matter, I remind them why we passed the Sherman antitrust law. It was because certain great aggregations of capital were preempting and dominating the markets. There was no such thing as the law of supply and demand being availed of without restriction and without interference. We either did the bidding of these dominant forces or we were destroyed if we attempted to enter into the market place.

Just the other day this body gave its approval to proposed anti-chain-store legislation. What was the basis of our action? It was that certain manufacturers sold their entire output to a few great aggregations of capital, so that the local markets were preempted by them and the small merchant had no chance whatever to enter into the retail mercantile business.

The Senate reached the conclusion that even if the consumer had to pay a little more it was of greater importance to let the local man have an opportunity to deal with his people than to have the whole business monopolized by a few gigantic organizations manufacturing the stuff and selling their entire output to a like organization which could distribute it.

Identically the same thing has occurred in the cotton business. The farmers of this country produce the raw material, and a few great concerns distribute it. The representative of one firm testified before the committee that at one time it had practically 2,500,000 bales of cotton at its disposal. Any man familiar with the business knows that, like the domination of a few in the grain exchange, this condition in the case of cotton has practically destroyed the market place. The only market place is in the minds of those who dominate the exchange, and their propaganda has been spread like a cloudburst on the Senate.

Men from the cotton States have said to me they could not agree to these amendments; that the cotton people were opposed to them. I am fortunate enough to have hundreds of unsolicited telegrams from the man in the field and the small man who wishes to do business locally stating that they are in favor of the cotton amendments in toto. Therefore, I desire to thank the members of the committee who heard the entire evidence and the members who did not, because this morning, when the amendments were read and explained, the committee gave them its endorsement.

Mr. President, as the consideration of the bill proceeds, if a debate should arise, I am going to take occasion to explain how I stand not only with reference to the grain features of the bill but with reference to other feaures which will be introduced from the floor; and since I not only produce cotton but have devoted almost my entire political life to trying to bring about a condition where the man who produces this indispensable article of universal human use may have a voice in its sale and distribution, I think I should be accorded the right to have this essential part of the bill considered with the same zeal and earnestness that the Senate considers the grain feature of the bill.

I know the propaganda which has been going on. I know that it has been said, "You may interfere with the manufacturers; you may interfere with the big dealers." I have no interest in any manufacturer or dealer other than seeing that the channels of trade shall not be obstructed by a vast accumulation of wealth, and an organization which spreads not only over North America but over South America and Europe. Two of these concerns have their organization in every market place in Europe, the Orient, South, Central, and North America. They dominate the market; they control the market; and today the cotton trade is absolutely moribund. The most anomalous condition exists.

Mr. President, with these preliminary remarks I think we may proceed to the consideration of the amendments dealing with grain, cotton, and potatoes; and if they shall be accepted, as a matter of course, time will be greatly conserved. The Senator from Iowa [Mr. MURPHY] has the grain amendments, and I shall be glad to have him offer them; and when they shall have been offered, or if the opportunity shall present itself in the interim, I shall offer in behalf of the committee the amendments I have sent to the desk.

Mr. MURPHY. Mr. President, the amendments I am offering on behalf of the committee are in two parts. The first part comprises amendments which are purely technical, and are suggested by the drafting clerk as necessary to perfect the measure. They are lying on the clerk's desk, and presumably are on the desks of Senators. There is no means of briefly differentiating between them. One set of amendments, however, comprises four pages, and the other set two pages. The amendments comprising two pages are purely technical, as I have stated; and unless the Senate desires to go over each one of them I shall offer them en bloc and ask for their approval.

Mr. FLETCHER. Mr. President, will the Senator yield?

Mr. MURPHY. I yield to the Senator from Florida.

Mr. FLETCHER. Do the amendments appear in the printed copy of the bill as reported by the committee?

Mr. MURPHY. No, Mr. President; this is the House bill that we are considering, with amendments by the Senate committee in the bill before us, but which does not contain the amendments for which I am now asking consideration.

Mr. FLETCHER. I understand; but the Senate committee has reported the bill, with amendments in italics, beginning on page 27.

Mr. SMITH. Mr. President, if I may explain the situation, this bill has been on the calendar for some time. It is unchanged as it appeared on the calendar. The amendments which appear in italics in the print which lies on the Senator's desk have no relation whatever to the amendments

that are now to be offered, following the action of the committee. For instance, all of the amendments that pertain to cotton, beginning on page 27, are to be stricken out and replaced by the amendments which were acted on this morning by the committee, and are to be offered in lieu of all cotton amendments. The same thing is true of the grain amendments.

Mr. ROBINSON. Mr. President, will the Senator yield?

Mr. MURPHY. I yield to the Senator from Arkansas.

Mr. ROBINSON. I think it is rather unfortunate that the Senate has had no opportunity to see these amendments. I do not refer particularly to the amendments proposed by the Senator from Iowa, but have in mind especially the cotton amendments. It seems, from the statement of the able chairman of the committee, that the amendments which the Senate is actually to be asked to consider were agreed on by the committee only this morning. Is that correct?

Mr. SMITH. Yes. They have been discussed, however, for several days.

Mr. ROBINSON. But the point is that while the bill has been pending on the calendar for almost a year, and while there have been hearings before the committee, the amendments which we are expected to pass on have been reported and have become available for the study of the Senate only this morning, and since the bill was made the special order. I do not know that anything can be done about it, but I do express the regret that there has been no opportunity to study the amendments.

This bill is technical in its terms. Since it was brought forward, there has been no explanation of its primary purposes. I remember that some weeks ago one of the Senators who is a member of the Committee on Agriculture and Forestry did take the floor and make a somewhat prolonged speech in explanation of the primary purposes of the measure. I think that ought to be done now. I do not wish, of course, to interfere with the procedure that is in progress; but before we are asked to vote on anything I think the Senate ought to understand what the bill is about and what abuses it is intended to correct, so that the Senate may have the opportunity of passing on the question whether or not the language employed is appropriate to the purposes in mind.

Mr. SMITH. I agree with the Senator.

Mr. ROBINSON. I have read the bill, and literally hundreds of pages of literature on the subject; and still my mind is somewhat in doubt as to the purposes of the proposed amendments. I do know that the courts have held that on account of the language in the original Grain Futures Act the penalties prescribed by the act are not applicable to offenses which have been completed; that in order to have a remedy against alleged evil practices, the practices must be in progress or in contemplation. That decision at first seems absurd; but when Senators read the language of the act they will see that the proscription is against what is taking place, and not against what has already occurred.

It is my understanding that one of the purposes of the pending bill is to change that, and to insert in the law language which will correct that discrepancy; namely, make the provisions of the law applicable to offenses which have already taken place, instead of limiting their application to transactions which are in progress.

Before this measure progresses far enough for the Senate to begin to vote on the amendments, I shall ask some member or members of the committee who have had opportunity of studying it to explain the intention and the purpose of the proposed legislation. After reading a great deal, I have come to a conclusion as to some of its features; but I am perfectly sure that those who are listening to me are in the same state of mind I have described. They do not know what the proposed legislation will accomplish. They recognize in a general way that there is a desire, and perhaps a necessity, for legislation of this character, but they do not understand how the errors in existing law are proposed to be corrected.

I thank the Senator from Iowa for yielding to me to make this statement.

Mr. SMITH. Mr. President, will the Senator from Iowa yield to me?

Mr. MURPHY. I yield.

Mr. CONNALLY. Mr. President, will the Senator from South Carolina yield to me to ask a question so that he may discuss what I have in mind?

Mr. SMITH. Mr. President, I wish to make just one statement in reference to what the Senator from Arkansas [Mr. ROBINSON], our leader, has said. I agree with him 100 percent that if an amendment, upon a reading of it, is not sufficiently clear, the Senator offering it should explain what is proposed to be done, so that the Senate may have a clear understanding of the purpose of the amendments.

Mr. CONNALLY. Mr. President——

Mr. MURPHY. I yield to the Senator from Texas, who desires to ask a question.

Mr. CONNALLY. If I may, I wish to supplement what the Senator from Arkansas has said to the Senator from South Carolina, and to suggest that one of the most important amendments, if not the most important, is that proposed by the committee striking cotton from the provisions of the bill as it passed the House. I should like to have someone who understands the subject explain that.

Mr. ROBINSON. Mr. President, I may say to the Senator from Texas that it is my understanding that that amendment is to be withdrawn; it is not to be voted on.

Mr. CONNALLY. I am glad to hear that.

Mr. ROBINSON. I understand that the cotton amendments which were reported by the committee this morning are in lieu of the amendments which appear in the first report of the committee bill.

Mr. CONNALLY. I thank the Senator from Arkansas. I have a copy of the amendments, and I tried to examine them in my office briefly; but those of us who have not had time to examine carefully the amendments which were presented only this morning were not in possession of the information which the Senator from Arkansas now conveys to us, to the effect that cotton is to be restored to the bill, and some new amendments are now presented for the first time. So I should like to have these amendments explained in detail before we swallow them in their entirety.

Mr. SMITH. They will be explained.

Mr. McNARY. Mr. President, I was unable to attend the meeting of the Committee on Agriculture and Forestry this morning, and I am curious to know whether, after the elimination of cotton from the original bill, the amendments now submitted by the Senator from South Carolina embody the views of those who are supporting the cotton amendment.

Mr. CONNALLY. Mr. President, I will say to the Senator from Oregon that, so far as my investigation has enabled me to comprehend what is proposed in the amendments, they do not represent the views of the junior Senator from Texas. I favor the House bill as it came to us.

Mr. McNARY. Let me ask the chairman of the committee whether the amendments proposed by the Senator from South Carolina, now on the desk, meet the views of his committee.

Mr. SMITH. They do, without a dissenting vote.

Mr. McNARY. Action was taken this morning?

Mr. SMITH. Action was taken this morning; and the amendments have been thoroughly discussed, modified, and finally whipped into this shape. They were read seriatim.

Mr. ROBINSON. Mr. President, may I ask, in that connection, in order to understand the actual endorsement the amendments have, what representation of the committee membership was present?

Mr. SMITH. Each amendment was read and explained.

Mr. ROBINSON. That is not what I mean. How many members of the committee were present participating in the action?

Mr. SMITH. Nine.

Mr. BORAH. Mr. President, will the Senator from Iowa yield to me?

Mr. MURPHY. I yield.

Mr. BORAH. Mr. President, I presume these amendments have just come to the desk. This is the first I have seen of them. What I should like to understand is whether any substantive change in the bill as it appears on the calendar is proposed before we reach page 27, where the cotton controversy arises.

Mr. MURPHY. There are some substantive changes, and there are some technical changes, and it is my purpose to discuss the substantive changes when they are reached. It is not my purpose, as to the amendments I am presenting on behalf of the committee, to touch cotton. That subject is separately dealt with in the amendments tendered by the Senator from South Carolina.

Mr. GEORGE. Mr. President, that was the point about which I wished to ask. Is it understood now that the committee amendment on page 2, which would eliminate cotton, is to be disagreed to?

Mr. MURPHY. Yes. The committee is not disturbing the inclusion of cotton as it appears in the House bill.

Mr. GEORGE. Is it understood that the committee amendment on page 27 of the bill I hold in my hand—and this is the only bill I have——

Mr. MURPHY. As to those amendments, I will say to the Senator from Georgia that a few moments ago the Senator from South Carolina stated that they will be withdrawn from the bill, and he has other amendments which he is offering this morning.

Mr. GEORGE. That is, that the entire section 13, beginning on page 27, is to be eliminated?

Mr. SMITH. That goes out.

Mr. GEORGE. The amendments on the desk to be proposed by the chairman of the committee are to be considered?

Mr. SMITH. Yes.

Mr. GEORGE. Those are the only ones relating to cotton which are to be considered?

Mr. SMITH. That is correct.

Mr. MURPHY. I should like to have the Senator from South Carolina confirm the statement I made to the Senator from Georgia, to wit, that it is unfortunate that the print before us is a print as amended, that what we intend for consideration is the House bill, and that the word "cotton" occurs in the House bill.

Mr. SMITH. Yes.

Mr. MURPHY. And that considering this measure we are assuming that the word "cotton", where it appears in line 9, page 2, as stricken out, shall be restored.

Mr. SMITH. That is correct.

Mr. GEORGE. I understand the situation. I thank the Senator.

Mr. MURPHY. Mr. President, with this explanation I recur to what I have referred to as the purely technical amendments, and I ask unanimous consent that they may be considered en bloc.

Mr. BORAH. Mr. President, when the Senator say "technical amendments", does he mean that they are corrections of the language or something of that kind?

Mr. MURPHY. I may say to the Senator from Idaho that they are suggested by the drafting clerk, and none of them is substantive.

Mr. BORAH. They are supposed to put the bill in better form?

Mr. MURPHY. That is my understanding.

Mr. BORAH. They seek to express the same purpose?

Mr. MURPHY. Just that.

Mr. FRAZIER. Mr. President, will the Senator from Iowa yield?

Mr. MURPHY. I yield.

Mr. FRAZIER. There is one amendment to which I seriously object, and I should like to have it voted on separately. I refer to the amendment striking out butter and eggs.

Mr. MURPHY. The Senator has confused my reference. Has the Senator the other group of amendments offered by me?

Mr. FRAZIER. The Senator's motion is as to the technical amendments?

Mr. MURPHY. Just that.

Mr. FRAZIER. Very well.

Mr. NORRIS. Mr. President, I believe the Senator's explanation to the Senator from North Dakota answers the question I had in mind. There are some committee amendments upon which members of the committee are divided.

Mr. MURPHY. Yes.

Mr. NORRIS. Never yet, so far as I can remember, have I heard of adopting a lot of amendments en bloc. I have no objection, if it is understood that they are the technical amendments which were submitted by the Department of Agriculture and agreed to unanimously by the committee.

Mr. MURPHY. That is what they are.

Mr. NORRIS. If the Senator includes only such amendments, of course I have no objection.

Mr. MURPHY. I ask for action on my motion.

The PRESIDENT pro tempore. The clerk will state the motion.

The LEGISLATIVE CLERK. It is moved that the Senate adopt en bloc the following amendments:

On page 1, line 3, before "title" insert "1934 ed.,".
On page 1, line 4, strike out "This" and in lieu thereof insert "That this".
On page 1, line 6, before "title" insert "1934 ed.,".
On page 2, lines 5 and 6, strike out "(U. S. C., title 7, sec. 2)" and in lieu thereof insert "(U. S. C., 1934 ed., title 7, secs. 2, 3, and 4)".
On page 2, line 18, before "title" insert "1934 ed.,".
On page 4, line 2, before "title" insert "1934 ed.,".
On page 4, line 11, before "title" insert "1934 ed.,".
On page 16, line 2, before "title" insert "1934 ed.,".
On page 16, line 15, before "title" insert "1934 ed.,".
On page 16, line 22, strike out "changed" and insert in lieu thereof "changes".
On page 19, line 17, before "title" insert "1934 ed.,".
On page 21, line 3, before "title" insert "1934 ed.,".
On page 22, line 2, before "title" insert "1934 ed.,".
On page 24, line 23, before "title" insert "1934 ed.,".
On page 26, line 14, before "title" insert "1934 ed.,".

The PRESIDENT pro tempore. The Senator from Iowa asks unanimous consent that the amendments be considered en bloc. Is there objection?

Mr. ROBINSON. Mr. President, it is my understanding that these amendments are merely corrective of the language in the bill.

Mr. MURPHY. That is my understanding. They are just as the drafting clerk gave them to me, and he suggested the necessity of having them in the measure.

Mr. ROBINSON. I, of course, have no objection to the disposition of these amendments; but my suggestion made a few minutes ago is renewed, that some Senator who is familiar with the bill and with its fundamental purposes undertake to explain it to the Senate before we attempt to pass on more substantial amendments. There is no objection to making corrections such as the proposed amendments seem to make of the language that is in the bill; but before we pass upon a point that is material there ought to be a general explanation of the measure.

Mr. McNARY. Mr. President, there is so much confusion in the Senate Chamber that I must confess I do not know the nature of the request made by the Senator from Iowa.

The PRESIDENT pro tempore. The Senator from Iowa asks unanimous consent to consider en bloc the several amendments which he has moved to adopt. Is there objection?

Mr. McNARY. I object. It is an unusual practice. I have not been able to determine the nature of the amendments of the Senator from Iowa. It is seldom that we attempt to act on a number of amendments en bloc. They may be wholly unrelated in their subject matter. Are they amendments which have been offered by the committee? Are they committee amendments in character?

Mr. MURPHY. I will say to the Senator from Oregon that it is my purpose to offer later the amendments which are substantive in their nature. They are printed separately.

Mr. NORRIS. Mr. President, I desire to join in the request of the Senator from Iowa. The present proceeding is an exceptional one. The request made by the Senator from Iowa is exceptional; but, as I understand his request, he has offered only amendments which do not change substantive portions of the bill and only amendments which were unanimously agreed to by the committee. As I understand, they are technical amendments changing a word here and there. I think he would have gotten through with the whole matter had he taken up the amendments separately.

Mr. McNARY. That may be so; but I observe that the amendments are technical in character. They are offered for the committee, and so they are really committee amendments?

Mr. NORRIS. Yes.

Mr. McNARY. That is a different matter.

The PRESIDENT pro tempore. Is there objection to considering the amendments en bloc?

Mr. McNARY. I object.

Mr. LEWIS. Mr. President, I desire information along the lines indicated by the able leader on this side of the Chamber, the Senator from Arkansas [Mr. ROBINSON]. I wish disclosure concerning certain matters.

The constituency known as the Board of Trade of Chicago—naturally, under the circumstances, a constituency of mine—is of the opinion that somewhere in the bill is a purposed injustice against its interests. I should like to ask the able Senator from Iowa, knowing he would be perfectly frank with me, whether any of the amendments alluded to do in their nature touch the business or the affairs, as he understands them to be, of the board of trade dealing with futures in the city of Chicago; if so, in what way do they affect them?

Mr. MURPHY. The bill as drawn is directed at the grain exchanges and commodity exchanges—the board of trade in Chicago no less than the boards of trade in other cities in the country. The proposed legislation has been the subject of discussion for a number of years. Two weeks ago the Senator from Idaho [Mr. POPE] made a speech which was printed in the RECORD in which he reviewed the purposes of the legislation. There is a report accompanying the House bill dated March 18, 1935, covering the provisions of the bill. Yielding to the request of the Senator from Arkansas for a general statement of the provisions of the bill as they relate to the commodity exchanges, while I myself am perfectly conversant with all its provisions and heartily favor the passage of the bill, nevertheless, as a courtesy to the Senator from Idaho, who is very deeply interested in the bill and who has already spoken upon it, I yield to him to set forth briefly the principles of the bill.

Mr. POPE. Mr. President, as the Senator from Iowa has said, about 2 weeks ago I attempted to point out the important features of this bill, which amends the original Grain Futures Act. That original act was passed in 1922 to regulate the various grain exchanges of the country. During the 12 years or more which have elapsed since that time certain practices have developed in trading on the grain exchanges which are thought to be injurious to the producers of and the traders in grain. The pending bill amends certain features of the original act.

The first section of the bill, which is section 2 in the print before the Senate, changes the word "grain" to "commodity." "Grain" was defined in the original act to include wheat, corn, oats, rye, flaxseed, and grain sorghums. The word "commodity" is defined in this bill to include those commodities and, in addition to them, cotton, rice, millfeeds, butter, and eggs. It can be seen that the only point in that section is the change in the word "grain" to "commodity", and the enlargement of the scope of commodities to be dealt with in futures on the grain exchanges.

With reference to that matter, when the bill came over from the House to the Senate the word "cotton" was in the bill and was one of the additional commodities provided for. In the original consideration given by the Committee on Agriculture and Forestry the word "cotton" was stricken out, as shown by the print on the desks of the Senators. Then at the end of the bill a long amendment relating to cotton was inserted. The Cotton Futures Act was amended as indicated by the italicized portion of the bill, which is on the desks of Senators. The bill was reported to the Senate and went to the calendar. There was a great deal of pressure upon the part of those interested in grain that the bill be passed. After that a hearing was had before a subcommittee of the Committee on Agriculture and Forestry, at which representatives of the grain exchanges, and particularly the board of trade in Chicago, were heard, and also representatives of those administering the Grain Futures Act, and those who are interested in having the bill passed.

Mr. FRAZIER. Mr. President, will the Senator yield?

Mr. POPE. I yield.

Mr. FRAZIER. Was the hearing before a subcommittee or a full committee?

Mr. POPE. The hearing was before the full committee. I stand corrected. However, a subcommittee which was appointed recommended certain amendments growing out of the hearing before the full committee. Later on a session of the full committee was had, and the amendments were adopted by the committee informally, because the bill was still on the calendar and was not formally before the Committee on Agriculture and Forestry. Those are the amendments which the Senator from Iowa is now offering and are the amendments which relate to the grain-futures part of the bill. They have nothing to do with the cotton amendment.

Some consideration was given from time to time of cotton amendments other than those in the printed form of the bill. Several sessions were held on that subject. No action was taken on the subject by the committee. The committee was called to meet several times, but the meeting was postponed until finally this morning the amendments referred to by the Senator from South Carolina [Mr. SMITH] were presented to the committee. A number of the members of the committee were present. I was present part of the time, but was unable even to read the amendments. However, the committee reported favorably upon the amendments of the Senator from South Carolina. The one who made the motion, as I recall, reserved the right to vote otherwise on the floor. I think that was the Senator from Nebraska [Mr. NORRIS].

Mr. SMITH. Mr. President, may I call the Senator's attention to the fact that the Senator from Nebraska stated that if upon the floor a showing was made that they were not as he understood them to be, then he reserved the right to vote otherwise than as he then voted. He also reserved the same right with regard to the other amendments. The chairman replied that he reserved the same right, not only as to the cotton amendments but as to the amendments affecting grain.

Mr. WALSH. Mr. President, will the Senator yield?

Mr. POPE. I yield.

Mr. WALSH. Are the amendments which were acted upon by the committee this morning different from the amendments appearing on page 27 of House bill 6772, proposing to amend the United States Cotton Futures Act?

Mr. POPE. Yes.

Mr. WALSH. So the Senate committee first acted on the amendments appearing on pages 27, 28, 29, 30, 31, and 32, proposing to amend the United States Cotton Futures Act, and this morning the committee proposed amendments to those amendments?

Mr. SMITH. No. I should like to make a statement in regard to that matter which should have been made in my introductory remarks. The intent of the committee is to strike from the bill the italicized cotton amendments and to substitute the amendments which were agreed upon this morning.

Mr. WALSH. Have they been printed?

Mr. SMITH. They have been printed and are available in that form.

Mr. BORAH. Mr. President, may I interrupt my colleague?

Mr. POPE. I yield to the senior Senator from Idaho.

Mr. BORAH. I do not want to urge the suggestion I am about to make, but, as we all know, this is a very technical bill. Is there anything engaging the attention of the Senate tomorrow which would make it inadvisable to consider the bill tomorrow after we have had time to take counsel as to the effect of these amendments, and so forth? We are now proceeding blindly.

Mr. SMITH. Mr. President, I think it would have been a good idea for someone who was thoroughly conversant with the intent and purpose of the original bill and the amendments to give a general statement, and then I think the Committee on Agriculture and Forestry of the Senate ought to be authorized to have a reprint of the bill as it is now proposed to amend it. Take the original text and wherever it is proposed to amend it print the amendments in italics, so that the Senate when it comes to consider them will have the original text and all the proposed amendments right before it. I think that ought to be done, and I think we would not lose any time if the committee were authorized to do that for the convenience of the Senate, so that the Senate might be advised.

Mr. ROBINSON. Mr. President, there can be no objection to a new print of the bill, but I wish to point out to the Senate the fact that this bill must either be disposed of within the next day or two or, in all probability, it cannot be acted upon during the present session. Once the Senate takes up the relief bill and the tax bill, we will be busy here all day and part of the nights.

I have moved to adjourn and recess the Senate day after day in order that the committees of this body might have an opportunity of considering the measures before them and of bringing in their reports. This bill has been on the calendar for almost a year, and on the very day when it is to be actually taken up for consideration, after it has been made the unfinished business, a group of new amendments are brought in.

My suggestion is that the Senate go ahead and discuss this bill and the purposes of the proposed legislation. We can discuss the amendments which will be proposed. The measure will not be disposed of today, and this evening an order may be made, if the Senator from South Carolina will so request, for a reprint of the bill, so that the amendments which are proposed today by the committee will be substituted for the amendments which were reported many months ago.

I shall object, under the circumstances, to recessing or adjourning the Senate at this time. We ought to go ahead. We should discuss the measure, and we can discuss the amendments. I shall not ask that a vote be taken on them today; but the result of taking a recess now or adjourning until tomorrow would be that we would then come in here with a new print on our desks in the morning—the print will not be made until tonight—and we would have the same situation tomorrow that we have now. Let the bill be reprinted now, for that matter, but let us go ahead and discuss the measure and discuss the amendments.

Mr. BORAH. Mr. President, I agree with the Senator from Arkansas that we ought to go ahead with the bill, but, so far as anyone is concerned outside of the members of the committee, the discussion will be very unintelligible if we have not time to read the amendments.

Mr. NORRIS. Mr. President, will the Senator from Iowa yield for a statement? I do not wish to take the Senator off the floor.

Mr. POPE. Mr. President, I have the floor.

Mr. MURPHY. I had the floor and yielded to the Senator from Idaho for a statement.

The PRESIDENT pro tempore. The Chair will state that the Senator from Idaho has the floor.

Mr. MURPHY. I yielded to the Senator from Idaho to make some remarks, but I did not yield the floor.

Mr. POPE. I now yield to the Senator from Nebraska.

Mr. NORRIS. As I understand, the Senator from Idaho has not the floor and he cannot yield.

The PRESIDENT pro tempore. The Senator from Idaho has the floor, and he yields to the Senator from Nebraska.

Mr. MURPHY. Mr. President——

Mr. POPE. I yield first to the Senator from Nebraska, and then I will yield to the Senator from Iowa.

Mr. MURPHY. I said that I would yield to the Senator from Idaho to make a statement in connection with this bill.

The PRESIDENT pro tempore. The Chair will say that the Senator cannot farm out the time, and when he yielded to the Senator from Idaho for a statement he yielded the floor.

Mr. POPE. I yield to the Senator from Nebraska.

Mr. NORRIS. Mr. President, I hope the Senate will have a proper understanding of the parliamentary situation of this proposed legislation.

It is very important. It was reported to the House by the Committee on Agriculture of that body after extended hearings, and was passed by the House at the last session of Congress. It was brought to the Senate, reported by the committee, and placed on the calendar, where it has been for nearly a year. The cause of all this delay—and I am not going to complain about it; it arose in such a way that I do not think any complaint can be made—the cause of all this difficulty and this delay has been cotton. The grain men, so far as I know, are unanimously in favor of this proposed legislation. The Agricultural Department has been urging it. It is necessary that this grain exchange bill be passed at this session, because this is the last session of the present Congress, and, if the Congress shall adjourn without passing it, it will be necessary to start again at the next Congress; at any rate, it will be necessary for those who may be here at that time to start all over again. There is danger even now as to getting it into conference, and a dispute about cotton may endanger the entire grain provisions of the bill.

As to the amendments, some pertaining to grain, which came from the Agricultural Department in the ordinary routine, are technical in nature and have been approved by the committee. There has not been any division and no opposition, so far as I know, in the committee or from the Agricultural Department. The Chicago Board of Trade was opposed to this proposed legislation. They do not want it; they have fought it, as they have a right to do, I concede; but it is not right that all the grain farmers of America should have to suffer what they believe to be a legal wrong because there happens to be a dispute about cotton.

Why not go on with the bill; consider the technical amendments that will be offered in regard to grain—just a few of them—pass on them, and then take up the cotton amendments which the Senator from South Carolina, the chairman of the committee, will offer; debate them, discuss them, and vote them either up or down; so that this bill may go to conference and be ready for final disposition before the Congress shall adjourn?

Mr. BORAH. Mr. President, may I ask to interrupt my colleague again for a moment?

Mr. POPE. I yield to the senior Senator from Idaho.

Mr. BORAH. I wish to ask again, as I undertook to ask sometime ago, are there any amendments in the list of proposed amendments which have any substantial bearing with reference to the grain features of the bill?

Mr. POPE. I will say to my colleague there are two or three amendments, as I attempted to point out some few weeks ago in an address to the Senate, which are important. One has reference to the matter of margin deposits. Another has reference to the payment by federated grain cooperatives of certain remuneration to their regionals. Though not of great importance, they are of sufficient importance that the Secretary of Agriculture and the Grain Futures Administration thought them desirable in this bill.

Now, if I may go on——

Mr. NORRIS. Mr. President, may I say that, so far as I know, there is no dispute about those amendments.

Mr. POPE. There is none at all.

Mr. NORRIS. They are suggested by the Agricultural Department.

Mr. POPE. So far as the Committee on Agriculture and Forestry is concerned, and the Grain Futures Administration, the Secretary of Agriculture, and those who will have the administration of this bill, there is no dispute about them. There is, however, some opposition to various portions of the bill by the representatives of the grain exchanges, particularly the Chicago Board of Trade.

Mr. LEWIS. Mr. President——

Mr. POPE. I yield to the Senator from Illinois.

Mr. LEWIS. May I ask the Senator a question, if he will allow me to interrupt him, as I wish to refer to the observations of the Senator from Nebraska [Mr. NORRIS]? As I understood the senior Senator from Nebraska, he said there was no opposition from the grainmen to the bill. I assume that the able Senator meant the grain producers and not those who dispense the grain through the trade agencies. May I ask the Senator from Idaho, will he at some convenient moment disclose wherein the present bill changes the law as it exists as to regulations of the Agricultural Department or otherwise as affecting the board of trade, to which he alludes as the board of trade of Chicago? I am anxious to have their rights protected. I am anxious to have no law enacted which would perpetuate injustices, if they can be disclosed. If the Senator would be so kind as to let me know wherein these amendments, if adopted, would change the law as it previously existed and in what way the changes would operate, I should be under great obligations to him.

Mr. POPE. I was undertaking to do that. I had referred to the first change which this bill would make in the original Grain Futures Act, which would be to enlarge the scope of the act to include certain other commodities.

May I say with reference to the commodities included in the bill, which are proposed in an amendment to the original act, that there has been some difference of opinion as to whether butter and eggs should be included among the commodities. There is no question that there are dealings in butter and eggs futures on various exchanges. On the Chicago Mercantile Exchange futures are dealt in with reference to butter and eggs. But there is some difference of opinion among members of the committee and, I understand, among other Senators as to whether butter and eggs should be included in the bill.

I shall offer during the consideration of the bill an amendment to include potatoes as one of the commodities. The people of my State desire such an amendment. I have a letter from the Grain Futures Administration recommending that potatoes be included in the bill. The committee this morning unanimously voted to recommend that potatoes be included among the commodities covered by the bill.

Mr. NORRIS. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Nebraska?

Mr. POPE. I yield.

Mr. NORRIS. The Senator has touched upon two amendments which are not fundamental. Whether butter and eggs go in or stay out, the bill ought to be considered and acted upon anyway. The same suggestion applies to potatoes. There may be some other items similar to those which are in dispute, but such amendments are not material; they are not technical. The Department of Agriculture is in a tentative attitude in reference to them. They are willing such commodities should be included in the bill, but they will not object if we leave them out.

Why not go on with the consideration of the bill, let the Senator from Iowa [Mr. MURPHY] offer the other amendments relating to the grain business, consider them, and vote as to whether we shall incorporate them in the bill? Then let us vote whether we shall include butter and eggs and whether we shall include potatoes. Let us settle those matters and then come to the cotton feature of the bill, which I understand those interested in cotton will take some time to discuss.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. POPE. I yield to the Senator from Iowa.

Mr. MURPHY. As suggested by the Senator from Nebraska [Mr. NORRIS], I stand ready to proceed with the amendments, but the Senator from Arkansas [Mr. ROBINSON] desired that committee amendments be first considered. For that purpose I yielded to the Senator from Idaho [Mr. POPE]. I did not think I yielded the floor. I thought I merely yielded to the Senator from Idaho until I was in position again to take up the amendments. Whenever the Senator from Idaho shall have concluded his explanation I shall be ready to proceed with the amendments which it is my intention to offer.

Mr. POPE. I had intended to state that one of the amendments of the Senator from Iowa deals with the matter of butter and eggs, and will come before the Senate for a vote in due course.

Mr. McNARY. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Oregon?

Mr. POPE. Certainly.

Mr. McNARY. The bill about which the Senator is speaking and which we have before us for consideration, as it was reported by the committee does not contain the item of butter and eggs.

Mr. POPE. The Senator is correct.

Mr. McNARY. The Senator from Iowa has suggested that he intends to offer an amendment to exclude butter and eggs from the bill. I understood that the committee adopted an amendment to exclude butter and eggs. If that is the case, why not proceed with the bill? Why should the Senator from Iowa [Mr. MURPHY] be proposing now to exclude something from the bill which has heretofore been excluded by the committee?

Mr. POPE. As the bill came from the House it contained the item of butter and eggs. Sometime in August 1935 the committee acted and approved of leaving the item of butter and eggs in the bill. In other words, we did not strike that item from the bill. During the last few weeks the committee has acted informally and by a bare majority voted to strike the item of butter and eggs from the bill. That action is now in the form of an amendment which the Senator from Iowa will present in due time. As the committee originally acted on the bill which was reported on the calendar, the item of butter and eggs was left in the bill.

Mr. McNARY. Am I to understand the Senator from Idaho to state that while the committee had excluded butter and eggs, he is now pleading for an amendment which the Senator from Iowa will offer proposing to include them again?

Mr. POPE. I so understand. The bill was on the calendar and not before the committee, notwithstanding the fact that hearings were had sometime ago. Afterward the committee met and informally voted upon certain amendments which the Senator from Iowa [Mr. MURPHY] will present. As I understand, it means that the Senator from Iowa will present those amendments individually, but they have the informal support of the majority of the members of the Committee on Agriculture and Forestry. That, it seems to me, is an unusual way to proceed in this matter, but it is the procedure which was adopted by the committee in this instance.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. POPE. I yield to the Senator from Maryland.

Mr. TYDINGS. Am I to understand that the bill was placed on the calendar without the action of the committee?

Mr. POPE. No. The committee acted on the bill and reported it favorably with one or two amendments. It went to the calendar. Afterward there was a hearing on the bill before the committee; and the committee, without having the bill referred back to them, acted informally upon certain amendments which appeared to be desirable, growing out of that hearing.

Mr. TYDINGS. I cannot see how the committee had any authority to act on the bill after the committee had concluded its hearings, and the bill had been reported to the Senate and was placed on the calendar. If the committee

was going to reconsider the bill the obvious course was to take it off the calendar and have it recommitted to the committee. The amendments would not be committee amendments if they came in subsequent to the time the committee reported the bill and had it placed on the calendar.

Mr. POPE. I think the Senator is entirely correct. They are not committee amendments, but they are amendments which have received the approval of a majority of the committee acting informally, for whatever that may be worth.

Mr. SMITH. Mr. President——

Mr. POPE. I yield to the Senator from South Carolina.

Mr. SMITH. This point ought to be clearly understood. There was a suggestion that the bill be recommitted to the committee. There was opposition to that being done. Then the suggestion was made to leave the bill on the calendar and let the committee meet and consider and agree upon such amendments as in their judgment were germane and report the amendments to the Senate without the bill losing its place on the calendar. This is what has caused the confusion.

The committee were authorized to make certain recommendations as to amendments. Obviously the thing to do now is to authorize a reprint of the original bill, leaving out those things which were suggested to be left out, and incorporating in the proper places the amendments now proposed so that each Senator may have the bill before him with the original text and the amendments now proposed informally by the committee.

That is the confused situation arising from the mistake of not recommitting the bill to the committee. The committee met, acted, and made certain suggestions. If we are allowed to have a reprint of the bill, the measure in proper form will be here for the consideration of Senators.

Mr. POPE. Mr. President, I think when the bill is explained in detail—as I hope to do—and then the committee amendments are presented in the order in which they have been prepared, the matter will be clear to Members of this body and we can proceed to vote. I am attempting as I proceed with the explanation of the bill to point out where the amendments will appear, and perhaps I shall indicate the reasons for the amendments.

Mr. WHEELER. Mr. President, will the Senator yield?

Mr. POPE. I yield.

Mr. WHEELER. I think the confusion comes about by referring to these as committee amendments. Strictly speaking they are not committee amendments. If they were committee amendments they would have been incorporated in the bill as the bill was originally reported.

Mr. POPE. Let me try again to make that clear. The only two amendments which the committee made to the bill were to strike out the word "cotton", on page 2, and to add a cotton amendment at the end of the bill. As the bill now stands on the calendar, those are the amendments which the committee made. All the amendments which have been referred to by the chairman of the committee [Mr. SMITH] and by the Senator from Iowa [Mr. MURPHY] are really individual amendments, but they do have the informal approval of the committee. They are not, however, actual committee amendments.

Mr. McNARY. Mr. President, I desire to make an inquiry. We are working under an agreement to consider, first, committee amendments. If it be true that the amendments to be offered by the Senator from Iowa [Mr. MURPHY] are simply individual amendments having informal endorsement, they would not come under the classification of committee amendments.

Mr. POPE. The Senator is entirely correct. They are not committee amendments; and the only two amendments that can be considered at this time, under the unanimous-consent agreement, as I understand, are those to which I have referred—the one striking out "cotton", on page 2, and the cotton amendment which appears at the end of the bill.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. POPE. I yield to the Senator from Iowa.

Mr. MURPHY. While the amendments to which reference has been made by the chairman of the committee and myself are not technically committee amendments, nevertheless they express the mind of the committee.

Mr. McNARY. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. O'MAHONEY in the chair). The Senator will state it.

Mr. McNARY. I am advised by one distinguished Member of this body that the amendments in question are not committee amendments, and by another distinguished Member that they are. I should like to have a ruling on that point from the Chair. It becomes vital, because we have a unanimous-consent agreement to consider, first, committee amendments. If we follow out that procedure, we should take up the cotton amendment printed in the bill before we take up the butter-and-egg amendment.

The PRESIDING OFFICER. The Chair understands the parliamentary situation to be that the bill was originally reported with certain amendments recommended by the committee, and that thereafter, while it was still on the calendar, the committee approved certain other amendments which have been presented by the Senator from Iowa [Mr. MURPHY]. If the amendments presented by the Senator from Iowa have the approval of the committee, they have the same effect as committee amendments. The Chair, of course, is unable to state whether or not those amendments actually come here with the approval of the committee.

Mr. McNARY. I assume from the statement of the Chair that the decision is somewhat uncertain at this time.

The PRESIDING OFFICER. It cannot be otherwise until the Chair has a statement from the committee that these are committee amendments.

Mr. POPE. Mr. President, now I shall proceed. If there are those who are following the bill, I will say that in section 3 of the bill, subsection (b), there are certain definitions—a definition of a cooperative association, for instance, on page 2; a definition of a member of a contract market at the top of page 3; a definition of a futures commission merchant on page 3; a definition of a floor broker; and then, proceeding to section 4, there are certain technical amendments to the original Grain Futures Act. As I construe the amendments in section 4, they simply make more accurate the language, but do not change the meaning or effect of the original Grain Futures Act.

In section 5, a number of new amendments have been added which will interest the Senator from Illinois [Mr. LEWIS], who inquired a few minutes ago as to the effect of this bill upon the grain exchanges of the country. In section 4 (a), on page 4 of the bill, there is a provision giving to the Commodity Exchange Commission power to fix limits on future trading in these exchanges. It has developed within the past few years, since the original act was passed, that certain injurious practices grew up because of the fact that there was no limit on the amount of trading in futures; that, for instance, under that situation, Mr. Arthur Cutten, to whom I have referred, traded very largely in grain.

At one time he had as many as 7,000,000 bushels, I believe, of grain futures that he had purchased. He failed to report according to the regulations of the Grain Futures Administration, and charges were brought against him for failing to report as required by the original Grain Futures Act. His case went to the United States Supreme Court and was decided 3 or 4 days ago. In that case it was held by the circuit court of appeals and by the United States Supreme Court that because of the wording of the original Grain Futures Act, which was to the effect that when it is found that a trader on an exchange is violating the provisions of the act, he may be deprived of the privilege of trading on the exchange. The use of the present tense prevented a charge or a complaint for past offenses. It appeared from the complaint in the Cutten case that he had violated the law continuously for some 2 years before the complaint was filed, but was not violating it at the time the complaint was filed. Therefore it was held that he had not violated the act. In this bill there is a provision to correct that condition by

making past offenses, within a reasonable time, I assume, a basis for a complaint that would enable the Commodity Exchange Commission to deprive one of trading privileges on one of these exchanges.

Mr. CONNALLY. Mr. President——

Mr. POPE. I yield to the Senator from Texas.

Mr. CONNALLY. Of course, I assume that the narrow construction of that language by the court was because of the fact that they regarded it as a penal statute and construed it strictly as against the Government.

Mr. POPE. Yes. I put into the RECORD 2 or 3 days ago the decision of the Supreme Court, which was just to that effect. They said it was perfectly clear in the original statute that the present tense was used, and that past offenses, therefore, would not constitute offenses under the statute.

Mr. LEWIS. Mr. President——

Mr. POPE. I yield to the Senator from Illinois.

Mr. LEWIS. May I ask what was meant by the remark of the able Senator from Idaho with reference to a futures-trading commission? Have we a commission in this Government which exists under the law to pass upon the question of trading by boards of trade or exchanges?

Mr. POPE. Oh, yes. Under the original Grain Futures Act, there is what is called the Grain Futures Commission, which consisted of three Cabinet officers—the Secretary of Agriculture, the Secretary of Commerce, and the Attorney General. They have certain powers given to them to regulate grain exchanges, to recognize them, and to permit them to act as contract markets under the law. All those powers were given to the Commission by the original act.

Mr. LEWIS. The Senator has referred to the case of Mr. Cutten, taking it, as I gathered, from history. Do I understand the Senator from Idaho now to say that there is really before this body a bill which revives acts of past conduct, and designates them retroactively as criminal, making criminal conduct that is long since past and gone?

Mr. POPE. The same provision is put into this bill relating to the individual violator of its provisions as now exist, as to the grain exchanges themselves. The Senator will remember that certain language is used with reference to the conduct of the grain exchanges themselves which is not limited to the identical moment when the complaint is filed. Different language was used in the original act as it applied to a member of the exchange, to an individual, for instance; so if this bill shall be enacted, the same language will be used with reference to the individual violator of the act as it was used in the original act with reference to the exchange itself when it violated the law. That does not mean that the Commission will go back an indefinite period of time to find facts upon which to base a complaint, but if the acts have been committed with some reasonable reference to the time when the complaint is filed, the present provision will apply.

Mr. LEWIS. Then under this provision we would enact an ex-post-facto law, would we, contrary to the Constitution of the United States protecting the rights of the citizen? Does the Senator understand that the bill would so operate?

Mr. POPE. I do not so understand it, if the Senator please. As I understand, if acts have been committed after the passage of the law which are a violation of it, a complaint may be filed based upon the commission of such acts. That does not mean that complaints may be based upon acts occurring before the time when the act was passed; but, just as in the case of any criminal statute, after the statute is passed, if an individual violates it by performing an act prohibited by the statute, he then may be complained against, and the complaint would not be limited to an act committed at an identical moment the complaint is filed.

Mr. LEWIS. And yet the bill would make criminal an act that was done at a time when there was no law prohibiting it?

Mr. POPE. Not at all. That is just the distinction. The Commission could not go back beyond the time when the law was enacted; but a complaint could be based upon acts committed at any time after the law was enacted, up to the time when the complaint was filed.

Mr. MURRAY. Mr. President——

Mr. POPE. I yield to the Senator from Montana, who desires to enter into this colloquy.

Mr. MURRAY. The Senator is under a misapprehension. This bill is not intended to go back and affect any acts that may have been committed prior to its enactment, so that a case like that of Mr. Cutten would not be affected as the result of the passage of this bill. It has reference only to acts that may occur in the future. It merely provides that it is not necessary to catch the person in the act of violating the law; but if at any time it is discovered that the law is being violated or has been violated, the law becomes operative and the offender may be punished.

Mr. POPE. I think that is a very clear statement of the matter. For instance, under the original Grain Futures Act the Commission attempted to file a complaint against Mr. Cutten for acts committed after the law was passed, but before the complaint was filed; and because the language of the act was limited to the present tense, the Supreme Court has now held that the defendant had not violated the act. This bill is to correct such a situation as that.

On pages 5 and 6 of the bill there is a provision which is rather important, which defines bona-fide hedging. I attempted to cover that in my address to the Senate sometime ago.

Bona-fide hedging is defined to be the sale of futures when actual grain has been purchased, to the extent of the amount of the actual grain purchased, or, in the sale of grain, futures may be purchased in that amount. Bona-fide hedging is, therefore, limited to the amount of grain which may be purchased or sold, and that, according to the Grain Futures Administration, and according to the traders generally, is a very fair provision. In other words, no limits could be placed upon bona-fide hedging by the Commodities Exchange Commission, as can be done in the case of future dealing without reference to the existence of any actual grain. That provision is found on page 6.

It is interesting to note that not only actual grain bought or sold may be hedged against, but grain to be grown within 12 months by one who owns land or who has a lease upon it, and products and byproducts of grain may be hedged against. Hedges may be bought or sold as against the products or byproducts.

In connection with that an interesting amendment will be presented by the Senator from Iowa, who proposes that an amendment be made enlarging the scope of the definition of hedging where certain interests handle package goods, like Quaker Oats. The Senator will explain the amendment when it is presented; but it does at this point in the bill present an interesting enlargement of the definition.

On page 7 of the bill there is a provision that this limitation as to hedging shall apply to commission merchants and to brokers, but that it does not apply to the United States Government.

On page 7, section 4 (b), and continuing over onto page 8, there is a general provision prohibiting cheating, making false reports, or deceiving by any means, and also a provision prohibiting bucketing orders.

On page 9, section 4 (c), of the bill there is a provision prohibiting certain practices which have grown up in trading on the exchanges. For instance, wash sales, cross trades, accommodation trades, dealing in privileges and indemnities, are all thought to be undesirable in the administration of the law, and they are prohibited.

In my address 2 or 3 weeks ago I attempted to explain the technical meaning of all these terms, but, as I then said, they are practices which are pure gambling. For instance, in the matter of dealing in indemnities, an option is given for the purchase or the sale of grain on the market depending upon whether the market price of the particular grain increases or decreases on the following day or during the following week. I think those practices are just as much

speculating as bucketing orders, and, as I think all here know, when orders are bucketed, nobody is represented at all except the individual who receives the orders and attempts to fill the orders, when he has no grain and represents nobody. He is simply speculating, and these practices are simply speculative practices.

At the top of page 10 of the bill there is a provision that nothing in the law shall impair any State law regulating the exchanges, and in section 4 (d) there is a provision that future commission merchants must register. In the original act there was no provision for registration of commission merchants or floor brokers. Therefore it was difficult for the Department to obtain information and to check the activities of these commission merchants and floor brokers on the exchanges. This section provides for annual registration. It is, however, a formal matter. Unless the registration certificate of the commission merchant or floor broker has been revoked or suspended, after full hearing, with an opportunity for judicial review, then the commission merchant or the floor broker may not be refused registration on application.

Mr. VANDENBERG. Mr. President——

The PRESIDING OFFICER (Mr. BURKE in the chair). Does the Senator from Idaho yield to the Senator from Michigan?

Mr. POPE. I yield.

Mr. VANDENBERG. I am sorry I have not been able to study the pending bill in the detail it deserves. I should like to ask the Senator whether the bill would have any effect, for example, upon the miller who, of necessity, and in a thoroughly legitimate fashion, is forced to hedge against his purchases of grain.

Mr. POPE. It would not. As I explained a few moments ago, the definition of bona fide hedging, in the opinion of those who have administered the present act, and in the opinion of the traders with whom I have talked, is broad enough fully to protect the rights of the millers. Millers appeared at the hearing and testified, and I heard no complaint as to this definition of hedging being broad enough to cover their business.

Mr. VANDENBERG. Does the interpretation of legitimate hedging rest upon the language in the bill, or is it referred to some regulatory body?

Mr. POPE. It is very definitely defined in the bill.

Mr. BORAH. Mr. President, will my colleague yield?

Mr. POPE. I yield.

Mr. BORAH. On page 26, subdivision (5) provides that the Secretary of Agriculture is authorized "to make and promulgate such rules and regulations as, in the judgment of the Secretary of Agriculture, are reasonably necessary to effectuate any of the provisions or to accomplish any of the purposes of this act."

Did the committee give any particular study to that provision with reference to the power there granted?

Mr. POPE. In the course of the hearing there was considerable testimony on that point. It was the contention of the representatives of the Chicago Board of Trade that this provision is invalid, or unconstitutional, for the reason that it would delegate powers to the Secretary which would not come under the recent decision of our Supreme Court. But there were those who appeared on the other side, who took a different view. For instance, in the Packers and Stockyards Act there was almost identical language which has been upheld by the Supreme Court of the United States. I think there are one or two other laws containing similar language which have been upheld. At any rate, the committee, after such consideration as was given to the matter, thought the provision did not go beyond the provisions of law which have been upheld by the Supreme Court, particularly that in the Stockyards Act.

Mr. VANDENBERG. Mr. President, will the Senator yield further?

Mr. POPE. I yield.

Mr. VANDENBERG. Referring to the question which I asked the Senator a moment ago in regard to the definition of legitimate hedging, would the provision on page 26 to which the senior Senator from Idaho just referred confer any authority on the Secretary of Agriculture to specify or circumscribe what we may deem to be legitimate hedging under the prior terms of the bill?

Mr. POPE. I do not think so, for the reason that the definition of bona-fide hedging, which appears in the first part of the bill, is so specific that no regulation could be made by the Secretary of Agriculture contrary to it or extending the definition.

I think the definition of hedging is very specific, and is limited strictly to the amount of cash grain either bought or sold, plus the amount of grain that may be raised for a period of 1 year by one who owns or has rented land or the products and byproducts of the commodity. That is so specific and is so definite that, in my opinion, and in the opinion of others who appeared before the committee, there would be no reason to say that the Secretary could go beyond that definition or extend the definition of hedging.

Mr. LEWIS. Mr. President, if I am not interrupting the Senator from Michigan. I should like to ask the Senator from Idaho, if I correctly understood the Senator to say that the provisions as to hedging apply to different persons and institutions but not to the Government? Is there an exception made as to the Government? Does the able Senator think the Government is assuming to put itself in the position where it may take the number of bales of cotton it now holds outright or which, because of an advance of money, it now controls; would it indicate that the Government would hedge, as the Senator calls it, and commit what would be made an offense when done by an individual, and yet the Government under that act would be exempt?

Mr. POPE. All I can say to the Senator from Illinois is that the act provides that it shall not apply to the United States Government. Of course, I may say to the Senator that in the testimony it appears that the Government is now closing out its cotton pool, and while in the past it has dealt in futures and has, of course, dealt in hedging, the pool is now being closed out and there may be a practical matter to consider. I have no further answer, however, to make to the Senator with reference to the United States Government being permitted to engage in unlimited fashion in dealing in futures.

Mr. LEWIS. I thank the Senator. It is a little strange to think of the Government taking to itself the right to do that which is an offense when done by an individual. However, I thank the Senator for the information.

Mr. POPE. I call attention of the Senate to the provision at the bottom of page 7 which corrects the abuses which appeared in the recent Cutten case. It is provided in that section that past offenses, committed, of course, following the passage of the act, would be a basis for complaint.

On page 12 there are certain general provisions requiring commission merchants and floor brokers to give information to the Commission and to the Secretary of Agriculture. The commission merchants are required to post their certificates in prominent places. On page 13, section 4 (g), there is a penalty for violation of the law by revocation of registration.

On page 14 there are certain other provisions with reference to false reports and the failure to make reports regularly to the Secretary of Agriculture.

On page 15 there is a requirement that certain books be kept by the various contract markets, commission merchants, and brokers.

On page 16 there is a rather interesting provision that gives to the Secretary of Agriculture power to extend the time within which delivery may be made at the end of a month. The obvious purpose of that is to prevent squeezes which have often occurred at these exchanges. There is also a provision at the bottom of page 16 which gives a certain time for notice when delivery may be expected under a futures contract. There are some general provisions as to the inspection of books and papers which follow very generally, as I understand, the Packers and Stockyards Act.

There is an important provision which occurs on pages 19, 20, and 21, which gives to the Secretary of Agriculture power to deal with individual violators of this act. The power to

deal with contract markets is still left to the Commission, but because of the number of such small violations it is proposed to give the Secretary of Agriculture power to deal with them. That appears, as I said, on pages 19 and 20 and extends on over to page 21.

There is an important provision at the top of page 22 dealing with cooperatives. Heretofore when a complaint was lodged against a cooperative organization the cooperative was immediately deprived of the right to operate on the market. However trivial the complaint might be that was filed, it would have to refrain from operating. Now it is provided that until final hearing the cooperative association may continue to operate on the market. That appears on page 22 and the top of page 23.

Mr. DAVIS. Mr. President, do I understand that cooperatives are exempt from the provisions of the bill?

Mr. POPE. No, Mr. President; cooperatives are not exempt from the provisions of the bill. They are permitted to trade on the market in the same way as any other individual or corporation, but heretofore the law has been construed to relieve a cooperative of the right to operate on the market immediately the complaint was filed. This bill provides that while the complaint is pending, until it is determined, he may continue to operate on the market.

Mr. VANDENBERG. Mr. President, will the Senator yield?

Mr. POPE. I yield.

Mr. VANDENBERG. The Senator will forgive me for returning once more to my question of bona fide hedging. I assume that in event of an argument whether a transaction is bona fide within the language on page 6 the decision would rest with the Commodity Exchange Commission; is that correct?

Mr. POPE. Perhaps in the first instance, with a right of appeal to the court.

Mr. VANDENBERG. That is what I want to ask the Senator. Is there a court appeal permitted?

Mr. POPE. Yes. There is a general provision, I will say to the Senator, authorizing an appeal to the courts from any order that has been made. I cannot refer to it by page just now, but as I recall there is such a provision.

Mr. VANDENBERG. There is no doubt in the Senator's mind that a right of court appeal exists?

Mr. POPE. No; there is no doubt in my mind about that at all.

Mr. DAVIS. Mr. President, the exchanges themselves have committees to pass upon such questions?

Mr. POPE. Oh, yes. The exchanges do have committees that deal with this matter of infractions of the rules of the exchanges, and exchanges have certain penalties they impose upon their members for violation of the rules of the exchanges. The rules are broad. They cover most of the offenses, or many of these offenses, to which we have referred. The difficulty is that in the past, in the Cutten case, for instance, or in the Howell case, the action of the exchange has not been effective.

Mr. DAVIS. They cannot enforce their rules against what they call some of their powerful members?

Mr. POPE. They cannot or they have not. They have not enforced them, so the offenses by Cutten, by Howell, by others, have gone on and have had a very serious effect upon the price of grain upon the markets. I may say to the Senator that one of the contentions of representatives of the board of trade is that they would clean house, they would take care of these matters themselves, but since the passage of the original act, although they have had regulations of the exchanges requiring them to do it, they have failed to do so.

On page 23 there is a provision which is one of the important provisions of the bill, which authorizes cooperative associations to remunerate their regionals for services rendered. However, the regionals in this provision of the bill are prohibited from granting a rebate to their members from whom they purchase grain. I think that is a very wise and desirable provision in both respects. I think it is desirable that the federated cooperatives may retain the support of their regionals, retain their organization, and may remunerate them for the services that the regionals perform for the national cooperatives, but it is also important that they not be permitted under the guise of dividends, or any other way, to give a rebate to those from whom they purchase grain.

Mr. LEWIS. Mr. President——

Mr. POPE. I yield to the Senator from Illinois.

Mr. LEWIS. It was asserted in letters received by Senators and by expressions in certain publications that the cooperative societies or similar organizations, under this bill, are allowed privileges to do things that are made criminal offenses if done in the same manner by exchanges, such as the exchanges to which the Senator has alluded, for instance, the one at Chicago and others elsewhere known as stock exchanges.

Mr. POPE. I will say to the Senator that in my study of this bill I have found that to be entirely untrue. What was sought by this bill was to place the cooperatives on the same basis as any other trader on the exchanges, with no more and no less rights. The only possible basis for such a suggestion would be the provision to which I have referred, under which a national cooperative may compensate regional cooperatives for services they might perform.

Mr. LEWIS. May I ask the Senator if the compensation to which the Senator alludes, from a general association to a regional one, is not but a mere matter of adjustment to equalize the return or offset losses?

Mr. POPE. Perhaps so.

Mr. LEWIS. And seemingly a very fair thing?

Mr. POPE. I think the Senator has expressed the thought admirably. Throughout the bill, however, I will say to the Senator, the cooperatives have not been granted any special privileges or special consideration; but we have sought to prevent the cooperatives from being discriminated against, our thought being that the cooperative, as an association, should be treated like any other individual or corporation that deals on the exchanges.

On page 24 of the bill there is a rather interesting and important provision. Now, when under the law a contract market is authorized to exist by the Commission it may continue to operate until a complaint is filed against it. When complaint is filed it is required to cease its operations. The amendment provides that it may continue its operations, but that the Commission may issue a cease-and-desist order, requiring the exchange to desist from the practice for which complaint has been made.

This simply means that the benefits of the exchange may be continued notwithstanding a complaint has been filed; but the exchanges are required to desist from any practice complained of until hearing and a final determination of the matter.

On page 25 of the bill will be found the general powers given to the Secretary of Agriculture. It is under that provision that the questions raised a few minutes ago by my colleague the senior Senator from Idaho and the Senator from Michigan arise. However, according to my view of the matter, comparing the language of this proposed legislation with the language of other statutes which have been upheld by the courts, the powers of the Secretary are well within the constitutional limits, as I indicated in answer to the questions of the Senators a few moments ago.

There are certain other provisions requiring information to be given by the exchanges as to the practices that may be followed by the exchanges.

There is also a provision to the effect that if any provision of this measure shall be held to be unconstitutional the original Grain Futures Act, which has already been held to be constitutional, shall apply.

The final section of the bill provides that it shall take effect 90 days after its passage. That is to give time for any adjustments which may be necessary in anticipation of the act going into effect.

Then follow the so-called cotton amendments which have been referred to today.

I have attempted to give to the Senate in some detail the provisions of this bill. There are only two or three important

provisions, but they are exceedingly important. If this bill should not do anything else than prevent a recurrence of the Cutten incident on the board of trade it should be passed. However, there are other provisions that I have indicated which are important.

In discussing the bill I forgot to mention that there is a provision with reference to margin deposits. In the past margins have been received by commission merchants from both the buyer and the seller of future contracts. Such deposits have been intermingled with the money of the commission merchant, and he has used that money for his own business operations. In some instances the commission merchants have failed, leaving the depositors without any legal redress. It is provided in this bill that the margin deposits must be kept separate from the individual funds of the commission merchant. In other words, the funds of traders deposited for margins still belong to the traders and not to the commission merchants. That is a rather important feature, because a considerable amount of money has been lost by innocent traders on the grain exchanges, as the commission merchants have intermingled the funds, have used them for their own purposes, and when they have failed an injury has resulted in many instances to the traders on the market. That also is included in this bill and is an important provision.

Mr. WALSH. Mr. President——

Mr. POPE. I yield to the Senator from Massachusetts.

Mr. WALSH. The Senator does not intend, does he, to discuss the proposed amendments to the United States Cotton Futures Act?

Mr. POPE. No.

Mr. WALSH. The Senator is confining himself entirely to the amendments to the Grain Futures Marketing Act?

Mr. POPE. Yes. This morning the Senator from Arkansas and other Senators suggested that a rather careful explanation be made of the pending bill and how the committee proposes to change the original act. I have done so with reference to the grain provisions.

Mr. WALSH. May I be permitted to say that the Senator has done so ably and well? I wanted to ask him some questions about the proposed amendments to the Cotton Futures Act if he intended to discuss them, but I understand he is not going to do that.

Mr. POPE. No.

I may say in conclusion that, as I understand, the Senator from Iowa will present amendments to the grain-futures portion of this bill. I have already indicated that some of those amendments, in my opinion, are good amendments. Some of them are merely technical, for the purpose of clarifying the language. There are one or two other rather important amendments that will be presented by him as to the grain-futures portion of the bill.

Mr. WALSH. The operation of the present law has been quite satisfactory, I am informed.

Mr. POPE. Yes; I will say to the Senator that it has been very satisfactory, but in the administration of the law certain very definite defects in the original Grain Futures Act have been disclosed, and it is to correct those defects that this bill is offered.

Mr. WALSH. It is somewhat similar in character to the bill the Senate had under consideration a few days ago changing, modifying, and strengthening the Federal Trade Commission law in cases where the administration of the law disclosed certain defects and certain limitations, and the department administering the law made recommendations. I assume that this is, in a general way, the same kind of a bill.

Mr. POPE. Yes; and I may say that every Secretary of Agriculture for several years has recommended that such a bill as this be passed in order to remove the defects which have been disclosed.

Mr. WALSH. Just as in the case of the amendment to the Federal Trade Commission Act which the Senate passed a few days ago.

Mr. POPE. Exactly. Secretary Wallace recommended it; Secretary Hyde, before him, and I believe some other Secretaries of Agriculture recommended that the holes which appeared in the original act be stopped in this way. I may say also to the Senator that the various farm organizations throughout the country—the National Grange, the Farm Bureau Federation, the Farmers Union, and, so far as I know, all the other great farm organizations—are very strongly supporting this measure; and that the Grain Futures Administration, the body which has been actively engaged in administering the present law, is very strongly supporting this proposed legislation. For several years in the reports which have been made by the Grain Futures Administration they have pointed out the defects and have recommended such legislation as this. So it is not a new thing.

This bill has been before the Congress since early in 1935. It passed the other House in 1935, and has been before the Senate during the present session, but, as we all know, has been delayed by reason of the cotton amendments which have been offered to the bill.

Mr. WALSH. It is the portion of the bill relating to that feature in which I am interested and in which a good many of my constituents are interested.

Mr. POPE. I think that question will be discussed later. Those representing the grain interests in the Senate have taken the attitude that while we do what is best for the country with reference to the cotton amendments, still we feel that the cotton representatives in the Senate know better what amendments they want than we know.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its reading clerks, communicated to the Senate the intelligence of the death of Hon. RANDOLPH PERKINS, late a Representative from the State of New Jersey, and transmitted the resolutions of the House thereon.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

The message also announced that the Speaker had affixed his signature to the following bills and joint resolution, and they were signed by the President pro tempore:

S. 925. An act to carry into effect the findings of the Court of Claims in the case of William W. Danenhower;

S. 1360. An act for the relief of the estate of Teresa de Prevost;

H. R. 8069. An act for the relief of Mr. and Mrs. A. S. Mull;

H. R. 8599. An act to provide for a change in the designation of the Bureau of Navigation and Steamboat Inspection, to create a marine casualty investigation board and increase efficiency in administration of the steamboat-inspection laws, and for other purposes;

H. R. 8766. An act to authorize municipal corporations in the Territory of Alaska to incur bonded indebtedness, and for other purposes;

H. R. 11747. An act extending the time for making the report of the commission to study the subject of Hernando De Soto's Expedition; and

H. J. Res. 439. Joint resolution authorizing the erection in the Department of Labor Building of a memorial to the officers of the Immigration and Naturalization Service and Immigration Border Patrol, who, while on active duty, lost their lives under heroic or tragic circumstances.

CONTINUATION OF TRADING IN UNLISTED SECURITIES

The PRESIDING OFFICER (Mr. TRUMAN in the chair) laid before the Senate the amendments of the House of Representatives to the bill (S. 4023) to provide for the continuation of trading in unlisted securities upon national securities exchanges, for the registration of over-the-counter brokers and dealers, for the filing of current information and periodic reports by issuers, and for other purposes, which were: On page 4, to strike out line 25 and insert "been"; on page 7, line 6, after "to" where it appears the second time, to insert "clause (1) of"; on page 9, line 14, after "dealer", to insert "whether prior or subsequent to becoming such"; and on page 11, to strike out lines 11 to 23, inclusive, and insert:

(c) No broker or dealer shall make use of the mails or of any means or instrumentality of interstate commerce to effect any

transaction in, or to induce the purchase or sale of, any security (other than commercial paper, banker's acceptances, or commercial bills) otherwise than on a national securities exchange, by means of any manipulative, deceptive, or other fraudulent device or contrivance. The Commission shall, for the purposes of this subsection, by rules and regulations define such devices or contrivances as are manipulative, deceptive, or otherwise fraudulent.

Mr. FLETCHER. I move that the Senate concur in the amendments of the House.

The motion was agreed to.

MISSISSIPPI RIVER FLOOD CONTROL

The PRESIDING OFFICER laid before the Senate the amendments of the House of Representatives to the bill (S. 3531) to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928.

Mr. COPELAND. I move that the Senate disagree to the amendments of the House and ask for a conference thereon, and that the Chair appoint the conferees on the part of the Senate. Furthermore, I assume that the bill will be printed showing the amendments of the House. May I ask whether that is correct?

The PRESIDING OFFICER. Yes; the bill will be printed with the amendments. The question is on the motion of the Senator from New York.

The motion was agreed to; and the Presiding Officer appointed Mr. COPELAND, Mr. FLETCHER, Mr. SHEPPARD, Mr. OVERTON, Mr. MCNARY, Mr. JOHNSON, and Mr. VANDENBERG conferees on the part of the Senate.

Mr. CLARK subsequently said: Mr. President, I have been absent from the Chamber attending a meeting of the Finance Committee. I find that during my absence the Senate took action on the bill (S. 3531) to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928. The Senate disagreed to the amendments of the House and asked for a conference. I desire to enter a motion to reconsider the vote by which the House amendments were disagreed to and a conference asked, for the purpose, if I have an opportunity and my present motion should prevail, of moving that the Senate concur in the amendments of the House.

The PRESIDING OFFICER. The motion will be entered.

REGULATION OF COMMODITY EXCHANGES

The Senate resumed the consideration of the bill (H. R. 6772) to amend the Grain Futures Act to prevent and remove obstructions and burdens upon interstate commerce in grains and other commodities by regulating transactions therein on commodity future exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes.

Mr. MURRAY. Mr. President, in accordance with the suggestions of the Senator from Nebraska [Mr. NORRIS] and other Senators, I wish to make an argument in general support of the measure now before the Senate.

I am one of those who firmly believe that the reestablishment of prosperous and happy conditions in this country depends absolutely upon the rehabilitation of agriculture, the main source of all our wealth. In harmony with that conviction I have, since becoming a Member of this body, supported and voted for every important piece of sound agricultural legislation advocated by organized agriculture and designed to relieve the distress, protect the interests, and promote the welfare of our farming population.

For many years organized agriculture has sought legislation to curb the excessive speculation on the grain exchanges in the well-founded belief that the grain producer's income will be materially increased if the wild orgies in grain speculation can be controlled. In support of the farmers' contention we have before us the annual reports of the Grain Futures Administration, repeatedly pointing out the ill effects on American grain producers resulting from price manipulations caused by the speculative rise on the grain exchanges by relentless grain gamblers.

We have before us now the bill (H. R. 6772) to amend the Grain Futures Act to remove obstructions and prevent burdens being placed upon the interstate commerce in grains and other commodities by regulating transactions therein on commodity futures exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes. The essential features of this bill were passed by the House during the Seventy-third Congress after having given the subject the most thorough consideration. Hearings were again had on a similar bill before the House Committee on Agriculture early in the first session of the Seventy-fourth Congress. The House bill was favorably reported and passed the House, and came to the Senate Committee on Agriculture and Forestry, and was reported shortly before adjournment last summer. It has been on the Senate calendar ever since. It is imperative in the interest of the farmers of this country that the bill be now passed.

A short time ago the Senator from Idaho [Mr. POPE] addressed the Senate in support of the measure, explaining in detail the purposes of the bill and the necessity for its enactment into law at this session. It was a clear, logical, and convincing presentation of what is intended to be accomplished by the enactment of this proposed legislation. Along with his fine analysis of the bill he presented in factual detail the sordid history of the malpractices daily occurring on our American grain exchanges and principally upon the Chicago Board of Trade, which is the outstanding grain-trading center of the world. He demonstrated beyond any fear of successful contradiction the serious effects of these speculative orgies upon the incomes of the grain producers of this country. He also showed the utter disregard or failure of the officials of the Chicago Board of Trade to take any action looking to a correction of the evils complained of.

Mr. LEWIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Illinois?

Mr. MURRAY. I yield.

Mr. LEWIS. Will the able Senator from Montana permit me to ask him the source from which he obtained the information to which he referred in speaking of someone criticizing and publicly condemning some actions of the Chicago Board of Trade? What was the source of the information referred to by the able Senator from Montana or what was it from which he read quoting someone in criticism of or calling attention to certain actions of the Chicago Board of Trade?

Mr. MURRAY. My source of information was the hearings before the Committee on Agriculture and Forestry.

Mr. LEWIS. In the House?

Mr. MURRAY. In the House and in the Senate.

Mr. LEWIS. I thank the Senator.

Mr. MURRAY. Mr. President, my State, Montana, produces millions of bushels of grain annually. Grain is our main agricultural crop upon which our level of prosperity largely rests. My State produces the highest quality of high-protein hard wheat. This wheat produced in Montana is commonly referred to as "gold nuggets", indicative of its great value in making the finest white flour manufactured in all the world. Montana grain producers, therefore, rightfully demand that they be permitted to receive cost of production for producing this vital commodity so greatly desired by the consuming public. They perform a most important function in our economic life and are justly entitled to protection from any dishonest manipulations effecting their incomes.

I, therefore, respectfully submit that it is the responsibility of this body to enact appropriate legislation to protect these grain producers of my State and other States similarly situated in order that they may be permitted to continue the needed supply of grain each year. I contend that it is the duty of our Government to furnish these farmers with protective laws designed to assist them in receiving a just return for their economic efforts.

I am sure that before this problem was called to the attention of this body few Members realized that the price American farmers receive for their grain is dominated and controlled by the gambling price manipulations on the Chicago Board of Trade. The farmers' price starts with the speculative price determined by these gamblers at Chicago.

From this fictitious price the service charges, transportation costs, profits to handlers, and so forth, are all deducted in order to reflect a net price to the farmers of the Nation. The only modification to this statement is the premium or discount which is determined by the inspection of each wagonload of grain brought to an interior warehouse.

Therefore, since the gambling prices fixed at Chicago control the price received by the farmer, as a representative of my State, I am interested to see that these gambling markets are properly supervised and policed by some independent and unbiased agency of the people, such as the Department of Agriculture, acting through its Grain Futures Administration. The history of these operations shows that the grain exchanges themselves, interested in the great volume of gambling and the service charges and profits accruing therefrom to the members of the exchanges, have a profit interest inimical to the welfare of the grain producers. I desire to briefly discuss the bill in this light and point out what it seeks to accomplish.

First. The measure is intended to correct a defect in the present Grain Futures Act of 1922 disclosed by a decision of the United States Circuit Court of Appeals, and recently affirmed by the Supreme Court of the United States. I refer to the case of Arthur W. Cutten against Henry A. Wallace, Secretary of Agriculture, and others.

Under the ruling in the Cutten case it has been pointed out the act may be flagrantly violated so long as the wrongdoer is not caught in the act. In other words, a speculator may violate all the rules and regulations established for the protection of the public. He may manipulate the trading; he may make false reports; in fact, commit any act that is prohibitive provided he concludes his unlawful activities before being detected. This act seeks to correct this situation.

I shall not undertake to discuss this point further. It was discussed in detail by the Senator from Idaho [Mr. POPE], and repetition of that argument is unnecessary. There can be no legitimate objection to this correction or amendment of the Grain Futures Act. The necessity for the amendment is obvious.

Second. The bill is designed also to prohibit excessive speculation. I have before me a chart prepared by the Grain Futures Administration which shows the startling range in the price of wheat at Chicago during the last 13 or 14 years. This chart, which I shall ask to have incorporated in the RECORD in connection with my remarks, shows that in 1922 the Chicago May wheat gambling price had a range of 46⅝ cents, and the years following the annual price ranges were as follows: 22¾ cents, 14⅜ cents, 86¼ cents, 50⅞ cents, 26 cents, 44¾ cents, 40⅜ cents, 64 cents, 41 cents, 24¼ cents, 31¼ cents, 56⅝ cents, 34½ cents, and 18½ cents. The average during these years in this price range was over 42 cents per bushel.

Mr. NORRIS. Mr. President, will the Senator yield there?

Mr. MURRAY. I yield.

Mr. NORRIS. I should like to have the Senate get the picture which the Senator has just painted. It is all shown in the hearings; and I wish the Senator would be just a little more explicit, and give the time when these transactions took place.

Mr. MURRAY. I have a chart with me, which I desire to call to the attention of the Senate, giving the average fluctuation during the year.

Mr. NORRIS. If the Senator intends to cover the point later on in his address, I shall not ask him to do so now.

Mr. MURRAY. I shall incorporate the figures in the RECORD for each year; but I stated that it started in 1922, and that the annual price ranges subsequent to that time were as follows, which would mean 1923, 1924, and so on, right up to the present time, showing that each year these remarkable fluctuations occur in the price of wheat, brought about entirely by these fictitious sales in Chicago.

The annual production of wheat in the world, excluding Russia and China, runs around three and one-half billion bushels, with a variation from year to year of ordinarily two to three hundred million bushels. The demand for wheat is constant; the supply does not vary over 10 percent from year to year on the average; yet, as I have pointed out, prices vary as much as 50 percent within a year.

Mr. NORRIS. Oh, yes; I think the record shows that they have varied as high as 80 cents. They go above 50 cents, and they are often just below 50 cents—46 cents, 47 cents, and so forth.

Mr. MURRAY. The Senator is entirely correct.

During the period which I have mentioned the high price for wheat was $2.05⅞ and the low was 43¼ cents. These prices are all for Chicago May wheat. These are the prices which determine what may be paid to our wheat producers for their grain. No one with any pretension to sanity or honesty would attempt to justify such a range of prices as resulting from the free operation of the principle of supply and demand. Obviously conditions which produce such disastrous results must be remedied.

Third. The bill also seeks to register commission merchants handling funds of the public and floor brokers executing the orders. This procedure is necessary to secure control of these activities. The registration would be subject to suspension for revocation for cause. The only purpose of this provision it effectively to bring the commission merchants and floor brokers of the grain exchanges within the enforcement of the rules and regulations adopted by the grain exchanges themselves. These operators and merchants can find no reasonable objection to being supervised and policed in order to carry out their own rules and regulations and whatever additional regulations the Federal Government may provide in the interest of protecting the producers. History shows that they do not through an effective system of self-policing enforce their own rules and regulations against the big wheat gamblers. There can be no legitimate objection to this provision. It is in the interest of common honesty and fairness.

Fourth. The bill, through section 4d, page 10, seeks to safeguard margins deposited by the public, declaring it to be unlawful for commission merchants to use such funds for their own private operations, or to extend credit to others. This section merely provides that the public's money put up for margins shall be in fact treated as belonging to the customer, and held in trust. Who can object to this?

The Grain Futures Administration has found the common practice to be that commission merchants receiving margin moneys in excess of the amounts required by the exchanges to be deposited use these excess margin deposits as their own capital, and for any purpose they choose. It is a common practice by the commission merchants to use the excess margins deposited by the herd of small speculators. Frequently they utilize these margins by extending credits to large preferred speculators who are often in the market on the opposite side of the trading. To this extent the small traders furnish the capital for margin requirements not only for themselves but oftentimes for the very operators who take the opposite side in order to fleece them as lambs.

If there is to be any confidence maintained in grain exchanges, and if the public is to continue to trade on the grain exchanges, the best interests of all will be served by putting the exchanges and all their operations in a figurative goldfish bowl, where everyone may see what is going on.

The recent failure of a large commission firm in Chicago finds the public "holding the sack" for almost a million dollars in margin moneys as the result of these absurd practices. These depositors of margins rank only as general creditors. Surely they thought their margins were regarded as trust funds and would be handled with a reasonable degree of integrity. It would seem that this mere statement of the provision under consideration would be sufficient to justify its acceptance.

Fifth. The bill seeks to minimize cheating or fraudulent practices by outlawing so-called trading in privileges (puts and calls), wash sales, cross trades, accommodation trades, and other fictitious transactions. There hardly is need for any comments on these provisions. The Senator from Idaho [Mr. POPE] has already clearly explained what is meant by the terminology used to express these different kinds of trades. The subject was covered in general detail by the distinguished Senator from Idaho in his able discussion of the

bill on April 27. Similar irregular practices in the securities exchanges of the country have been ruled out by the provisions of the Securities Exchange Act. There is much greater reason for ruling out these underhanded practices in the commodities exchanges.

Sixth. The bill seeks to prohibit commission merchants and floor brokers from taking customers' orders into their own account. This merely means that merchants and floor brokers may not be both agent and principal in the same transaction. It is a fundamental principle that no man can serve two masters. The application of this principle in the present bill cannot be challenged.

Seventh. The bill provides protection to cooperative associations or producers. The present law requires the admission to contract markets of cooperative associations complying with certain statutory provisions. Needed protection to such cooperatives is provided which would prevent the arbitrary suspension or expulsion from membership of such cooperatives by commodity exchanges, as it would not be possible to deprive cooperatives of the rights and privileges of contract membership, meanwhile forcing them to await the result of litigation arising from the appeal to the courts by a commodity exchange from an order of the Grain Futures Commission.

The bill proposes to amend the present act so that the rights of cooperative associations on exchanges would be expressly preserved pending such appeal. The hearings on this bill constitute complete proof of the unfairness dealt to the cooperatives by grain exchanges. The cooperatives, of course, constitute a direct threat to the business of the private grain trade, and therefore the private grain trade disadvantages the cooperatives in every way possible in the hope that they will fail and leave the market to the private operators. In such circumstances cooperatives cannot cope with the grain exchanges and hold membership thereon, where the rules and regulations of the exchanges are interpreted in all instances against the activities and conduct of cooperatives. The cooperatives have been denied membership; they have been suspended, fined, and punished in every conceivable way, at a great cost to the producers' cooperative associations. All of these punishments and fines, and so forth, have been well publicized through the press in an effort to destroy the good will of the country and to weaken the morale of the producer-members of the cooperative associations. Surely the producer-cooperatives should not rest in a position where their natural enemy judges them, tries them, and punishes them. It is a species of kangaroo court which deals everything but justice.

Eighth. Under the present act, the penalty for violation of the act by a commodity exchange is the suspension or revocation of contract market designation of such exchange by the Commission. It will be seen at a glance that the imposition of such penalty would penalize innocent producers through the closing of their market. It would be visiting punishment on the innocent producers rather than on the wrongdoers. This situation would be remedied by the present bill, which provides that in lieu of revoking the designation of a contract market the Commission may direct the market to cease and desist from its violation of the act, failure of the market to comply with such cease-and-desist order subjecting it to a fine of not more than $10,000, or its officers to imprisonment for not more than 1 year, or both such fine and imprisonment. This provision hardly needs discussion, since it merely attempts to provide a method by which the degree of punishment may be measured against the degree of violation. It protects the interests of the producers and traders, while at the same time it provides an adequate penalty for violations of the act.

Ninth. Under the provisions of section 6 (b) of the present act, trading privileges on contract markets may be denied violators of the act only by order of the Commission created by the act. In order to enforce this provision of the existing act it would be necessary to convoke the Commission by assembling the three members of the President's Cabinet befor violators could be dealt with. Such a cumbersome procedure is, of course, wholly unnecessary. By the provision contained in this bill (sec. 8 (a), p. 25), the defect in the existing law is corrected by placing in the control of the Secretary of Agriculture the power of applying the penalties. The proposed provision in this bill will facilitate the carrying out of the regulations at a minimum of trouble and expense, and will deprive the accused of none of his rights or privileges.

I now wish to speak of an amendment urged by the Secretary of Agriculture which is incorporated in his letter to the chairman of the Senate Committee on Agriculture and Forestry dated June 27, 1935. On page 3 of the Secretary's letter the following amendment is proposed:

Page 19, following subparagraph 6 of section 5a add another subparagraph as follows:

"(7) Require that receipts issued under the United States Warehouse Act (U. S. C., title 7, secs. 241–273) shall be accepted in satisfaction of any futures contract made on or subject to the rules of such contract market, without discrimination and notwithstanding that the warehouseman issuing such receipts is not also licensed as a warehouseman under the laws of any State or enjoys other or different privileges than under State law: *Provided, however*, That such receipts shall be for the kind, quality, and quantity of commodity specified in such contract and that the warehouse in which the commodity is stored meets such reasonable requirements as may be imposed by such contract market on other warehouses as to location, accessibility, and suitability for warehousing and delivery purposes."

The purpose of this amendment proposed by the Secretary is to break and stop the monopoly of a certain clique of public elevators at Chicago, Ill. The satisfaction of a futures contract purchased in Chicago for any delivery month may be completed upon the delivery of the quantity and grade of grain called for by the contract—which is a no. 2 grade of wheat—or a warehouse receipt covering the quantity and grade of grain issued by a regular warehouseman. A regular warehouse is one licensed by the State of Illinois and approved by the Chicago Board of Trade. The State and the Chicago Board of Trade have preempted the field for licensing and designating a grain warehouse as "regular." The Chicago Board of Trade and the State of Illinois refuse to designate as "regular" a warehouse licensed under the Federal Warehouse Act.

The proposed amendment sought by the Secretary in effect denies the State of Illinois the right to preempt the field exclusively to the State.

The Supreme Court in many decisions has certainly settled that the Federal authority is supreme in dealing with this matter. This particular phase has never been specifically settled by the Supreme Court of the United States. No cooperative association has undertaken to devote the time and the great expense necessary to battle the Chicago Board of Trade and the State of Illinois to overthrow their control in this matter. The inclusion of the provision sought by the Secretary of Agriculture will bring the matter up for immediate determination. It is proper that this be done, as I shall attempt to explain.

I have previously stated that the Chicago speculative price, which is the futures contract price, determines the farmers' price. I have also stated that the only warehouse receipt which may be used in satisfaction of a futures contract is one issued by a regular house and which, in turn, is only regular at the pleasure of the Chicago Board of Trade and the State of Illinois.

This collusive arrangement at Chicago has meant a monopoly in the field. Whereas at Chicago the annual volume of futures trading is about 12,000,000,000 bushels of grain, the actual regular warehouse space averages around 13,000,000 bushels. There are about 1,000 bushels of speculative trading in grain futures to every bushel of regular warehouse space; it is 1,000 to 1. The incoming cash grain to the Chicago market and other warehouses there not regular is ineffectual to meet speculative corners in the market which occur too frequently. Bear in mind that a warehouse in Chicago which is not regular is put to the expense of loading grain out in cars on track at about 1½ cents per bushel, or about $20 per car, in order to satisfy a futures contract. This is too great a penalty to the warehouseman who does not enjoy the favorable designation as "regular."

It must be obvious that the very foundation of trading in futures rests upon the actual grain in store, and the only grain in store which enjoys advantages is that which has already come to market and has been deposited in a regular warehouse. It must be to the interest of the public and the producer that the largest possible volume of regular space be maintained at all times in order to minimize the possibility of corners and squeezes. This may only be done by taking the privilege to designate out of the hands of those who are interested in maintaining a monopoly of the business. This needed correction is what is sought by the Secretary of Agriculture in his request for the amendment which provides that public warehouses under Federal license may be designated "regular."

Before closing I desire to offer a few observations. Congress has given prolonged and careful study to the public's interest in the operation of securities exchanges and has enacted legislation to minimize unfair exchange practices by its members. While commending Congress for its efforts in this regard the producers of agricultural commodities quite properly inquire of the Senate, "Why do you fail to give similar attention to commodities exchanges?"

Speculation by the public in the capital stock of a corporation or in its bonds of debt seldom affects the management, operating account, or profit and loss account of the industry, but speculation in the price of a commodity such as wheat or butter vitally affects the producer's operating account, his profit and loss account—yes; it reaches his fireside and often dispossesses him of his home.

I desire to quote from the hearings before the Senate Committee on Agriculture and Forestry from a statement prepared by Mr. M. W. Thatcher, Washington representative of Farmers' National Grain Corporation and the Northwest Farmers' Union:

Picture the following: The President, the Congress, and an army of employees engaged in the program known as the A. A. A., to carry relief to the wheat farmers, amongst others. On July 9, 1933, the Secretary of Agriculture declared the imposition of a 30-cent rate of processing tax on each bushel of wheat processed. This tax yielded to the farmer about 28 cents per bushel on the wheat domestically consumed, which represented about 15 cents per bushel on the total historic production. On July 19, 1933 (10 days after the official declaration referred to), one group of speculators in Chicago wheat futures broke the market 28 cents per bushel. This occurred at the time the winter-wheat harvest was going to market. The farmers suffered loss of income in marketing all of their grain as the result of the repercussions from that price debacle.

We have properly approved legislation with the object of relieving the farmer of the serious distress under which he has been laboring. I refer to the legislation contained in the Agricultural Adjustment Act, the Farm Credit Act and amendments thereto, and the new Soil Conservation and Domestic Allotment Act. All these various measures may prove to be utterly futile in their purpose to increase the farmer's income if we permit the commodity exchanges to be operated as gambling institutions and permit them to continue their malpractices and orgies of speculation, which too frequently destroy commodity prices, upon which farm income is determined.

I call attention to the very large appropriation which is provided each year to sustain and maintain the Grain Futures Administration. I ask Senators to observe that year after year in its annual report the Grain Futures Administration has called attention to the bad practices of the grain exchanges, together with the ill effect upon the farmer's income; year after year the Grain Futures Administration has urged Congress to enact remedial legislation suggested in their reports; yet we do not follow or even carefully examine their suggestions. Surely, with this startling picture of the malpractices of commodity exchanges which has been brought to the attention of the Senate, it will no longer delay giving to the farmers of this country what they seek through this bill as additional help in assuring a reasonable stabilization of their price structure and protection against these violent manipulations of gamblers affecting the price of the producer's grain.

I am certain this body will not countenance the continuation of an impotent system of self-regulation by a group of grain operators whose real interest lies primarily in encouraging the volume of trading so that they may have increased earnings therefrom. Their interest is not in the consumer; their interest is not in the producer of the grain; their interest is in volume and profits therefrom. They naturally shrink from punishing or driving from the market places the big operators who, by spectacular operations and headline stories in the metropolitan newspapers with reference to these great price changes, stir up the speculative fever and provide the stimulation in trading which allows these grain gamblers to make money.

In conclusion I wish to say with all the emphasis possible that the farmer's interest, the consumer's interest, and the Nation's interest are bound up in the purposes sought by the pending bill, and I respectfully submit that it must be favorably acted upon now if we are to do justice to this most serious national problem.

Mr. COPELAND. Mr. President, I ask that there be printed in the RECORD certain telegrams which I have received in opposition to the pending bill.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

NEW YORK, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND,
Senate Office Building:

The Smith amendments to the commodity bill is expected on the floor Monday. While these amendments are not as drastic as they were, still they are absolutely unfair, and I shall consider it a personal favor your not only opposing it but getting as many of your associates to do the same. Regards.

WILLIAM W. COHEN.

PERRY, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND,
United States Senate:

We respectfully request that you strongly oppose limitation amendment to the commodities-exchange bill.

THE PERRY KNITTING CO.,
GEORGE M. TRABER, Jr., *President.*

NEW YORK, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND,
United States Senate, Washington, D. C.:

Understand Senator SMITH'S amendments are due to come before Senate Monday. We oppose limitation of legitimate hedges, as it will work to disadvantage of farmer, mill, and consumer, and drive business to foreign merchants.

MINOT, HOOPER & CO.

NEW YORK, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND,
United States Senate, Washington, D. C.:

I earnestly request you to strenuously oppose the Smith amendments, particularly limitation which will be discussed in the Senate on Monday, as it will be most detrimental not only to the welfare of the cotton farmers but to the cotton trade as a whole.

JOHN H. MCFADDEN, Jr.

NEW YORK, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND,
Senate Office Building, Washington, D. C.:

As an individual interested primarily in the cotton trade, I would like to call your attention to proposed amendment to commodity bill (H. R. 6772), and go on record as being strongly opposed to said limitation amendment for the following reasons: First, highly discriminatory in nature; and, secondly, volume purchases spot cotton by larger interests serve useful and constructive purpose in yearly distribution American crop.

FRANK S. BROWN, Jr.

NEW YORK, N. Y., *May 23, 1936.*

Senator ROYAL S. COPELAND:

Believing so-called Smith amendments to commodity bill harmful to cotton trade, would appreciate your continued opposition to them when again presented.

R. R. ROTHENBERG.

NEW YORK, N. Y., *May 23, 1936.*

Senator ROYAL S. COPELAND:

Understand so-called Smith amendments to commodity bill will again be offered for consideration Monday. Believing that they are harmful to the general cotton trade, would appreciate your continued opposition thereto.

FRANK J. KNELL,
Manhasset, N. Y.

NEW YORK, N. Y., *May 23, 1936.*

Hon. ROYAL S. COPELAND,
United States Senate:

Earnestly hope that you will strenuously oppose H. R. 6772 (Smith amendments) to be discussed Monday, it would be most detrimental to entire cotton trade and the farmers.

PHILIP B. WELD.

NEW YORK, N. Y., *May 23, 1936.*

Hon. ROYAL S. COPELAND,
United States Senate:

I am not in favor of Smith amendments as they are detrimental to welfare of cotton exchange and cotton trade in general, as well as cotton farmers. Urge you strenuously oppose them.

G. I. TOLSON.

NEW YORK, N. Y., *May 22, 1936.*

Senator ROYAL S. COPELAND,
United States Senate:

I consider the proposed limitation of hedging transactions by cotton merchants extremely unwise and an undue restriction of legitimate business. Hope you will oppose this proposal in the Smith amendment.

WALTER L. JOHNSON.

UTICA, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND,
United States Senate:

We respectfully request that you oppose most strenuously the limitations amendment to the commodities-exchange bill.

RICHARD K. CONBOY.
HERBERT A. T. SMITH.
I. M. TOWNSEND.

UTICA, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND,
United States Senate:

We respectfully request that you strongly oppose limitation amendment to commodities-exchange bill.

UTICA KNITTING CO.

NEW YORK, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND:

Strongly oppose limitation of trading in cotton futures market. Believe broad flexible market will render best service to all branches of the trade.

WILLIAM J. WALSH.

UTICA, N. Y., *May 22, 1936.*

Senator ROYAL S. COPELAND:

Respectfully request you oppose the cotton amendment to the commodity-exchange bill.

ONEITA KNTG. MILLS,
F. R. DEVEREUX.

NEW YORK, N. Y., *May 23, 1936.*

Hon. ROYAL S. COPELAND:

I strenuously object to Senator SMITH's proposal to amend H. R. 6772, commodity-exchange bill, especially insofar as such amendments, if adopted, will limit the quantity of hedges dealt in on our cotton exchanges which any spot-cotton merchant may legitimately wish to make. Limitation of this sort will have a tendency to further restrict the already gradually lessened volume of business currently being transacted on the American cotton exchanges.

CLARENCE A. MILLNER,
New Rochelle.

NEW YORK, N. Y., *May 22, 1936.*

Hon. ROYAL S. COPELAND,
United States Senate Building, Washington, D. C.:

Understand Senator SMITH, South Carolina, will introduce Monday amendment H. R. 6772, limiting volume cotton hedges permitted any one firm. As largest American firm, handles under 14 percent total crop. There is certainly no monopoly, and that firm must buy right or would not get the cotton. Such limitation unfair, both farmers and consumers, because will widen distribution costs by eliminating most efficient units in business. Moreover, will make gift of business now done by large American firms to foreign firms who can hedge unhampered in foreign markets. Earnestly request you vigorously oppose this amendment.

T. C. FIGGATT.

NEW YORK, N. Y., *May 22, 1936.*

Hon. Senator ROYAL S. COPELAND,
Senate Office Building, Washington, D. C.:

Understand Senator SMITH intends introduce his amendments to H. R. 6772 Monday, which will limit legitimate hedging transactions in cotton. This legislation is so drastic that it would have very adverse effect on general cotton business. The bill covers 13 commodities, and while it places restrictions on speculative transactions in same does not prohibit bona-fide hedging transactions; therefore cannot see why cotton hedges should be limited, as Congress cannot control transactions of foreign merchants. They could easily trade here in different names and evade the limitation law and return to the Liverpool market the domination of American cotton which it had before the war. As a member of New York Cotton Exchange, I earnestly request you to oppose any legislation of this nature.

WILLIAM J. JUNG,
Greatneck, N. Y.

NEW YORK, N. Y., *May 20, 1936.*

Senator ROYAL S. COPELAND,
Care United States Senate:

From the study I have made of the Smith amendments to the commodities exchange control bill, it does not seem that the interests of the producer and consumer have been kept in mind. The important thing is for cotton to move easily and freely, and the southern delivery arrangement helps a great deal to accomplish this. Furthermore, the restrictions regarding hedges in any one month would, in my opinion, interfere with normal business operations, and the prohibition against delivery of high-density bales against contracts at Houston, Galveston, and New Orleans seems uncalled for and would create a serious condition for the interior presses. I hope, therefore, that you will vote against all of the Smith amendments.

J. L. CLEVELAND, Jr.

Mr. SMITH. Mr. President, I wish to make a request which is not for the purpose of shutting off debate. It is very evident, however, that the consideration of the bill cannot be concluded today, and Senators do not have the bill and amendments in convenient form to study them. I ask that the Senate Committee on Agriculture and Forestry be instructed to have made a reprint of the original bill, containing the language proposed to be stricken out as well as the amendments. I ask that it be done for the use of the Senate in the morning.

The PRESIDING OFFICER (Mr. MCGILL in the chair). Is there objection to the request made by the Senator from South Carolina? The Chair hears none, and it is so ordered.

Mr. MURPHY. Mr. President, I should like now to proceed with the committee amendments to the bill.

The PRESIDING OFFICER. The first amendment will be stated.

The CHIEF CLERK. In section 3, page 2, line 9, after "wheat", it is proposed to strike out "cotton", so as to read:

SEC. 3. Section 2 of the Grain Futures Act (U. S. C., title 7, sec. 2) is amended by—

(a) striking out the third sentence of paragraph (a) and inserting in lieu thereof the following: "The word 'commodity' shall mean wheat, rice, corn, oats, barley, rye, flaxseed, grain sorghums, mill feeds, butter, and eggs"; and

Mr. MURPHY. Mr. President, I ask that the amendment on page 2, line 9, be rejected.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 2.

Mr. AUSTIN. Mr. President, I have very little knowledge of the amendment and its effect, but I should like to inquire whether it is the amendment concerning which there has been some controversy in the Committee on Agriculture and Forestry.

Mr. MURPHY. I will state the situation.

The bill, as passed by the House, included cotton as a commodity subject to regulation by the Grain Futures Administration. The bill, as first reported to the Senate, strikes out cotton as one of those commodities. If the amendment now pending shall be rejected, cotton will be restored as one of the commodities which will be subject to regulation by the Grain Futures Administration.

Mr. AUSTIN. Can the Senator inform me whether the amendment is the same which is referred to in the telegram which I am about to read? It is from Russell T. Fisher, secretary of the National Association of Cotton Manufacturers, and was sent from Boston, Mass. The telegram is dated May 18, 1936, and is as follows:

Understand Senator SMITH proposes to offer amendments concerning cotton to commodities exchange control bill. These amendments already voted down in Senate Agricultural Committee. Believe such amendments detrimental to future interest of cotton industry, and urge that you use your efforts to defeat them.

I have another telegram to the same effect from Harold Amory, secretary of the New England Cotton Buyers' Association. I have not had the advantage of having been in the committee which heard the matter.

Mr. MURPHY. The reference in the telegram which the Senator has read is not to the amendment which I have asked the Senate to reject. I think the reference in the telegram which the Senator read is not to the cotton amendments which appear in House bill 6772, before us. The telegram probably refers to the amendments which the Senator from South Carolina reported favorably today and which he will presently offer as amendments to the bill. When we reach the cotton amendments which appear at the end of the bill, beginning on page 27, in order to restore the bill to the form in which it passed the House, the chairman of the Committee on Agriculture and Forestry will ask that those amendments be rejected; so for the present I think the amendment to which the Senator's correspondents have reference is not before the Senate and will not come before the Senate until the Senator from South Carolina shall have offered his amendment.

Mr. POPE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. POPE. I understand that the question arises on agreeing to the committee amendment and that a negative vote on the committee amendment will accomplish what the Senator from Iowa desires.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment. A vote "aye" will be in favor of retaining the amendment. A vote "nay" will be to reject it.

Mr. AUSTIN. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Clark	Holt	Overton
Ashurst	Connally	Johnson	Pittman
Austin	Coolidge	Keyes	Pope
Bachman	Copeland	King	Radcliffe
Bailey	Couzens	La Follette	Reynolds
Barkley	Davis	Lewis	Robinson
Benson	Dieterich	Lonergan	Russell
Bilbo	Donahey	Long	Schwellenbach
Black	Duffy	McAdoo	Sheppard
Bone	Fletcher	McGill	Shipstead
Borah	Frazier	McKellar	Smith
Brown	George	McNary	Steiwer
Bulkley	Gerry	Maloney	Thomas, Utah
Bulow	Gibson	Metcalf	Townsend
Burke	Glass	Minton	Truman
Byrd	Guffey	Murphy	Tydings
Byrnes	Hale	Murray	Vandenberg
Capper	Harrison	Neely	Van Nuys
Caraway	Hastings	Norris	Walsh
Carey	Hatch	Nye	Wheeler
Chavez	Hayden	O'Mahoney	White

The PRESIDING OFFICER. Eight-four Senators having answered to their names, a quorum is present.

The question is on the amendment reported by the committee to strike out "cotton" on page 2, line 9.

The amendment was rejected.

The PRESIDING OFFICER. The clerk will state the next amendment reported by the committee.

The CHIEF CLERK. On page 27, after line 16, it is proposed to insert sections 14, 15, 16, and 17, as follows:

SEC. 14. That section 1 of the act of August 11, 1916, known as the United States Cotton Futures Act, as amended, is amended by inserting after the words "United States Cotton Futures Act", the following new paragraphs:

"For the reasons hereinafter enumerated, transactions in cotton involving the sale thereof for future delivery as commonly conducted on cotton-futures exchanges and known as futures and the other transactions hereinafter described are affected with a national public interest which makes it necessary to provide for regulation and control of such transactions and of practices and matters related thereto in order to protect and effectively regulate interstate and foreign commerce:

"(1) Such transactions are carried on in large volume by the public generally and by persons engaged in the business of buying and selling cotton in interstate and foreign commerce; (2) the prices involved in such transactions are generally quoted and disseminated throughout the United States and in foreign countries as a basis for determining the prices to the producer and the consumer of cotton and to facilitate the movements hereof in interstate and foreign commerce; (3) such transactions are utilized by shippers, dealers, manufacturers, and others engaged in handling cotton in interstate and foreign commerce as a means of hedging themselves against possible loss through fluctuations in price; (4) the transactions and prices of cotton on such cotton-futures exchanges are susceptible to speculation, manipulation, and control, and sudden or unreasonable fluctuations in the prices thereof frequently occur, as a result of such speculation, manipulation, or control, which are detrimental to the producer or the consumer and the persons handling cotton in interstate and foreign commerce; (5) such speculation, manipulation, or control is frequently effectuated, and such sudden or unreasonable fluctuations of prices are at times brought about by purchases or sales of future contracts in large quantities by some person acting alone or in association with other persons or affiliations; (6) that owing to conditions naturally incident to the growing and marketing of the cotton crop and the uncertainty as to its grades and qualities, such speculation, manipulation, or control, and such sudden or unreasonable fluctuations of prices, cannot be prevented unless only standard forms of future contracts are made and dealt in upon such cotton-futures exchanges and matters relating thereto necessary to insure fulfillment of such contracts are regulated; (7) and that such speculation, manipulation, and control, and such fluctuations in prices are an obstruction to and a burden upon interstate and foreign commerce in cotton and render regulation of such cotton-futures exchanges, and the dealing thereon, imperative for the protection of such commerce and the national public interest therein."

SEC. 15. Section 5 of such act of August 11, 1916, as amended, is amended by striking out paragraph "Sixth" and substituting therefor the following:

"Sixth. Provide that any cotton tendered under such contract shall contain not more than three grades, which shall be contiguous, in each 100 bales; that such tender shall be the full number of bales involved in such contract, except that such variations of the number of bales may be permitted as is necessary to bring the total weight of the cotton tendered within the provisions of the contract as to weight; that on the seventh business day prior to delivery and not later than the eighteenth calendar day of the delivery month the person making the tender shall give to the person receiving the same written notice of the date of delivery; and that on or prior to the date so fixed for delivery, and in advance of final settlement of the contract, the person making the tender shall furnish to the person receiving the same a written notice or certificate stating the grade of each individual bale to be delivered and, by means of marks or numbers, identifying each bale with its grade; that delivery shall be made only on one of 4 days in each delivery month, which shall be fixed in regulations prescribed by the Secretary of Agriculture as delivery days; and that the delivery of cotton on such contract shall be made at a place where a cotton-futures exchange is located."

SEC. 16. Section 6 of such act of August 11, 1916, as amended, is amended by striking out the words "sixth business day" and inserting in lieu thereof "eighth business day."

SEC. 17. Such act of August 11, 1916, as amended, is amended by inserting after section 22 the following new section:

"SEC. 23. (a) No person who is a member of a clearing house or clearing association of any cotton-futures exchange, or a member of any organization performing the functions of a clearing house for any cotton-futures exchange, shall, directly or indirectly, be engaged in the business of a spot-cotton merchant or have any financial or other interest in, or lend any financial aid to, any such business; and no person engaged in the business of a spot-cotton merchant shall, directly or indirectly, have any financial or other interest in, or lend any financial aid to, any such member.

"(b) The tender upon futures contracts more than once by the same person in the same calendar month of notices of delivery of the same cotton is hereby prohibited.

"(c) Each member of a cotton-futures exchange engaged in the execution for others of orders for the purchase and sale of cotton for future delivery shall demand and receive from both members and nonmembers of such exchange for whom he executes such orders, and shall require to be maintained at all times subject to reasonable provisions for call and notice, minimum margins on their net open interests, with respect to such orders, in purchases and sales of cotton for future delivery. Such margins for members of the cotton trade or textile manufacturers shall be not less than 5 percent and for other persons not less than 10 percent of the current market price of the cotton involved.

"(d) Any person who shall sell any cotton for shipment from one State to another, or export to a foreign country, on credit terms shall, upon the fixing of the price of the cotton involved, demand and receive from the buyer or his agent a margin of not less than 10 percent of the market price of such cotton; and in no case shall any such seller ship or deliver for shipment from one State to another or to a foreign country any cotton involved in any such sale on which the price shall not have been fixed.

"(e) Any person who violates any of the provisions of this section shall, upon conviction thereof, be fined not more than $1,000, or be imprisoned not more than 6 months, or both, for each such violation."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment which has just been stated.

The amendment was rejected.

The PRESIDING OFFICER. The bill is still before the Senate and open to amendment.

Mr. SMITH. Mr. President, it is evident that the Senate in nowise understands this bill and these amendments. I have certain amendments which were agreed to by the committee. The Senator from Iowa has certain amendments which he intends to offer. I have made the suggestion, and it has been agreed to, that the committee be authorized, without action being taken on the bill, to have a reprint of this bill with the amendments in their proper place, indicating what it is proposed to change. I insist if there is no other explanation to be given that we ought now to allow the committee to have a reprint of the bill showing the amendments, so that they may be thoroughly understood and voted on intelligently.

If this bill is to become a law, I know we have got to take advantage of the time when other bills, such as the tax bill and measures necessary for the running of the Government, are not before us, but I insist here and now that the Senate proceed on this bill decently and in order. I do not want the confusion that may be incident to the somewhat irregular manner in which these amendments have come before the Senate to operate against a thorough understanding of each and every one of them.

I am entitled, as are those whom I represent, to have a fair understanding of the amendments I have proposed. One Senator has risen in his place and read telegrams opposing amendments that nobody knew anything about, in a way, until this morning. I think that is unfortunate, but I am here to say that every word that has been said in behalf of regulating grain exchanges applies to cotton exchanges. I do not want to adopt a dog-in-the-manger policy, but I am here battling for the recognition of the interest of those whom I represent, and the Senate is going to have an opportunity to hear the amendments explained before it votes on this bill, if I am accorded the recognition that every Senator has a right to ask.

I am aware of the propaganda that has gone out; I know that it is an easy matter to use the influence of money and organizations. I have been battling here for 28 years. I have not made any very great progress, and I do not think the agricultural interests have had any very signal success. We have all attempted to bring about certain legislation that would enable the agricultural producers to have some trade resistance, but we have not accomplished it. Certain evils have grown up in our exchanges which are amenable to regulation. I am asking that the Senate shall consider these questions as they appear in the amendments which I propose and which have met the approval of hundreds of men who actually produce the commodity, whose response, without my solicitation, shall be placed before the Senate.

Mr. President, it is impossible to know where these amendments occur and what portions of the bill they propose to amend in the form in which they presently appear; but I am asking at this stage, now that there has been given a very extensive, clear, and lucid explanation of the intent and purpose of the bill, that there shall be a reprint made showing where the amendments will come in with reference to the particular text proposed to be amended, and that the part to be stricken out be indicated. I think it will expedite matters if we will take that course. No time will be lost. I shall content myself with explaining from the text the amendments that I have had the honor to propose and which have been endorsed by hundreds and hundreds of those who have taken the time to read and understand them.

Mr. President, I think the whole matter can be expedited if that course shall be pursued.

Mr. CAPPER. Mr. President, it would be most regrettable if this Congress should fail to pass the pending bill, H. R. 6772, amending the Grain Futures Act.

For years every wheat grower in the United States has been regularly victimized and our great milling industry upset by "bear raids", by "May squeezes", by vicious short selling on a huge scale at the hands of big manipulators who virtually have been in control of the board of trade and have used it unscrupulously to accomplish their ends. I frequently hear the statement made by western farmers that the board of trade has become one of the world's greatest gambling places. They believe it fixes the price for the benefit of the speculator and against the producer and consumer.

We have had too many men like Cutten depressing the farmer's market by their fictitious operations in "ghost" wheat, or "paper" grain. Option sales in wheat on the Chicago Board of Trade for the month of July last year amounted to more than the entire estimated crop, including the carry-over for the entire United States.

In 1 month this country's visible supply of grain was sold 31 times.

The stocks of wheat on track and in elevators in Chicago were sold 376 times. And this country's total primary receipts were sold 26 times.

Mr. President, it is time that the Federal Government should step in and at least limit the amount of gambling in foodstuffs. These grain gamblers buy and sell wheat that never was planted, wheat that never was harvested, wheat that never came to market, wheat that never will be ground into flour, wheat that never will be baked into bread. Through manipulating prices these gamblers run the prices down while the farmer is marketing his grain, then run the prices up on the consumer.

Gambling in the necessities of life costs the farmers millions and millions of dollars in the prices the farmer gets for grain. Such gambling also costs the consumers millions and millions of extra dollars for the food which they buy and eat. It is time the gambling on the grain exchanges is limited as much as possible.

Mr. POPE. Mr. President, referring to the suggestion of the chairman of the committee [Mr. SMITH] made a few minutes ago, I call attention to the fact that the amendments of the Senator from Iowa [Mr. MURPHY] are printed and on the desks of Senators. If not, they can be placed there in a few moments by a clerk. I suggest that the Senate proceed to the consideration of those amendments and act upon them. I believe that the printed amendments of the Senator from Iowa, which are before Senators, will give them the necessary information so that they may vote intelligently upon them, as each amendment refers to the line and page of the pending bill which is proposed to be amended.

Mr. MCNARY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Oregon?

Mr. POPE. I yield.

Mr. MCNARY. I am not sure that I am conversant with the proposal made by the Senator from Idaho [Mr. POPE]. Early in the day I objected to the consideration en bloc of the amendments offered by the Senator from Iowa [Mr. MURPHY] because such a procedure is unusual, and I thought, if followed in this instance, would lead to confusion and possibly to bad legislation. However, upon investigation, I determined that they were purely clerical, referring to the year 1934, and it was my intention then to withdraw my objection, which now I do for the purposes of the RECORD.

Mr. POPE. Mr. President, I may say that the original amendments recommended by the Committee on Agriculture and Forestry have been acted upon, so that now amendments are being offered from the floor. In that category come the amendments offered by the Senator from Iowa [Mr. MURPHY]. They have already been printed and they are now before Senators, just as in the case of any other amendments which have been printed and are offered from the floor. I see no reason why we cannot proceed with them.

Mr. NORRIS. Mr. President——

Mr. POPE. I yield to the Senator from Nebraska.

Mr. NORRIS. Then let us have those amendments agreed to. There was only one objection, and the Senator from Oregon [Mr. MCNARY] has now withdrawn the objection. Why can we not dispose of them right now?

Mr. POPE. I rose——

Mr. SMITH and Mr. MURPHY addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Idaho yield, and, if so, to whom?

Mr. POPE. I desire first to make a statement. I rose to meet the suggestion made by the Senator from South Carolina that the Senate suspend consideration of this bill until a reprint could be made of the measure, including the amendments. I think we can proceed with the consideration of the amendments to the bill and make use of the time now at our disposal.

Mr. SMITH obtained the floor.

Mr. MURPHY. Mr. President, will the Senator from South Carolina yield long enough to permit us to have a vote on the amendments?

Mr. SMITH. No; I prefer to make my statement now.

Mr. President, I clearly see the strategy is to get the grain amendments all agreed to, and then the cotton amendments can take their chance. I maintain that they amend the text of the Grain Futures Act in different places. They are not addenda to the act. They are part and parcel of it.

Mr. NORRIS. Mr. President, will the Senator from South Carolina yield?

Mr. SMITH. I yield.

Mr. NORRIS. If it be true, and I think it is, that there is practically no objection except to one or two quite unimportant amendments, why not have them agreed to? That will leave the cotton amendment for consideration and disposition. After the other amendments are agreed to, if the Senator wants to have the bill reprinted, I see no objection to that course.

The Senator ought not to put anyone in the wrong attitude by suggesting that it is the strategy of those who want to defeat the cotton amendment to pursue this course. I am sure I do not want to defeat the Senator's cotton amendment. Here are some amendments pertaining to grain exchanges, to which, if we are correct in our understanding—as I think we are—there is practically no objection; but the cotton amendments are going to be the subject of some discussion. Why not dispose of the other amendments to which there is no objection and then take up the cotton amendments in the regular way?

Mr. SMITH. Mr. President, I know how the Senator feels, but, so far as I am concerned, the amendments which I have proposed and which the Committee on Agriculture and Forestry in good faith voted to report will be taken up along with the other amendments because they are amendatory of the text of the Grain Futures Act just as the other amendments are.

All I am asking is a fair and square discussion of and action upon the cotton amendments. I am going to fight for them just so long as it is possible for me to stay on my feet. I know the propaganda that is abroad. I could bring here telegrams and affidavits by the score.

It is to the everlasting disgrace of those of us who represent this great industry that while we were conducting hearings and an investigation extending over some 90 days, involving the very life of nearly one-third of this Nation, only three or four Senators representing the cotton States put in their appearance. When we came to the question of grain, the committee room was filled. Those who produce the commodity which I stand here representing, both as a producer and as a Senator, do not propose without being heard to have organized capital propaganda and far-flung organization throttle the cotton amendment. It may be a weak voice, but I propose to outline the situation de novo.

This is one time when, in the interest of the producer, we are attempting to regulate the market places. The Senate is going to regulate them for my commodity as well as the others; or, if I can prevent it, we are not going to make fish of one and fowl of the other. I know the disposition here. I know the propaganda that has gone forth. I know the sources from which it comes. The Senator from Nebraska heard part of it for he was present during the committee hearings. He knows the tremendous power behind that propaganda. I shall take the time of the Senate to read telegrams from practically every cotton State in the Union protesting about the matter.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Nebraska?

Mr. SMITH. Certainly.

Mr. NORRIS. I am not finding fault with what the Senator advocates. It seems to me, however, he ought to be willing that amendments to which there is no objection should be disposed of. I am not trying to prevent the Senator from doing all he says he wants to do, but he is holding up something to which he himself has no objection in order to do the other thing. I am not finding fault with the Senator if he insists upon pursuing that course, but the effect of it is that we are going to waste all our time and not pass the bill. I am afraid that is what will happen.

Mr. SMITH. Mr. President, with the condition in which the market finds itself, which was explained under oath before the committee—and the Senator from Nebraska heard it—I cannot describe how I feel when I realize, standing here representing a commodity which is of as much importance to America perhaps as any other, that not a voice but mine seems to be raised in behalf of those who are suffering more today than are the grain producers. Every commodity has risen to 70 or 80 percent of parity except cotton, and that is down to 40 percent of parity.

What help have I? Who from the cotton-growing States has opened his mouth here except in derogation of what I am attempting to do? Now, I am asked to sit down quietly and have those who properly represent grain put through their amendments. Then the battery of opposition from organized millions would be turned upon the cotton amendments. The Senator from Nebraska heard one witness testify under oath that he had 2,500,000 bales of cotton and in 6 years had made a net profit of $13,000,000. That is in the record. The Cotton Shippers Association are opposed to the bill. Why? Because they are organized to see that the markets of the country are controlled by organization and capital.

Mr. President, I voted to report from the committee, amendments proposed to the Grain Futures Act. If there is to be no reprint of the text so that Senators may understand it, then as soon as those amendments are agreed to I am going to take up the other amendments and read them as they would appear in their proper place in the text, and ask to have them voted on. The proper order would have been that these amendments should have appeared in the bill along with the others. I am determined that those whom I represent shall get some relief from the intolerable condition which exists.

Let me call the attention of the Senate to a significant fact: In May 1934, with the domestic consumption of cotton at its lowest ebb, with export of cotton to foreign countries at its lowest ebb, with the carry-over—that is, the old stock the Government and others had accumulated, aggregating something like 12,000,000 bales—cotton went to 14 cents a pound. Now, with organization getting in its work, with domestic consumption up to nearly 6,000,000 bales, with foreign exports greater than they have been for years, with a crop of hardly more than nine and three-quarter million bales, and the carry-over reduced to something like 8,000,000 bales, the price of cotton is from fifteen to $20 a bale less than it was in 1934; and who gives a snap about it?

Here we are, with the Senate deluged with letters and telegrams protesting against any interference with the beautiful game of the farmers producing cotton, and three concerns, or four at the most, distributing it at their sweet will!—the very condition which existed, or was alleged to exist, in the grain market—and here I stand, with the threat that "grain is all right, but cotton will be controversial"—why? The South is solid. It is not necessary to get any votes in the Senate from the South. The Civil War froze us into one party. Therefore, why extend the South any kind of political courtesy? But where it is doubtful, "For God's sake, let us get out and do something!"

I am tired of being made the victim of this situation. Senators should be big enough to view the matter on its merits and not sit down complacently and listen to propaganda. What do we get down there? Nothing. "They are hitched, anyhow." When the Republicans are in power, they say, "There is nothing there for us." When the Democrats are in power, they say, "What is the use of fooling with them? We have them, anyhow"; and it is like the old doctrine of predestination:

I can and I can't;
I will and I won't.
I'll be damned if I do.
And damned if I don't.

[Laughter.]

There you are. It is the most frightful situation in the world.

I will guarantee that what I am saying would not fall on deaf ears if there were more political hope than now exists. I hate to say that, but 28 years of bitter fighting has led me to know that this is true, horribly true. It is a matter of the greatest humiliation in the world to me that a product which means life or death, financially speaking, to my section of the country, shall be treated with indifference, if not with actual opposition.

I was gratified this morning when the committee acted upon these amendments just as they acted upon the other amendments. I am just as anxious to see grain relieved as I am anxious to see cotton relieved; and unless my health and strength fail me, I think they will go together, Mr. President. Yes; I think so. I think so. There is not a member of the committee but who knows that the discussion of these amendments appealed to their judgment. I will ask the Senator from Nebraska if that is not so.

Mr. NORRIS. Mr. President, I have tried time and time again to say that to the Senator; but, because I have agreed with the Senator on cotton, it seems to me it does not follow that amendments that have no objection to them, but are vital, should not now be disposed of. Then the Senator may discuss at his own sweet will the disputed items on cotton.

I am not complaining that the cotton Senators have not agreed. I am willing, when they get through debating the matter, to vote according to my best judgment. I think the Senator from South Carolina is willing, and, whether the amendments are voted up or whether they are voted down, I am willing to take the result and take my medicine.

The Senator from South Carolina ought to do that. He ought to let other cotton Senators who do not agree with him debate the matter; and when we get through, the Senate, like a jury, will pass on it.

Nobody is trying to prevent the Senator from having his say and doing what he thinks is right. There are many Senators here who are now following him. He will drive them away from him if he continues in this kind of a course, and says that unless he gets what he wants in cotton we shall have no legislation for grain or anything else.

Mr. SMITH. Mr. President, I know how the Senator from Nebraska feels, and I know how the Senator from South Carolina feels. Sometimes I have felt that I have been engaged in an absolutely hopeless task.

Mr. NORRIS. Mr. President——

Mr. SMITH. Let me finish what I have to say. That has not been because I have not had the support of the Senator from Nebraska. I have the support of some Senators who perhaps never saw a cotton field; and yet here we are, with this propaganda going from one end of the country to the other, and the amendments that I propose exactly in accord in their regulatory features with those that are proposed for grain; and yet——

Mr. NORRIS. Mr. President, now will the Senator yield?

Mr. SMITH. Yes.

Mr. NORRIS. I desire to make a suggestion to the Senator with the idea of getting somewhere with this proposed legislation. I suggest to him that he offer his cotton amendments now, and let the grain amendments follow. Let us take up the cotton amendments right now, debate them as long as anybody wishes to debate them, and then vote. Then let us take up the other amendments afterward.

If the Senator would like to have his cotton amendments considered first, let us take them up first. He may offer them at this moment, and they will be before the Senate for debate. The Senator from South Carolina may be heard, and those who oppose his amendments may be heard.

Mr. SMITH. Mr. President, I think that is a pretty good suggestion. I ask to have the clerk read the amendment on page 8, after line 26.

The PRESIDING OFFICER. The Senator from South Carolina offers an amendment, which will be stated.

The CHIEF CLERK. On page 8, after line 6, it is proposed to insert the following new paragraph:

Nothing in this section or in any other section of this act shall be construed to prevent a futures commission merchant or floor broker who shall have in hand, simultaneously, buying and selling orders at the market for different principals for a like quantity of cotton for future delivery in the same month, from crossing and executing such buying and selling orders at the then fair market price: *Provided*, That any such crossing and execution shall take place on the floor of the exchange where such orders are to be executed and shall be duly reported, recorded, and cleared in the same manner as other orders executed on such exchange.

Mr. SMITH. Mr. President, let me explain that amendment.

A man is a broker on the cotton exchange. He gets an order to sell a thousand bales, and simultaneously he gets an order to buy a thousand bales. The orders are from different individuals, in different parts of the country. He has an order to sell which would tend to put the market down, and an order to buy which would tend to put it up. It is alleged in the hearings that such orders have been received, and that the broker wishing to have the market go up would execute the buying order, and reserve the selling order until the buying order had its effect, and then put in the selling order.

Under this amendment, if a broker gets two such orders, he must offer them simultaneously on the floor, at the market, so that the effect of one will not be felt before the effect of the other is felt. That is all there is to the amendment; and it provides that this shall be done openly, instead of having the selling order executed and the other order transferred to someone else to execute for the broker at a different time.

That is all the amendment provides for. This is what is known in the Grain Act as cross selling. The amendment provides that if a broker gets two such orders under these circumstances, he shall execute them simultaneously at the market, so that the effect of one will not be offset by the precedence of the other.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from South Carolina.

Mr. CONNALLY. Mr. President, I desire to ask the Senator from South Carolina why the necessity for making that provision over the present law?

Mr. SMITH. Because it was testified before the committee that orders coming in would be segregated, and that the broker would execute his selling orders and affect the market, and then later put in his buying orders.

Mr. CONNALLY. I thank the Senator.

Mr. President, that does not seem to me to be a sufficient reason for adopting the amendment, because just a little while ago the Senator from South Carolina said that the depressing effect on the market of the sale was offset by the uplifting effect of the purchase. Of course, I understand now that he means that a sale might be made at 2 o'clock and force the price down a little, and a purchase might be made at 4 o'clock and bring it back.

Mr. SMITH. Yes.

Mr. CONNALLY. The Secretary of Agriculture, however, is not in agreement with the Senator from South Carolina as to the wisdom of this provision.

Mr. SMITH. All right; let us hear what he has to say about it.

Mr. CONNALLY. I desire to say that I regret very much the necessity of differing with the Senator from South Carolina on the subject of cotton. I realize that the Senator has spent many years in studying cotton from the legislative and market standpoints, and I congratulate him, and I am very sorry that I cannot follow his banner. I do not think the Senator, however, ought to manifest what seems to be some feeling on his part because everybody from the cotton States does not fall in line and shoulder arms and march right along behind the Senator from South Carolina.

Mr. SMITH. Just one moment. I do not want to have any of my colleagues shoulder arms and march along. I want them to shoulder arms and study the proposition as it is entitled to be studied.

Mr. CONNALLY. Mr. President, I have a very high regard and affection for the Senator from South Carolina, but, when it comes to a choice between the interests of our constituents and those of a Senator from another State we have to side with our constituents.

Mr. McKELLAR. Mr. President, may I ask either one of the Senators which amendment we are now considering?

Mr. CONNALLY. The first cotton amendment.

Mr. McKELLAR. The one on page 8, after line 26?

Mr. CONNALLY. That is it. The effect of the amendment would be, as I understand, that the broker could handle the whole transaction himself. It is as if there were a broker sitting up in New York, who would get a call from Florence, S. C., to sell a thousand bales of cotton, and also get a telegram from Texas to buy a thousand bales.

Mr. SMITH. That is correct.

Mr. CONNALLY. Without anybody's intervention at all, this broker takes a thousand bales out of one pocket and puts a thousand bales in the other pocket. It does not need to go through the exchange at all. Is that correct?

Mr. SMITH. Yes; the bill provides that. But in order to execute the order for his clients, he shall sell and buy at the market, offer this commodity for sale and seek that commodity for purchase at the market, in the open market. That was discussed before the committee.

Mr. NORRIS. Mr. President, will the Senator from Texas permit an interruption?

Mr. CONNALLY. I yield.

Mr. NORRIS. I have no object except to vote on the cotton amendments according to my conviction as to what is right. I do not understand that there could possibly be any harm in this amendment, and great good might result from it.

If the Senator were a commission man, and he received an order from me to buy a hundred bales of cotton, and at the same time he received an order from another man to sell a hundred bales of cotton, it would be within his power, as a commission man, as I understand, to injure either one of the customers, because he would have to go on the market, and if he went on the market and bought a hundred bales of cotton, it would have one effect, and if he went on the market and sold a hundred bales of cotton, that would have the opposite effect.

Suppose the Senator should go into the market and say, "I want to buy a hundred bales of cotton and I want to sell a hundred bales of cotton." That would give everybody a fair show. That would be open and aboveboard, and the effect on one side would just equal the effect on the other side. It would not cheat either one of the clients. Each one of them would get a square deal, as I see it. If that would not be the effect, I should like to be informed as to what the effect would be. Who would be hurt by that transaction?

Mr. CONNALLY. Mr. President, I wish to say to the Senator from Nebraska that it seems to me the case he puts presupposes absolute fairness and equitable dealing by the broker. Of course, in any case where that occurs, things will be all right. But the mere power which the Senator suggests the broker would have to control the market by balancing it would give the broker the power to do something else if he wished to do so.

Listen to what the Secretary of Agriculture said about it. This comment is with relation to another amendment of the Senator from South Carolina, at some other time, but it is the same proposition. In a letter, under date of May 18, to the chairman of the Committee on Agriculture and Forestry, the Senator from South Carolina [Mr. SMITH], the Secretary said:

> However, paragraph (c) of such section authorizes the offsetting or matching of purchase orders against selling orders received simultaneously without actual execution of the orders in the exchange ring or pit provided for such trading.

The Secretary further said:

> There may be times when better executions can be effected by commission merchants by the simple process of offsetting or matching orders but it seems to us to be a practice fraught with temptation, and the experience of the Grain Futures Administration has suggested the desirability of prohibiting such practice by law.

Mr. SMITH. Mr. President, that is exactly the point I am making, and that is exactly what is provided in the Grain Futures Act, that they cannot have these cross sales to the detriment of either one of the clients. That is exactly what the Secretary says, and what is in the Grain Futures Act, that it must be a simultaneous transaction, and not prejudice the market by executing one order at this hour and later on getting the benefit of the effect of that and executing the other order.

Mr. FLETCHER. That is in the amendment.

Mr. CONNALLY. Mr. President, let me ask the Senator from South Carolina a question. In section 10 of the old amendments, page 44, it was provided that all purchases and sales of cotton for future delivery should be made by public outcry. Is that in the amendments we are considering?

Mr. SMITH. Yes.

Mr. CONNALLY. Paragraph (c) in the former amendments, to which I am now addressing myself, was a subsection of that clause which provided that the transactions must be by public outcry, and this paragraph (c) is a weakening of the effect of that provision.

Mr. SMITH. Oh, no. It is nothing in the world but a restatement of it. There is too great a temptation, as the Secretary says, unless we prohibit it by requiring that the two transactions shall be simultaneous. The letter of the Secretary is exactly in accord with what I have put into the amendments, and what occurs in the Grain Futures Act.

Mr. CONNALLY. I beg the Senator's pardon, but I do not understand it in that way. I will confess that I am not familiar with the technical manipulations and operations of cotton exchanges, but I am trying to become familiar with them—I am studying them. I am going by what the Secretary of Agriculture says as to the operation of the Grain Futures Act.

Mr. SMITH. The Secretary refers to precisely what we are attempting to correct in the Grain Futures Act and also in this amendment.

Mr. POPE. Mr. President, will the Senator from Texas yield to me?

Mr. CONNALLY. I yield.

Mr. POPE. Let me ask the Senator from South Carolina whether there is anything in the original act—that is, the Grain Futures Act, without this amendment—which would prevent a broker from representing two different traders in just exactly the same way that is described here?

Mr. SMITH. No.

Mr. POPE. In other words, the Senator's statement here is as to the sort of thing that would occur if the bill were enacted as it now stands, without this amendment?

Mr. CONNALLY. That is it exactly.

Mr. SMITH. No.

Mr. POPE. What does the amendment accomplish, then?

Mr. SMITH. The amendment simply prohibits the practice of making cross sales.

Mr. POPE. Let me ask the Senator this question. Since cotton is in the bill now, would not the whole section relating to wash sales, cross trades, accommodation trades, and

all such pernicious practices, apply to cotton and the cotton exchange so as to amply protect traders on the exchange from those very practices?

Mr. SMITH. No, Mr. President; the point I am making is that the nature of the cotton business is different from other businesses. When one brings forward a load of grain and it is graded he cannot follow its identity to save his life. That ends it. It is put in an elevator, and he has a receipt for a certain character of grain. An individual bale of cotton can be followed to the Orient and identified, and its character determined, for its marking is a matter of record until it goes to the breaker room in the factory.

Mr. CONNALLY. Mr. President, it seems to me the Senator from Idaho has put his finger on the point in the case. We have included cotton in the general Grain Futures Act. It is treated there as a commodity just like grain or any other commodity. If what the Senator from South Carolina says he wants to do is already being done with grain, there is no occasion to insert this particular provision in the form of an independent amendment.

The Senator says that the amendment is intended to prohibit the doing of what I suggested could be done. Let us see what the amendment provides:

Nothing in this section—

That evidently refers to the general section in the Grain Futures Act which prevents this sort of thing. I will ask the Senator from Idaho to look that matter up. It is on page 8, line 26:

Nothing in this section or in any other section of this act—

A sweeping provision—

shall be construed—

To prohibit something? No—

to prevent a futures commission merchant or floor broker who shall have in hand, simultaneously, buying and selling orders at the market for different principals for a like quantity of cotton for future delivery in the same month, from crossing and executing such buying and selling orders at the then fair market price: *Provided*, That any such crossing and execution shall take place on the floor of the exchange where such orders are to be executed and shall be duly reported, recorded, and cleared in the same manner as other orders executed on such exchange.

Let me suggest, Mr. President, under that provision if it should be enacted, what would prevent a broker from getting an order at 10 o'clock this morning and keeping it in his pocket until 4 o'clock this afternoon until he got an order on the other side, and by that means probably manipulating the market?

Mr. SMITH. No, Mr. President; the provision says "simultaneously."

Mr. CONNALLY. Simultaneously so far as we know, but there would be no reason on earth why the broker should not do as I suggested. That is what the Secretary of Agriculture had in mind when he said that the view of the Department is that this kind of a provision is subject to the temptation that assails the brokers and the manipulators on the cotton exchange.

Mr. POPE. Mr. President, will the Senator yield?

Mr. CONNALLY. I yield.

Mr. POPE. I will say to the Senator that the section which it is proposed to amend prohibits generally cheating, defrauding, making false reports, or bucketing orders, and then in the next section there is prohibition against crosstrade and the other practices to which we have referred. The point about the amendment, it seems to me, is that it is an exception to the general provision as to cheating, defrauding, and making false reports.

Mr. SMITH. Oh, no, Mr. President. The Senator should be fair about this. The provision simply provides that when orders come in simultaneously, as they do, that one shall not be pocketed and the other sold. The very language which the Senator read from the Secretary of Agriculture referred not to this provision alone, but to the general practice of using one order to offset another order. There is not a Senator who believes that a broker, when he receives two orders, one to buy and one to sell, should be allowed to use one order even incidentally to the detriment of the other.

Mr. CONNALLY. Mr. President, let us see what the amendment is about. The Senator from Idaho [Mr. POPE] referred to it. Section 4 (b), on page 7 of the bill with which we are dealing, provides:

SEC. 4. (b) It shall be unlawful for any member of a contract market, or for any corresponding agent, or employee of any member, in or in connection with any order to make, or the making of (1) any contract of sale of any commodity in interstate commerce, or (2) any contract of sale of any commodity for future delivery made, or to be made, on or subject to the rules of any contract market for or on behalf of any person if such contract for future delivery is or may be used for (a) hedging any transaction in interstate commerce in such commodity or the products or byproducts thereof, (b) determining the price basis of any transaction in interstate commerce in such commodity, or (c) delivering any such commodity sold, shipped, or received in interstate commerce for the fulfillment thereof—

What is unlawful? What is it that is condemned?—

(A) to cheat or defraud or attempt to cheat or defraud such person;

(B) willfully to make or cause to be made to such person any false report or statement thereof, or willfully to enter or cause to be entered for such person any false record thereof—

What else is condemned?—

(C) willfully to deceive or attempt to deceive such person by any means whatsoever in regard to any such order or contract or the disposition of execution of any such order or contract or in regard to any act of agency performed with respect to such order or contract for such person; or—

To do what? This is one of the things we are aiming at.

(D) to bucket such order, or to fill such order by offset—

Mr. SMITH. Bucketing does not have anything to do with it.

Mr. CONNALLY. Does the Senator desire me to yield to him?

Mr. SMITH. No, Mr. President; I merely said that bucketing does not have anything to do with it.

Mr. CONNALLY. The language is—

to bucket such order.

What is bucketing? Bucketing is when the broker wants to take the risk himself. When he holds an order from 10 o'clock in the morning until 4 o'clock that afternoon to see if he cannot get an order on the other side he has the opportunity to bucket an order, or to make a profit, or to make a loss, as the case may be, according to his judgment on the fluctuations of the market. That is one of the things we are trying to prevent by the legislation now before us—

To bucket such order, or to fill such order by offset.

I should like the Senator from Nebraska to listen to this language. It is dealing with grain as well as cotton.

(D) to bucket such order, or to fill such order by offset against the order or orders of any other person, or willfully and knowingly and without the prior consent of such person to become the buyer in respect to any selling order of such person, or become the seller in respect to any buying order of such person.

In one paragraph we condemn bucketing and offsetting of orders in grain. If it is sound to do it in grain, why should we except cotton, I ask the Senator from Nebraska? If it is fair and just to say that a man operating on the Chicago wheat pit——

Mr. NORRIS. Mr. President, if the Senator desires to ask me that question, I will say no.

Mr. CONNALLY. I am appealing to the Senator from Nebraska.

Mr. NORRIS. I have no hesitancy in answering the question the Senator asked me.

Mr. CONNALLY. I thank the Senator. My reference was not hostile, because I knew the Senator would agree to it.

Mr. NORRIS. I have no objection to curtailing what is wrong on the cotton market as well as on the grain market.

Mr. CONNALLY. I am sure of that. That is why I appeal to the Senator. I knew when he knew the facts about the amendment he would agree that it ought not to

be adopted. That is why I addressed the question to him to divert his attention from the very interesting piece of literature he was reading at the moment.

Mr. President, the Senator from Nebraska and other members of the Committee on Agriculture and Forestry say that it is necessary to insert paragraph (D) as to grain and other commodities, and to prevent the very thing in the case of those commodities which the amendment of the Senator from South Carolina [Mr. SMITH] specifically authorized in the case of cotton.

Mr. SMITH. Mr. President, in my own time I shall explain the difference between bucketing and cross sales.

Mr. CONNALLY. Mr. President, I do not contend that bucketing and cross sales are identical. What I did say was that this would give the dealer an opportunity to bucket if he wanted to. He could hold the order from 10 o'clock in the morning until the afternoon.

Mr. SCHWELLENBACH. Mr. President, will the Senator yield?

Mr. CONNALLY. I yield.

Mr. SCHWELLENBACH. I should like to submit a question to the Senator from Texas which I think all the Members of the Senate from the grain States would like to hear discussed. We had brought to us from the House a bill to regulate grain exchanges, and with the amendments we have worked out we feel that it is a desirable bill. The bill included cotton. The Senator from South Carolina, the chairman of the committee, takes the position, and took the position before the committee, that cotton was different from grain; that there were certain conditions existing which required a different treatment of cotton, and that therefore it was not desirable to have cotton regulated by the same agency of the Government or the same branch of the department of Government which regulated grain, and that it should be handled by some other department in the Department of Agriculture.

We Senators from the grain States do not know about the details of the handling of cotton. What we should like to have discussed is whether cotton can be handled by the same agency and in the same way and under the same rules and regulations as to grain. We think we have worked out a grain bill which is desirable. We do not know whether cotton can be handled in that way or not; and, so far as we are concerned, we are perfectly anxious and willing that cotton shall be handled in the way that the Members of the Senate who know about cotton and are interested in it know will work out. However, we do not feel that the cotton side of the question should interfere with the regulation of the grain side. We should like to have all the Senators from the cotton States discuss that one question, which our chairman has presented to us, who says that cotton is different from grain and cannot be handled in the same way as grain or by the same agency.

Mr. CONNALLY. I am glad to have the interruption of the Senator from Washington. Let me suggest, however, at the outset that when he says he does not want the Grain Futures Act interfered with by cotton, that so far as I know the Senators interested in cotton have shown no disposition to interfere with the grain part of the bill. We are in sympathy with and in hearty accord with the wishes and aims of the Senators from the grain States. However, if cotton, being an agricultural product, must be handled with the same legislation as grain, we crave your indulgence and your patience, because we cooperated with the grain people and expect to do so in the future.

Mr. SCHWELLENBACH. Mr. President, I should like to say that there was nothing in my remarks intending to suggest the thought that there was any desire on the part of the cotton people to interfere with the grain part of the act.

Mr. CONNALLY. No, Mr. President.

Mr. McGILL. Mr. President, will the Senator yield?

Mr. CONNALLY. I yield.

Mr. McGILL. There has been no disposition on the part of the representatives of grain States to exclude cotton from the same provisions of law as apply to grain. It has simply been a question with us as to whether or not the cotton States desire a different law from that which the grain States desire.

Mr. CONNALLY. I thank the Senator from Kansas.

Mr. POPE. Mr. President, will the Senator yield?

Mr. CONNALLY. I yield.

Mr. POPE. I should like to ask the Senator from Texas if the same practices exist on the cotton exchange in a general way that exist on the grain exchanges? In listening to the testimony it has seemed to me that the same conditions and practices existed with regard to cotton as existed with regard to grain. There may be some difference in detail, but, on the whole, the same sorts of transactions are engaged in and the same sorts of evils exist in the exchanges as to cotton and as to grain. Then, if it be true that the same condition exists and the same practice prevails, why would not the proper way to handle the situation be to include cotton in this bill, subjecting cotton exchanges, therefore, to the same regulations as those to which grain exchanges are subjected, and dealing in the same way with vicious practices which have grown up in some of the other exchanges? That is a matter that has interested me for many days.

Mr. CONNALLY. I thank the Senator from Idaho. The Senator's question presupposes that I know about both cotton exchanges and wheat and grain exchanges more than is known by the Senators from the grain-producing States. That is a very violent presumption, for I know very little about either kind of exchanges and their operations. I never bought a bale of cotton or sold one on an exchange in my life; I never bought a bushel of wheat or other grain or sold one on an exchange; but I know from reading in the press and otherwise that brokers and operators on the exchanges, whether grain exchanges or other exchanges, in general, indulge in the same practices. They are the same kind of human beings, they have the same sort of temptations, and they usually find an outlet in the same channels.

Mr. President, if that be true—and no one denies it—why is it that one law would be good for the wheat exchanges and a different law for the cotton exchanges? The Senator from South Carolina at first did not want cotton included in the Commodity Exchange Act at all, as I understood his position. He secured an amendment at one time in the committee to strike out cotton entirely. Is not that true, I will ask, in turn, the Senator from Idaho?

Mr. POPE. The Committee on Agriculture and Forestry, of which the distinguished Senator from South Carolina is chairman, reported the House bill striking cotton from its provisions.

Mr. CONNALLY. The committee struck cotton from the bill. When this bill passed the House of Representatives, it contained provisions for cotton just as in the case of any other commodity; there was no distinction. I assume that the House Committee on Agriculture, in its hearings and its study of this measure, ascertained whether, according to its view, they should be dealt with in the same fashion. They did determine the question and brought in a bill applying to cotton, wheat, and other grain, all in the same way. Now, why should we have a different rule?

If paragraph (D), which I read a moment ago, is good in the case of corn and oats and wheat, why should the Senator from South Carolina insist when it comes to cotton that we must adopt a different provision? Remember what I read:

(D) To bucket such order, or to fill such order by offset—

The bill specifically prohibits in the case of grains the offsetting of one order by another order. Why is that provision made? Because the Secretary of Agriculture has stated that the operations of the grain exchanges have proved that practice to be bad, have proved it to be filled with temptation in the case of grain exchanges. Why the necessity, then, to have a different provision in the case of cotton exchanges?

Mrs. CARAWAY. Mr. President——

Mr. CONNALLY. I yield to the Senator from Arkansas.

Mrs. CARAWAY. Would the fact that cotton is perishable while grain is not perishable make any difference in connection with the futures market?

Mr. CONNALLY. The Senator from Arkansas asks the Senator from Texas whether cotton, not being perishable, and wheat and grain, being more or less perishable, would have any effect on the futures market? Frankly, like many questions that intelligent and charming women ask, that is not easily answered. [Laughter.] I do not know just what effect it would have on the market, but basically I should assume as to a product that is not perishable there would be less danger of fluctuation by reason of that fact than if it were a perishable product and subject to the hazards of deterioration and weather and conditions of that character.

Mr. McKELLAR. Mr. President——

Mr. CONNALLY. I yield to the Senator from Tennessee.

Mr. McKELLAR. I desire to ask a question, merely for information. What evil practice now being indulged in is this amendment designed to protect the public against?

Mr. CONNALLY. The Senator refers to the amendment offered by the Senator from South Carolina?

Mr. McKELLAR. Yes; to the amendment offered by the Senator from South Carolina. What I wish to know is just what evil practice that now exists and that is now indulged in is this amendment designed to do away with?

Mr. CONNALLY. As I see it, the amendment of the Senator from South Carolina is a softening of the provisions of the main bill; it is an exemption from its operations. It exempts the cotton broker from the provisions of paragraphs A, B, C, and D of the main bill, and provides that in the case of a cotton broker he can do the things which are prohibited to the grain broker.

Mr. SMITH. Mr. President, will the Senator allow an interruption there?

Mr. CONNALLY. I am glad to yield to the Senator from South Carolina.

Mr. SMITH. Mr. President, the amendment is diametrically opposite to what the Senator from Texas has said. It provides that when the broker gets an order to sell and an order to buy he shall not bucket either one; that he shall offer them on the market at the market price simultaneously and not hold one back; that he shall not sell one contract, for instance, that would tend to put the market down and then, later on, execute the other order. We ask that he not be allowed to bucket one; that is, buy it himself and then wait to see if he can "do" the market, and report to his client what he has bought at, but that he shall buy at the market open and aboveboard.

Mr. McKELLAR. Does it go through the regular channels of the exchange itself?

Mr. SMITH. Let me explain. Say, I am a broker and I get an order from the Senator from Arkansas and one from the Senator from Tennessee, one to buy and one to sell. In place of bucketing of them around, I am to offer them in the ring, open and aboveboard, the order to sell and the order to buy at the market, and let the orders be executed there in the presence of all men. It is just exactly the opposite of what the Senator from Texas is trying to make appear. How does it exempt anybody? It simply emphasizes and makes specific and unlawful the very practice referred to in the particular paragraph of the Grain Exchange Act. It brings it down to a specific case and makes it unlawful to do that thing.

Mr. McKELLAR. What is the meaning of the words—and I ask for information only—on page 1 of the amendment of the Senator from South Carolina—"from crossing and executing such buying and selling orders at the then fair market price."

To my mind, that indicates that the broker may establish the fair market price. I do not think those words should be in the amendment under any circumstances.

Mr. SMITH. I do not think the word "fair" should be there. It should be at the market price for the orders at that time. That is what it means and that is all it does mean.

Mr. McKELLAR. Yes; but it would give the broker, it seems to me, the right to fix the price rather than the price that exists on the market at the time.

Mr. SMITH. He must sell at the market, as is indicated by the provision.

Mr. CONNALLY. Let us see now if that is true. The Senator from South Carolina—and I speak with all respect—now says that his amendment prohibits just what the Senator from Tennessee is talking about and prohibits just what is inveighed against in the main bill. Let us see if it does. I read what is prohibited in paragraph D of the bill. Among other things, it is prohibited—

To bucket such order or to fill such order by offset against the order or orders of any other person—

That is prohibited by the main bill—

or willfully and knowingly and without the prior consent of such person to become the buyer in respect to any selling order of such person or become the seller in respect to any buying order of such person.

What does the amendment of the Senator from South Carolina provide?—

Nothing in this section—

Nothing in that section—

or in any other section of this act shall be construed to prevent a futures commission merchant or floor broker who shall have in hand simultaneously buying and selling orders at the market for different principals for a like quantity of cotton for future delivery in the same month from crossing and executing such buying and selling orders at the then fair market price.

If this amendment does not intend to soften the terms of the original bill it would not be offered; there would be no sense in offering an amendment which does the same thing that the bill already does. But the amendment takes the teeth out of the main bill not as to grain but as to cotton only, and the cotton broker will be permitted to do that which in the case of the grain broker is unlawful and under the prohibition of the law.

Mr. SMITH. Mr. President, in reference to that statement——

Mr. CONNALLY. I shall be glad to yield for a question, but the Finance Committee is in session, and I must go to it as quickly as possible. I want to be courteous to the Senator, but the Senator is in charge of the bill and will have plenty of opportunity to discuss it. I want to get my views in the RECORD and conclude.

This is the Senator's amendment:

Provided, That any such crossing and execution shall take place on the floor of the exchange where such orders are to be executed and shall be duly reported, recorded, and cleared in the same manner as other orders executed on such exchange.

The Senator from Tennessee suggested that under the language of the amendment it might be possible for a broker to fix the price of the selling orders. Suppose it does not permit it as a matter of law, what is to prevent him from doing it, in fact, if we leave the matter open and give him the opportunity of offsetting one order against another? He can accept the orders. He might violate the law. Of course, those who steal and rob and commit other crimes all violate the law. What would prevent him from telling one correspondent "your order came in and I could not market it at that figure"?

Mr. SMITH. Mr. President, may I ask the Senator a question?

Mr. CONNALLY. I am glad to yield to the Senator for a question.

Mr. SMITH. Suppose the broker receives the orders simultaneously, what would he do with them under that provision where he is prohibited from offering both of them at the market?

Mr. CONNALLY. Here is the bill that applies to cotton as well as grain. The first thing provided is that the broker cannot bucket it and he cannot fill it by offsetting it. He would have to come in and put them both on the exchange just as he would do if he got one of them alone. He would have to sell a thousand bales for John Smith and buy a thousand bales for Henry Brown.

Mr. SMITH. That is what the amendment provides.

Mr. CONNALLY. That is the right way to do it, but the Senator wants to exempt from official operation that sort of thing and let the broker do it that way in his office.

Mr. SMITH. Oh, no; the Senator does not understand it. It does not do anything of the kind and does not even intimate any such thing.

Mr. CONNALLY. Then what does it do?

Mr. SMITH. It says he shall execute it on the exchange, open and aboveboard.

Mr. McKELLAR. Mr. President——

The PRESIDING OFFICER (Mr. RUSSELL in the chair). Does the Senator from Texas yield to the Senator from Tennessee?

Mr. CONNALLY. I am glad to yield.

Mr. McKELLAR. It seems to me it is very necessary to provide that where a broker gets two orders simultaneously he shall be required to go on the floor of the exchange and execute those orders. He cannot execute them simultaneously, but one at one moment and the other at another moment. There should be exchange operations. No authority should be left in him to determine the matter.

What bothers me about the amendment are the words in the last line of the first page and the first line of the second page reading as follows:

> From crossing and executing such buying and selling orders at the then fair market price.

The word "fair" unquestionably would indicate discretion in someone.

Mr. CONNALLY. There cannot be two market prices.

Mr. SMITH. The thing I had in mind was that he could not shade it on account of anything.

Mr. McKELLAR. Someone has to determine what "the fair market price" is, and apparently the broker is allowed to fix what is "the fair market price." I think the word "fair" ought to be stricken out.

Mr. CONNALLY. If it goes through the exchange regularly it is bound to be at the market price.

Mr. SMITH. Of course it is.

Mr. CONNALLY. If we are going to let the brokers say what the fair market price is, it will not go through the exchange.

Mr. McKELLAR. That is the difficulty I find in reading the amendment.

Mr. CONNALLY. If it goes through the exchange like the original bill intends it should go, it has to be at the market price, because there is the market price quoted; but if we allow the broker to offset and juggle the two orders in his office, how do we know what is going to be the market price?

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from South Carolina.

Mr. SMITH. Mr. President, has the Senator from Texas yielded the floor?

The PRESIDING OFFICER. He has.

Mr. SMITH. Mr. President, I shall not take much of the time of the Senate. When the language is so plain, what is the use for me to attempt to explain what has been attempted to be confused? The effect of the amendment is exactly the opposite of the argument that has been made. The broker shall not be allowed to sell and buy when acting in the capacity of a broker. He gets an order to sell and an order to buy. He must execute them and he ought to be allowed to execute them. He should have no interest except to get the fair market return on his orders. Therefore, he sells without prejudice and he buys without prejudice—a thousand bales to sell and a thousand bales to purchase at the market. As quickly as those orders can be executed the thing is over and done. That is all the amendment means.

Mr. ROBINSON. Mr. President, will the Senator yield?

Mr. SMITH. Certainly.

Mr. ROBINSON. I notice that in all the illustrations used it is assumed that the broker receives an order to buy and an order to sell simultaneously for exactly the same amount. I apprehend that in the regular course of business he might receive an order to sell a thousand bales and an order to buy, say, 5,000 bales.

Mr. SMITH. I think that is taken care of under the other amendment. I was undertaking in this amendment to take care of those cases which were developed in our investigation where the orders were similar and of the same volume and received simultaneously.

Mr. ROBINSON. Then the amendment applies only to cases where the broker has an order to buy and an order to sell at the same time, the two orders involving identical amounts?

Mr. SMITH. Yes; and he is not allowed then to use one to depress the market to the same extent that the other might raise it, but he must execute them at the market.

Mr. ROBINSON. If he must sell at the market in a regular transaction and must have the transaction recorded, as I think the language indicates is required, what is the effect or advantage of the use of the words "at the then fair market price?" The use of the words "fair market price" implies discretion somewhere to determine what the price is. If he is selling at the market, he sells at the market price and not at what we term "the then fair market price."

Mr. SMITH. The object I had in view there was that on account of grade or color or other element, he should not shade it in his report to the party for whom he bought or executed the order. I am perfectly willing that the word "fair" shall be eliminated and to have it read "at the market price."

Mr. ROBINSON. May I ask if the provisions in the bill relating to grain transactions forbid a broker to execute orders for purchase and sale at the market?

Mr. SMITH. Yes, sir; they do. They prohibit any cross-sale, as the Senator will read in the bill.

Mr. ROBINSON. The object of that being to prevent deception and fraudulent practices?

Mr. SMITH. Yes; that is correct. That is where the orders are simultaneous, and the effect of one would offset the effect of the other.

We had testimony before the committee as to the necessity of this very kind of an amendment. Anyone reading it will see that it would be fair to the broker and fair to the buyer and fair to the seller—that is, the man who has a selling order and the man who has a buying order. That is the reason why it was incorporated in the bill.

Mr. President, I am astounded that any question of "bucketing" should be brought into this equation, because this is the very thing that will prevent it. This provision requires a broker to go on the floor and transact his business openly and aboveboard, and to have orders of this kind recorded, and let them go to the clearinghouse just as if the broker had gotten a single order.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from South Carolina [Mr. SMITH].

Mr. McKELLAR. Mr. President, I believe the Senator from South Carolina said he would strike out the provision about "fair" market price.

Mr. SMITH. I am perfectly willing to have the amendment amended in that way.

Mr. McKELLAR. I move to amend the amendment of the Senator from South Carolina by striking out the words "then fair" in line 1, page 2, of the amendment, so as to read "at the market price."

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from South Caroline, as amended. [Putting the question.] By the sound the noes seem to have it.

Mr. SMITH. I call for a division.

On a division, the amendment, as amended, was rejected.

Mr. SMITH. Mr. President, I see the tendency of what is going on. In the circumstances, with a matter as plain and palpable as this is, I do not believe what has just been

done should be taken as final action on this amendment. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Adams	Clark	Holt	Overton
Ashurst	Connally	Johnson	Pittman
Austin	Coolidge	Keyes	Pope
Bachman	Copeland	King	Radcliffe
Bailey	Couzens	La Follette	Reynolds
Barkley	Davis	Lewis	Robinson
Benson	Dieterich	Lonergan	Russell
Bilbo	Donahey	Long	Schwellenbach
Black	Duffy	McAdoo	Sheppard
Bone	Fletcher	McGill	Shipstead
Borah	Frazier	McKellar	Smith
Brown	George	McNary	Steiwer
Bulkley	Gerry	Maloney	Thomas, Utah
Bulow	Gibson	Metcalf	Townsend
Burke	Glass	Minton	Truman
Byrd	Guffey	Murphy	Tydings
Byrnes	Hale	Murray	Vandenberg
Capper	Harrison	Neely	Van Nuys
Caraway	Hastings	Norris	Walsh
Carey	Hatch	Nye	Wheeler
Chavez	Hayden	O'Mahoney	White

Mr. NEELY. Mr. President, I repeat the announcement made on a former roll call in regard to the absence of the Senator from Colorado [Mr. COSTIGAN], the Senator from Nevada [Mr. MCCARRAN], and the Senator from Alabama [Mr. BANKHEAD] on account of illness.

I also announce that the senior Senator from Oklahoma [Mr. THOMAS], the Senator from Kentucky [Mr. LOGAN], and the junior Senator from Oklahoma [Mr. GORE] are unavoidably absent.

The PRESIDING OFFICER. Eighty-four Senators having answered to their names, a quorum is present.

Mr. MCNARY. Mr. President, I should like to ask the Senator in charge of the bill whether it is his desire at this time to go on with the consideration of his amendment. Does the Senator propose to have a vote at this time?

Mr. SMITH. Mr. President, I realized that there were very few Senators present, and it looked as though the few who were here did not fully understand the amendment. I do not think we will have a vote on the pending amendment at this time.

I may say that I have confidence in the common sense of the Senate, and I should like to submit this observation on the amendment. Suppose a broker were to receive simultaneously an order to sell and an order to buy the same amount of a given commodity, whether of grain or of cotton. Under the provisions of the Grain Futures Act he could not execute both orders. That act prohibits a cross sale. I have provided that where such a thing occurs he should be allowed to sell simultaneously at the market.

The logic of the situation is that a broker, if he is going to sell today, must discard all purchase orders. I want every Senator present to hear that; if a broker is in the market with clients, he must discard either all buying orders and execute only selling orders, or vice versa. He cannot execute buying and selling orders at the same time.

Of course, if a broker had an order for October to sell and an order for January to buy he might execute them at different times, but if he has two orders for the same month at the same time, he must discard either one or the other. I have merely provided that where such a thing occurs he may sell at the market.

Mr. McGILL. Mr. President, will the Senator yield?

Mr. SMITH. I yield.

Mr. McGILL. It is proposed in the bill that certain rules be fixed so far as concerns trading in grain and other commodities, with the exception of cotton, and that will be accomplished if the Senator's amendment shall be agreed to. What is interesting us who are from States other than those which produce cotton and what we would like to be informed about, is why there should be a different rule with reference to cotton and any other commodity. On an answer to that question our votes will largely depend. Unless it can be demonstrated that there is a reason for a different rule regarding cotton from that obtaining with regard to other commodities, I shall have to vote against the amendment of the Senator.

Mr. SMITH. I really think the rule ought to apply to grain as well as cotton. Where a broker receives an order to buy and an order to sell the same amount of grain on the same market in the same month, he should not be required to reject one and proceed with the other, but if the amounts are the same, if it is the same market and in the same month, he ought to be allowed to offer them both simultaneously, because it would not be fair to his clients to provide otherwise. I think in place of applying to cotton alone, the provision should be modified so as to apply to both grain and cotton.

Mr. McGILL. Then, it is the Senator's position that there is no real distinction between commodities?

Mr. SMITH. In this particular I do not think there is, but later on I will show a distinction.

Mr. ROBINSON. Mr. President, many Senators are not familiar with details pertaining to market transactions. It, therefore, follows that in the consideration of language which necessarily is more or less technical there is difficulty in giving the language proper application.

With respect to the particular amendment just voted on by the Senate, having given attention to the debate and the explanations which have been made respecting the amendment, I reached the following conclusions:

First, that the object of the legislation is, or should be, to prevent deceptive or fraudulent transactions. Any language which accomplishes that end is worthy of consideration. Second, there ought not to be adopted language which will have the effect of preventing honest transactions. A broker has the right to buy and sell for his clients. He has no right to do it in a way that will sacrifice the interests of one client for the benefit of another, or the interests of any client for his own personal advantage. His relationship to the subject, as I understand it, is that of an agent. Under the practice that prevails, brokers may at the same time take and execute bona-fide offers for the purchase and for the sale of commodities on exchange.

The law should not be so framed as to make a broker either a "bull" or a "bear." The broker ought not to be permitted, much less required, to exercise his influence and the influence of his clients to manipulate the market or to affect the market further than naturally results from the transactions in which he engages.

What is the situation of a broker, for instance, who this morning, before the exchange opened, received an order to sell and an order to buy from different individuals the same amount of a certain commodity? Under the proposed act, as it is framed, must he either elect to execute one of the orders to the exclusion of the other, or must he refrain from carrying out the orders?

Mr. POPE. Mr. President, will the Senator yield?

Mr. ROBINSON. I yield.

Mr. POPE. The interpretation which the Senator has just given to the law as it stands I think is incorrect. The only thing which is prohibited is a cross trade. A cross trade means a fictitious trade, where one broker deals with another broker, and they register the trade as though it were an honest bona-fide trade. It is strictly a fictitious trade. That is the meaning of a cross trade as the term is used according to the Cotton Futures Administration.

Mr. ROBINSON. It is a deceptive and, in a sense, a fraudulent transaction. I am speaking now of a bona-fide transaction. Take the case I cited: This morning, before the exchange opened, a broker received an order to purchase a thousand bushels of wheat from one person and received from a different person an order to sell a thousand bushels of wheat. What can the broker do?

Mr. POPE. Will the Senator yield?

Mr. ROBINSON. Certainly.

Mr. POPE. Under my interpretation of the law as it stands, without the amendment of the Senator from South Carolina he can proceed and execute both of those orders by

registering them in the usual way, even though they be simultaneous. That is the reason why I said, a few minutes ago, that this amendment, in my opinion, does not change the laws as it now exists.

Mr. ROBINSON. However, it has been contended that the amendment modifies very materially the provision that is in the bill, as reported, relating to grain exchanges. It has been contended on the floor of the Senate that the amendment proposed by the Senator from South Carolina to this section completely changes the provisions in the bill.

Let me follow through, now, on the thought of the Senator from Idaho. His thought is that the interpretation which the amendment places on the proposed act is sound. The language is "Nothing in this section shall be construed to prevent", and so forth. The Senator from Idaho merely says that the language is unnecessary, and does not change the statute. However, it is contended by other Senators that it marks a very material and a vicious change in the proposed law.

Mr. SCHWELLENBACH. Mr. President, will the Senator yield?

Mr. ROBINSON. I yield.

Mr. SCHWELLENBACH. I should like to suggest that the word "cotton" be stricken out, and the words "a commodity" be inserted. I think the words "crossing and" should also be stricken out as the word "crossing" raises some doubt as to the purpose.

Mr. SMITH. Mr. President, the Senator from Idaho misinterprets that word. The word "crossing" means that a broker will cross a purchase with a sale.

Mr. ROBINSON. I think the suggestion of the Senator from Washington is a good one.

Mr. SMITH. I do, too.

Mr. ROBINSON. Together with the suggestion of the Senator from Tennessee which has already been agreed to, it eliminates the implication that it might be a questionable transaction. The sale is not crossed in any objectionable sense, but the broker goes on the open market and offers both the purchase and the sale at the same time, and the transactions are made of record. I think by the elimination of the words "crossing and" the language should be acceptable, and that there ought to be no objection to its incorporation in the bill.

What I am anxious to do is not to penalize an honest transaction but to give the fullest possible freedom to any fair business transaction, and at the same time do everything that is reasonable and necessary to prevent the crooks that sometimes operate on the market from influencing it.

Mr. POPE. Mr. President, with the amendment suggested by the Senator from Washington, I think there is nothing undesirable about the amendment of the Senator from South Carolina.

Mr. ROBINSON. As a matter of fact, this discussion is not in order at this time.

The PRESIDING OFFICER. The Chair will state that the amendment offered by the Senator from South Carolina was rejected by the Senate.

Mr. ROBINSON. Yes; but we all understand that it has not been finally disposed of. The Senator from Texas, I see, has returned to the Chamber. I had just stated, before the Senator came in, that with the elimination of the words "crossing and", on page 1, in line 8, and the elimination of the words "then fair", which has already been agreed to, I see no objection to this amendment.

The PRESIDING OFFICER. The Chair is advised that earlier in the day several amendments were offered by the Senator from Iowa [Mr. MURPHY], and they are still on the clerk's desk. The Senator from Iowa requested unanimous consent that they be agreed to en bloc, but objection was heard. Subsequently that objection was withdrawn.

The amendments offered by the Senator from Iowa will be stated.

The CHIEF CLERK. The amendments proposed by Mr. MURPHY are:

On page 1, line 3, before "title", insert "1934 ed.,".
On page 1, line 4, strike out "This" and in lieu thereof insert "That this".
On page 1, line 6, before "title", insert "1934 ed.,".
On page 2, lines 5 and 6, strike out "(U. S. C., title 7, sec. 2)" and in lieu thereof insert "(U. S. C., 1934 ed., title 7, secs. 2, 3, and 4)".
On page 2, line 18, before "title", insert "1934 ed.,".
On page 4, line 2, before "title", insert "1934 ed.,".
On page 4, line 11, before "title", insert "1934 ed.,".
On page 16, line 2, before "title", insert "1934 ed.,".
On page 16, line 15, before "title" insert "1934 ed.,".
On page 16, line 22, strike out "changed" and insert in lieu thereof "changes".
On page 19, line 17, before "title", insert "1934 ed.,".
On page 21, line 3, before "title", insert "1934 ed.,".
On page 22, line 2, before "title", insert "1934 ed.,".
On page 24, line 23, before "title", insert "1934 ed.,".
On page 26, line 14, before "title", insert "1934 ed.,"

The PRESIDING OFFICER. Without objection, the amendments will be agreed to en bloc.

The next amendment in order is the amendment offered by the Senator from South Carolina [Mr. SMITH].

Mr. SMITH. Mr. President, am I to understand that the amendment which I offered was proposed to be amended by the Senator from Washington so that it would apply to wheat as well as to cotton?

Mr. McKELLAR. Which amendment is the Senator now talking about?

Mr. SMITH. The one we were talking about a few moments ago.

Mr. ROBINSON. It would be necessary to reconsider the vote by which the amendment was rejected. I wonder if the Senator from Texas objects to that.

Mr. CONNALLY. If the Senator desires to have that action taken, I see no objection. I see no objection at all to changing the amendment.

Mr. ROBINSON. Mr. President, I move to reconsider the vote by which the amendment of the Senator from South Carolina was rejected.

The PRESIDING OFFICER. The question is on the motion of the Senator from Arkansas. [Putting the question.] The ayes seem to have it.

Mr. CONNALLY. I call for a division.

On a division, the motion was agreed to.

Mr. McKELLAR. Mr. President, I understand that the Senator from Washington [Mr. SCHWELLENBACH] has asked that certain other words be inserted.

The PRESIDING OFFICER. The amendment offered by the Senator from Washington will be stated.

The CHIEF CLERK. On page 1 of the amendment of the Senator from South Carolina, line 8, it is proposed to strike out the words "crossing and."

The amendment to the amendment was agreed to.

Mr. SCHWELLENBACH. I now offer another amendment. In line 7, I move that the word "cotton" be stricken out and that the words "a commodity" be substituted therefor.

Mr. CONNALLY. Mr. President, it is so late it seems to me the matter might well go over until tomorrow and let us determine exactly where we are. I suggest that the amendment of the Senator from Washington go over until tomorrow so we can read the amendments and understand the situation.

Mr. ROBINSON. Mr. President, I think the suggestion of the Senator from Texas, in view of the course we have taken, is a fair one. I inquire whether the perfecting or correcting amendments of the Senator from Iowa [Mr. MURPHY] have been agreed to.

The PRESIDING OFFICER. They have been agreed to.

Mr. MURPHY. They have been agreed to. May I inquire the status of the amendment just offered by the Senator from Washington [Mr. SCHWELLENBACH]?

Mr. JOHNSON. Mr. President, what is the condition of the Smith amendment at this time?

The PRESIDING OFFICER (Mr. MURRAY in the chair). It has just been amended by the amendment of the Senator from Washington [Mr. SCHWELLENBACH] striking out the words "crossing and." The Senator from Washington has offered a further amendment, which the clerk will state.

The CHIEF CLERK. On page 1 of the amendment of the Senator from South Carolina [Mr. SMITH], in line 7, it is proposed to strike out the word "cotton" and insert the words "a commodity", so as to read:

Nothing in this section or in any other section of this act shall be construed to prevent a futures commission merchant or floor broker who shall have in hand, simultaneously, buying and selling orders at the market for different principals for a like quantity of a commodity for future delivery in the same month, from executing such buying and selling orders at the then fair market price.

Mr. JOHNSON. That is a perfecting amendment, as I understand?

The PRESIDING OFFICER. It is an amendment to the amendment.

Mr. SCHWELLENBACH. Mr. President, the Senator from Texas [Mr. CONNALLY] has requested that my second amendment go over until tomorrow. There is another amendment I should like to offer of the same nature, to wit, on page 2, line 2, to strike out the words "crossing and."

The PRESIDING OFFICER. The amendment will be stated.

The CHIEF CLERK. In the amendment of the Senator from South Carolina on page 2, line 2, it is proposed to strike out the words "crossing and", so as to make the proviso read:

Provided, That any such execution shall take place on the floor of the exchange where such orders are to be executed and shall be duly reported, recorded, and cleared in the same manner as other orders executed on such exchange.

Mr. MURPHY. Mr. President, I ask that the two amendments to the amendment may go over until tomorrow.

The PRESIDING OFFICER. Without objection the amendments to the amendment will be passed over until tomorrow.

AGRICULTURAL DEPARTMENT APPROPRIATIONS—CONFERENCE REPORT

Mr. RUSSELL submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 11418) "making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1937, and for other purposes", having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 8, 9, 10, 11, 15, 18, 21, 26, 42, 52½, 54, 57, 60, 63, 74, 77, 83, 89, 90, 93 and 94.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 3, 4, 5, 6, 7, 22, 29, 47, 53, 55, 58, 61, 75, 76, 78 and 79, and agree to the same.

Amendment numbered 12: That the House recede from its disagreement to the amendment of the Senate numbered 12, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$22,107,870"; and the Senate agree to the same.

Amendment numbered 13: That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,494,089"; and the Senate agree to the same.

Amendment numbered 14: That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$3,861,024"; and the Senate agree to the same.

Amendment numbered 17: That the House recede from its disagreement to the amendment of the Senate numbered 17, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$769,503"; and the Senate agree to the same.

Amendment numbered 19: That the House recede from its disagreement to the amendment of the Senate numbered 19, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$669,935"; and the Senate agree to the same.

Amendment numbered 20: That the House recede from its disagreement to the amendment of the Senate numbered 20, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$5,258,194"; and the Senate agree to the same.

Amendment numbered 23: That the House recede from its disagreement to the amendment of the Senate numbered 23, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$10,063,963"; and the Senate agree to the same.

Amendment numbered 24: That the House recede from its disagreement to the amendment of the Senate numbered 24, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$629,099"; and the Senate agree to the same.

Amendment numbered 25: That the House recede from its disagreement to the amendment of the Senate numbered 25, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$697,094"; and the Senate agree to the same.

Amendment numbered 27: That the House recede from its disagreement to the amendment of the Senate numbered 27, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,140,454"; and the Senate agree to the same.

Amendment numbered 28: That the House recede from its disagreement to the amendment of the Senate numbered 28, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$4,551,206"; and the Senate agree to the same.

Amendment numbered 30: That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$565,232"; and the Senate agree to the same.

Amendment numbered 31: That the House recede from its disagreement to the amendment of the Senate numbered 31, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,803,445"; and the Senate agree to the same.

Amendment numbered 32: That the House recede from its disagreement to the amendment of the Senate numbered 32, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$950,984"; and the Senate agree to the same.

Amendment numbered 33: That the House recede from its disagreement to the amendment of the Senate numbered 33, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$964,487"; and the Senate agree to the same.

Amendment numbered 34: That the House recede from its disagreement to the amendment of the Senate numbered 34, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,180,069"; and the Senate agree to the same.

Amendment numbered 35: That the House recede from its disagreement to the amendment of the Senate numbered 35, and agree to the same with the amendment, as follows: In lieu of the sum proposed, insert: "$1,663,590"; and the Senate agree to the same

Amendment numbered 36: That the House recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,665,988"; and the Senate agree to the same.

Amendment numbered 37: That the House recede from its disagreement to the amendment of the Senate numbered 37, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$559,307"; and the Senate agree to the same.

Amendment numbered 38: That the House recede from its disagreement to the amendment of the Senate numbered 38, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,019,304"; and the Senate agree to the same.

Amendment numbered 39: That the House recede from its disagreement to the amendment of the Senate numbered 39, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$897,817"; and the Senate agree to the same.

Amendment numbered 40: That the House recede from its disagreement to the amendment of the Senate numbered 40, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$110,959"; and the Senate agree to the same.

Amendment numbered 41: That the House recede from its disagreement to the amendment of the Senate numbered 41, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$10,815,950"; and the Senate agree to the same.

Amendment numbered 43: That the House recede from its disagreement to the amendment of the Senate numbered 43, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert "$608,361"; and the Senate agree to the same.

Amendment numbered 44: That the House recede from its disagreement to the amendment of the Senate numbered 44, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$200,000"; and the Senate agree to the same.

Amendment numbered 45: That the House recede from its disagreement to the amendment of the Senate numbered 45, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$91,295"; and the Senate agree to the same.

Amendment numbered 46: That the House recede from its disagreement to the amendment of the Senate numbered 46, and agree to the same with an amendment, as follows: In lieu of the matter inserted by said amendment, insert the following: "$269,152: Provided, That $170,000 of this appropriation shall be available only for maintenance in nurseries of existing stocks and for the free distribution thereof to farmers, in liquidation of the so-called shelter belt project of trees or shrubs in the plains region undertaken heretofore pursuant to appropriations made for emergency purposes."; and the Senate agree to the same.

Amendment numbered 48: That the House recede from its disagreement to the amendment of the Senate numbered 48, and agree to the same with an amendment, as follows: In lieu of the

sum proposed, insert: "$13,462,919"; and the Senate agree to the same.

Amendment numbered 49: That the House recede from its disagreement to the amendment of the Senate numbered 49, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,655,007"; and the Senate agree to the same.

Amendment numbered 50: That the House recede from its disagreement to the amendment of the Senate numbered 50, and agree to the same with an amendment, as follows: In lieu of the matter inserted by said amendment, insert the following:

"For the acquisition of forest lands under the provisions of the Act approved March 1, 1911 (36 Stat., p. 961), as amended (U. S. C., title 16, secs. 500, 513, 515, 516, 517, 518, 519, 521. 552, 563), $2,500,000: Provided, That not to exceed $50,000 of the sum appropriated in this paragraph may be expended for departmental personal services in the District of Columbia."

And the Senate agree to the same.

Amendment numbered 51: That the House recede from its disagreement to the amendment of the Senate numbered 51, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$17,738,505"; and the Senate agree to the same.

Amendment numbered 52: That the House recede from its disagreement to the amendment of the Senate numbered 52, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$50,000"; and the Senate agree to the same.

Amendment numbered 56: That the House recede from its disagreement to the amendment of the Senate numbered 56, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,398,272"; and the Senate agree to the same.

Amendment numbered 59: That the House recede from its disagreement to the amendment of the Senate numbered 59, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$173,625"; and the Senate agree to the same.

Amendment numbered 62: That the House recede from its disagreement to the amendment of the Senate numbered 62, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$5,317,675"; and the Senate agree to the same.

Amendment numbered 64: That the House recede from its disagreement to the amendment of the Senate numbered 64, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$95,000"; and the Senate agree to the same.

Amendment numbered 65: That the House recede from its disagreement to the amendment of the Senate numbered 65, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$138,149"; and the Senate agree to the same.

Amendment numbered 66: That the House recede from its disagreement to the amendment of the Senate numbered 66, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$300,000"; and the Senate agree to the same.

Amendment numbered 67: That the House recede from its disagreement to the amendment of the Senate numbered 67, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$130,798"; and the Senate agree to the same.

Amendment numbered 68: That the House recede from its disagreement to the amendment of the Senate numbered 68, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$335,772"; and the Senate agree to the same.

Amendment numbered 69: That the House recede from its disagreement to the amendment of the Senate numbered 69, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$79,753"; and the Senate agree to the same.

Amendment numbered 70: That the House recede from its disagreement to the amendment of the Senate numbered 70, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,961,224"; and the Senate agree to the same.

Amendment numbered 72: That the House recede from its disagreement to the amendment of the Senate numbered 72, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$400,669"; and the Senate agree to the same.

Amendment numbered 73: That the House recede from its disagreement to the amendment of the Senate numbered 73, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$438,269"; and the Senate agree to the same.

Amendment numbered 80: That the House recede from its disagreement to the amendment of the Senate numbered 80, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$321,665"; and the Senate agree to the same.

Amendment numbered 81: That the House recede from its disagreement to the amendment of the Senate numbered 81, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$5,966,244"; and the Senate agree to the same.

Amendment numbered 82: That the House recede from its disagreement to the amendment of the Senate numbered 82, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$5,992,896"; and the Senate agree to the same.

Amendment numbered 84: That the House recede from its disagreement to the amendment of the Senate numbered 84, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$1,600,000"; and the Senate agree to the same.

Amendment numbered 87: That the House recede from its disagreement to the amendment of the Senate numbered 87, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$601,512"; and the Senate agree to the same.

Amendment numbered 88: That the House recede from its disagreement to the amendment of the Senate numbered 88, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$20,000"; and the Senate agree to the same.

Amendment numbered 91: That the House recede from its disagreement to the amendment of the Senate numbered 91, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$22,853,485"; and the Senate agree to the same.

Amendment numbered 92: That the House recede from its disagreement to the amendment of the Senate numbered 92, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$24,869,265"; and the Senate agree to the same.

Amendment numbered 95: That the House recede from its disagreement to the amendment of the Senate numbered 95, and agree to the same with an amendment as follows: In lieu of the sum propesed insert "$21,364,000"; and the Senate agree to the same.

Amendment numbered 96: That the House recede from its disagreement to the amendment of the Senate numbered 96, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$8,000,000"; and the Senate agree to the same.

Amendment numbered 97: That the House recede from its disagreement to the amendment of the Senate numbered 97, and agree to the same with an amendment, as follows: In lieu of the sum proposed, insert: "$4,500,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 2, 16, 71, 85, and 86.

The report was agreed to.

SILVER AND THE MONETARY POLICY

Mr. PITTMAN. Mr. President, I wish to call attention to an article which appeared in the newspapers this morning. There was a report to the effect that 82 members of the National Committee on Monetary Policy today recommended to Congress that all silver legislation be repealed. The article states that this is on the ground that such policy reduces confidence in the national currency and that it has accomplished no good. The article also states that a petition has been prepared by this body which will be sent to Congress for the purpose of requesting Congress to repeal all silver-purchase acts and also to attempt to annul the agreements which the President of the United States entered into with other governments at the London conference with regard to silver.

I do not intend to discuss the matter at this time in detail because it is not officially before the Senate. I assume, however, that tomorrow or later the report will come to the Senate so we may examine it in its details. It carries one announcement which attracted my particular attention. In reading the list of members, I find that it is the largest group of professors that has yet attempted to influence legislation. I do not want anyone to take this as a reflection on professors. Personally, I think they accomplish a good purpose. In fact, in their own line they accomplish just as much good as any other artisan, such as a plumber or brick mason accomplishes in his own line.

The reason the matter becomes particularly important is that there are 82 professors in this group. I do not believe we have over six professors in our brain group in this admin-

istration. I understand, however, the Republican National Committee has 13 professors in its brain group. We shall have to find some method by which we may weigh the value of this expert influence. We must find some measure of their value, some natural measure that we may understand, whether by the bushel or the pound or the number or some other way. In this particular case there are 82 professors. That offsets our "brain trust", and it offsets the Republican "brain trust."

I really believe, however, that instead of referring the matter to the Congress, which possibly would not be able to understand their reasoning, they should refer this recommendation on their part to the "brain trust" of the Republican National Committee, and they in their turn should refer it to the platform committee at the Republican national convention.

That convention will meet in a few days. They no doubt have already listened to some monetary plans. Nobody can advise them better than these 82 professors; and at the head of this list is Professor Kemmerer, of Princeton. Professor Kemmerer believes we should instantly return to the old gold standard at the old gold value of $20.67 an ounce. He also believes we should instantly return to gold redemption. He believes we should instantly condemn silver for use as money at all. That was the advice which the Republican Party followed in the past, and it seems to me that advice should be given to the professors of the Republican National Committee, and by them to the platform committee of the Republican Party. I hope that method will be pursued.

These distinguished gentlemen state that silver has diluted and debased the currency of the United States. Mr. President, practically every country in the world today uses silver as money. Over 3,000,000,000 ounces of silver today are used in the world as money. In our own country, from the very beginning of this Government, we have used silver as a part of our monetary system. In fact, down to the time of the demonetization of silver in 1873 we had true bimetalism in this country. A debt could be paid either in gold or in silver. So many grains of silver constituted a dollar. So many grains of gold constituted a dollar. The only change that was made in that policy was that in 1873 silver was demonetized by an act of Congress stating that it should not be legal tender for any debts whatsoever. That policy has been changed by this administration. Today every kind of currency that we issue is legal tender.

Let us see how wise it was to do that.

If, as a result of the enactment of our parity act it is necessary to maintain the parity of all our currency, it is certainly wise to give as much intrinsic value to that currency as can be given to it. It is said that the Government of the United States has been injured in its trade and commerce by virtue of the passage of the silver act. I challenge that statement as baseless. I challenge it as malicious. I challenge it as based upon an ancient prejudice.

As a matter of fact, our commerce has steadily increased since the Silver Act was passed, and with practically every country. I do not mean to say that the increase in that trade was due to the Silver Act, but I say it is just as absurd to state that the passage of that act was injurious to our trade and commerce as it would be for me to say that the increase in our commerce and trade was due to the passage of the Silver Act.

It is said that we have ruined China. I say to you, as a matter of fact, that Dr. Kemmerer knows that is not true. What were the factors that ruined China? They are perfectly simple. When did they commence? They commenced in 1930. How? The action of India in beating down the price of silver created a boom in China as a result of foreign money going in and buying that cheap money, and with that property at exorbitant prices; and then what followed that? They had as big a boom in China in 1930 and 1931 as was ever seen in Florida or Los Angeles; and when it fell, as it had to do, and liquidation commenced, banks commenced to fail. That was the first step.

What was the second step in the destruction of China? In 1932, when Japan invaded and took possession of Manchuria and established the state of Manchukuo, she deprived China of one of China's largest export markets. What was the next step that followed in that line? When the Japanese came south of the wall and actually took possession of North China, they took away from China another of her great export markets. What was the next step? When Japan took control of North China she took control—through Chinese, it is true—of all the customhouses; and then what happened? The chief revenue of China disappeared. How did it disappear? If I had made the statement earlier, it would have been charged as an unfriendly act toward Japan; but now we find our Government, by the advice of our Ambassador to Japan, asking the State Department to protest to the Japanese Government against the smuggling of Japanese goods around the customhouse into China. That now is an admitted fact. By these acts the purchasing power of China was destroyed.

When the Silver Act was passed in 1934, China was dying financially; and she added to her own misery by her unfortunate actions with regard to the silver policy which we adopted in this country. What did she do? I have here the newspaper accounts. I shall not read them; but in the middle of 1934 the Chinese Government commenced to protest to the United States, demanding that we cease our silver policy; and when they were told that we could not do so, what did they do? They did what any foolish banker would do and what no wise banker would do. They commenced deliberately to put out rumors from the National Government of China to the effect that if the United States did not change its silver policy they would go off the silver standard. The poor, misguided people over there thought going off the silver standard would affect the people of the United States! The rumors continued. The next rumor—and it was an official rumor, coming out of the office of the Minister of Finance—was, first, that they were going to put an export duty on silver; second, that if that did not work, they would put an embargo on it; and third, that they would nationalize silver.

What would have been the effect on any bank in this country if it had announced that after a certain date it was not going to redeem any more of its paper? There would have been a run on the bank prior to that date. That is what happened in China. I received a letter from Sir Henry Deterding from London at the time, in which he stated that by reason of the threat to nationalize silver—that is, to take all the silver into the treasury and use nothing but paper as a circulating medium—he had withdrawn from China 80,000,000 ounces of silver; and you will find also that all the great foreign companies doing business in China which had kept hundreds of millions of silver on deposit there for years withdrew that silver. So we find that China finally caused the silver to be withdrawn from the reserves of the banks to Shanghai and the other big cities through her own acts, and it was not the silver act which was responsible for it.

It is stated that we are ruining China. Here is the report of Dr. Kung, from Shanghai. He states that in 1931 the price index in China was 126.7. At that time ours was about 60. In 1932 the price index in China was 112. In 1933 it was 103. In October 1934—that was the time of the high price of silver—it was 90.

In other words, I say to you that the hardship China had to undergo with regard to the deflation of commodity prices was never over 9 percent, while our commodity prices went down 40 or 50 percent—I have forgotten exactly how much. The deflationary effect on her commodities of the rise in the price of silver was not over 9 percent. That did not injure China, and at the same time China was purchasing cotton and other materials in this country at a reduction of 25 percent below the normal price, by reason of the high exchange rate of silver; so we find there is nothing in that.

If nothing else on earth had been accomplished as a result of the authority which we gave to the President of the United

States in the silver act, the aid which it permitted us to give China was sufficient recommendation for it. When China was threatened by reason of the action to which I have referred, the United States Government bought $70,000,000 worth of silver from China, and placed it here as a stabilization fund. That was the first in the series of actions that led to the prolonging of the economic life of China.

What has happened? The United States, by virtue of the power under this act, has agreed to purchase more silver from China, because the Chinese Government desires to take the American fund paid for that silver and place it in the United States for its stabilizing effect on their exchange, because China intends to establish a 65-percent reserve behind a currency issue, having 25 percent of that in silver, and the rest of the 65 percent in United States currency or gold.

China intends to have a new silver-currency issue. It will consist of the yuan, or Chinese dollar, and the half yuan, or Chinese half dollar. The unit will be smaller, and instead of being 90 percent pure silver, it will be 72 percent pure silver. It will be pure enough so that there will not be danger of its being counterfeited, yet it will be of low enough grade so that with the fluctuations of exchange the silver will not be melted up and sent out of the country. In other words, in the opinion of the great statesmen of China—and there are some great statesmen there—the aid which our Government has extended has saved the monetary situation in China, and that could not have been accomplished except under this act. Repeal this act, and there will be no further power to assist. I repeat, if the act had had no other result than that I have recounted, it would have justified itself.

But there are great Latin American countries to the south of us, and their monetary systems, with the exception of one or two, are also chaotic today. During the boom days of silver, when it was selling at $1.38 an ounce, the silver which circulated all through Latin American countries being more valuable as silver than coins, was gathered up and sold as bullion, and today such countries which used silver from the beginning of civilization have little silver.

We will not buy silver from Latin America. We will lend them the silver if they use it safely and honestly, in accordance with the plan satisfactory to our Government. Our action means the beginning of stabilization not only in China, but the stabilization of the currencies of Latin American republics, and it will be of advantage to us that they are supported by our Government, instead of by some other government. It brings closer to us socially, commercially, and in every other way, not only China, but all of the great Latin American countries to the south of us.

In spite of these things, these great professors have nothing to say to us except that our action has not resulted in any good. They ask us to destroy the law; but what do they offer in its place? They have read the books which their fathers read, and which their fathers got from their grandfathers. They cry "Gold standard! Gold standard!" What kind of a gold standard? Where are other governments to get the gold?

I think it was in 1930 that Professor Kemmerer was employed by the Chinese Government to recommend a monetary system to them, and he advised them to debase their silver coin, to sell their silver, and to go on the gold standard, just at the time when the whole world was getting ready to go off the gold standard; and it did go off the gold standard inside of 2 years.

The Chinese knew too much about silver to do that. They had seen that the efforts in India to force silver out of India had been an utter failure. They knew that debasing their coins and dumping their silver as bullion would drive the price down until they would get nothing.

Yet these professors say to us, "Your present monetary system is all wrong. You have no gold standard now. Go back on the gold standard or the people will lose confidence in your securities, your bonds, and your currency."

They have been saying that for 2 years. Yet today the currency, the credit, and the securities of our Government stand higher than those of any other government in all the world. In fact, the conditions here are so good that gold flows into this country for safety. Yet these professors say that our credit will be damaged.

During this transaction, up to date, our Government has made a profit of $500,000,000, as can be seen by reference to the Treasury reports. On the silver the Government has purchased it has already issued $685,972,458.39 in new silver certificates, and those silver certificates, which represent dollars, which are legal-tender dollars, cost our Government in the neighborhood of only about 45 cents apiece. Therefore the Government has made this profit.

This has been the fairest, the most sensible inflation that possibly could have been had in this country. I have read the figures. The Government has inflated six-hundred-odd million dollars in currency, and there is a dollar's worth of silver back of every dollar of it, at the market price. It cannot be depreciated currency. There is more back of it than the Federal Reserve notes ever had back of them, because the silver can be sold anywhere in the world, and every certificate redeemed, dollar for dollar.

In addition to this, the Government has the power today to issue $315,000,000 more of silver certificates at the prices paid for the silver, and on that they will make a profit. So who has been injured? We added to our currency the soundest form of currency which exists in the world today, and we needed that currency. It has probably prevented an inflation which many think would be dangerous. As a matter of fact, I am always afraid of a fiat inflation. I am afraid of fiat currency. I am afraid of a managed currency, unless it be managed on a metallic base. All currencies are managed, more or less, but there is but one measure in the world that I know of that is sound in restricting currency issues, and that is the use of gold and silver. The history of the production of gold and silver for 400 years—and the statistics in regard to this are the most accurate in the world—discloses that gold has increased in production to the extent of only about 3 percent per annum, just about the percentage of the increase in population. The statistics also prove that the production of silver has increased but about 3 percent per annum; in other words, that the ratio of the production of gold and silver for 400 years has been about 14½ ounces of silver to 1 ounce of gold.

Yet these professors refer to this "base, dishonest, depreciated metal", when today nearly half the people of the world know no other money than the silver of which these "professors" speak so contemptuously.

In my opinion, if the stability of international exchange is ever reestablished, that effort will have to be supported by silver, not because, for instance, silver needs to be a part of the measure, but because today there are not over $18,000,000,000 of monetary gold in the world, even at the present price. How far do Senators think $18,000,000,000 would go toward stabilizing the currencies of the world?

There was a time when a very little gold stabilized vast currency issues and secured vaster credits, but when the World War was over, and there was talk about payment of war debts, and we realized that there was not enough gold in the world to pay the war debts, people began to see that gold was very scarce. When we found out that $138,000,000,000 of American securities were payable by contract in gold, and we had only $5,000,000,000 in gold, people commenced to realize the scarcity of gold.

We hear talk about going back to the old gold standard, and gold redemption. How could we afford to redeem our currency in gold? We should have all our paper currency in the Treasury in 30 days, and all of our gold in the hands of speculators, and then, getting in the hands of speculators, it would go to those places in foreign countries where gold buys more than our paper currency. In other words, we should have a brief delightful time of redemption for 30 days, and after that the gold would be gone from our shores, and it would be necessary to reissue fiat currency, and then the only currency in this country that would be respectable would be the silver certificates, behind every dollar of which

there is a dollar's worth of silver. It is the only money today that has any intrinsic value back of it, that can be recovered by the holder.

Compared with this great galaxy of professors, our little coterie of professors in the present administration sinks into insignificance. Of course that is the fault of Congress. Had Congress appropriated more money, more professors and better professors could have been employed. In the present situation we are doing the very best we can.

I admire professors. A distinguished one is sitting in front of me. I think they are the best whetstones for a good active blade that can be found anywhere in the world. Some professors themselves have been active blades. Some of them have had practical life, and have taken into their classrooms not only what they have read from the fathers' books but the experience of life, and have given their students the benefit of a broad experience. Those men have become distinguished professors. Some of them have entered the United States Senate, as did my distinguished friend who honors me with his presence, the Senator from Utah [Mr. THOMAS].

I have known other professors whose ability has been recognized. President Wilson was a distinguished professor. We have had others who were distinguished. However, I say to Senators that they are the exception, because those men are the exceptions who go into life, and meet people, and, take part in incidents, and get to know realities. Those who cloister themselves, as most professors do, and revel in their books and in their own imaginations, attain for themselves a delusion of greatness which is frequently not real.

They are coming down here to tell the Congress of the United States what to do. They give us their ipse dixit. "We know what you should do. Repeal the Silver Purchase Act. Violate the agreement of the President of the United States, made on behalf of this Government with nine other great powers with regard to silver. Violate that agreement." That is what they are going to tell him to do. They are going to tell us in very plain language in this Congress, "Do not do anything for silver."

I have already painted you a picture of what the power we granted the President relative to silver has done for our own country in giving it an honest inflation of currency, and what it has done for China, and what it will do for other countries as it continues. When these professors speak about subsidizing the silver mines of this country, let me say to Senators that for every dollar that the silver miner gets for all the risks he takes and all the work he does, our Government gets approximately $2 for coining the silver into coin at a cost of a cent a coin.

There is not another industry in this country that would stand for a minute a government making such an unholy profit from it; but we have submitted to it. We have submitted to it by reason of the narrow prejudice that permeated this country long ago in a great silver fight. But when these 82 professors come out of their cloisters without their hoods, and walk into this body and tell us what we shall do with regard to legislation, when they say to the Senate, which by nearly two-thirds vote passed the Silver Purchase Act, "You will have to repeal it; you made a mistake; you will have to condemn the President of the United States for entering into an agreement with nine other powers by which our Government benefits", I say to you that their delusions of greatness will be deflated.

Senators, so far as the mining States are concerned, this act was the best relief act that was ever passed, because it enabled mining people first to initiate their own work and employ their own idle.

I say to the Senate that since this act was passed 4,000 new mining industries have started up in the Western States. That is the reason why today, in the State of Nevada, we can hardly get enough men on the relief rolls to carry out any of our projects. That is the kind of work we want. These are not great industries. They are 4,000 little new industries, with miners starting in on leases, miners starting in on old mines, miners starting in on new prospects.

Let us tell these professors in advance that when they come in with their facts, if they have any, we have a special committee appointed by this body for the investigation of the silver question to which such facts will be referred. We have had experts working on statistics for months and they are now working on them. They are coordinating the price of silver with our exports and with our imports, and they are following up the changes in the monetary systems in all countries. We are now ready to make a preliminary report; and I say to Senators that it will deny each and every charge made by the distinguished gentlemen to whom I have referred.

INCORPORATION OF VETERANS OF FOREIGN WARS

Mr. NEELY. Mr. President, some days ago Senate bill 4100, to incorporate the Veterans of Foreign Wars of the United States, was passed by the Senate. There is now pending before the Judiciary Committee of the Senate House bill 11454, which is similar to the bill which the Senate unanimously passed last week. It is my purpose to ask unanimous consent that the Committee on the Judiciary be discharged from the further consideration of House bill 11454, and then to ask unanimous consent that the House bill be passed by the Senate and that Senate bill 4100 be recalled from the House.

I now ask unanimous consent that the votes by which Senate bill 4100 was ordered to be read the third time, and passed, be reconsidered.

The PRESIDING OFFICER (Mr. CLARK in the chair). Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

Mr. ROBINSON. Mr. President, has an identical bill already passed the Senate?

Mr. NEELY. Yes; unanimously.

Mr. ROBINSON. The Senator now proposes to have the House bill passed, so that the legislation may be concluded?

Mr. NEELY. Yes.

I move that the Judiciary Committee be discharged from the further consideration of House bill 11454, to incorporate the Veterans of Foreign Wars of the United States.

The motion was agreed to.

Mr. NEELY. I now ask unanimous consent for the present consideration of the House bill.

There being no objection, the Senate proceeded to consider the bill (H. R. 11454) to incorporate the Veterans of Foreign Wars of the United States, which was ordered to a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That the following persons, to wit: James E. Van Zandt, Altoona, Pa.; Bernard K. Kearney, Gloversville, N. Y.; Scott P. Squyres, Oklahoma City, Okla.; Robert B. Handy, Jr., Kansas City, Mo.; Henry F. Marquard, Chicago, Ill.; William E. Guthner, Denver, Colo.; Edward J. Neron, Sacramento, Calif.; Joseph C. Menendez, New Orleans, La.; Paul L. Foulk, Altoona, Pa.; Robert E. Kernodle, Kansas City, Mo.; Walter I. Joyce, New York City, N. Y.; George A. Ilg, Cranston, R. I.; James F. Daley, Hartford, Conn.; Charles R. Haley, Pittsburgh, Pa.; F. C. Devericks, Clarksburg, W. Va.; John J. Skillman, Miami, Fla.; Ellie H. Schill, New Orleans, La.; Gerald C. Mathias, Lagrange, Ind.; James W. Starner, Effingham, Ill.; Leon S. Pickens, Wichita, Kans.; Archie W. Nimens, Minneapolis, Minn.; Harvey W. Snyder, Denver, Colo.; Charles O. Carlston, San Francisco, Calif.; Walter L. Daniels, Seattle, Wash.; John E. Swaim, Tulsa, Okla.; Peter J. Rosch, Washington, D. C.; and their successors, who are, or who may become, members of the Veterans of Foreign Wars of the United States, a national association of men who as soldiers, sailors, and marines have served this Nation in wars, campaigns, and expeditions on foreign soil or in hostile waters, and such national association, are hereby created and declared a body corporate, known as the Veterans of Foreign Wars of the United States.

SEC. 2. That the said persons named in section 1, or their successors, and such other persons as are duly accredited delegates from any local post or State department of the existing national association known as the Veterans of Foreign Wars of the United States, under its constitution and bylaws, are hereby authorized to meet and to complete the organization of said corporation, by the adoption of a constitution and bylaws, the election of officers, and to do all other things necessary to carry into effect and incidental to the provisions of this act.

SEC. 3. That the purposes of this corporation shall be fraternal, patriotic, historical, and educational; to preserve and strengthen comradeship among its members; to assist worthy comrades; to perpetuate the memory and history of our dead, and to assist their

widows and orphans; to maintain true allegiance to the Government of the United States of America, and fidelity to its Constitution and laws; to foster true patriotism; to maintain and extend the institutions of American freedom; and to preserve and defend the United States from all her enemies, whomsoever.

SEC. 4. That the corporation created by this act shall have the following powers: To have perpetual succession with power to sue and be sued in courts of law and equity; to receive, hold, own, use, and dispose of such real estate, personal property, money, contract, rights, and privileges as shall be deemed necessary and incidental for its corporate purposes; to adopt a corporate seal and alter the same at pleasure; to adopt, amend, apply, and administer a constitution, bylaws, and regulations to carry out its purposes, not inconsistent with the laws of the United States or of any State; to adopt, and have the exclusive right to manufacture and use such emblems and badges as may be deemed necessary in the fulfillment of the purposes of the corporation; to establish and maintain offices for the conduct of its business; to establish, regulate, or discontinue subordinate State and Territorial subdivisions and local chapters or posts; to publish a magazine or other publications, and generally to do any and all such acts and things as may be necessary and proper in carrying into effect the purposes of the corporation.

SEC. 5. That no person shall be a member of this corporation unless he has served honorably as an officer or enlisted man in the Army, Navy, or Marine Corps of the United States of America in any foreign war, insurrection, or expedition, which service shall be recognized as campaign-medal service and governed by the authorization of the award of a campaign badge by the Government of the United States of America.

SEC. 6. That said corporation may and shall acquire all of the assets of the existing national association known as the Veterans of Foreign Wars of the United States upon discharging or satisfactorily providing for the payment discharge of all its liabilities.

SEC. 7. That the said corporation shall have the sole and exclusive right to have and to use, in carrying out its purposes, the name "Veterans of Foreign Wars of the United States" and the sole and exclusive right to the use of its corporate seal, emblems, and badges as adopted by said corporation.

SEC. 8. That said corporation shall, on or before the 1st day of January in each year, make and transmit to the Congress a report of its proceedings for the preceding fiscal year, including a full and complete report of its receipts and expenditures: *Provided, however,* That said financial report shall not be printed as a public document.

SEC. 9. That as a condition precedent to the exercise of any power or privilege herein granted or conferred, the Veterans of Foreign Wars of the United States shall file in the office of the secretary of state of each State the name and post-office address of an authorized agent in such State upon whom legal process or demands against the Veterans of Foreign Wars of the United States may be served.

SEC. 10. That the right to repeal, alter, or amend this act at any time is hereby expressly reserved.

On motion of Mr. NEELY, it was

Ordered, That the House of Representatives be requested to return to the Senate the bill (S. 4100) to incorporate the Veterans of Foreign Wars of the United States.

REPUBLICAN PLAN TO STOP GRAZING

Mr. O'MAHONEY. Mr. President, from the beginning of this administration until the present time it has been the practice of some spokesmen of the livestock industry of the West to criticize as detrimental to the interests of the West some of the policies which have been inaugurated since March 4, 1933. The administration has been represented as hostile to the best interests of the livestock industry. Sometimes it was charged that the acts and policies would destroy the wool industry. Again it was charged that other acts and policies would destroy the livestock industry.

Of course, the predicted disasters never actually came. Conditions in the West have constantly improved as they have in every other section of the country, and the people of the far West are now in much better position than they were at the beginning of the administration.

There has been some suspicion that the purveyors of these charges were more interested sometimes in partisan advantage than they were in the advantage of the industry itself. With respect to that, however, I offer no opinion.

Nevertheless, I think it is of great importance that the attention of all of the livestock growers of the West should be called to an article which appeared in the Washington Post of this morning written by Mr. Hilding Siversen, special correspondent of the Post at Chicago. This article outlines a program which it indicates is to be presented to the Republican national convention for its approval. The authors of the program are, among others, Hon. William Allen White and Hon. Harry J. Allen, of Kansas, sponsors, I understand, of the gentleman who is represented as the leading candidate for the Republican nomination for the Presidency. Another sponsor of this new program is the Honorable Don Berry, of Iowa. What these leaders propose to the Republican convention is the complete suspension of grazing upon the public domain.

They would retire from use as grazing lands all of the public domain as well as put a complete stop to reclamation, their purpose being to transfer to the Middle West and to the East all of the livestock activity that is now carried on in the public-land States. Mr. President, it seems to me to be of importance that all of the livestock interests of the far West, regardless of partisan affiliation, be advised as to this program in order that it may be repudiated before it is even offered to the Republican national convention.

I, therefore, ask unanimous consent that certain excerpts from the article by Mr. Siverson may be printed in the RECORD at this point as a part of my remarks.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 25, 1936]

William Allen White and Henry J. Allen, of Kansas; Don Berry, of Iowa, and others have been interested in an idea which would look toward a permanent Government policy of land use and land control.

UNITED STATES OWNS VAST PUBLIC LANDS

Such a program would take cognizance of the fact that the United States Government has actual or potential control of hundreds of millions of acres of grazing lands, Indian lands, areas subject to reclamation, areas subject to erosion control, areas that could be purchased at a very small sum and retired, areas which are tax delinquent and which are now being taken over by various States, areas that should be retired from agriculture and planted to forests, areas that have been drained, but which should have remained marshland. At present there is no coordinated program along these lines.

The free Government grazing land, or that which is leased for a fraction of 1 cent per acre net, after paying administrative costs, constitutes actual, if indirect, competition for the farmer of the humid area. The land under great Federal reclamation projects, formerly desert, constitutes real competition for the farmer in the humid area.

Under the Grand Coulee real-estate project, for instance, between one and two million acres will be transformed from desert into intensively farmed land. In fact, all the marginal land, which amounts to at least half a billion acres in the aggregate, constitutes very real competition to the farmer in the humid area, who has paid a high price.

* * * * * * *

WITHDRAWAL OF PUBLIC GRAZING LANDS PROPOSED

There are, according to conservative estimates, something like 14,000,000 head of livestock on public grazing lands, most of which is being used without remuneration to the Government (which means the taxpayers). This constitutes real competition to the farmer on the family-size farm as well. If these cattle and sheep were shifted to the humid areas they would require more than 20,000,000 acres of pasture, and that, in turn, would retire that much cropland, automatically restrict the production of corn, wheat, and other staple crops, and raise the price of those crops.

Nobody expects that all this Government grazing land will be retired all at once, but certainly a substantial beginning could be made, especially since the Government allegedly has set out to help the man on the small farm by putting on his heels an army of bureaucrats to tell him just how much he can raise, what kind of crops he can raise, and where he can raise them. It just doesn't make sense. There is a vast national hodge-podge instead of an intelligent, far-sighted land-use policy.

If the Republican Party does not tackle this general land-use problem in a statesmanlike way and promise to contract the total cropland area to the area needed for domestic consumption and thus raise farm prices by a broad national program without regimentation, it will be overlooking the biggest bet of the century. However, it might be expecting too much of the old-line politicians, for it is not likely that they have read the voluminous reports of several Federal administrations, and do not realize the vastness and grotesquery of the contradictory hodge-podge that has taken the place of what should be a real land-use policy.

The politician can be expected only to take the line of least resistance, which is to let an already almost bankrupt Treasury pay out direct benefits, permitting large-scale land practices to continue which are almost criminal. The Democrats do not dare to adopt a land-use policy as described, because the party machinery is too deeply imbedded in the localities chiefly involved, and special interests would desperately demand a hands-off policy on grazing, reclamation, etc.

Mr. PITTMAN. Mr. President, in connection with the remarks just made by the Senator from Wyoming [Mr. O'MAHONEY], permit me to say that it seems to be forgotten that the Original Thirteen States owned all the land within their borders; that Texas, for instance, when she came into the Union, owned all the land within her borders. It is now

forgotten that in my State, for instance, 87½ percent of the land within its borders is held in Federal Government ownership. Every effort to pass the title of that land into the State, so that it might become potential taxable property, has been fought by the great majorities in the other States where all the land within their borders is subject to State taxation. It is unfair; it is unreasonable, in the extreme.

Those who come from the great States of the Middle West, the farming States, who have received the support and the votes of the Senators from the States that have public lands in Government ownership, have forgotten that fact. Having held back from us all public lands so they could not be taxed by the State, it is now proposed to enact a further law under which we would not be permitted even to use the lands within the borders of our own States.

EXECUTIVE SESSION

Mr. ROBINSON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDING OFFICER (Mr. CLARK in the chair) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

Mr. SHEPPARD, from the Committee on Military Affairs, reported favorably the nominations of sundry officers in the Regular Army.

Mr. McKELLAR, from the Committee on Post Offices and Post Roads, reported favorably the nominations of sundry postmasters.

He also, from the Committee on Appropriations, reported favorably the nomination of Morris L. Cooke, of Pennsylvania, to be Administrator of the Rural Electrification Administration for a term of 10 years, pursuant to the act of Congress approved May 20, 1936.

The PRESIDING OFFICER. The reports will be placed on the Executive Calendar.

If there be no further reports of committees the Clerk will state the first nomination in order on the calendar.

POSTMASTERS

The legislative clerk proceeded to read sundry nominations of postmasters.

Mr. McKELLAR. Mr. President, I ask unanimous consent that the nominations of postmasters on the calendar be confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations are confirmed en bloc. That completes the calendar.

DEATH OF REPRESENTATIVE RANDOLPH PERKINS, OF NEW JERSEY

Mr. ROBINSON. Mr. President, I move that the Senate resume legislative session.

The motion was agreed to; and the Senate resumed legislative session.

The PRESIDING OFFICER. The Chair lays before the Senate resolutions from the House of Representatives, which will be read.

The legislative clerk read as follows:

IN THE HOUSE OF REPRESENTATIVES,
May 25, 1936.

Resolved, That the House has heard with profound sorrow of the death of Hon. RANDOLPH PERKINS, a Representative from the State of New Jersey.

Resolved, That a committee of four Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect the House do now adjourn.

Mr. ROBINSON. Mr. President, the senior Senator from New Jersey [Mr. BARBOUR] and the junior Senator from New Jersey [Mr. MOORE] are both necessarily absent from the Senate. In their absence I send to the desk resolutions which I ask to have read and immediately considered.

The resolutions (S. Res. 304) were read, considered by unanimous consent, and unanimously agreed to, as follows:

Senate Resolution 304

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. RANDOLPH PERKINS, late a Representative from the State of New Jersey.

Resolved, That a committee of two Senators be appointed by the Presiding Officer to join the committee appointed on the part of the House of Representatives to attend the funeral of the deceased Representative.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Under the second resolution the Presiding Officer appointed the Senators from New Jersey [Mr. BARBOUR and Mr. MOORE] as the committee on the part of the Senate to attend the funeral.

Mr. ROBINSON. Mr. President, as a further mark of respect to the memory of the deceased Member of the House, I move that the Senate take a recess until 12 o'clock noon tomorrow.

The motion was unanimously agreed to; and (at 5 o'clock and 36 minutes p. m.) the Senate took a recess until tomorrow, Tuesday, May 26, 1936, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 25 (legislative day of May 12), 1936

PUBLIC HEALTH SERVICE

Senior Surgeon Carlisle P. Knight to be Medical Director in the United States Public Health Service, to rank as such from March 25, 1936.

APPOINTMENT, BY TRANSFER, IN THE REGULAR ARMY

TO AIR CORPS

Second Lt. John Burroughs Cary, Corps of Engineers, with rank from June 12, 1934.

PROMOTIONS IN THE REGULAR ARMY

TO BE COLONEL

Lt. Col. James Howard Laubach, Quartermaster Corps, from May 14, 1936.

TO BE LIEUTENANT COLONEL

Maj. Parley Doney Parkinson, Infantry, from May 14, 1936.

TO BE MAJOR

Capt. William Rebert Gerhardt, Ordnance Department, from May 14, 1936.

PROMOTIONS IN THE NAVY

Chief Carpenter William F. Twitchell to be a naval constructor with the rank of lieutenant, on the retired list of the Navy, from the 1st day of September 1936, in accordance with the provisions of an act of Congress approved April 14, 1936.

Lt. (Jr. Gr.) William W. Graham, Jr., to be a lieutenant in the Navy from the 30th day of June 1935.

Naval Constructor Edmund R. Norton to be a naval constructor in the Navy with the rank of captain, from the 1st day of July 1935.

Midshipman Randolph Meade, Jr. to be an ensign in the Navy, revocable for 2 years, from the 4th day of June 1936.

POSTMASTERS

ALABAMA

Max B. Wells to be postmaster at Ashford, Ala., in place of C. L. Jackson. Incumbent's commission expired April 4, 1936.

Maude A. Bosarge to be postmaster at Bayou Labatre, Ala., in place of M. A. Bosarge. Incumbent's commission expired February 9, 1936.

Mack Karrh to be postmaster at Berry, Ala., in place of J. L. Miller. Incumbent's commission expired January 25, 1936.

Hugh H. Dale to be postmaster at Camden, Ala., in place of H. H. Dale. Incumbent's commission expired June 10, 1936.

Maunsell Gabbett to be postmaster at Camp Hill, Ala., in place of J. P. Aaron. Incumbent's commission expired May 19, 1936.

James E. Summerour to be postmaster at Henagar, Ala., in place of O. P. Williams. Incumbent's commission expired April 4, 1936.

Lucie L. Parnell to be postmaster at Maplesville, Ala., in place of J. E. Wallace. Incumbent's commission expired February 9, 1936.

Grover C. Warrick to be postmaster at Millry, Ala., in place of G. C. Warrick. Incumbent's commission expired April 4, 1936.

Jennings B. Key to be postmaster at Parrish, Ala., in place of W. L. Jones. Incumbent's commission expired June 1, 1936.

Leslie Booker to be postmaster at Phenix City, Ala., in place of A. R. Sherrer. Incumbent's commission expired April 4, 1936.

Stella K. Martin to be postmaster at Plantersville, Ala. Office becomes Presidential July 1, 1936.

ARIZONA

S. Paul Shoemaker to be postmaster at Buckeye, Ariz., in place of L. W. Harper. Incumbent's commission expired March 22, 1936.

Peter Riley to be postmaster at Clifton, Ariz., in place of R. B. Anderson. Incumbent's commission expired May 19, 1936.

Bertha L. Hastings to be postmaster at Hayden, Ariz., in place of J. A. Williams. Incumbent's commission expired March 22, 1936.

George L. Noel to be postmaster at Holbrook, Ariz., in place of Luther Cadwell. Incumbent's commission expired January 7, 1936.

Vernon Hubbs to be postmaster at Kingman, Ariz., in place of O. D. M. Gaddis. Incumbent's commission expired January 9, 1934.

Floyd H. Miller to be postmaster at Tempe, Ariz., in place of Dilworth Baird. Incumbent's commission expired January 7, 1936.

Lee B. McAleb to be postmaster at Willcox, Ariz., in place of C. A. Williamson. Incumbent's commission expired January 7, 1936.

George T. Stevens to be postmaster at Winslow, Ariz., in place of A. R. Kleindienst. Incumbent's commission expired January 7, 1936.

ARKANSAS

William Earl Polk to be postmaster at Corning, Ark., in place of J. H. Magee. Incumbent's commission expires May 26, 1936.

William B. Martin to be postmaster at Mena, Ark., in place of J. W. Martin, deceased.

CALIFORNIA

Harry S. Sumners to be postmaster at Artesia, Calif., in place of H. W. Crider. Incumbent's commission expired January 9, 1936.

Manuel C. Joseph to be postmaster at Irvington, Calif., in place of M. K. Blacow. Incumbent's commission expired January 26, 1936.

May C. Baker to be postmaster at Paradise, Calif., in place of M. C. Baker. Incumbent's commission expired May 10, 1936.

Thomas Budd Van Horne, Jr., to be postmaster at Reseda, Calif., in place of M. H. Turner. Incumbent's commission expired May 10, 1936.

John Ira Fiscus to be postmaster at Rio Vista, Calif., in place of L. P. Miller. Incumbent's commission expired May 10, 1936.

William W. Truby to be postmaster at Cross Roads, Calif. Office became President April 1, 1936.

Sydney W. Balding to be postmaster at Willowbrook, Calif., in place of J. J. Hunter, deceased.

COLORADO

Leo F. Houston to be postmaster at Sugar City, Colo., in place of Emmons Ringle. Incumbent's commission expires June 28, 1936.

CONNECTICUT

Arthur A. Lawrence to be postmaster at East Berlin, Conn., in place of L. M. Root. Incumbent's commission expired January 9, 1936.

Clinton A. Theis to be postmaster at Madison, Conn., in place of J. H. Derenthal. Incumbent's commission expired January 9, 1936.

FLORIDA

George C. Johns to be postmaster at Lake Butler, Fla., in place of M. E. Johnson. Incumbent's commission expired February 9, 1936.

John B. Jones, Jr. to be postmaster at Oviedo, Fla., in place of C. E. Mariner. Incumbent's commission expires June 1, 1936.

GEORGIA

Robert C. Ayers to be postmaster at Royston, Ga., in place of G. G. Ridgway. Incumbent's commission expired January 7, 1936.

IDAHO

James B. Poynor to be postmaster at Council, Idaho, in place of G. W. Prout. Incumbent's commission expired February 5, 1936.

MAINE

William G. Chamberlain, Fort Fairfield.
Bess M. Clark, Milo.
Harry V. Smith, Springfield.
Roy E. Swaney, Vanceboro.

HOUSE OF REPRESENTATIVES

MONDAY, MAY 25, 1936

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Consider and hear us, O Lord our God: Lead us to walk uprightly and work righteousness and speak the truth in our hearts. We lift our prayer to the throne of Eternal Light, where there is life, joy unspeakable, and which is full of glory. Grant us Thy holy spirit that we may grow in mind, in soul, and in appreciation of all things worth while. Be with us in our struggles and in our triumphs; may we never neglect to praise Thee for that power which brings us into the joy and liberty of life. Heavenly Father, bless our own true America, which is composed of a God-fearing and family-loving people, ever holding to the ideals which have been the guide and the guardian of our destiny. Blessed Master and Friend, be with our President, our Speaker, and the entire Congress. Grant us the largest portion of Thy spirit with which to do the work entrusted to us. When Thy wings spread against the gray nightfall give us rest and peace.

We wait a moment. Again we have been made deeply conscious of the brevity of time and the frailty of human life. Again the roll has been called and there is no response. Again the silver cord has broken and a noble and upright public servant has left us. O give his family and all his loved ones the Christian's peace and consolation. Through Christ. Amen.

The Journal of the proceedings of Friday, May 22, 1936, was read and approved.

PRESERVATION OF THE GIBRALTAR WATERSHED IS OF THE UTMOST IMPORTANCE TO THE CITIZENS OF THE CITY OF SANTA BARBARA

Mr. STUBBS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. STUBBS. Mr. Speaker, one of the loveliest communities in all the world is Santa Barbara, Calif. It has climate, beautiful surroundings, high type citizens, access to the sea, majestic mountains in the background, and everything else necessary to make it the most comfortable community on earth in which to live. I invite you all to visit us, but I warn you now that if you come, come prepared to stay, for few ever desire to leave once they have tasted the pleasure of living in that glorious place.

With all of its natural assets, however, Santa Barbara has always been dependent, and will always be dependent, upon a supply of fresh water which emanates from the Gibraltar watershed in the mountains back of the community.

Soon after coming to Congress civic officials and Government agents in the Santa Barbara area came to me and asked me to sponsor a bill in Congress which would protect the watershed area. This bill was introduced under the title of H. R. 6544. I was able to push it through the various committees and it has become a law—Public No. 526, Seventy-fourth Congress. As the title of the law indicates, its purpose is to conserve the water resources and to encourage reforestation of the watersheds of Santa Barbara County, Calif.

This new law, I am confident, will preserve the city of Santa Barbara from one of its greatest dangers—fire. Fire, the demon of the forests and a ruthless destroyer of watersheds, is an unpredictable element, and the best we can do is to utilize every possible expedient in preventing its inception.

I recently received a letter from S. A. Nash-Boulden, supervisor of the Santa Barbara National Forest, in which he stated:

> If you are successful in getting this bill (H. R. 6544) through Congress, it will mean a great deal to the city of Santa Barbara in the development and protection of the Gibraltar watershed, and may save them considerable trouble and expense in any further development work within the area.

Many interesting points were discussed in the Public Lands Committee of the House when the bill was under consideration, and for the benefit of those who are familiar with the situation out there, I am taking the liberty of quoting from my testimony before the committee.

Hon. RENÉ L. DEROUEN, chairman of the committee, was presiding. My testimony follows:

> The CHAIRMAN. Mr. STUBBS, do you choose to address yourself to this bill?
>
> Mr. STUBBS. I do not think, Mr. Chairman, that much need to be said on this bill, because it is so meritorious. This was requested by the city of Santa Barbara on behalf of the citizens of that community. Most of you know our crying need for water, and this city of about 35,000 inhabitants derives its main supply of domestic water from the Gibraltar Dam, situated in mountains overlooking the city. Some years ago—in 1932, I believe—approximately 132 square miles of 199 square miles of the forest watershed drainage area were practically denuded by the great Militija fire, which resulted in silt flowing into the Gibraltar Dam, and now we find 28-percent silt in this dam, and it was constructed only 10 years ago.

In other words, unless something is done to prevent erosion and these devastating fires, we cannot conceive of what might happen to this beautiful little city and the communities lying about it which represent an additional 15,000 or 20,000 people.

Nothing but good can come from this bill. There have never been any minerals found in this watershed in the course of a century of time, perhaps, as a result of spasmodic explorations which have been chronicled. It will be for the interest of that community, I am sure. It is not my home city, but it is my home county, and there has been no objection raised from any source. In fact, just the reverse is true. Now, the fact that both Departments—Interior and Agriculture—have acted favorably leads me to request the committee to vote out this bill.

Mr. ROBINSON. How does this affect the discovery of oil?

Mr. STUBBS. It does not affect that.

Mr. DEMPSEY. It does affect the entry under the mining laws, as I understand it.

Mr. STUBBS. That is the idea. Men go up there prospecting, and innumerable fires are the result. There is nothing to be accomplished by that prospecting. There is nothing else to do, and the community feels—all the county seems to feel—that the bill should be passed. The superintendent of the national forest there has written a letter urging its enactment. We are continually having trouble with fires.

Mr. WHITE. Let me ask a question. Is the land embraced within the provisions of this bill all now within a national forest?

Mr. STUBBS. Yes.

Mr. WHITE. Could you tell us, if this law was enacted, how you would encourage reforestation or protect watersheds by the terms of the act any more than the Forest Service now protects it?

Mr. STUBBS. Well, perhaps more to prevent future fires. The C. C. C. camps are located in there now. The Government is trying to rebuild this devastated forest area. By replanting of watersheds and building truck trails, and such as that, the Government is spending a large sum of money. A number of C. C. C. camps in the area now are trying to build up the district, and if future prospecting work is carried on there promiscuously we believe that it would serve no good purpose. A devastating fire might occur at any time. The last great fire in 1932 cost an estimated $70,000,000. But there was one authority on the subject who told me that the loss in forest assets would reach $700,000,000. We are trying to save our watersheds. They are California's greatest assets and Santa Barbara needs this one.

Mr. WHITE. Will you tell us how the provisions of this act barring entry of mining claims in this area is going to promote the reforestation or protect the watershed? Can you explain that to us?

Mr. STUBBS. Just as I stated, the Government is spending a good deal of money in there now trying to rebuild that watershed and to prevent soil erosion, which is at the present time the result of these fires. Useless and fruitless prospecting endangers the watershed and the Santa Barbara Reservoir. We all feel that it would provide real protection, and there is nothing harmful that could come from this bill.

Mr. WHITE. Don't you think that if there are mineral resources in there, wealthy mineral in this area, that the passage of this law will bar its development and leave those resources undeveloped and latent?

Mr. STUBBS. Not necessarily so. I think the report from the Secretary of Agriculture states that if there are any healthy symptoms, need for mineral development, that terms can be granted quickly. In other words, it seems like we are trying to regulate a hazardous condition that is endangering the lives and property of a great community.

Mr. MOTT. How big did you say that watershed is—how many square miles?

Mr. STUBBS. Well, the actual number of square miles is 196, affecting the reservoir area, and 200,000 acres in all are involved in this particular bill.

Mr. MOTT. And the town is how big?

Mr. STUBBS. The town is 35,000, but the country—the back country—back of the city of Santa Barbara represents more than 15,000 population.

Mr. WHITE. This is a colony of millionaires in Santa Barbara, isn't it?

Mr. STUBBS. I am glad you asked that question, because I believe it would be apropos to tell you something about the city of Santa Barbara and vicinity, and something about the people who reside there. Santa Barbara is a city which nestles in the cup of a mountain range where it touches the sea. It is famed for its beautiful homes, where many families of great wealth and prestige reside, but it also has many other attractions. It is probably one of the most attractive communities of the world, being surrounded by commanding mountain peaks, and by the sparkling and peaceful Pacific Ocean, where yachts, motorboats, and other types of sea vessels are operated by those who reside there. The people are of the highest type. Many of them trace their ancestry back to the founders of California. All who once see this beautiful community long to remain there permanently.

Regardless of what others might say, it is my belief that Santa Barbara is the paradise of the Pacific, because of its healthy atmosphere, its glamorous air, its high type citizenry, attractive buildings, and other factors which go into the development of a splendid community—all these Santa Barbara has in abundance, and these are what I want to save from destruction. The very lives of the citizens are at stake, because they naturally require pure water in abundance, not only now, but the certainty that this supply will be protected for future generations. Water is king out in my country.

There has been some question raised concerning the protection of current mining development and the right to develop any mineral deposits of value which might be discovered in the future. If you will permit me to refer to the report of the Secretary of Agriculture, you will note that the city obtains its principal supply of water from the forest area. You will also note that the land has not been found, even with prospecting over a long period of time, to contain valuable deposits as far as is known now, but under the existing law they are subject to location and entry under the mineral statutes; but under the mineral laws, in view of the provision for the restoration of valuable mineral lands to location and entry by the President, and upon the recommendation of the Secretary of the Interior and the Secretary of Agriculture, valid rights are adequately protected.

Mr. WHITE. As I understand it, the provisions of this bill would invalidate any mineral location.

Mr. STUBBS. Not present locations.

Mr. WHITE. Is it the opinion of the chairman that, after the passing of the law, they could be easily obtained?

The CHAIRMAN. I cannot pass on that—I am sorry. I do not know how that would be interpreted, or how easy it is.

Mr. MOTT. I will tell you. It is our experience, and I have had several bills in at the last session like this, that you cannot protect your watershed if you let anybody go in there to live, or homestead, or mine, or anything else. If you have a watershed that you want properly protected either from fire or from insanitary conditions, you have to keep people out of it.

The CHAIRMAN. It is moved and seconded that the report on H. R. 6544 be made. All in favor signify by saying aye. [A chorus of ayes.]

Those who are not in favor will say no.

Mr. WHITE. No.

The CHAIRMAN. The ayes have it. One no.

And thereupon, Mr. Speaker, the bill was presented to the House and passed. It passed the Senate with the aid of Senator HIRAM JOHNSON, who defended it in the upper Chamber, and was approved by the President.

This law, I know, will not only protect the water rights of the citizens who depend upon the Gibraltar watershed for domestic and agricultural water needs, but it will assist materially in advancing recreational activities, grazing, propagation of wildlife, and a host of other important and necessary activities which follow naturally when we take good care of our forest and watershed areas.

ROBINSON-PATMAN EQUAL OPPORTUNITY IN BUSINESS BILL

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection.

There was no objection.

Mr. PATMAN. Mr. Speaker, this bill, H. R. 8442, is expected to receive consideration Tuesday, May 26, 1936, immediately after disposal of the vocational education bill. There will be 1 hour's debate on the rule for consideration of our bill and 4 hours' general debate after the adoption of the rule. Then the bill will be read under the 5-minute rule. It will possibly be late Wednesday evening before the bill is finally disposed of, but those of us who are sponsoring the legislation are hopeful that the bill can be disposed of before adjournment Wednesday night. The Honorable JOHN E. MILLER will have charge of the bill for the Judiciary Committee.

OTHER QUESTIONS AND ANSWERS

In the daily CONGRESSIONAL RECORD for Thursday, May 21, on page 7969, I inserted questions and answers relating to this bill. I am inserting herewith additional questions and answers:

STOCK DEFENSE TO ANY EQUAL-RIGHTS BILL

1. Question. What will be the tactics of the opposition?

Answer. As usual, it will be contended by many that they are in favor of just this type of legislation, but opposed to this particular bill. It is the same old stock defense that is used to oppose any kind of legislation along this line. Witnesses appeared before the Judiciary Committee and the Rules Committee of the House and stated that they favored what the bill seeks to do, but offered critical objections to the bill as proposed to do what we wanted and what they wanted, according to their arguments. It is interesting to note that the ones who are opposing this bill have never suggested to the committee that considered it a bill that will do what we want done that they would favor, although they

claim that they favor what we are proposing to do. The House Judiciary Committee considered this bill for almost a year.

FARM ORGANIZATIONS

2. Question. The newspapers a few days ago reported that representatives of several farm organizations have issued a statement in opposition to the Robinson-Patman bill. Are the farmers opposing this legislation?

Answer. I believe the farmers and their organizations will support this bill. It is true that a letter was written to the Honorable JOHN J. O'CONNOR, chairman of the Rules Committee, by representatives of several farm organizations, stating that they were writing on behalf of the farmers of the country and asked that the bill be given further study. In the letter it was stated:

As representatives of the organized farmers of this country, we are in favor of legislation to eliminate false brokerage allowances, false advertising allowances, and unreasonable quantity discounts where such discounts are made available only to a very limited number of customers.

In another part of the letter they stated that—

The bill should go over until the next session of Congress and be more carefully reviewed and studied with a view to writing a bill which will correct the abuses complained of.

At the time this letter was written, our bill contained two amendments that were objectionable to these farm organizations: One was the definition of price, section 5 of the House bill, known as the antibasing point provision; and the other one was the classification section, classifying distributors into groups such as wholesalers, retailers, brokers, jobbers, and so forth. Since that time the sponsors of this legislation have agreed to eliminate both these amendments. The Judiciary Committee has met and instructed the chairman, the Honorable HATTON W. SUMNERS, to offer amendments to the bill on the floor to strike these provisions from the bill. Undoubtedly they will be eliminated.

Therefore these farm organizations will certainly support the legislation in favor of correcting the abuses that our bill is intended to correct.

NOT SUBSTITUTE FOR N. R. A.

3. Question. It has been stated in the public press that the Robinson-Patman bill is a substitute for the N. R. A. Is this true?

Answer. No; it is not true. This bill has no connection whatsoever with the N. R. A. It seeks to correct abuses and unfair advantages that are generally known, condoned by a few but never encouraged or defended by any except the special few who are profiting by reason of them. No one will openly defend these abuses, and the Members of Congress will not hear a Member of the House of Representatives attempt to defend the abuses this bill seeks to correct.

WILL RETAILERS HAVE TO COME TO WASHINGTON BEFORE FEDERAL TRADE COMMISSION?

4. Question. If this bill is passed, will it require the million and a half retail stores to defend their rights before the Federal Trade Commission?

Answer. No; this bill does not deal with the retail distributor. It merely grants one retail distributor the same rights and benefits as other retail distributors under the same conditions. About the only concern that will be called upon to defend itself before the Federal Trade Commission will be the manufacturer who cheats his customers by charging to certain customers more for the same quantity and under the same conditions than he charges others. This practice will be prohibited by this bill, which requires equal rights to all customers and special privileges to none. Many large manufacturers now have this policy. This bill will force all chiselers and cheaters to adopt Golden Rule policies.

PRICES NOT INCREASED

5. Question. Will the bill affect in any way retail prices?

Answer. No; a manufacturer will be compelled to sell all customers the same quantity at the same price. The retailer who purchases from the manufacturer will not be required to maintain a price. Manufacturers will compete among themselves, but each manufacturer must treat his own customers fairly and squarely and not charge one more for the same quantity under the same conditions than he charges another. This is enforcing common honesty.

QUANTITY PURCHASES RECOGNIZED

6. Question. Will this bill prevent a large purchaser from receiving a lower price for a large quantity than a small purchaser receives for a small quantity?

Answer. No; the bill recognizes that there should be a difference in the selling price based upon differences in cost of manufacture and distribution. In other words, if 50,000 units of a commodity are ordered from a manufacturer and he can produce these units for 5 cents less per unit by reason of the large order than he could produce a thousand such units, there is nothing in the bill which will prevent the lower price being given for the large quantity purchased. In this case the buyer of a thousand such units will pay 5 cents more per unit because there is a difference in the cost of manufacture of that amount. The only exception is that where a particular commodity is purchased in such great quantities by a very few large buyers that these large buyers would soon obtain a monopoly in the distribution of that commodity, then the Federal Trade Commission may establish a quantity limit upon the showing that there is danger of a monopoly, and when that quantity limit is fixed, any purchaser or group of purchasers who buy the quantity limit so fixed will receive the same price per quantity unit as the large mass buyers who purchase several such quantity units. This power of the Federal Trade Commission cannot be invoked unless there is danger of monopoly and upon proof being made that there is danger of monopoly.

WILL NOT COMPEL HIGHER PRICES TO CHAINS

7. Question. Will this bill compel chain and department stores to pay a higher price?

Answer. It is not intended to require anyone to pay a higher price, but it is intended to compel a manufacturer who selects a customer—and in this bill power is expressly reserved for the manufacturer to select his customers—to give each customer the same fair deal and the same prices for the same quantities under the same conditions. This bill will not increase prices. It will lower prices to consumers, since independents who are now refused equal rights with other customers of a manufacturer will be given these rights under this law, which will result in a lower price to them. This law will cause keener competition and lower prices to consumers.

MIDDLEMEN

8. Question. Is there anything in this bill that will require middlemen to be used?

Answer. Absolutely nothing. The only provision about brokers and wholesalers will merely prevent fees and commissions ordinarily paid to brokers and wholesalers from being used as bribes.

VOLUNTARIES FOR BILL

9. Question. Are the voluntary groups of grocers, druggists, and other opposing this bill?

Answer. Only where their executives and promoters are making money off of them by exploiting the menace of the chain store to the independent merchant. The bill will make it easier for the voluntary to protect its members against the chain, because it places a halter on chain abuses. And this bill will make the voluntary more effective in securing that protection, because it will guarantee its members prices on pool purchases on an equal basis with their largest chain competitor.

Any voluntary is, therefore, very foolish to oppose this bill. Under existing law, a number of owners of stores can go in together, buy collectively, and receive a better price by reason of the quantity purchased. An investigation has disclosed, however, that such groups do not receive as good a price as the corporate chains, although they purchase the same quantities. Besides, under existing law, manufacturers can cut them off entirely any time they want to and refuse to give them any discount or rebate whatsoever. Some leaders in these groups have been led to believe that they are already getting more than certain other groups, and efforts are being made to get them to oppose the bill. The

fact is that no one knows the special discounts that the other customers of a manufacturer are receiving, and an investigation has disclosed that only the big corporate chains receive certain big rebates.

HOLDERS OF PRIVILEGE OPPOSE BILL

10. Question. Why is this bill so bitterly opposed?

Answer. A few people are enjoying great privileges from manufacturers. These few have become greedy, which is perfectly natural. One large corporate chain is paying its president, vice president, and general superintendents $2,000,000 a year. This $2,000,000 represents about one-fourth of the special rebates this concern receives from manufacturers. Six of these officials draw salaries of more than $100,000 a year each. They are afraid if this law should be passed and they have to pay the same price for the same quantity of merchandise under the same conditions that their big salaries will be in jeopardy; that they will possibly have to accept a reduction. This is not at all pleasing to them. Evidently they have in mind increases rather than reductions.

SECTIONS AND GROUPS AFFECTED

11. Question. Which sections of the country and groups are most vitally affected by this legislation?

Answer. The manufacturer who deals fairly with his customers will not be affected by this bill. It was stated before a committee of the House that 90 percent of those affected by the bill reside in a small area in the heart of New York City. They are profiting to the extent of millions of dollars a year through their chiseling, cheating, racketeering tactics. Their policies are destructive not only to small business, small manufacturers and distributors, but also to the consumers including the farmers and wage earners. All sections of the country are affected, and all groups, but the unfair privileges are held by a small group in a small area.

HOW GREEDY KEEP THEIR PRIVILEGES

12. Question. How do the few greedy people who are opposed to the Golden Rule in business most effectively prevent the enactment of such a bill as the Robinson-Patman Bill?

Answer. By seeking delay, by confusion of the issue, and by downright misrepresentations. A congressional investigation has shown that these people use farmers and other consumers as a front or stuffed shirt to act as their mouthpiece. They do not come out into the open themselves as their arguments will not stand the light; but different methods and tactics are used to get the so-called consumers, farmers, and wage earners to plead their cause for a consideration. One who advocates the enactment of a law is at a great disadvantage since he has such hazards before him as delay and all kinds of misrepresentations. On the other hand, one who is opposing the enactment of a bill has many things to his advantage. A whispering campaign is often resorted to to disturb the members. Every method on earth is used to delay consideration and the more confusion by misrepresentations or otherwise that is injected into the issue, the better chance there is of defeat of the bill.

DANGER OF MONOPOLY

13. Question. Why do you say there is danger of monopoly?

Answer. There is not a danger of monopoly at this time in every line of business, but in the lines of business in which corporate chains are engaged there is already a monopoly in many of the favorite areas in this country. In determining the extent that corporate chains have gone in the direction of monopoly, comparisons should be restricted to the areas in which the corporate chains operate and the lines of business in which they are engaged. For instance, in community A, there is a million dollars' worth of retail distribution business a year. Let us suppose that the corporate chains only do 25 percent of that business, or $250,000. Without further investigation you would say that there is no danger of monopoly, but suppose that the $250,000 of business represents all of the grocery business in that community for that year and that is the only business in which the chains are engaged in that area. That would show conclusively that in the grocery business in that area that they have a complete monopoly although they are only doing 25 percent of the total retail business, which includes all retail distribution.

Suppose a corporate chain has 10,000 outlets, and it opens a thousand new outlets. These thousand new outlets are in competition with local merchants who have spent their lifetime building up goodwill and the business in which they are engaged. This corporate chain desires to destroy the competitors around these thousand new stores. Under the existing system all they have to do is to let these thousand stores have all their secret rebates obtained by reason of their purchases for all their 11,000 stores and this will enable the thousand new stores to soon destroy their competitors. When these competitors are destroyed, a thousand more stores can be opened and their competitors destroyed in a similar manner. The losses in one place are made up not only by the secret rebates obtained on total purchases but also on higher prices charged to consumers in areas where they already have a monopoly of business where their competitors have already folded up.

THE LOW PRICE CONSUMERS SHOULD RECEIVE

14. Question. Is it better for consumers to receive a real low price?

Answer. Yes; consumers should receive the lowest price possible. That does not mean, however, that we should not look into the future and determine the effect of present destructive policies if permitted to continue. For instance, because a corporate chain is bribing or baiting their customers with real low prices while their competitors are being destroyed does not mean that the consumers will continue to get those prices after competition is destroyed; it means that the sky will be the limit as to prices and the people will pay what monopoly says they should pay. On the other hand, the farmers will be compelled to accept the price for what they produce that monopoly says they must accept. The wage earners will be compelled to accept the wage that monopoly fixes. Such a policy in the direction of monopoly is destructive to the best interests of our country. It just happens that the independent merchants are victim no. 1. Farmers and wage earners will be victim no. 2, and the consumers of the country will be victim no. 3.

The consumers are entitled to the lowest price consistent with a fair price to the producer of raw materials, a fair wage to those who convert the raw materials into the finished product, and a fair cost of distribution to the consumers. Remember, that the 26,000,000 people dependent upon agriculture, the 36,000,000 people dependent upon mechanical and manufacturing pursuits, the 11,000,000 people dependent upon transportation and communication, the 9,000,000 people dependent upon professional services, and the 18,000,000 people dependent upon distribution for a livelihood are also consumers and they are interested in fair prices and fair wages.

GOOD PRICES AND GOOD WAGES

15. Question. Why are good prices and good wages necessary?

Answer. The American people owe $250,000,000,000 in debts. The minimum tax burden is fixed for the next 40 years. If prices and wages are reduced 50 percent, our debt burden will be doubled and our tax burden will be doubled in what the people will have to pay with. There is only one way that this country can readjust itself and that is for us to force, if necessary, a policy of live and let live, and compel the Golden Rule in business in order that the people may pay their debts and taxes and in order that they may have purchasing power. The farmers cannot buy what the wage earners and the manufacturing plants of this country produce unless they have buying power.

A TOWNSEND PLAN CATECHISM

Mr. LEA of California. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection.

There was no objection.

Mr. LEA of California. Mr. Speaker, I submit a catechism on the Townsend plan in the hope it may aid in a better understanding of some features of that proposal:

Question. What is the Townsend plan?

Answer. A plan to pay every citizen over 60 years of age a pension sufficient to make his monthly income $200 per month, provided such person retires from all gainful employment and agrees to spend all the money each month.

Question. What is the main purpose of the plan?

Answer. To provide large incomes for persons over 60, and thus spending this money to aid economic recovery.

Question. Does the plan provide any care or aid for widows, orphans, cripples, blind, indigents, or those under 60 in poverty or distress?

Answer. It does not.

Question. Would large property owners, with little or no net income, be eligible?

Answer. Yes.

Question. Would a man over 60, with $30,000 and an income of $1,200, receive a pension, while a widow under 60, with dependent children and without property, would receive nothing?

Answer. Yes.

Question. If the object of the Townsend plan is to compel the circulation of money, why not compel the person who earns the money to spend it as he sees fit instead of giving it to somebody else to spend?

Answer. It is a harsh thing to take a man's earnings away from him by taxes and give them to others to spend for any old purpose, useful or not.

Question. Can a pensioner 60 or over, having a wife younger than himself, and minor children, make provision for them out of his pension so that they may be cared for after his death?

Answer. He cannot. He must spend his entire pension and save nothing.

Question. In event of the death of a pensioner, leaving a wife under 60 and minor children, how are they provided for?

Answer. They go on county relief as at present.

Question. Could not some kind-hearted pensioner support the widow and family?

Answer. The plan limits all gifts to persons or institutions to 10 percent of the pension and out of this must come all contributions to churches, lodges, and charity.

FINANCING THE PLAN

Question. How is it proposed to finance the plan?

Answer. Principally by what is called a transaction tax of 2 percent.

Question. What is a transaction tax?

Answer. Roughly, it is a tax on all business transactions and on every dollar of wages earned and the value of goods or property bought or sold. It closely resembles a sales tax but is more far-reaching and taxes many transactions now exempt under ordinary sales taxes.

Question. Would the tax apply to food and clothes?

Answer. Yes; to both.

Question. What will be the cost of these pensions?

Answer. That depends on the number who qualify. The advocates of the plan estimate the cost from eighteen to twenty-four billions of dollars per year. There are more than 11,000,000 persons over 60 in the United States and over 10,000,000 eligibles. If all these apply, the cost at the beginning would be twenty-four billions a year. Within another generation the cost would be forty-eight billions a year.

Question. What is the population of the United States?

Answer. 122,775,046, according to the 1930 census.

Question. What must be contributed through transaction taxes to raise this 24 billions annually?

Answer. An average of $195.40 for every man, woman, and child in the United States.

Question. How can you prove that?

Answer. Simply by dividing the amount to be raised by the total number of the population.

Question. What would this transaction tax cost a family of five persons?

Answer. $977 per year or about $2.67 per day, including Sundays.

AMOUNT OF BUSINESS NECESSARY TO RAISE TAX

Question. What amount of transactions or business must be done annually for each man, woman, and child to raise these pensions?

Answer. An average of $9,770.

Question. Enormous! Can you prove that?

Answer. Prove it yourself.

Question. How?

Answer. You have already proved by the census that the cost of raising this pension of 24 billions would be $195.40 for each man, woman, and child. This $195.40, therefore, represents 2 percent of the amount of transactions necessary to raise the pensions.

Question. Correct, so far.

Answer. Now divide this $195.40 by 2 (the percent of the tax) and you have $97.70, or 1 percent of the per capita expense of the pensions.

Question. Correct, but proceed.

Answer. Multiply this 1 percent, or $97.70 by 100, and you have $9,770 as the average amount per capita of the transactions, taxed at the 2 percent, necessary to raise the pensions.

Question. But would not big business pay most of this tax?

Answer. No. The rich man may pay a tax on production, but adds it to the cost, and is repaid by the higher cost paid by the consumer. There are few rich people. They may spend much for their own consumption, but there are so many poor people, or persons of moderate income, who spend much or all their income for their necessities, that over 90 percent of the cost of the pensions would be borne by families having an income of less than $2,500 a year.

Question. How much tax would the average man, if his family averaged five persons, pay from the time he was 20 until he was 60?

Answer. $39,080.

Question. What would he and his family get if he died at 59?

Answer. Nothing from the Townsend plan except hard work to support others. If a good man, he might get a place in heaven. He would have to die to get that reward.

RETIRING AGED PERSONS TO MAKE ROOM FOR YOUNGER ONES

Question. How many people are there in the United States over 60?

Answer. Over 11,000,000. Over 500,000 are aliens.

Question. How many of these does Dr. Townsend estimate to be engaged in productive industry?

Answer. About 4,000,000.

Question. How many over 60 are women?

Answer. Only about 5,525,000.

Question. How many of these earn over $200 a month or have a job of fair wages for a younger person?

Answer. Few. Observe such jobs in your community. So far as the retirement of these 5,000,000 women to make room for younger workers is concerned, it may as well be left out of the calculation.

Question. Well, there still remain 5,000,000 men over 60. How about them?

Answer. Again, answer the question for yourself. How many men about you over 60 have a job they would not give up for an assured income of $200 a month for life? Again, how few, comparatively, have jobs that would be attractive to younger men?

Displacing the aged by younger men and placing on them the burdens of supporting the aged on a scale twice as affluent as the younger men now enjoy gives no promise of helping younger men or younger people.

OTHER EXPERIMENTS

Question. Has any government adopted a plan to bring prosperity by wholesale pensions?

Answer. Yes; Alberta, Canada.

Question. What was that plan?

Answer. To pay $25 per month to every adult, on the theory they would spend it and thus bring back prosperity.

Question. How would that amount, payable to each adult, compare with $200 a month to each person over 60?

Answer. Approximately the same.

Question. How did the plan work in Alberta?

Answer. The candidates pledged to the plan were elected. The government went bankrupt and the officials did not dare to put the plan in effect.

RESULTS OF THE TOWNSEND PLAN

Question. Who would benefit by the Townsend plan?

Answer. Theoretically, all over 60, about 8 percent of the population.

Question. How will it affect the remainder of the people?

Answer. Most people die before 60. They would work all their lives for something neither they nor their families ever get.

Question. But would not the spending of this vast sum bring back prosperity?

Answer. It could not. It would burden our people with a tax equal to nearly one-third of the total national income, nearly one-third of all they earn to spend for themselves.

Question. What is meant by national income?

Answer. Roughly, it means the total actual income received by the entire population.

Question. But would not this pension money go into trade and business?

Answer. Yes. But this money now goes into trade, spent by those who earn it.

Question. Would the Townsend plan create any new money for circulation?

Answer. No. It would simply take existing money from those who earned it and give to others to spend. It takes from Peter to give to Paul. Peter has that much less and Paul no more than he took from Peter.

Question. How about Dr. Townsend's statement that he does not believe in saving but in spending money?

Answer. The prodigal son tried out that theory over 2,000 years ago.

OLD-AGE PENSION DESIRABLE

Question. Is not an old-age pension desirable?

Answer. Not only desirable but necessary.

Question. Would not the Townsend plan serve that necessary purpose of taking care of the needy aged?

Answer. If it would work; yes. Its unbearable burdens would lead the Nation into further poverty and distress. It would bring misfortune to all, even the pensioners themselves.

Many aged people need help. Many do not. To give to all of a ten-million class equally and on a generous scale because part of them are needy would be a folly and improvidence such as the world has never yet known.

Question. What is the true basis of aid to the needy?

Answer. That question was answered in the name of religious duty many centuries ago. Give to the needy "according to their need"; give "with an open hand." We should provide not stingily, but according also to our ability to aid them. We cannot compel 80 or 90 percent of our people to live on beans to feed 8 percent on turkey.

Question. What is a revolving fund?

Answer. A fund that is paid out on condition it will be used and repaid to the one who furnished the money. There is no revolving fund under the Townsend plan. The use of that term is a misnomer.

Question. Is there any assurance that the pension taxes will be repaid to those who pay them?

Answer. None whatever. No more than if the money was thrown to the boys in the street or paid as taxes for any other purpose.

Until we learn how to get something for nothing the Townsend plan cannot work without impoverishing the Nation.

THE WORKS PROGRESS ADMINISTRATION IN WESTCHESTER COUNTY, N. Y.

Mrs. O'DAY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mrs. O'DAY. Mr. Speaker, on May 13, 14, and 15 there appeared simultaneously in the Washington Post and Herald Tribune a series of articles purporting to give a picture of the Works Progress Administration as it operates in my county of Westchester. The articles filled approximately 20 columns of the papers and contained some truths, many skillfully perverted half truths, many statements wholly erroneous and misleading, and a great deal in the nature of a general and violent attack on the present administration. Under the camouflage of giving certain alleged facts to the public, the articles are in reality a Republican fulmination by two bitterly partisan newspapers.

These articles have been answered point by point by Mr. Bryan, W. P. A. administrator for Westchester and surrounding counties, but he does not touch upon the interesting background behind this rather venomous attack.

The articles were written by Mrs. Agnes Meyer, whose husband is owner of the Washington Post.

William Ward, until his death a few years ago, was for 37 years the Republican leader of Westchester, and dominated the county where Democrats were outnumbered more than three to one.

He was, however, a benevolent dictator, and his very laudable ambition was to make Westchester the model county of the United States. His plans included the setting up of an elaborate recreation department, and at its head he appointed the wife of his friend and fellow Republican, Mr. Eugene Meyer, who has a home in Westchester.

Mrs. Meyer has great executive ability, and with the aid of a highly paid staff, her own great wealth, generous appropriations from a Republican board of supervisors, and the backing of Mr. Ward she created a model department for the county and for herself a semiofficial political standing as the Lady Bountiful of Westchester.

The death of Mr. Ward was followed by strife among his political leaders and his organization began to crumble. The board of supervisors, long in secret rebellion against what they considered the extravagance of the recreation department, began to cut appropriations and even talked of closing the magnificent county recreation center.

Republican prestige began to wane and the enrollment books of 1932 showed a loss of thousands of Republican names. Mrs. Meyer is an ardent Republican worker, and this, together with the loss of prestige as dispenser of bounty, political and otherwise, probably goaded her into making her reckless statements concerning the W. P. A. and into giving to the public her interpretation of the New Deal.

THE BATTLE OF THE GUMDROPS

It is hard to take seriously her anguish over the fact that "the other day one youth idling about tossed a piece of chalk at a girl across the room. She shouted, squealed, and threw a gumdrop back at him; then, for good measure, tossed another gumdrop down the back of another girl. So much equipment was lost in this office that detectives are now looking for it." Mrs. Meyer does not tell us whether the equipment was lost during the battle of the gumdrops or if the gumdrops were a part of the equipment.

Conceding that there may be venal and unscrupulous persons among the thousands connected with the W. P. A. in one capacity or another, let us look at Mrs. Meyer's condemnation of it as a whole.

In the first paragraph of her first article Mrs. Meyer describes Mr. John Bryan, regional director, as "an engineer of repute, well regarded by everyone as a professional man." Then adds that he said to friend of hers, "Franklin Roosevelt is the man who gave us the money, and I would be the dirtiest kind of a dog traitor if I didn't see that the people

who are 100 percent for him did not receive first consideration." Mr. Bryan brands this story of Mrs. Meyer's unnamed friend as an absolute falsehood.

Mrs. Meyer in her second paragraph takes up the matter of overdue pay. This is admitted and deplored. It was due primarily to an effort on the part of the Treasury Department disbursing office to expedite pay checks at the time of decentralizing the disbursing office in Albany and setting up offices throughout the State. This has been accomplished, and delays are ended.

Mrs. Meyer claims to see "an oppressive atmosphere of terror of the Federal Government which demoralizes the relief workers." I am in close and constant touch with my county of Westchester and can discern no such atmosphere of terror. On the contrary, I find in Republicans and Democrats alike a lively appreciation of what the administration is doing through W. P. A.

Mrs. Meyer deeply resents the fact that in taking over the temporary emergency relief the W. P. A. did not take over bodily its entire staff. Mr. Bryan did absorb such of its employees as were suited to the purposes of his organization.

Mrs. Meyer bitterly resents that some features of her recreation department now come under W. P. A.'s jurisdiction and that the county works bureau was absorbed. She quotes some random cost comparisons of relief work under the bureau and W. P. A. In the matter of salary expenses she says that, prior to the advent of W. P. A., approximately 100 persons carried on the entire operation of the county works bureau while P. W. A. has a force of 250.

She fails to add that the bureau employed only about 3,000 workers, while the district in charge of Mr. Bryan comprises four counties besides Westchester and carries six times the load handled by the bureau.

Mrs. Meyer claims there is discrimination between relief workers of the two major parties, since, with a 3-to-1 majority, the great bulk of relief goes to Democrats. In proof of this she cites a list of 27 supervisors and foreman in the township of Mamaroneck, 23 of whom are Democrats.

The list is entirely misleading in that it is incomplete. She omits to name the field superintendent, a Republican, who receives top salary of $195, and a number of general foreman in the same town, also Republicans, also receiving upper-bracket salaries. The one she lists with a blank against his name is a former Republican district leader, who has been credited with controlling the Italian vote of the township.

Since it is not the policy of the Works Progress Administration to inquire the politics of a worker, Mr. Bryan has no means of knowing the proportion of Republicans to Democrats on relief work.

If the latter are in the majority it is easily explainable. The very wealthy and the comfortably-off of Weschester are almost invariably members of the Republican Party. As such they were well taken care of during the 37 years of Mr. Ward's dictatorship. The poorer Democrats could not get jobs even as day laborers on the building of the county's beautiful parkways, a work of many years, and consequently had no reserve to fall back upon when overtaken by the depression.

Mrs. Meyers claims that totally unqualified supervisors and foremen have been appointed by Mr. Bryan, and cites in proof a number of men and their former occupations. Does Mrs. Meyer, secure in her home among the Westchester hills, not know that unemployment and stern necessity have driven men to accept any work, however humble, rather than go on relief? L. E. H., for instance, a field superintendent, is listed as a mail-truck driver. As a matter of fact, H. has been general superintendent for two large construction companies and was with the General Electric Co. as an air-conditioning engineer at one time. His experience as mail-truck driver was gained 16 years ago when, on his discharge from the Army, and having a civil-service status, he took the first job he could get until he became established in the work for which he was trained.

J. B., listed as a former beer salesman, has had experience of 15 years as superintendent of road construction. When such work was terminated by the depression he temporarily became a beer salesman for his brother-in-law.

U. R. is listed as a saloonkeeper. Records shows no man of that name to have been on the W. P. A. pay roll. Of others listed there are none who have not a background of construction work of some kind. Is it quite fair or honest to class them as workers in jobs they held temporarily in some cases as long ago as 15 years?

Mrs. Meyer claims that field supervisors "reach out among the relief workers and population generally for the formation of new Democratic clubs in every city, village, and town." She offers no proof of this except vague mention of a "blue card" which she has not been able to obtain. If the staff of investigators and lawyers employed in helping her with her articles could not find one it can safely be classed with the mythical F. W., of Rye, whose pitiful case she cites, and the unnamed worker who, in order to get relief, was forced to drink and smoke with a long line of Democratic politicians before attaining his goal.

Does Mrs. Meyer not know that months prior to a Presidential election new political clubs spring up like mushrooms and that there is nothing criminal about a "call for meetings sent out on a postcard" to members?

Does Mrs. Meyer not know that Westchester is covered by a chain of Republican newspapers, that the need for a Democratic one becomes acute as the time comes for a Presidential election, and that one is born and dies away every 4 years? Mrs. Taylor, a district leader who has the courage to try and start one, surely merits a dinner in her honor. Neither starting a newspaper nor giving such a dinner denotes moral turpitude on the part of Democrats.

I have mentioned some of the high lights of Mrs. Meyer's articles. Mr. Bryan specifically denies others, namely:

That W. P. A. has been used in any manner to "intimidate the helpless and to destroy local government."

That he "has no power to select his subordinates—It is done for him by William Cronin, the Democratic boss."

That Democratic project supervisors receive higher pay than Republican supervisors. That "projects were more efficiently operated and at less administrative expense under the Temporary Emergency Relief than under W. P. A."

That W. P. A. is "using large sums of public money intended for the alleviation of unemployment to build a Democratic political machine."

That W. P. A. is "discriminating between American citizens in a most despotic way for political purposes."

That W. P. A. is "guilty of petty extortion from defenseless relief cases to finance local political organizations."

Is guilty of "waste, extravagance, and rank incompetence."

Nor having "so intimidated the people that its tyrannical power is a menace to a free nation."

These unsubstantiated accusations are embodied throughout Mrs. Meyer's violently political outburst. It is well to remember in reading them that prejudice is vagrant opinion without any visible means of support; and a choice must be made between the statements of a person obviously biased and bitter, having no official position, and a public official chosen for outstanding and well-known qualifications and in full possession of actual facts.

RANDOLPH PERKINS

Mr. RANKIN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. RANKIN. Mr. Speaker, those of us who linger upon this "bank and shoal of time" were made sad, indeed, this morning when we beheld the flag at half-mast and learned that it indicated the passing of our beloved and distinguished colleague, Hon. RANDOLPH PERKINS, of New Jersey.

It brought a keen and peculiar sadness to me because of our intimate association over a long period of years. We came to Congress at the same time—the Sixty-seventh Congress—and served together on the same committee for many years. There grew up between us one of those friendships

which has been referred to as the flowers that overhang the walls of party politics.

He was one of the best, truest, and ablest Members I have ever known.

The Sixty-seventh Congress, together with President Harding, came in on a Republican landslide. The Republicans captured more seats that year, if I am not mistaken, than have ever changed at one time in the history of the American Congress. Strange to say that Mr. PERKINS was the only one of that number remaining in the House at the time of his death.

The country and the world have undergone many changes and the political vicissitudes have been devastating, but he so held the confidence of the people of New Jersey that he was able to weather the storm, when all his colleagues on his side of the House who came in with him had either been defeated, died, or retired.

During the time that we served together on the same committee we passed through many exciting and a few bitter ordeals; but I never knew him to lose his temper or to utter a harsh or an unkind word. Yet he was firm in his convictions and did not hesitate to retain his position, regardless of pressure or criticism.

He was a profound scholar and an able lawyer. He was probably the ablest trial lawyer in either House of Congress. He was an ornament to the bar, as he was to this House.

I knew him in the intimacy of his home. I never met a more loving and loyal husband and father.

RANDOLPH PERKINS had courage, both moral and physical. Shakespeare says that—

> Cowards die many times before their deaths;
> The valiant never taste of death but once.

RANDOLPH PERKINS never tasted death but once. He is gone—never to be replaced. The position he occupied in this House, and especially in the affections of his fellow Members, can never be refilled.

Others will eulogize him in more fitting terms at some other time, but I could not resist the temptation to come in my feeble way to pay this humble tribute of respect, and with the hand of unfeigned friendship to place a wildflower upon his bier.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

Mr. PARSONS, from the Committee on Enrolled Bills, reported that that committee had examined and found truly enrolled bills and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H. R. 8069. An act for the relief of Mr. and Mrs. A. S. Mull;

H. R. 8599. An act to provide for a change in the designation of the Bureau of Navigation and Steamboat Inspection, to create a marine casualty investigation board, and increase efficiency in administration of the steamboat-inspection laws, and for other purposes;

H. R. 8766. An act to authorize municipal corporations in the Territory of Alaska to incur bonded indebtedness, and for other purposes;

H. R. 11747. An act extending the time for making the report of the commission to study the subject of Hernando De Soto's Expedition; and

H. J. Res. 439. Joint resolution authorizing the erection in the Department of Labor Building of a memorial to the officers of the Immigration and Naturalization Service and Immigration Border Patrol, who, while on active duty, lost their lives under heroic or tragic circumstances.

THE LATE REPRESENTATIVE RANDOLPH PERKINS

Mr. LEHLBACH. Mr. Speaker, it is with deep personal grief that I have to announce to the House the death of our able and distinguished colleague from New Jersey, Hon. RANDOLPH PERKINS.

On another occasion doubtless the House will note his life and services.

In the meantime I offer a resolution, which I send to the desk.

The Clerk read as follows:

House Resolution 524

Resolved, That the House has heard with profound sorrow of the death of Hon. RANDOLPH PERKINS, a Representative from the State of New Jersey.

Resolved, That a committee of four Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

The resolution was agreed to.

The SPEAKER appointed the following members on the committee: Mr. LEHLBACH, Mrs. NORTON, Mr. MCLEAN, and Mr. POWERS.

ADJOURNMENT

The SPEAKER. The Clerk will read the remainder of the resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect this House do now adjourn.

The resolution was agreed to; accordingly (at 12 o'clock and 15 minutes p. m.) the House adjourned until tomorrow, Tuesday, May 26, 1936, at 12 o'clock noon.

COMMITTEE HEARING

COMMITTEE ON THE PUBLIC LANDS

There will be a meeting of the Committee on the Public Lands of the House Tuesday, May 26, at 10:30 a. m., to discuss various bills pending before that committee.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. CROWE: Committee on Public Buildings and Grounds. House Joint Resolution 450. Joint resolution authorizing the erection of a memorial building to commemorate the winning of the Oregon country for the United States; without amendment (Rept. No. 2776). Referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. BEITER: Committee on War Claims. H. R. 12144. A bill for the relief of the Federal Enameling & Stamping Co.; with amendment (Rept. No. 2775). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BACON (by request): A bill (H. R. 12839) to extend the status of veterans of the World War to persons enlisted and serving on United States Shipping Board vessels during the World War in war zones; to the Committee on Naval Affairs.

By Mr. BLAND (by request): A bill (H. R. 12840) to extend the laws governing inspection of vessels, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. BREWSTER: A bill (H. R. 12841) to provide for the establishment of a Coast Guard station on the coast of Maine at or near Frenchboro, Hancock County, Maine; to the Committee on Merchant Marine and Fisheries.

By Mr. JOHNSON of West Virginia: A bill (H. R. 12842) to complete the Point Pleasant Battle Monument, Point Pleasant, W. Va.; to the Committee on Military Affairs.

By Mr. WITHROW: A bill (H. R. 12843) authorizing the State of Wisconsin to construct, maintain, and operate a free highway bridge across the Mississippi River at or near

La Crosse, La Crosse County, Wis.; to the Committee on Interstate and Foreign Commerce.

By Mr. CANNON of Wisconsin: Joint resolution (H. J. Res. 595) providing for an investigation of the abuses prevalent in the insurance business in the United States; to the Committee on Rules.

By Mr. RAMSAY: Joint resolution (H. J. Res. 596) to enable the States of Pennsylvania, Ohio, Illinois, Indiana, West Virginia, Kentucky, and Tennessee to conserve and stabilize the coal-mining industry within said States; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BELL: A bill (H. R. 12844) for the relief of Fred W. Ross; to the Committee on Naval Affairs.

By Mr. COX: A bill (H. R. 12845) for the relief of John Benton Jones; to the Committee on Military Affairs.

By Mr. JOHNSON of West Virginia: A bill (H. R. 12846) granting an increase of pension to Mary A. Stagg; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

10965. By Mr. BEITER: Resolution passed by the housing committee of the Buffalo City Planning Association, Inc., approving of the objectives of the Wagner housing bill (S. 4424) to place housing on a permanent basis, and opposing certain provisions of the measure, especially the lack of inclusion of personnel under civil service; to the Committee on the Civil Service.

10966. By Mr. COLDEN: Resolution adopted by the Board of City Planning Commissioners of the City of Los Angeles, Calif., asking favorable consideration of the Wagner housing bill (S. 4424); to the Committee on Banking and Currency.

10967. Also, resolution of Office Employees' Local Union, No. 15251, of Los Angeles, Calif., urging the passage of the Wagner-Ellenbogen housing bill (S. 4424 and H. R. 12164); to the Committee on Banking and Currency.

10968. By Mr. WELCH: Resolution of the San Francisco Labor Council, protesting against unlawful and unsafe methods of drilling carried on by the United States Bureau of Reclamation in the seven tunnels at Kenneth, Calif.; to the Committee on Mines and Mining.

10969. By the SPEAKER: Petition of the International Ladies Garment Workers' Union, Local No. 8; to the Committee on Banking and Currency.

10970. Also, petition of the International Ladies Garment Workers' Union, Local No. 101; to the Committee on Banking and Currency.

10971. Also, petition of the Chicago Federation of Labor; to the Committee on Banking and Currency.

10972. Also, petition of the International Ladies Garment Workers' Union, Local No. 189; to the Committee on Banking and Currency.

10973. Also, petition of the city of Chicago; to the Committee on Banking and Currency.

10974. By Mrs. ROGERS of Massachusetts: Petition of the City Council of Cambridge, Mass., requesting early enactment of the United States Housing Act of 1936, Senate bill 4424 and House bill 12164; to the Committee on Banking and Currency.

10975. By Mr. GOODWIN: Petition of the New York State Legislature, memorializing Congress not to reduce the tariff duty on coconut oil below a minimum of 3 cents a pound; to the Committee on Agriculture.

10976. Also, petition of the National Board of Young Women's Christian Association of the United States of America, affirming support of the Costigan-Wagner antilynching bill in the Senate and House; to the Committee on the Judiciary.

SENATE

TUESDAY, MAY 26, 1936

(Legislative day of Tuesday, May 12, 1936)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

THE JOURNAL

On request of Mr. ROBINSON, and by unanimous consent, the reading of the Journal of the proceedings of the calendar day Monday, May 25, 1936, was dispensed with, and the Journal was approved.

MESSAGES FROM THE PRESIDENT—APPROVAL OF A BILL

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries, who also announced that on May 22, 1936, the President approved and signed the act (S. 4594) to supplement the act of June 25, 1929 (ch. 41, 46 Stat. L. 41), which authorized and directed the Attorney General to institute suit against the Northern Pacific Railway Co. and others.

CALL OF THE ROLL

Mr. LEWIS. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Clark	King	Radcliffe
Ashurst	Connally	La Follette	Reynolds
Austin	Coolidge	Lewis	Robinson
Bachman	Copeland	Lonergan	Russell
Bailey	Couzens	Long	Schwellenbach
Barkley	Davis	McAdoo	Sheppard
Benson	Donahey	McGill	Shipstead
Bilbo	Duffy	McKellar	Smith
Black	Fletcher	McNary	Steiwer
Bone	Frazier	Maloney	Thomas, Okla.
Borah	George	Metcalf	Thomas, Utah
Brown	Gerry	Minton	Townsend
Bulkley	Gibson	Murphy	Truman
Bulow	Glass	Murray	Tydings
Burke	Guffey	Neely	Vandenberg
Byrd	Hale	Norris	Van Nuys
Byrnes	Hatch	Nye	Wagner
Capper	Hayden	O'Mahoney	Walsh
Caraway	Holt	Overton	Wheeler
Carey	Johnson	Pittman	White
Chavez	Keyes	Pope	

Mr. LEWIS. I announce that the Senator from Alabama [Mr. BANKHEAD], the Senator from Colorado [Mr. COSTIGAN], and the Senator from Nevada [Mr. MCCARRAN] are absent because of illness, and that my colleague the junior Senator from Illinois [Mr. DIETERICH], the Senator from Oklahoma [Mr. GORE], the Senator from Kentucky [Mr. LOGAN], and the Senator from New Jersey [Mr. MOORE] are unavoidably detained from the Senate.

I further announce that the Senator from Mississippi [Mr. HARRISON] is absent because of illness.

Mr. AUSTIN. I announce that the Senator from New Jersey [Mr. BARBOUR], the Senator from Iowa [Mr. DICKINSON], and the Senator from Delaware [Mr. HASTINGS] are necessarily absent.

The VICE PRESIDENT. Eighty-three Senators have answered to their names. A quorum is present.

DISPOSITION OF EXECUTIVE PAPERS

The VICE PRESIDENT laid before the Senate a letter from the Archivist of the United States, transmitting, pursuant to law, a list of certain papers and documents on the files of the Department of the Interior which are not needed in the conduct of business and have no permanent value or historical interest, and requesting action looking toward their disposition, which, with the accompanying list, was referred to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The VICE PRESIDENT appointed Mr. BARKLEY and Mr. NORBECK members of the committee on the part of the Senate.

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate a resolution adopted by the City Council of Brainerd, Minn., favoring the

prompt enactment of Senate bill 4424, known as the Wagner-Ellenbogen low-cost housing bill, which was referred to the Committee on Education and Labor.

He also laid before the Senate a resolution adopted by the executive committee of the American Historical Association, endorsing the recommendation of the National Historical Publications Commission for the enactment of legislation providing for the collection, editing, and issuance as a Government publication of original documentary materials relating to the ratification of the Constitution and the first 10 amendments thereto, which was referred to the Committee on the Library.

He also laid before the Senate a letter in the nature of a memorial from Anna Jarvis (founder of Mother's Day, Inc.), of Philadelphia, Pa., remonstrating against the enactment of the joint resolution (S. J. Res. 115) designating the last Sunday in September as Gold Star Mothers' Day, and for other purposes, which was ordered to lie on the table.

Mr. WAGNER presented a concurrent resolution adopted by the Legislature of the State of New York favoring the retention of the tariff duty of 3 cents a pound on imported coconut oil, which was referred to the Committee on Finance.

(See concurrent resolution printed in full when laid before the Senate by the Vice President on the 25th instant, p. 7832, CONGRESSIONAL RECORD.)

LOW-COST HOUSING

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD and appropriately referred lists of national and other organizations that have endorsed Senate bill 4424, known as the low-cost housing bill; also resolutions adopted by various organizations endorsing the bill.

There being no objection, the lists and resolutions were referred to the Committee on Education and Labor and ordered to be printed in the RECORD, as follows:

NATIONAL ORGANIZATIONS WHICH HAVE ENDORSED THE WAGNER-ELLENBOGEN HOUSING BILL, URGING ITS ENACTMENT AT THE PRESENT SESSION OF CONGRESS

American Association of Social Workers Housing Committee.
American Federation of Labor: Executive council, building trades department; housing committee.
Mayor F. H. LaGuardia, president, United States Conference of Mayors.
National Federation of Settlements.
Federal Council of Churches of Christ in America.
National Women's Trade Union League.
National Public Housing Conference.
National Urban League.
National Board of the Young Women's Christian Association.
American Federation of Hosiery Workers.
Special Conference of American Rabbis; Social Justice Commission; Rabbi Edward L. Israel.
National Association for Advancement of Colored People.
International Brotherhood of Electrical Workers.
Glass Bottle Blowers Association.
International Fur Workers Union.
Brotherhood of Railway Clerks.
National Association of Letter Carriers.
Piano, Organ, and Musical Instrument Workers Union.
Sheet Metal Workers International Union.
International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers.
International Association Marble, Stone, and Slate Polishers, Rubbers and Sawyers, Tile and Marble Setters, Helpers, and Terrazo Helpers.
United Rubber Workers of America.
International Federation of Technical Engineers, Architects, and Draftsmen's Union.
Federation Flat Glass Workers.
United Leather Workers International Union.
International Broom and Whisk Makers Union.
United Wall Paper Crafts of North America.
Cigar Makers' International Union.
National Federation of Rural Letter Carriers.
Operative Plasterers' and Cement Finishers' International Association.
Amalgamated Clothing Workers of America.
United Association of Plumbers and Steamfitters.
International Association of Machinists.
American Federation of Musicians.
International Ladies Garment Workers' Union.
United Mine Workers of America.
Bricklayers, Masons, and Plasterers International Union.
United Hatters, Cap, and Millinery Workers.
Labor Housing Conference.
Scripps-Howard newspapers.

ALABAMA

Housing Authority, Birmingham.
Muscle Shoals Building Trades Council, Florence.
Local Bricklayers, Masons, and Plasterers International Union, Dothan.
Alabama State Federation of Labor.
Birmingham Building Trades Council.
Anniston Central Labor Union.
Central Labor Union, Montgomery.
Central Labor Union, Winfield.
International Association of Machinists, River Front Lodge, No. 261, Mobile.

ARKANSAS

Central Trades and Labor Council, Pine Bluff.

ARIZONA

Mayor of Phoenix.
City Commission, Phoenix.

CALIFORNIA

Los Angeles Commission on Public Housing.
Los Angeles Municipal Housing Commission.
Central Labor Council of San Mateo County.
Central Labor Union of Monterey County, Salinas.
San Francisco Board of Supervisors.
Los Angeles County Board of Supervisors.
Los Angeles City Planning Commission.
San Bernardino City Council.
Mayor C. T. Johnson, San Bernardino.

BOOKKEEPERS', STENOGRAPHERS' AND ACCOUNTANTS' UNION,
New York City, May 18, 1936.

Hon. ROBERT F. WAGNER,
United States Senate, Washington, D. C.

DEAR SENATOR: We submit for your consideration enclosed copy of resolution adopted by our organization in favor of the Wagner-Ellenbogen housing bill and hope you will give it your full support.

Very truly yours,

LEONARD BRIGHT, *Organizer.*

[Enclosure]

RESOLUTION ADOPTED BY BOOKKEEPERS', STENOGRAPHERS' AND ACCOUNTANTS' UNION

Whereas a large number of workers in New York City live in obsolete and inadequate dwellings; and

Whereas it is apparent that private enterprise is unable to remedy this situation; and

Whereas many skilled building-trades workers are unable to find employment, although the need for decent housing exists; and

Whereas the American Federation of Labor, in convention assembled last October, resolved unanimously that "a long-term, public-housing policy must be adopted in order to guarantee a minimum standard of decency in housing for all families"; and

Whereas the American Federation of Labor convention resolved that "broad Federal, State, and local legislation, establishing workers' housing as a public responsibility, setting up permanent machinery to effectuate the ends herein set forth, and providing adequate sources of funds must be enacted as quickly as possible, and that all labor organizations should actively sponsor and promote such legislation, and should investigate and publicize the stand on housing of all candidates for office"; and

Whereas the Wagner-Ellenbogen housing bill presents the first concrete forward step toward fulfillment of labor's housing program: Now, therefore, be it

Resolved, That the Bookkeepers', Stenographers' and Accountants' Union heartily endorses the Wagner-Ellenbogen housing bill, and urges its immediate adoption by the Congress of the United States; and be it further

Resolved, That we hereby petition the Congress, while leaving the general policy and administrative set-up as it now is in the bill, to increase the immediate appropriation from $51,000,000 to $100,000,000 and the first bond issue from $100,000,000 to $250,000,000, with corresponding increases for ensuing years; and be it further

Resolved, That copies of this resolution be sent to the President; Chairman WALSH, of the Senate Committee on Education and Labor; Acting Chairman GOLDSBOROUGH, of the House Committee on Banking and Currency; and to Speaker BYRNS.

An emergency resolution memorializing the Congress of the United States to enact the United States Housing Act, being S. 4424, by WAGNER, and H. R. 12164, by ELLENBOGEN

Whereas the availability of decent, sanitary, and safe housing for all of the people is now recognized as a proper concern of government; and

Whereas persons of low income can be housed adequately only by a degree of Government aid; and

Whereas the low-income group is of necessity occupying cast-off housing in what are known as our slum and blighted areas; and

Whereas the continued maintenance of our slums is socially undesirable and an economic waste; and

Whereas the city of Jacksonville has embarked upon a low-cost housing and slum-clearance program with the aid of the Housing Division of the Emergency Administration of Public Works; and

Whereas no funds are available to carry on this work without additional appropriations; and

Whereas it is desirable to preserve the benefits of the emergency housing experiences by providing for a permanent housing agency in the Federal Government; and

Whereas the building trades are still in need of stimulation in order to bring back a greater degree of employment; and

Whereas this resolution constitutes an emergency in that the same provides for the immediate preservation of the public prop-

erty and the usual daily operation of a municipal department: Now, therefore, be it

Resolved by the Municipal Housing Board of Jacksonville:

SECTION 1. That the United States Senate be, and it is hereby, requested to enact at the earliest date possible the United States Housing Act of 1936, being Senate bill 4424, introduced by Senator ROBERT F. WAGNER, and that the House of Representatives enact the identical measure introduced in said House by Congressman HENRY ELLENBOGEN, of Pennsylvania, and being H. R. 12164.

SEC. 2. That a copy of this resolution be sent to the President and to the Vice President of the United States and to the Speaker of the House of Representatives and to Senator DUNCAN U. FLETCHER and the following Representatives: W. J. SEARS, R. A. GREEN, J. HARDIN PETERSON, MILLARD CALDWELL, and MARK WILCOX, of Florida.

Adopted May 11, 1936.

FRED B. BRADSHAW,
Chairman of the Municipal Housing Board of Jacksonville.

Resolution endorsing Wagner bill providing for creation of United States Housing Authority as permanent housing board

Whereas the Senate Committee on Education and Labor in Washington has under consideration bill S. 4424, introduced by Senator WAGNER, providing for the creation of a United States Housing Authority as a permanent housing board to replace the Housing Division of the Federal Emergency Administration of Public Works; and

Whereas the purpose of this Housing Authority will be "to provide loans and grants to the States and localities for the elimination of unsafe and insanitary housing conditions, for the development of decent, safe, and sanitary dwellings for families of low income, and for the reduction of unemployment and the stimulation of business activity"; and

Whereas his honor the mayor, in his inaugural message to the common council, reported that notwithstanding the Federal Government's $10,000,000 Greendale housing project southwest of the city and the $2,800,000 Parklawn housing development on the northwest side, there are still thousands of families in Milwaukee's low-earning group who will be inadequately housed, and there is no possibility that private capital will venture to solve the housing problem of the low-paid workers, and the problem must be solved to provide minimum standards of decency and relieve local public agencies of the burden of subsidizing in one form or another the unwholesome and deleterious conditions under which the families of these low-paid workers live; and

Whereas public low-cost housing development is one of the most effective means of providing useful employment and stimulating business activity with a reasonable prospect of recovering the funds advanced for reinvestment in new construction as and when needed: Therefore be it

Resolved, That the Common Council of the City of Milwaukee hereby endorses and recommends for adoption bill S. 4424 as a practical step toward the solution of our housing problems and as an effective means of relieving unemployment; and be it also

Resolved, That copies of this resolution be sent to Senator ROBERT WAGNER, our Wisconsin Senators, ROBERT M. LA FOLLETTE and F. RYAN DUFFY, and to Representatives RAYMOND J. CANNON and THOMAS O'MALLEY, of this city, for their consideration.

A resolution petitioning the Senate of the United States to enact an act known as the United States Housing Act of 1936, being Senate bill no. 4424; petitioning the House of Representatives of the United States to enact the identical measure, known as H. R. 12164; and providing that this resolution shall be an emergency resolution, which shall take effect and be in force immediately upon its passage and approval by the mayor

Whereas it is vitally necessary for the Federal Government to enact a program having for its objective the elimination of unsafe and insanitary housing conditions, the development of safe and sanitary dwellings for families of low income, and to provide financial assistance to the States and political subdivisions for said purposes: Now, therefore, be it

Resolved by the Council of the City of Youngstown, State of Ohio (three-fourths of all members elected thereto concurring):

SECTION 1. That the United States Senate be, and it is hereby, requested to enact in the interest of the public welfare an act known as the United States Housing Act of 1936, being Senate bill no. 4424, introduced by Senator ROBERT F. WAGNER.

SEC. 2. That the House of Representatives be, and it is hereby, requested to enact in the interest of the public welfare the measure introduced in said House by Congressman HENRY ELLENBOGEN, of Pennsylvania, and being H. R. 12164.

SEC. 3. That the clerk be, and hereby is, instructed to forward copies of this resolution to the President and Vice President of the United States, the Speaker of the House of Representatives, Senator ROBERT F. WAGNER, Congressman HENRY ELLENBOGEN, Senators ROBERT J. BUCKLEY and VIC DONAHEY, and Congressman JOHN COOPER.

SEC. 4. This resolution is hereby declared to be an emergency measure necessary for the preservation of the public welfare, peace, and safety, the emergency being the necessity of initiating a Federal Government program having for its objectives the elimination of unsafe and insanitary housing conditions and for the development of safe and sanitary dwellings for families of low income, and as such this resolution shall take effect and be in force immediately upon its passage and approval by the mayor.

BINGHAMTON, N. Y., *May 22, 1936.*

Hon. ROBERT F. WAGNER,
Senator, Senate Office Building, Washington, D. C.

DEAR SENATOR WAGNER: I have been requested to advise you that Local Union 112 of Journeymen Plumbers and Steamfitters of the United Association, of Binghamton, N. Y., heartily endorse the following resolutions regarding the Wagner-Ellenbogen housing bill (S. 4424; H. R. 12164):

"Whereas the bad, obsolete, and inadequate dwellings in which the majority of workers in Binghamton, N. Y., and vicinity, are forced to live, constitute a mockery of this country's vast resources of land, labor, materials, and technical skill; and

"Whereas an absolute shortage of all kinds of dwelling is rapidly approaching both here and throughout the country, and is forcing rents to exploitive heights and forcing families to 'double up'; and

"Whereas labor's housing program is substantially embodied in the Wagner-Ellenbogen housing bill; and

"Whereas this administration must keep its oft-repeated promises to the American people, to improve housing conditions and increase employment in the building trades, which promises can be fulfilled only by the immediate enactment of the Wagner-Ellenbogen housing bill, preferably with larger appropriations and bond issues; and

"Whereas the provisions of low-rent housing on a nonprofit basis should be a great nonpartisan movement, and this bill should be supported by all Republicans and Democrats alike, who truly represent the interests of the people: Be it therefore

"*Resolved*, That Local Union 112 of Journeymen Plumbers and Steamfitters of the United Association, of Binghamton, N. Y., hereby actively endorses and supports the Wagner-Ellenbogen housing bill, and urges both the President and every Member of Congress to do likewise and to make this bill into law at this session; and be it further

"*Resolved*, That copies of this resolution be sent to the President and to the Senators and Representatives in Congress of New York State."

Trusting you will give this your consideration and approval, I remain,

Yours very truly,

C. H. SCHMIDT,
Recording Secretary, Local Union 112.

DEPORTATION OF ALIENS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the RECORD and referred to the Committee on Immigration a resolution adopted by the Sixty-eighth National Meeting of the Commandery General, a national patriotic organization with State divisions and locals in the several States.

There being no objection, the resolution was referred to the Committee on Immigration and ordered to be printed in the RECORD, as follows:

Whereas there is pending in Congress the Kerr-Coolidge so-called alien deportation bill, which contains three major and four minor discretions that would substitute for existing inadequate but definite written deportation and immigration restriction laws, indefinite, personal immigration restriction and alien deportation, making the bill, as so ably pointed out on the floor of the Senate by Senator REYNOLDS, of North Carolina, really an alien importation bill; and

Whereas during the past 5 years in spite of the patriotic American administrative efforts of the consuls of the Department of State to slow down the alien influx by refusing immigration visas 949,903 aliens have legally entered the United States, and doubtless, judging by the large number of high-powered autos, high-speed boats, and fast airplanes, actually apprehended annually smuggling aliens into our country, as many more aliens entered illegally; and

Whereas of this annual alien influx of almost 200,000, 213,524 were new immigrants at a time when in every State and in every town and in every city in every State there were thousands of unemployed and dependents overtaxing our employers, charities, and people; and

Whereas not only has there been this annual alien influx to further burden our relief agencies and increase unemployment but alien deportations have been reduced from a previous annual average of over 19,000 to less than 9,000 in both 1934 and 1935, even deported alien anarchists like Emma Goldman, Henri Barbusse, Willie Musenberg, and the like, given written permission to enter and preach the overthrow of our Government; and even the number of alien criminals, the number of anarchists, the number of immoral classes, and all other alien degenerates, defectives, and objectionables here in flat violation of law decreased, their deportation being unlawfully "stayed" by the thousands, the number of anarchists dropping from 74 in 1933 to 20 in 1934 and 17 in 1935; the number of criminals deported dropping from 1,770 in 1933 to 1,589 in 1934, and 1,632 in 1935; the number of alien dope peddlers dropping from 167 in 1933 to 122 in 1934 and 111 in 1935; the number of insane and mentally and physically defective dropping from 1,056 to 662 in 1934 and to 510 in 1935 under a temperamental, sentimental alleged "humanizing" of law enforcement: Therefore be it

Resolved by the Commandery General in sixty-eighth annual session at Philadelphia, Pa., this 19th day of May 1936 A. D., That we urge upon Congress the defeat of the Kerr-Coolidge alien deporta-

tion bill and most respectfully suggest that what is needed is more instead of less mandatory immigration restrictions and alien deportation legislation, such as the proposed Starnes-Reynolds bill and the more patriotic and American enforcement of our restriction and deportation statutes, particularly putting on a basis of law the existing administrative discretion to exclude "persons likely to become public charges" by reducing the quotas to 10 percent, applying the quotas to nonquota countries and registering all aliens, our own native born being registered from birth to death; and be it further

Resolved, That the recorder in chief send a copy of this resolution to the President, the Secretary of State, and to every Member of Congress, together with an appropriate letter, and give a copy to the press for immediate publication.

REPORTS OF COMMITTEES

Mr. ASHURST, from the Committee on the Judiciary, to which was referred the bill (S. 4656) to amend the statutes providing punishment for transmitting threatening communications, reported it without amendment and submitted a report (No. 2095) thereon.

Mr. SMITH, from the Committee on Agriculture and Forestry, to which were referred the following bills and joint resolution, reported them severally without amendment and submitted reports thereon:

S. 4567. A bill to authorize the Secretary of Agriculture to extend and renew for the term of 10 years a lease to the Chicago, Milwaukee & St. Paul Railway Co. of a tract of land in the United States Department of Agriculture Range Livestock Experiment Station, in the State of Montana, and for a right-of-way to said tract, for the removal of gravel and ballast material, executed under the authority of the act of Congress approved June 9, 1926 (Rept. No. 2096);

H. R. 11821. A bill to correct an error in section 16 (e) (1) of the Agricultural Adjustment Act, as amended, with respect to adjustments in taxes on stocks on hand, in the case of a reduction in processing tax (Rept. No. 2097); and

S. J. Res. 268. Joint resolution to amend the joint resolution entitled "Joint resolution authorizing the Federal Trade Commission to make an investigation with respect to agricultural income and the financial and economic conditions of agricultural producers generally", approved August 27, 1935 (Rept. No. 2098).

Mr. WAGNER, from the Committee on Banking and Currency, to which was referred the bill (H. R. 10101) to amend the Federal Farm Loan Act and the Farm Credit Act of 1935, and for other purposes, reported it with an amendment and submitted a report (No. 2099) thereon.

Mr. FLETCHER, from the Committee on Commerce, to which was referred the joint resolution (S. J. Res. 266) for the appointment of boards to study and report upon the Atlantic-Gulf Ship Canal project, Florida, and the Passamaquoddy tidal power project, Maine, and for other purposes, reported it without amendment.

Mr. OVERTON, from the Committee on Commerce, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 4618. A bill granting the consent of Congress to the Louisiana Highway Commission to construct, maintain, and operate a free or toll highway bridge, or a railway bridge in combination with a free or toll highway bridge, and approaches thereto across the Mississippi River at or near Baton Rouge, La. (Rept. No. 2100); and

S. 4676. A bill declaring Bayou St. John, in the city of New Orleans, La., a nonnavigable stream (Rept. No. 2101).

Mr. JOHNSON, from the Committee on Commerce, to which was referred the bill (H. R. 8525) prescribing regulations for carrying on the business of lighter service from any of the ports of the United States to stationary ships or barges located offshore, and for the purpose of promoting the safety of navigation, reported it without amendment and submitted a report (No. 2102) thereon.

Mr. WHEELER (for Mr. MOORE), from the Committee on Interstate Commerce, to which was referred the bill (H. R. 11108) to advance a program of national safety and accident prevention, reported it without amendment and submitted a report (No. 2103) thereon.

Mr. COOLIDGE, from the Committee on Military Affairs, to which was referred the joint resolution (H. J. Res. 570) authorizing the President of the United States to award posthumously a Distinguished Service Medal to Maj. Gen. Clarence Ransom Edwards, reported it without amendment.

ENROLLED BILLS PRESENTED

Mrs. CARAWAY, from the Committee on Enrolled Bills, reported that on May 25, 1936, that committee presented to the President of the United States the following enrolled bills:

S. 537. An act for the relief of C. O. Meyer;

S. 920. An act for the relief of Ruth J. Barnes;

S. 925. An act to carry into effect the findings of the Court of Claims in the case of William W. Danenhower;

S. 1360. An act for the relief of the estate of Teresa de Prevost; and

S. 3789. An act authorizing the Secretary of Commerce to convey the Charleston Army Base Terminal to the city of Charleston, S. C.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. DAVIS:

A bill (S. 4688) for the incorporation of the Ladies of the Grand Army of the Republic; to the Committee on the Judiciary.

By Mr. LEWIS:

A bill (S. 4689) for the relief of Harry W. Dubiske; to the Committee on Claims.

By Mr. SCHWELLENBACH:

A bill (S. 4690) for the relief of Borghild Harner; to the Committee on Claims.

By Mr. WAGNER:

A bill (S. 4691) authorizing the transfer of Camp Upton Military Reservation, Long Island, N. Y., to the State of New York, for forest demonstration, game conservation and management, and public park uses; to the Committee on Military Affairs.

By Mr. SHIPSTEAD:

A bill (S. 4692) for the relief of Harris Bros. Plumbing Co.; to the Committee on Claims.

By Mr. ROBINSON:

A bill (S. 4693) to establish the Arkansas Mounds National Monument of America in Lonoke County, Ark.; to the Committee on Public Lands and Surveys.

By Mr. BACHMAN:

A bill (S. 4694) to provide $50,000 for the care, maintenance, and improvement of the ancestral home of James K. Polk, and for other purposes; to the Committee on Military Affairs.

By Mr. BONE, Mr. MCNARY, Mr. SCHWELLENBACH, and Mr. STEIWER:

A bill (S. 4695) to authorize completion, maintenance, and operation of certain facilities for navigation on the Columbia River, and for other purposes; to the Committee on Commerce.

By Mr. KING:

A bill (S. 4696) to amend the act entitled "An act to provide for the construction of certain public buildings, and for other purposes", approved May 25, 1926 (44 Stat. 630), as amended;

A joint resolution (S. J. Res. 272) to provide for the maintenance of public order and the protection of life and property in connection with the Presidential inaugural ceremonies in 1937;

A joint resolution (S. J. Res. 273) authorizing the granting of permits to the Committee on Inaugural Ceremonies on the occasion of the inauguration of the President-elect in January 1937, and for other purposes;

A joint resolution (S. J. Res. 274) to exempt from the tax on admissions amounts paid for admission tickets sold by authority of the committee on inaugural ceremonies on the occasion of the inauguration of the President-elect in January 1937; and

A joint resolution (S. J. Res. 275) to provide for the quartering, in certain public buildings in the District of Colum-

bia, of troops participating in the inaugural ceremonies; to the Committee on the District of Columbia.

LAND IN FORT BRADY RESERVATION, MICH.—AMENDMENT

Mr. FLETCHER submitted an amendment intended to be proposed by him to the bill (H. R. 190) granting authority to the Secretary of War to license the use of a certain parcel of land situated in Fort Brady Reservation to Ira D. MacLachlan Post, No. 3, the American Legion, for 15 years, which was ordered to lie on the table and to be printed.

THE AMERICAN MERCHANT MARINE—AMENDMENTS

Mr. JOHNSON submitted two amendments intended to be proposed by him to proposed amendments submitted by Mr. COPELAND, Mr. GUFFEY, and Mr. GIBSON to the bill (H. R. 8555) to develop a strong American merchant marine, to promote the commerce of the United States, to aid national defense, and for other purposes, which were ordered to lie on the table and to be printed.

AMENDMENT TO FIRST DEFICIENCY APPROPRIATION BILL

Mr. WALSH submitted an amendment intended to be proposed by him to House bill 12624, the first deficiency appropriation bill, 1936, which was referred to the Committee on Appropriations and ordered to be printed, as follows:

At the proper place in the bill to insert the following:

"Payment to Henry W. Peabody & Co.: For payment to Henry W. Peabody & Co. of claim no. 336, awarded April 18, 1929, by the Commission under a convention between the United States and Mexico concluded September 8, 1923, as extended, $78,120.60: *Provided*, That the 5-percent deduction in reimbursement of the Government of the United States of expenses incurred by it in respect of such claim, provided for in the Department of State Appropriation Act, 1937, shall not be made."

NOTICES OF MOTIONS TO SUSPEND RULE—AMENDMENTS TO FIRST DEFICIENCY APPROPRIATION BILL

Mr. GEORGE. Mr. President, I submit a notice of motion to suspend paragraph 4 of rule XVI and ask that it be read at the desk.

There being no objection, the notice was read, as follows:

Pursuant to the provisions of rule XL of the standing rules of the Senate, I hereby give notice in writing that I shall hereafter move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H. R. 12624) making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1936, and prior fiscal years, to provide supplemental appropriations for the fiscal years ending June 30, 1936, and June 30, 1937, and for other purposes, the following amendment, viz, on page 100, after line 13, to insert a new section, to be known as section 7 (c), as follows:

"Not more than $2,000,000 of the sums appropriated by section 2 of the Independent Offices Appropriation Act, 1937, for carrying out sections 7 to 17, inclusive, of the Soil Conservation and Domestic Allotment Act, shall be available to the Department of Agriculture for the purpose of carrying out the provisions of such act with respect to land devoted to the production of pine oleoresin and its derivatives, gum turpentine and gum rosin."

Mr. GEORGE. I also submit an amendment intended to be proposed by me to House bill 12624, the first deficiency appropriation bill, and ask that it be read, printed, and appropriately referred.

There being no objection, the amendment intended to be proposed by Mr. GEORGE was referred to the Committee on Appropriations and ordered to be printed, and was read, as follows:

On page 100, after line 13, to insert a new section, to be known as section 7 (c), as follows:

"Not more than $2,000,000 of the sums appropriated by section 2 of the Independent Offices Appropriation Act, 1937, for carrying out sections 7 to 17, inclusive, of the Soil Conservation and Domestic Allotment Act shall be available to the Department of Agriculture for the purpose of carrying out the provisions of such act with respect to land devoted to the production of pine oleoresin and its derivatives, gum turpentine and gum rosin."

Mr. BILBO submitted a notice of motion to suspend paragraph 4 of rule XVI, which was read, as follows:

Pursuant to the provisions of rule XL of the Standing Rules of the Senate, I hereby give notice in writing that I shall hereafter move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H. R. 12624) making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1936, and prior fiscal years, to provide supplemental appropriations for the fiscal years ending June 30, 1936, and June 30, 1937, and for other purposes, the following amendment, viz, on page 26, after line 7, to insert the following:

"No person who is a candidate for any State, district, county, or municipal office in any primary, general, or special election, or is serving as a campaign manager or assistant thereto for any such candidate or is a member of any campaign committee organized to promote the political interest of any candidate for such office, or holds, either by appointment or election, any such office, shall be employed or continued in employment on administration staffs of the Works Progress Administration: *Provided further*, That this prohibition or ineligibility shall apply to any person employed or seeking employment on nonrelief supervisory personnel on works projects as well as on State, district, and field representative staffs."

PRINTING OF TAX HEARINGS BEFORE FINANCE COMMITTEE

Mr. KING (for Mr. HARRISON) submitted the following resolution (S. Res. 305), which was referred to the Committee on Printing:

Resolved, That, in accordance with paragraph 3 of section 2 of the Printing Act, approved March 1, 1907, the Committee on Finance of the Senate be, and is hereby, empowered to have printed for its use 1,000 additional copies of the hearings held before the said committee during the current session on the bill the Revenue Act of 1936.

EXTENSION OF INVESTIGATION OF SO-CALLED RACKETS AND RACKETEERING

Mr. COPELAND submitted a resolution (S. Res. 306), which was ordered to lie over under the rule, as follows:

Resolved, That the authority conferred by Senate Resolution No. 74, Seventy-third Congress, first session, authorizing an investigation of the matter of so-called rackets, with a view to their suppression, and Senate Resolution No. 196, Seventy-third Congress, second session, enlarging the scope of the investigation of so-called rackets and racketeering practiced in the United States, shall be extended and continued in force until the expiration of the Seventy-fifth Congress.

INVESTIGATION OF TRADE ROUTES BETWEEN THE UNITED STATES AND SOUTH AMERICA

Mr. BARKLEY submitted the following resolution (S. Res. 307), which was referred to the Committee on Commerce:

Resolved, That a special committee of five Senators, to be appointed by the President of the Senate, is authorized and directed to make a full and complete investigation of the ocean trade routes between ports of the United States and South America, and to investigate the service now maintained on such routes, the contracts, transactions, and obligations between the United States of America and any steamship line and its trustees, the operation of all American-flag services on such routes, the necessity or advisability of the construction of additional combination cargo and passenger ships for such routes, and what obligations, legal or moral, exist on the part of the United States toward security holders of any steamship line or other operators on account of existing ocean-mail contract or contracts or other transactions heretofore had between the United States of America and any such line; and shall investigate and report upon the recommendations contained in the report of the Secretary of Commerce transmitted to the President of the Senate by the Acting Secretary of Commerce on February 10, 1936.

For the purposes of this resolution the committee or any duly authorized subcommittee thereof is authorized to hold such hearings, to sit and act at such times and places during the sessions and recesses of the Senate in the Seventy-fourth and succeeding Congresses, to employ such clerical and other assistants, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures within the limits of this resolution as it deems advisable. The cost of stenographic services in reporting such hearings shall not be in excess of 25 cents per hundred words. The expenses of the committee, which shall not exceed $20,000, which sum is hereby appropriated, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman.

The committee shall report to the Senate as soon as practicable the results of its investigation, together with its recommendations, if any, for necessary legislation.

ADDRESS BY SENATOR RADCLIFFE AT MARYLAND DEMOCRATIC CONVENTION

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD the keynote speech delivered at the Democratic convention of the State of Maryland on May 20 by my colleague the junior Senator from Maryland [Mr. RADCLIFFE].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Everyone here is, I know, distressed to realize the absence of one of the ablest and most distinguished men that Maryland has ever produced. I refer to the late Albert C. Ritchie. It is my understanding that during the proceedings this afternoon some action will be taken in regard to him. It is instinctive for me, however, to take advantage of this opportunity to refer to my keen personal loss in the death of a lifelong friend.

No one is likely to forget that 4 years ago we of the Democratic Party asked that the running of the Federal Government be turned over to us. It is certainly not necessary to describe the conditions of affairs in this country at that time. It was one of the darkest periods in our history. During the administration of President Hoover the affairs of the country had gone from a state of feverish prosperity to one of severe and unprecedented depression. Throughout the length and breadth of our land economic and financial ruin existed or impended. Matters were going from bad to worse at a most alarming rate. The Republican Party had shown itself utterly incapable of handling the situation.

In November 1932 the people of the United States turned to the Democratic Party for the solution of many harassing problems. Two of these were the following: One was to tide us over existing difficulties. The other was to start our country back toward prosperity.

And now the Democratic Party is asking that it be given a grant of power for 4 more years. It is therefore natural that you, the people of Maryland, should desire to look carefully into the record of the Democratic Party during the existing administration. What have been the aims and objectives of the Democratic Party? What efforts were made by it to handle the depression and what success has been obtained?

No one of us will ever forget the heartening message, with its keynote of courage and confidence, which President Roosevelt gave to the people on March 4, 1933. At that moment the first ray of hope returned to an unhappy and stricken people. President Roosevelt said that the situation could be handled and that it would be done. Immediately efforts were made to stay the tides of disaster and to find ways of rehabilitation. Since the situation was extraordinary, is it surprising that some of the means adopted to handle it were unusual in character?

We may differ among ourselves as to the merits of any particular method used by the administration in Washington. No one will, however, question the fact that President Roosevelt showed supreme courage and optimism. Likewise, he submitted to the American people a program which for comprehensiveness of scope has never been excelled in the history of this country. Nor has there been any other so humanitarian in nature.

Some measures adopted were designed to be temporary only. Other plans embodied the hopes that something worth while of a permanent nature would result. The Bourbon Kings of France could learn nothing. Surely we must believe that the tragedies of the depression can point out to us some ways and means of getting rid of existing troubles. Is it not practical to hope also that something could be done to prevent the return of such calamities?

Each successive year demonstrates more and more clearly the fact that the different sections of this country are becoming so closely interwoven with each other that the interest and welfare of one part concerns those of the rest of the country. New York and Baltimore could not be prosperous if the South and West were suffering from general economic distress. Nor would it be possible for the middle and western sections of the country to thrive if business were stagnant in the East. Any plan of trying to handle the frightful problems of the depression and of promoting recovery had in material respects to cover the country as a whole. Plans of a general nature affecting all parts of the country had to be evolved and put into operation. Likewise it was that different sections often required different kinds of treatment.

Almost each industry had its characteristic troubles. For instance, the problem of the farmer was an acute one. Even before the depression had come to us with its terrors and miseries, the condition of the farmer for a number of years had been on a constant decline. This is not the time nor the place to go into a statement of causes for such. The tremendous shrinkage in foreign markets for our farm products, increases in cost of machinery, labor, and taxes were among the many factors which were adding to the cost of operations of the farmer. But the products which he produced had not increased in price. In fact, the prices of wheat, corn, and certain other commodities had dipped to lowest depths. The Republican tariff bill is not of assistance to him. It is injuring him.

Let us consider conditions in Maryland on March 4, 1933, and give special consideration to the remedial measures in our State. All of our banks were closed. Industry of almost every kind was in a state of distress and demoralization. Many thousands of industrious, hard-working people had been deprived of gainful methods of making a living—in many instances for the first time in their lives. They would have starved if something had not been done to supply them with work or food. The plight of those people required immediate consideration and whatever helpful action was then necessary.

Of course, it would have been better if private capital could have supplied such work and relief, but is there anyone who believes that in March 1933 private capital in Maryland could have so handled the situation? The State of Maryland and its local subdivisions had more than their customary financial problems to reckon with and were illy prepared to take on the added burdens which the depression had thrust upon us. Those in high official position, our business and professional men and women, and many people in other walks of life appealed to Washington for relief and assistance. They insisted that immediate assistance was absolutely essential and that the Federal Government alone could furnish it. Such help was given by Washington in no stinting manner.

Many of our banks and trust companies, basically strong and healthy, were facing storms too severe for them to weather. The Federal Government, through its various agencies, analyzed carefully the condition of these Maryland banks and trust companies. In every instance where the intrinsic worth of such an institution justified support and its assets, though slow in character, yet were sound under normal business standards, the Federal Government loaned that bank or trust company the necessary funds needed for continuing operations.

The giving of insurance by the Federal Government upon deposits in banks was tremendously helpful in the restoration of confidence in our banking structure.

It is significant that when in 1935 the banking bill was before Congress its provisions were considered so far reaching and wise that the bill passed the United States Senate unanimously, and was signed by President Roosevelt with country-wide approval. Does anyone want to repeal that law or the legislation regulating stock exchanges and the issuance of certain kinds of stock certificates and bonds? All of these measures are working satisfactorily in the main.

Many other types of corporations in Maryland received similar help. This was especially true of certain kinds of our insurance companies, such as surety and casualty companies. Baltimore has long been the leading surety and casualty center in the United States. Our companies employed many people, and their operations throughout the country have brought hundreds of millions of dollars to Baltimore. Their continued existence is essential to our welfare. Our most active citizens in public and private life again asked support from Washington for those companies, and that support was freely and wisely given. Is there anyone who believes that our Maryland banks, trust companies, surety and casualty companies should have been allowed to collapse? If not, how else could they have been saved? No one then or now suggests that private capital could have handled the situation. We are forced to the conclusion that many of these financial institutions in Maryland would have failed except for financial assistance given them by the Federal Government.

What has been the result? These financial institutions have fully justified the confidence Washington placed in them. Not a bank, trust company, or insurance company in Maryland has suspended operations during the administration of President Roosevelt and not one given financial support by Washington has failed to show substantial progress toward recovery. Some of these institutions have completely rehabilitated themselves, and every one of them is well on the road to recovery. Never have the business interests in our State been more promptly and effectively served and assisted by the Federal Government than by its successful efforts to save these institutions. Big business in Maryland was helped by Washington as never before.

Would anyone assume that the work of the Federal Government should have stopped there? Not so by any means. The railroads also required and received aid. The needs and problems of the farmer demanded action. Many business corporations or individuals, whether small or large, deserved assistance from Washington. They received it to a noteworthy extent.

The history of our country has been that when measures of unusual and far-reaching character were put into operation, all of them have not stood the test in the courts. That has been especially so during periods of economic and political upheavals. During the administration of President Grant, 12 measures passed by the Republicans were declared unconstitutional by our Supreme Court—7 under Lincoln. For the 12 years immediately prior to Roosevelt's administration, the Republican Party was in charge of our Government. Various acts passed during that period have been held to be unconstitutional by our Supreme Court. The present administration, like other administrations, has accepted the decisions of our Supreme Court as the law of the land. Our Federal Constitution has been amended 21 times. No additional amendment is being suggested to it by President Roosevelt.

The depression brought enforced idleness to many thousands of people in Maryland. Private industry was not able to offer them opportunities of earning a livelihood. What should the city, State, and Federal Government do? That was the harassing problem which faced us. People have never been permitted to starve in our country, and never will they. People may differ as to the relative merits of ordinary relief as contrasted with that afforded by public works, but something had to be done and done immediately. The Federal Government has attempted to do both somewhat simultaneously. It has tried in various ways to find work for men and women on the theory that it is better for the man in the community to work for a living than to live on relief.

It was not possible, however, to find work for all who were on relief. Some people are incapable of working, and for a while suitable opportunities for gainful employment could not be found fast enough for all of the qualified ones. Just now the W. P. A. in Maryland is offering work to every able-bodied, competent person on relief.

A large amount of good, useful work has been found in Maryland for unemployed people. For instance, after the Fifth Regiment Armory was burned, the insurance money and other funds of Maryland available only amounted to about $650,000. To re-

build and refurnish a much larger additional amount was necessary. The Federal Government contributed over $300,000 in cash and about $500,000 in labor through the C. W. A. and W. P. A. We needed the new armory—we have it. If the United States Government had not given over one-half of the cost of the armory, the financial strain upon Maryland in financing all of it at this time would have been exceedingly severe.

Our Baltimore airport and the Howard Street and Fayette Street improvements are among the many wise improvements which we have long sought and which are being made possible by Federal help.

For a hundred years the people of Maryland have been keenly interested in a Chesapeake & Delaware Canal. That old canal clearly needs modernization at this time, and such improvements will prove to be of inestimable value to Maryland shipping. The Federal Government is spending over $10,000,000 for the enlarging and modernization. Much of the work is being done by men who otherwise would be on relief. When completed the distance between Baltimore and Philadelphia will be reduced by 300 miles, from Baltimore to New York by about 150 miles. Even from Baltimore to Europe the reduction will be approximately 150 miles.

The problems of the Chesapeake Bay have received special consideration and support from President Roosevelt. The commission appointed by me as regional head of the P. W. A. was a very active one under the chairmanship of Dr. Thomas S. Cullen. It cooperated closely with boards of various States and with Federal agencies in making careful surveys and studies of the Chesapeake Bay regions. The support of the Federal Government in improvements of sanitary and other conditions was one of the numerous useful things done by Washington in that section.

Also, Washington has taken a very active part in efforts to restore the oyster beds in the Chesapeake Bay. Last year, for instance, the United States Government paid for 200,000 bushels of shells to be planted on oyster bottoms. It will furnish much larger amounts of oyster shells this year.

Over $60,000,000 have been allotted or spent in Maryland for P. W. A. projects. A careful analysis of the W. P. A. and the P. W. A. activities in Maryland lead irresistibly to the conclusion that the projects on the whole have been wisely selected and carefully executed. Many of them had been planned for by Maryland or its subdivision for years. The present situation has furnished opportunities for the doing of these jobs. The fact that relief in Maryland and the Public Works, whether W. P. A. or P. W. A., have been handled on the whole on a businesslike, nonpolitical basis, and that the projects themselves have real intrinsic merit, has never been seriously questioned in Maryland. No one can do so with an eye to the facts.

In this connection do not forget that a total of about 26,000 people in Maryland have been taken from relief rolls and given useful work by the W. P. A. and other Federal agencies. I want to take advantage of this opportunity to refer to the fine spirit which so many people on relief have shown when offered positions. They have shown their desire to work for a living, not to live on relief.

The Federal Housing Administration has insured three and a half million dollars of mortgages in Maryland. Also it has guaranteed in the State over 11,000 modernization and repair loans which have been made available to home owners at low rates of interest. These have provided a great stimulus to the very important construction industry. The Farm Credit Administration has made 9,000 loans of various types to our farmers amounting to about $14,000,000. The Federal land bank has been very helpful.

Many of our building-and-loan associations were hard pressed for cash. The real-estate situation generally was in a very sluggish and depressed condition. The Home Owners' Loan Corporation, the Federal Housing Administration, and various other Federal agencies acted promptly and efficiently. The Government has saved 16,000 Maryland homes from foreclosure, lending $45,000,000 for that purpose in long-term loans. Does anyone question that that has been a wise and fair thing to do? Incidentally, back real-estate taxes have been collected to a remarkable extent. Through the Home Owners' Loan Corporation the city of Baltimore has collected over $2,000,000 of such taxes, and the figures for the rest of the State are just as significant.

The R. F. C. has loaned $125,000,000 to various institutions and businesses in Maryland. Approximately $75,000,000 of the amount loaned has been repaid.

When the bill extending the life of the R. F. C. and broadening its power came up in the Senate in the Banking and Currency Committee, of which I am a member, not one word of adverse criticism of the R. F. C. was heard in committee or on the floor of the Senate. The bill passed unanimously. It was a remarkable tribute to the R. F. C., one of the largest and most successful organizations, whether public or private, which has ever been known.

The Federal Government has given for relief in our State a sum approximating $45,000,000 to prevent suffering, starvation, and misery among our destitute, many of whom had been industrious, hard-working citizens of Maryland. Has anyone claimed that the State or city of Baltimore or the counties or private charity could have been able to furnish such a vast sum of money, or even the larger part of it? You remember the difficulty in getting Maryland to raise through its legislature a small fraction of that amount for relief.

The Social Security Act, which doubtless experience will show will need some amendments, will help the old-age and unemployment situation tremendously. Washington believes that the assistance of this measure and the vast improvement in private business will permit the Federal Government to discontinue relief, and that really has been done. The problem can now be handled as a local one from local resources, public and private.

The C. C. C. has afforded work to almost 16,000 young men in Maryland who, through no fault of their own, found the doors of private employment closed to them. The C. C. C. has done useful work on reforestation, highways, drainage, and numerous other worth-while projects. Many of these C. C. C. workers are now being absorbed in private employment. So universal has been the praise of the C. C. C. organization and its results that it is generally conceded that the C. C. C. will become a permanent fixture. About $14,000,000 has been spent in Maryland for that purpose.

I will not comment further on specific activities. In short, the Federal Government has contributed, by gifts or loans, about $275,000,000 to Maryland—about the average for the entire country. Have the results been satisfactory in Maryland?

No one expects perfection in public administration. It does not occur in private business and cannot be expected from governmental activities; but you and I, as thoughtful people, want to examine carefully what has been attempted in Maryland by the Federal Government, consider the problems involved, analyze the treatment, and tabulate the returns. The results are significant and convincing. They show that the money loaned or given to Maryland has, on the whole, been wisely spent.

President Roosevelt has made resourceful and highly successful progress in developing foreign trade. A few days ago widespread approval met the announcement of the signing of a treaty of reciprocity with France, following closely upon those with Canada and other countries. These treaties will stimulate foreign trade in a constructive manner. For instance, the treaty with France will benefit greatly the tobacco farmer in southern Maryland. It provides especially for a large increase in the amount of tobacco which France will import from us. Cordell Hull has demonstrated that he is one of the most efficient Secretaries of State in the history of our country. He is one of the very many conscientious and competent officials in the Roosevelt administration.

One of the greatest and most useful achievements of the Roosevelt administration has been its remarkably efficient policy in fighting organized crime. The gangster has been stripped of much of his power. One of the greatest menaces to the peace and welfare of our country was the widespread and hideous power of gansters working in bands. Those gangsters have been systematically and relentlessly hunted and many of their leaders who are still living are in Federal prisons. What these results have added to the security and self-respect of the American citizen can hardly be overestimated.

It has been said that a man realizes more vividly his own suffering from toothache than the anguish of millions of cholera victims in India. So it is that a man understands most clearly the problems and needs of his own business. Sometime, also, the man or woman who has found his own business rehabilitated may not realize fully that all other industries have not improved to the same extent. During the depression, we in Maryland faced as severe problems as at any time in our history, yet our lot was infinitely preferable to that of many sections of the country. Our progress toward recovery in Maryland has been rapid and sure.

The conditions in many sections of the country have also improved but not all to the same extent as Maryland. The Federal Government can now believe that many of the problems of the depression have been largely solved. Emergency measures may not be needed as in the past. Some have not proved to be entirely satisfactory, but in the main they have served their purpose well.

The people of our country again took heart on March 4, 1933. However, they would have been helpless or distressingly handicapped if the administration in Washington had not been strong, resourceful, and efficient. The Democratic Party was called to power during a grave emergency, the gravest, doubtless, in our history. Never has a party more fully justified the charge which was placed in its hands. A comparison between March 1933 and March 1936 shows the most startling improvements in the history of this country.

Let me give you a few more Maryland figures. From March 1933 to March 1936 employment in manufacturing industries increased over 40 percent, the pay rolls in these industries no less than 90 percent. Farm income on principal products rose 38 percent from 1933 to 1935. In the important building industry, permits for April 1936 show an improvement of 140 percent over last April. The trade of the port of Baltimore has increased 22 percent during the first 4 months of this year as compared with last year. Power production for this section of the country shows a remarkable improvement, and it is interesting to note that it is an improvement even over the 1929–30 average. Almost 20,000 more new automobiles were registered in Maryland in 1935 than in 1933, an increase of 80 percent. Recovery is being indicated on every trade barometer we have, in bank clearings and deposits, in post-office receipts, in carloadings, and number of streetcar riders. This point is so obvious that "he who runs may read" and know that it is true. And this recovery which we have had in Maryland is merely illustrative of what has been going on all over the country.

During the Hoover administration the national debt increased by billions of dollars and constantly larger deficits were piling up. But the efforts of the Republicans to stop the depression proved totally unavailing and conditions in our country went from bad

to worse. In spite of the enormous expenditures of the Federal Government, during the Hoover administration, the depression continued to grow distressingly in intensity.

Since the Democrats took control of the Government in March 1933, the national debt has increased $10,000,000,000 but satisfactory results have been obtained. The depression has been stopped. A remarkable return toward prosperity has come about. No banks are now failing. The value of stocks and bonds has increased well over $30,000,000,000. In many instances the prices of stocks are 10 times what they were 4 years ago. The farmers are receiving at least twice as much for their products as they did in 1932. The income of the country is increasing enormously.

The national wealth was estimated at $247,000,000,000 in 1932 and $314,000,000,000 in 1935, an increase of $67,000,000,000.

The Democrats have something to show for their purchase. The value of the results obtained by them vastly exceed any outlay made. The increase in the national debt must be considered in relation to tax-paying power. The country is in a better position to stand its present indebtedness than it was that existing in March 1933.

That is not all of the story. So sure and rapid is the march toward recovery and so great is the increase in our national income that we can stand the additional burden of the national debt with less strain than was the situation in 1933. Furthermore, the rising tide of prosperity brings another hopeful result. That is the fact that many of the measures adopted by the Federal Government to tide us over the depression and to start us on the road to recovery have so well accomplished their purpose that it is likely it will not be necessary to make any substantial increases in our national debt. The balancing of our Budget may be reasonably expected within the near future.

The strain upon us resulting from demoralized conditions of European finances made it necessary for this country to make some changes in our monetary policy. Misgivings arose on the part of some people in regard to them. However, the financial condition today of our country is strong and healthy. The funds raised to fight the depression have made necessary issues of additional bonds by our Government. But these new bonds have been bought by our people at the lowest rates of interest in the history of our country. Also the Government has called many existing bonds and replaced them by new bonds bearing rates of interest much lower than were paid on the old ones. These facts furnish overwhelming and conclusive proof that our country is in a strong financial condition.

In the beginning of my talk I referred to two of the serious problems facing the administration. One was to tide over acute troubles. The second was to promote recovery. In discussion the first point is often overlooked. Much has been said as to whether or not any special measure of the administration has or has not aided recovery. It is just as important to know whether or not it helped to stop the downward movement of the depression and made it possible for us to endure the distressing conditions which afflicted our country. It is to the credit of the administration that it has aided the people to pass through trying times with a minimum of suffering. It is likewise to the glory of the administration that in doing so it has started us on the road to recovery at an ever-increasing degree of momentum.

Our people have shown grit and resourcefulness, but the Democratic Party is entitled to a big part of the credit for the remarkable improvement in business conditions and it will receive it. The Democratic Party has demonstrated that it can meet grave problems and handle them effectively. The Democratic Party could not have solved the problems if it had not been that its leader was a most capable man. The times called for a man of vigor and resourcefulness, vision and ability—a man who would have a plan and would attempt to put it into operation quickly and efficiently. Fortunately for our country such a man came to the White House. Franklin D. Roosevelt has been called upon to meet as severe problems as ever fell to any President in our history. No President has worked harder or more conscientiously or has secured in the main better results. Since Franklin D. Roosevelt took the oath of office as President of these United States, our country has made continuous progress toward recovery. He has fought the good fight. He deserves a reelection and he will get it next November.

Vice President Garner has shown himself to be a wise counselor and a very valuable factor in the administration. Probably no other Vice President in the history of our country has been more vigorous, influential, and efficient.

Our Maryland Congressmen—Goldsborough, Cole, Palmisano, Kennedy, Gambrill, and Lewis—have played their parts well and fully deserve reelection. Let us give our entire ticket our wholesouled support and see to it that next November every one of our candidates is continued in the office which he now fills so ably.

ACTIVITIES OF WORKS PROGRESS ADMINISTRATION

Mr. DAVIS. Mr. President, for many weeks and at various times I have urged a thoroughgoing and impartial investigation of the Works Progress Administration. No action has been taken. In view of the continued silence on the part of those whose work and program are now being questioned, I am impelled once more to call attention of Mr. Harry Hopkins, in the only manner now available to me, to the use of Federal funds for the spread of communistic propaganda.

I ask unanimous consent to have printed in the RECORD an editorial in the May 23 issue of Liberty entitled "Inciting to Riot", which I believe will be of interest to an increasingly large number of people.

Is it a mere coincidence that the directress of the Federal theater project who is the authoress of Can You Hear Their Voices? is now using taxpayers' money to stage Triple A Plowed Under in which outstanding representatives of the Communist Party are held up before the eyes of the American public for admiration while the heroic figures of Washington, Jackson, Jefferson, and Lincoln are ignored?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Liberty of May 23, 1936]

INCITING TO RIOT

Strange things are happening in this country of ours. And the climax of dangerous experiment has surely been reached in the Federal theater project, which presents a Communist propaganda play financed by the United States Government.

The thing surpasses belief, but there it is: the red, white, and blue official emblem, U. S. A. Work Program, W. P. A., on the doors of the Biltmore Theater, in New York City, while the drama of hate unfolds within.

We must admire the skill and cheek of the fellows who are working this racket. Their comrades, who are crudely rioting in the W. P. A. headquarters building are amateurs. Mr. Victor F. Ridder, the administrator, promptly issued nightsticks, had their heads cracked, and spoke out in meeting about it. Before the New York Rotary Club at the Commodore Hotel he said recently: "We try to be rough. We are rough. And we are going to be rougher. I am an old-fashioned American. We are not going to stand around and let these cheap rats of agitators fasten their name and tag of vermin on our workers. If there is anything I really want to earn, it is the undying hatred of this crowd of cheap Communists."

Brave words from an official of the national administration in these sad confusing days. For the same people are in the Biltmore Theater, not very far from Mr. Ridder's office, inciting thousands to renewed violence—with American taxpayers' money!

We must get out of our heads, once and for all time, the idea that the Communists in America are a political party. They are nothing of the kind. They are a revolutionary junta working day and night to overthrow our society and Government—not by ballots but by a bloody uprising of an armed minority in an hour of crisis. To print their ballots out of public funds is a crime against law and order. It should be stopped. In more than one European country it is now a felony to preach communism or to join one of its "cells." It should be so here.

For they would not only smash our business world, they would destroy the church, the home, our liberties and our ideals, and blot the name of God from human speech. And on the ruins of it all they would build a great hogpen with a common slop trough. They would give us equality—yes!—and there would be no more unemployment. Of course not! All men and women would be compelled to work, under the lash of a Soviet overseer. Millions of slaves driven by a little group of masters.

History has no habits save the single one of repeating itself. This inexorable fact is worth remembering in the light of what happened 150 years ago in the theater. Pierre Augustin Caron, who assumed the name of Beaumarchais, produced in the Théâtre Français an apparently innocent sequel to his earlier play, the Barber of Seville. It was called the Marriage of Figaro.

Beaumarchais, who had been confidentially employed by Louis XV and later by Louis XVI, previously had been invited to give a command performance in the Petit Trianon. Neither his royal patron nor Marie Antoinette recognized themselves as being lampooned. Later audiences in the Théâtre Français immediately sensed the inflammatory call to revolution. In the words of a subsequent historian: "Beaumarchais wished to fire a squib and he exploded a magazine." It was a spark which helped set France on fire—a conflagration that on January 21, 1793, cost Louis his head. Marie died under the same guillotine on October 16.

The astounding play at the Biltmore, Triple A Plowed Under, is done with skill and dramatic power. Its words are a mere smear of cheap sentiment, but the purpose of the dramatist must be found in the final emotions stirred in the minds of the audience.

In this case nothing is left to chance for any misunderstanding. Mr. Earl Browder, secretary of the Communist Party in America, is impersonated as one of the heroic characters of the play, making the climacteric speech denouncing the Supreme Court of the United States. From start to finish, the method used by the dramatist is to stir the ugliest passions of the poor against the rich and destroy the foundations of private property. In the grand finale we are all urged to join the so-called Communist-Farmer-Labor Party. The play is beautifully and artistically mounted and acted—with money from the United States Treasury!

We stand before the spectacle amazed and confused. At the Port of Authority Building on Eighth Avenue, Mr. Ridder's guards are ordered to crack the heads of Communist rioters. Farther uptown, in a Federal project theater, Communists are inciting the

people to riot—financed by the same Government that is cracking their heads at W. P. A. headquarters.

With increasing wonder we ask how it is that our Relief Administration is infested with thousands of these crack-brained theorists who are grabbing salaries with one hand while they distribute their calls to violence with the other. Surely it is time to get out our rat traps and delousing machinery.

It is inconceivable that the President should knowingly be a party to these infamies.

We modestly inquire, then: Who is really running this country? Certainly Congress should begin at once an investigation that will uncover the mysterious high official somewhere in the shadows of Washington who is responsible for the present activities of Communists in our Government service.

BERNARR MACFADDEN.

INSTRUCTIONS FOR PAYMENT OF ADJUSTED-SERVICE BONDS

Mr. PITTMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Postal Bulletin of May 25, 1936, relative to arrangements for the payment of adjusted-service bonds.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LATEST BONUS INFORMATION

[From the Postal Bulletin of May 25, 1936]

ADJUSTED-SERVICE BONDS

OFFICE OF THE POSTMASTER GENERAL,
Washington, May 22, 1936.

Postmasters and all postal employees concerned are enjoined to read the following instructions relative to the delivery, certification, and payment of adjusted-service bonds.

INSTRUCTIONS

1. Post offices are divided into three classes for the purpose of handling the adjusted-service bonds for veterans.

2. The 59 offices designated as central United States savings bond depository offices will pay adjusted-service bonds certified at their respective offices, and will also pay such bonds received from district offices.

3. There well be 182 offices which will pay only the bonds certified at their respective offices.

4. All other post offices will be considered district offices and will forward bonds certified by them to their central United States savings bond depository offices for payment.

5. Specific detailed instructions have been sent to the 241 paying offices with the checks and necessary supplies.

6. A list of the central United States savings bond depository offices appears elsewhere in this Postal Bulletin, with the territory assigned to each, designating the one to which postmasters in the respective districts will transmit certified bonds for payment.

7. The nonpaying offices are concerned in five major features, as follows:

(1) Receipt of registered letters.
(2) Delivery of registered letters.
(3) Certification of request for payment.
(4) Transmitting the bonds to paying postmasters for payment.
(5) Proper report of expenditures in connection with the additional work involved (first- and second-class offices only).

Receipt of registered letters

8. The bonds in question will be dispatched on June 15, 1936, from 12 post offices, namely, Boston, Mass., New York, N. Y., Philadelphia, Pa., Cleveland, Ohio, Atlanta, Ga., Chicago, Ill., St. Louis, Mo., Minneapolis, Minn., Kansas City, Mo., Dallas, Tex., San Francisco, Calif., and Washington, D. C. The date of receipt in your office will depend on the transit time between the mailing office and your city.

9. Postmasters at all post offices to which the registered letters containing the adjusted-service bonds will be sent are advised that the envelopes containing the bonds will not bear any postage stamps or permit indicia as a special arrangement has been made for the payment of any required charges on these registered letters mailed out by the regional disbursing officers of the Treasury Department and the Treasury Department at Washington.

Delivery of registered letters

10. These registered letters will be marked for delivery to addressee only.

11. Regardless of the fact that the registered letters may be addressed in care of a person or institution, delivery shall be made to addressee only. They must not be forwarded to other offices. If undelivered by reason of death or removal to another office the letter is to be returned to the sender immediately, the reason for return being shown in the space provided on the reverse side of the envelope, as well as the new address, if known. If undelivered for other reasons, they are to be returned to the senders at the expiration of 30 days with the reason shown on the envelope. If the letter is delivered to a local address other than that originally shown, the new address shall be placed on form 3849.

12. The time of delivery at your office will depend upon the transit time from the office of mailing and the necessary time required for distribution to carrier routes after the registered letters are received. Delivery shall be made promptly.

13. When the date of delivery is fixed, wide publicity should be given through the press and radio, and through veteran, fraternal, labor, and civic organizations and any other method which the postmaster believes will be of benefit, it being understood that such publicity will be obtained without cost.

14. The publicity as it relates to delivery should be along the lines that the registered letters will be delivered to addressees only and that the addressees should be at home to receive them, prepared to furnish suitable identification to the carrier, such identification to be made by a person known to the carrier.

15. Carriers will use proper means of identification in delivery of these registered letters, but it is thought that the carrier should go out of his way with a view to effecting delivery, if at all possible, by securing someone in the neighborhood whom he knows can identify the addressee. Of course, where the addressee is known to the carrier, no other identification is necessary.

16. The identifying person should also sign the registry receipt, form 3849, and enter thereon his address. Every effort possible should be used to effect delivery by carriers for the reason that ordinarily they can secure identification much more readily than window clerks. Prior to the date of delivery, specific instructions should be issued to all carriers concerning the necessity of effecting delivery on the routes.

17. It is probable that all registered letters will not be ready for mailing by the Treasury Department on June 15, and veterans making inquiry should be advised that delivery will be made as soon as received.

18. Form 3849, covering the delivery of these bonds, should be kept in a separate file. The original registry number will be used for delivery purposes and, in offices where the inward number is in use, it shall be disregarded in the handling of these registered letters.

19. In recording these registered letters, the prefix "A" shall be recorded as part of the registration number.

20. These registered letters shall be delivered by rural carriers under existing regulations and to addressees only. Delivery must not be made by star-route carriers, but the usual registry notices shall be mailed to the addressees in official envelopes.

21. Each registered letter is accompanied by a registry return receipt which shall be properly signed, dated, postmarked, and promptly mailed to the senders.

22. Where reference is made to form 3849 in the foregoing, the instructions shall apply to window delivery books where such records are in use.

Certification of requests for payment

23. Adjusted-service bonds may be redeemed on and after June 15, 1936. Although they earn simple interest at the rate of 3 percent per annum, no interest is payable on any bonds redeemed prior to June 15, 1937.

24. Veterans who desire to cash their bonds must sign the request for payment on the back of the bonds in the presence of a certifying officer. All postmasters, acting postmasters, and post-office inspectors in charge of post offices, throughout the United States, including Alaska, Guam, Hawaii, Puerto Rico, Samoa, and the Virgin Islands, are authorized to act as certifying officers and may designate any official or regular employee of the post office to act in that capacity. If such designated official or employee certifies to a request for payment, he shall certify in his own name. The signature of the certifying officer must be followed by his official designation; such as, postmaster, assistant postmaster, superintendent of mails, foreman, or designated clerk.

25. Certifying officers will be held responsible for positive identification of the person requesting payment as the one whose name appears on the face of the bond. If the veteran is personally known to the postmaster or designated employee, witnesses are not necessary. If he is not known, one or two witnesses who know the veteran and who are known to the certifying officer must sign the bond in the space provided, with their addresses, in the presence of the certifying officer. Space is also provided on the bond for taking fingerprint impressions in exceptional cases. Postmasters or designated employees must certify to the request for payment of properly identified owners. All certificates at post offices must bear a legible imprint of the post-office dating stamp. The postmarking, M. O. B., or registry stamp may be used for this purpose. Each bond must also be canceled with a punch where a punch has been furnished. The punch perforations must be confined to the space indicated on the back of the bond.

26. The owner must sign the request for payment exactly as his name appears on the face of the bond and must write his address on each bond in the space provided. For example, if the name appears on the face of the bond as "George Washington Jones", the signature should read accordingly, and not "G. W. Jones" or "George W. Jones." Signatures must be in ink or indelible pencil. The owner shall not be required to sign the receipt in the lower left corner on the back of the bond.

27. When bonds have been accepted for payment, the owner shall be given an interim receipt on form ASB–1, which shall be prepared in accordance with the instructions on the form. The complete serial number of each bond shall be recorded on the interim receipt.

28. The certification of the bonds will provide a major problem in that sufficient employees for the certification must be available and adequate space provided to accommodate the number of veterans and witnesses who may call at one time. Facilities for certification should be provided immediately following the delivery of the bonds, and the advance publicity should indicate to the veterans where the certification is to be made. It is incumbent upon postmasters to arrange for this certification so as to prevent congestion at post offices and to eliminate complaint.

29. Postmasters will find veteran organizations and other civic organizations interested and willing to render all assistance possible. The use of outside quarters for certification can no doubt be obtained without cost if necessary during the heavy period. Postmasters will also make use of post-office quarters after business hours and utilize every possible means for prompt handling of the certifications. In classified offices, temporary employees should not be designated as certifying officers. Any regular employee may be designated.

30. No person authorized to certify a request for payment may certify a request signed by himself either in his own right or in any representative capacity. Postmasters are not authorized to certify for payment bonds presented by others than the registered owner whose name is inscribed on the face of the bond. In case of death or incompetence of the registered owner, the person presenting the bonds should be instructed to secure information as to the cashing of the bonds from the Treasury Department, Division of Loans and Currency, Washington, D. C.

31. Bonds may be certified by agencies outside of the Postal Service. (See Treasury Department Circular No. 560, copies of which will be furnished to all postmasters.) Postmasters are not authorized to accept bonds which have been certified by any agency outside of the Postal Service. The owner should transmit such bonds, at his own risk and expense, preferably by registered mail, to the Treasurer of the United States, Washington, D. C. Postage and registry fee (and any required surcharge) will be chargeable on registered mailings of bonds sent by the owners. Postmasters may consider that the estimated cost of duplication of adjusted-service bonds will be the same as the cost of duplication of United States savings bonds as set forth in the notice published on pages 16 and 17 of the April 1936 Supplement to the Postal Guide, under the caption "Postage, registry fee, and surcharge on United States savings bonds." It should be suggested to the holder of bonds who sends them direct to the Treasury Department by registered mail that he pay a registry fee, in addition to the required postage, sufficient to provide indemnity, in case of loss, to cover the full cost of duplicating the bonds.

Transmitting bonds to paying office

32. There shall be no cash payments in any post office of adjusted-service bonds. Payments shall be made only by special Treasury Department checks supplied to the 241 designated paying offices. Each postmaster will inform himself as to the central United States savings bond depository designated as the office to which he is to transmit bonds certified by him. A list of these offices appears elsewhere in this bulletin.

33. All bonds surrendered for payment of nonpaying offices shall be transmitted daily to their respective central United States savings bond depository offices for the issuance of Treasury checks.

34. The bonds sent to the central United States savings bond depository shall be sent by registered mail in envelopes especially provided for the purpose (ASB–7–a for third- and fourth-class offices; ASB–7–b for second-class offices; ASB–7–c for first-class offices.) The bonds contained in these registered letters shall be accompanied by the original invoice form ASB–2 (ASB–2–A when the description for contents cannot be confined to ASB–2).

35. Paying postmasters shall return to the transmitting postmasters, by registered mail, all bonds whereon the request of payment or the certification is incorrect or incomplete. A check shall be issued for the amount of properly completed bonds, and the owner shall be advised by note enclosed with the check as to why the check transmitted does not cover the full amount. The transmitting postmaster to whom the bond or bonds are returned because of any irregularity shall resubmit the bond or bonds when properly completed, accompanied by a letter of transmittal, to the paying postmaster, by registered mail. If such bonds are included with the shipment of bonds transmitted that day for payment, they shall not be again described on form ASB–2, but shall be enclosed in an envelope plainly marked to indicate that it contains bonds previously submitted which were returned for correction.

36. Upon receipt of bonds from a nonpaying office, the paying office will check the bonds with the accompanying invoices and transmit to the nonpaying office a receipt on form ASB–3, using envelope form ASB–8 for the purpose. The paying office will mail the check direct to the veteran at the address furnished by him on the back of the surrendered bonds. The check will be sent as ordinary mail in an envelope to be furnished for the purpose (form ASB–9), which will bear no endorsement requiring restricted delivery.

Advance payment of postage and registry fee not required—Dispatch of certified bonds to paying offices—Statistics

37. No postage or registry fees will be collected by the postmaster at the office of mailing on mailings of bonds to the central United States savings bond depository office. As far as practicable, without missing available dispatches, all bonds transmitted to the central United States savings bond depository office in any one day shall be enclosed in one envelope or wrapper. The registered letter or parcel containing the bonds is to be entered on the registration records in the regular series of registration numbers and the records shall show the postmaster as the sender of the registered article. The registration receipts and office records of the articles shall be marked "ASB" to indicate the reason for acceptance without the payment of postage and registry fee. The registered articles referred to shall be included by the mailing postmasters with the 15-cent paid registrations of their offices when rendering their Annual Registry Statistical Report.

Postmasters shall not be absent from their post offices during the heavy period of work in connection with the handling of these adjusted-service bonds, and it will be necessary for all employees to be on duty during this period. Postmasters at first- and second-class offices, see letter from First Assistant Postmaster General dated May 18, 1936, relative to leave of employees.

JAMES A. FARLEY,
Postmaster General.

THE GUFFEY ACT—EDITORIAL FROM CHARLESTON GAZETTE

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in the Charleston Gazette of yesterday entitled "The Guffey Act."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Charleston (W. Va.) Gazette of May 24, 1936]

THE GUFFEY ACT

A year ago, come August, Congress was considering the Guffey bill, which then had been discussed for weeks and months in both Houses of Congress, in the press, and among coal operators and their employees, as well as by businessmen generally. It was then announced that the objections which had been raised against the bill had been smoothed out and that the demand for legislation to save the coal business from the standpoint of both investors and labor could be granted without any reflection on the honor of the Congress. Very soon thereafter the bill was passed and was approved by the President, and the latter proceeded to make the executive appointments required by the bill and necessary to carry out the purposes of the legislation. Very soon thereafter suits were instituted which attacked the constitutionality of the legislation. With few exceptions the bill was accepted by the producing end of the coal business and by all labor, with encouraging results.

Those few exceptions finally brought the matter to the attention of the Supreme Court of the United States in a suit, and the Court, after holding back its decision for quite a long while, finally held the act to be unconstitutional and consigned it to the judicial morgue. The vote of the nine members of the Court was on its face, six to put the law into a coffin and three to treat it as a law as provided in section 7, article 1, of the Constitution.

Since the President is sworn to "take care that the laws be faithfully executed" (art. 2, sec. 3) he proceeded to treat this bill, which had been passed by both branches of the Congress, in manner and form as provided by the Constitution (sec. 7, art. 1) as a law. He could not wait on the Court 1 or 3 or 5 years, nor as was done in the Dred Scott decision, 37 years after the legislative action, to put into effect the machinery for administration provided by this legislative act.

Now six of the judges come, albeit that one of the judges hesitated and gave an excuse for his action which ought to have been incorporated with the action of the three in minority, broke up the Executive machinery and put the mammouth coal business—yes; the fuel business of the United States—back into the condition quo ante which was chaotic. We have received communications from the laboring people, which taken in connection with knowledge, that is everybody's, that leaves little room to doubt that they who go down into mines where there is danger and death, want legislation and they are disappointed that the Supreme Court has again exhibited to the country the danger that lurks in the effort of the Congress and the decisions of the Court to construe the "unwritten part" of our "written Constitution."

We had always understood that where there is doubt of the constitutionality of the act of Congress, then the doubt must be resolved in favor of the constitutionality of the enactment. In other words, since the assumed power of the Court appears nowhere in the grants of power to the judiciary, and since the reasons for enacting the law are entirely within the breast of the legislative department, and the assumed right of the Court to nullify the act of a coordinate branch of the Government, to which has been granted "all legislative power" is still debatable, the nullification of an act of the legislature is conceded to be the most solemn function of the Government. As Senator NORRIS put it in his usual Lincolnian and Benjamin Franklin way, "Where the judges disagree, then the certainty that must proceed the nullification of the act of Congress is bound to be absent." We do not pretend to quote Senator NORRIS's exact words, but we believe that we have stated the substance of his position as stated on the floor of the Senate. With his terse statement as a text, we submit that where the Court itself has three of its learned members in favor of maintaining the constitutionality of the act and the Chief Justice himself, one of the six, expresses doubt upon one of the essential features of the opinion which goes out as the majority opinion, one is not bold in asserting that the res ipsa suggests doubt.

The situation which now confronts the Congress and the President who approved the Guffey law finds in judicial limbo, the old doctrine that in order to set aside the act of the legislature there must be no doubt in the minds of the judges. Since the Court in the A. A. A. case went outside of the record, and held, in effect, that agriculture, no matter what its demands and necessities may be, is exclusively a matter for the States, it is hard for the newspaper editor to get away from the impression that the Supreme

Court proposes now to put labor in the same category and put all production which comes from the joint action of capital and labor into that uncertain judicial "no man's land" called the "reserved power" of the States.

We have heretofore tried to show, as did counsel in the current cases, that such a position cannot stand permanently as the law of the land, much less the supreme law of the land. The dust storms of the West which carry the rich surface soil from one State to another, do not recognize any such judicial interpretation. Irrigation, water power, and navigation, which are a part of labor's heritage as they are the hope and reliance of the farmer, come from the rills, the creeks, and the rivers, which do not stop at State lines. The food and clothing of the people as well as their fuel, cannot be dealt with comprehensively or effectively by the States. The recent floods have shown that the laws of nature do not recognize geographical lines any more than they do political promises and purposes.

The West Virginia coal business is affected both at the point of production and in the markets by other coal fields in other States. How often that has been gone over in congressional investigations and judicial inquiries.

The situation exemplifies the business chaos of horrors that will hound labor and business if it be true that the Constitution is whatever the court may declare it to be. But, until Congress exercises the power given it by the Constitution to regulate the appellate power of the Supreme Court and to make such exceptions as the Congress may see fit, we must deal with the situation as the Supreme Court has said it is.

This heaven-favored, rich State of West Virginia, with its oil and gas, needs to use, as domestic fuel, very little of its coal. At least 90 percent of its coal would not be mined but for the markets beyond the State's lines. Its high carbon-coking coal, underlying a small (comparatively speaking) part of its coal area, is practically indispensable to many of the branches of the country's industry. The Norfolk & Western, the Chesapeake & Ohio and the Virginian Railways, bisect this coal, which constitutes a major part of their freight tonnage. Our domestic and gas coals bear the same relation to the B. & O., and the New York Central Railroads.

Our coal business from mine to home, is about as large as that of raising peacocks for their tail feathers.

It is too plain for discussion that our railroad development and our modern mine equipment had in contemplation interstate commerce.

But there is still the bigger question: Shall the millions invested in coal be told that Congress has no power to help the coal business to realize a fair profit in the production of coal?

Shall labor be relegated to the States which produce coal for the security of a fair wage?

Shall labor be told, as was the farmer, that he is the victim of the failure of his ancestors to define States' rights, and the omission to insert in the Constitution some "nots" that would prevent the courts from holding the business of the country over the hell of uncertainty and technical differentiation, by a horsehair?

REGULATION OF COMMODITY EXCHANGES

The Senate resumed the consideration of the bill (H. R. 6772) to amend the Grain Futures Act to prevent and remove obstructions and burdens upon interstate commerce in grains and other commodities by regulating transactions therein on commodity futures exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes.

The VICE PRESIDENT. The question before the Senate is on the first amendment offered by the Senator from Washington [Mr. SCHWELLENBACH] to the amendment offered by the Senator from South Carolina [Mr. SMITH].

Mr. SMITH obtained the floor.

Mr. SCHWELLENBACH. Mr. President——

The VICE PRESIDENT. Does the Senator from South Carolina yield to the Senator from Washington?

Mr. SMITH. I yield.

Mr. SCHWELLENBACH. The first amendment, the one on line 7, proposing to substitute the words "a commodity" for the word "cotton", I desire to withdraw.

Mr. SMITH. I hope that the Members of the Senate have been furnished with the new print that shows the original bill with the proposed amendments, so that Senators may have the context as well as the amendments thereto. Has the Senator from Washington a copy of that print of the bill?

Mr. SCHWELLENBACH. I have.

Mr. SMITH. On page 9 of the reprint the amendment appears, and I think it would be better for us to refer to that print. The amendment of the Senator from Washington would come in on line 17, page 9, after the words "a like quantity of", to strike out "cotton" and insert the words "a commodity." That, as I understand, is the amendment of the Senator from Washington to my amendment.

Mr. SCHWELLENBACH. Mr. President, after consultation with the Department by the Senator from Idaho and myself, we feel that that amendment would not be advisable so far as grain is concerned. I therefore withdraw that amendment, but I do not withdraw the other amendment proposing to strike out the words "crossing and" on line 18.

Mr. SMITH. Mr. President, as the Senate will have to vote on this question, I wish to say, if there are any Senators who may not be thoroughly familiar with the terms used on the exchanges, that it is impossible for a broker, either on a grain exchange or a cotton exchange, to execute a buying and a selling order without it being called a "cross" sale. The terminology used in this bill was unfortunate. By turning to page 10 of the reprint of the bill there will be found subdivision (A), under which are prohibited and declared to be unlawful "wash sales." Everyone who is familiar with the markets knows exactly what a "wash sale" is. It is a pure, unadulterated fraud.

"Cross trade", or "accommodation trade", or is a fictitious sale.

Mr. President, a "cross sale" is of the nature of what was described and debated yesterday. A broker receives an order for October wheat or October cotton. He receives simultaneously an order to sell and an order to buy. He offers them simultaneously. Under this amendment that is a cross sale, a sale involving an order to buy and an order to sell at the same time. It is provided in the amendment that nothing therein contained shall prohibit a broker from executing such sales open and aboveboard on the floor and having them recorded, so that his customers may know that in good faith he sold for A and bought for B at the market, no matter at what the market may be quoted in that particular month. The terminology here used is unfortunate.

Mr. POPE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. DUFFY in the chair). Does the Senator from South Carolina yield to the Senator from Idaho?

Mr. SMITH. I yield.

Mr. POPE. As the Senator understands, is a "cross sale" as he uses the term the same as a "cross trade"? A "cross sale" and a "cross trade" are the same thing, are they not?

Mr. SMITH. I do not know what terminology may be used, but a cross-execution is what I have described. It may be a cross trade. A broker may have an order to sell and an order to buy, and he may simply pocket the order to sell and execute the order to buy and execute the order to sell to the party who bought. My amendment would provide that that can be done in the office or with himself or with anybody, but that the broker must then take the orders and go on the floor and have them duly recorded as a purchase and a sale simultaneously.

Mr. POPE. Since the term "cross trade" was used, as the Senator indicates on page 10 of the new print of the bill, I asked the Grain Futures Administration, who are very familiar with these terms, to give me a definition of the term "cross trade." This is their definition:

Cross trades are fictitious trades recorded and cleared through the exchange clearing house as real trades. They are a device commonly employed by floor brokers for the coming buyers in respect to selling orders of customers and vice versa. They take the form of a recorded double purchase and sale between two brokers. Each broker is recorded as having bought from and sold to the other the same quantity of the same future at the same price.

That is the definition which the Grain Futures Administration gave of the term which is used in the bill.

Mr. SMITH. To my mind that is not applicable to the purpose of the amendment, because the amendment not only defines a cross sale, but specifies how it shall be made and where it shall be made. In other words, if it is not allowed, then the broker has to be a bear one day and a bull the next day because he does not dare, under this definition, to receive simultaneous orders for a given amount to be bought and to be sold, and execute both of them. It is a cross sale. That is what is meant. If there is a cross trade, then we get down to what is known as "bucketing", or, worse than that, the broker utilizing himself as the purchaser or salesman of his

client's business, whereas under the amendment in the event a broker should receive orders in an active market for the same quantity to be disposed of at the market, all he could do, if he were honest and fair, even without the law, would be to indicate to his representative in the pit, or himself if he is active on the floor, that the orders are to be taken and executed at once. If that is not to be allowed, but is to be prohibited, we are putting him into a position to do the identical thing the law is trying to make unlawful.

I know there is a determination on the part of some, no matter how righteous and how fair any of the Smith amendments may be, to defeat them. The evidence of that is visible all about me. There is not a Senator here who does not know that this amendment proposes to do nothing more nor less than to require the broker, if he is going to buy and sell simultaneously, to offer those orders at the market.

Mr. PITTMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Nevada?

Mr. SMITH. I yield.

Mr. PITTMAN. As I understood the Senator from Idaho [Mr. POPE] yesterday, he said the definition of a "cross trade" does not include the character of transaction to which the Senator from South Carolina is now referring. It seems to me, if that be true, that the Senator from South Carolina could preserve his provision against cross trading by the express language here used, that cross trading shall not include the character of transaction he is urging, since it is proposed to strike out the words "crossing and" as suggested by the Senator from Washington [Mr. SCHWELLENBACH].

Mr. SMITH. If those words be stricken out, then under the terminology of the bill we have put the broker in a position where he cannot execute a buying order and a selling order simultaneously.

Mr. McKELLAR. Mr. President, will the Senator yield?

Mr. SMITH. I yield.

Mr. McKELLAR. When the broker receives a cross order why cannot he go on the market and either buy or sell or do both, provided he buys at the market price and sells at the market price?

Mr. SMITH. But that is a cross sale. It cannot be avoided.

Mr. POPE. Mr. President, will the Senator yield again?

Mr. SMITH. Certainly.

Mr. POPE. A cross sale is not prohibited under the terms of the bill. It is cross trading as defined by me a few minutes ago. That is the only thing that would be prohibited. As I said yesterday, in my opinion, the sort of transaction included in the Senators' amendment is not prohibited by the bill as it stands without the amendment.

Mr. SMITH. All the trade would understand and the courts would so construe the term as used on the different exchanges, that a cross sale or a cross trade, if you please, has been known ever since exchanges existed as a buying order and a selling order. The complaint made is that some broker will get an order to buy and an order to sell simultaneously, and if he is inclined to favor one client as against another he may use the selling order, if he wants to depress the market, and hold the other for a reasonable time and then execute the other order.

The amendment which I have proposed would provide that he shall not do that; that if he has an order to buy and an order to sell he must execute them simultaneously and get away from the idea that he can withhold one order and execute the other. It seems to me it is so very patent that it does not really need discussion.

The contention was made yesterday that it was going to let in all sorts of bucketing. It is prohibitive of that practice.

Mr. McKELLAR. Mr. President, did not the Senate on yesterday order, and did not the Senator from South Carolina agree, that the words "then fair", in line 19, page 9, be stricken out?

Mr. SMITH. Yes.

Mr. McKELLAR. I see they are in again.

Mr. SMITH. The amendment went over. They were stricken out, and through some misapprehension they appear here.

Mr. McKELLAR. But were not the words "crossing and" stricken out, too; or was I mistaken about that?

Mr. SMITH. No; that amendment was pending.

I desire to explain the use of the word "fair." It is a pity that the markets are so technical and refined that the words we use here do not mean very much to those who are not familiar with them.

Assume that I get an order to buy and sell October. All of you know that October may for an hour be inactive, not a sale made—that is, no record at all is being made—but December is very active, and the last quotation December was 20 points on October. That is a dollar a bale higher. December may be declining or rising; and the word "fair" was used there so that if the broker wanted a quick execution he would sell October and report to his client that he had sold October at the price discounted or premiumized by the difference between December and October. I thought myself, however, after going over the matter, that he should be allowed to wait until October did become active and then sell at the market, so I agreed to have the word "fair" go out. A great many brokers desire to execute their orders; and when a broker has a sale, and a patron wishes it executed in a certain month, if that month happens to be inactive, the broker hates to delay for fear his patron may think he is engaged in some sinister business. That was the reason why I said the order should be executed at a fair price as measured with the active month that it is compared with, like December and October.

Mr. SCHWELLENBACH. Mr. President——

Mr. SMITH. I yield to the Senator from Washington.

Mr. SCHWELLENBACH. I feel that the amendment I proposed does not have as its purpose defeating the amendment offered by the Senator from South Carolina. I think if it were adopted, the original amendment would have exactly the same result, and it would remove the possibility of criticism.

We have said that cross trading in certain transactions is unlawful. Then there is a proviso that nothing in this section or any other section shall be construed to prevent, where orders are received simultaneously in the same amount, the execution of those orders. If we leave out the words "crossing and", the provision will read:

> Nothing in this section or in any other section of this Act shall be construed to prevent a futures commission merchant or floor broker who shall have in hand, simultaneously, buying and selling orders at the market for different principals for a like quantity of cotton for future delivery in the same month, from executing such buying and selling orders.

Mr. SMITH. So far as I am concerned, I should be perfectly willing to accept that amendment if it were not for the fact that if I should execute a buying and selling order, some fellow might report me for a cross trade.

Mr. SCHWELLENBACH. Yes, but under this amendment it would be construed that that was not a cross trade. We have declared in the pending bill that cross trading is unlawful; but we say that under these circumstances there is nothing in this measure which will prevent a person who receives simultaneous orders for execution in the same month from executing them.

Mr. SMITH. That may be all right.

Mr. SCHWELLENBACH. If the words "crossing and" were left in, it seems to me the provision would mean that in those particular cases where orders are received simultaneously for the same month, cross trades are permitted. The words "crossing and" add nothing to the contention of the Senator from South Carolina, but if they should be left in they might be construed to negative the provision which makes cross trading unlawful.

Mr. SMITH. No; my idea was just to limit it to that particular thing. I do not know but that it may be all right to amend the bill by striking out those words. I wish to have it understood that the word "fair" is stricken out.

Mr. McKELLAR. The two words "then fair."

Mr. SMITH. Yes. As I have explained to the Senate, the reason why I put in those words is very obvious—because very often a broker gets an order for a month that is not active for an hour or more. There are no quotations at all; and then, as soon as the market opens, the broker can execute his sales. But if that word does give rise to a rather sinister idea in the minds of my colleagues, I am perfectly willing to have it go out, though that course will retard the execution of a great many contracts.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Washington [Mr. SCHWELLENBACH] to the amendment offered by the Senator from South Carolina, to strike out the words "crossing and" on page 2, line 2.

The amendment to the amendment was agreed to.

Mr. SCHWELLENBACH. The same words appear twice. Which print is being used?

Mr. SMITH. Let us use a uniform print.

The PRESIDING OFFICER. The words appear on page 9, line 20, of the new print. The clerks are using the old print.

Mr. McKELLAR. Let it be understood that the words "then fair", in line 19, page 9, have already been stricken out. They were stricken out by order of the Senate last night.

The PRESIDING OFFICER. The Chair understands that that was agreed to yesterday.

Mr. SMITH. Yes; they were stricken out last night.

The PRESIDING OFFICER. The question now is on agreeing to the amendment of the Senator from South Carolina, as amended.

The amendment, as amended, was agreed to.

WHITMAN NATIONAL MONUMENT

The PRESIDING OFFICER laid before the Senate the action of the House of Representatives disagreeing to the amendment of the Senate to the bill (H. R. 7736) to provide for the establishment of the Whitman National Monument, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. WAGNER. I move that the Senate insist on its amendment, agree to the request of the House for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. MURRAY, Mr. BENSON, and Mr. NYE conferees on the part of the Senate.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its reading clerks, announced that the House had disagreed to the amendment of the Senate to the bill (H. R. 8455) authorizing the construction of certain public works on rivers and harbors for flood control, and for other purposes, asked a conference with the Senate on the disagreeing votes of the two House thereon, and that Mr. WILSON of Louisiana, Mr. WHITTINGTON, Mr. GRISWOLD, Mr. RICH, and Mr. ENGLEBRIGHT were appointed managers on the part of the House at the conference.

The message informed the Senate that the Speaker had appointed Mr. DOUGHTON, Mr. VINSON of Kentucky, and Mr. REED of New York additional managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9185) to insure the collection of the revenue on intoxicating liquor, to provide for the more efficient and economical administration and enforcement of the laws relating to the taxation of intoxicating liquor, and for other purposes.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Vice President:

S. 3118. An act to provide for the creation of the Perry's Victory and International Peace Memorial National Monument, on Put in Bay, South Bass Island, in the State of Ohio, and for other purposes;

S. 4023. An act to provide for the continuation of trading in unlisted securities upon national securities exchanges, for the registration of over-the-counter brokers and dealers, for the filing of current information and periodic reports by issuers, and for other purposes; and

S. 4448. An act to authorize the coinage of 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the issuance of the charter to the city of Lynchburg, Va.

REGULATION OF COMMODITY EXCHANGES

The Senate resumed the consideration of the bill (H. R. 6772) to amend the Grain Futures Act to prevent and remove obstructions and burdens upon interstate commerce in grains and other commodities by regulating transactions therein on commodity futures exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes.

Mr. POPE. Mr. President, I offer an amendment to section 3 of the bill, which I ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Idaho will be stated.

The LEGISLATIVE CLERK. On page 2, line 10, after the words "mill feeds", it is proposed to insert "and Solanum tuberosum (Irish potato)."

Mr. POPE. Mr. President, I will say that that amendment was submitted to the committee as a whole informally, and was unanimously approved. So far as I know, there is no objection to it. It includes potatoes as one of the commodities in this bill.

Under the trading which now exists in the mercantile exchange in Chicago, only Idaho potatoes are affected. There are only contracts provided for dealing in futures in Idaho potatoes. The amendment does not affect Maine potatoes, or North Carolina potatoes, or Michigan potatoes, or any other, because they are not traded in in futures; but with respect to Idaho potatoes there is a very considerable trade in future contracts, and the best informed people in my State are of the opinion that they have a depressing effect upon the market. Therefore the people of my State desire to have this amendment included. I have in my hand a statement from Dr. J. W. T. Duvel, Chief of the Grain Futures Administration, in which he approves of the inclusion of potatoes in the definition of commodities.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Idaho.

The amendment was agreed to.

The PRESIDING OFFICER. The Chair believes the question now would come upon the various committee amendments which have not been acted upon.

Mr. POPE. Mr. President, the committee amendments have been acted upon. The amendments which were informally approved by the committee, but which are in reality individual amendments to be offered by the Senator from Iowa [Mr. DUFFY] and the Senator from South Carolina [Mr. SMITH] have not yet all been presented.

Since the Senator from Iowa has entered the Chamber, I call his attention to the fact that the first amendment appearing on page 2, line 19 of the new Senate print, changing "50" to "75" percent of producers, might be presented as the next amendment.

Mr. SMITH. Yes; it is on page 2, line 19.

Mr. AUSTIN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Vermont will state it.

Mr. AUSTIN. Has the amendment on page 2, lines 14 and 15, to strike out "butter, and eggs", been disposed of?

The PRESIDING OFFICER. The Chair is informed that that amendment has not as yet been acted upon.

Mr. MURPHY. Mr. President, having reference to the amendment, on page 2, line 19, to strike out "50" and in lieu thereof to insert "75", this amendment raises from 50 to 75 percent the requirement as to proportion of the producer members in a cooperative association, corporate or otherwise, which shall be entitled to membership representation in a contract market—a contract market being a grain or other commodities exchange to which the bill is applicable. It is an amendment suggested by the Secretary of

Agriculture and would appear to admit of no objection on any ground.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. McKELLAR. Mr. President, before the Senator from Iowa leaves this particular matter, does he not think it would be well to insert the words "in good faith", on page 2, line 19, after the word "percent"?

Mr. MURPHY. I see no objection to that.

Mr. McKELLAR. Mr. President, I offer an amendment, on page 2, line 19, after the word "percent", to insert the words "in good faith."

Mr. McNARY. I could not hear the Senator's suggestion. Where is the insertion proposed to be made?

Mr. McKELLAR. After the word "percent", in line 19, on page 2. The words "bona fide" are usually employed in such cases, but I am a great believer in good English, which cannot be misunderstood, and I wish to add the words "in good faith." I hope the Senator will agree to the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Senator from Tennessee.

The amendment was agreed to.

The PRESIDING OFFICER. The Chair invites the attention of the Senator from Iowa to the fact that there has been no action on the amendment, on lines 14 and 15, page 2, to strike out the words "butter and eggs."

Mr. MURPHY. Mr. President, I suggest that we pass this amendment over for the present and take it up later, and that we go on with the amendments as to which apparently there is agreement. I think the next amendment occurs on page 3, line 1, in the new print of the bill, after the word "for", to insert the words "or with."

As passed by the House, the bill provided that business done for the United States of America or any agency thereof should not be considered as member or nonmember business in determining the compliance of any such cooperative association contemplated by the act. The addition of the words "or with" has the effect of providing that business done for or with the United States of America, or any agency thereof, shall not be considered either member or nonmember business in determining compliance. The form of this language is suggested by the Secretary of Agriculture.

Mr. McKELLAR. Mr. President, what is the purpose of the amendment?

Mr. MURPHY. It would affect any transaction conducted for or with the United States of America.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. MURPHY. The next amendment appears to be on page 7 of the print before us, the addition of paragraph "(C)."

Mr. McNARY. Mr. President, is the Senator discussing subdivision (C) on page 7?

Mr. MURPHY. Yes.

Mr. McNARY. How did that happen to be written into the bill in the form of an italicized amendment?

Mr. MURPHY. It is an amendment brought in by the committee to the bill as it passed the House.

Mr. McNARY. Did the Secretary of Agriculture suggest this amendment?

Mr. MURPHY. The Secretary of Agriculture did not suggest the amendment as his idea of what the proposed legislation should be, but representations were made when the testimony was taken, and it appeared that the bill as drawn would work an injustice to legitimate interests not concerned with speculation and not desiring to speculate. It was suggested then to the office of the Secretary that it suggest language meeting the objections of these legitimate interests, and with that understanding and on that basis the office of the Secretary then submitted this language.

Mr. McNARY. Did this meet, and does it now meet, with the approval of the farm groups and their representatives?

Mr. MURPHY. I have no information that it does not meet with their approval.

Mr. McNARY. That it does not?

Mr. MURPHY. I have no information that it does not meet with their approval. It has the approval of the committee. As to the logic of it, if the Senator will permit me to develop the purpose of the amendment, perhaps he will be satisfied.

The amendment proposes to enlarge the definition of "hedging" so as to permit manufacturers and millers to buy futures in anticipation of future manufacturing or milling requirements. The Quaker Oats Co., for example, knows from past experience about how much oats in the form of oatmeal can be marketed at a certain price, pursuant to a properly planned advertising campaign. Hence, when oats futures can be purchased at a price which enables the sale of packaged oatmeal at, say, 10 cents per package, the Quaker Oats Co. will wish to buy four or five or even ten million bushels of oats futures without actually having any offsetting sales. If the speculative limit should be fixed at 2,000,000 bushels, this amount could not be exceeded. However, the amendment will permit the Quaker Oats Co. to sell futures to whatever extent is necessary to hedge their anticipated requirements based on past experience, subject to the safeguard that in all such transactions prior approval by the Secretary of Agriculture must be had. In a sense this is a special provision to millers and manufacturers. Conceivably the privilege might be abused once, but not a second time, for the reason that the Secretary of Agriculture thereafter would not give his approval.

The office of the Secretary felt that was a condition it would like to relieve, but it was afraid of the consequences of writing into the law other language than that which is written, because opening the door to possible situations which it wanted to avoid. Therefore, it drafted this amendment, providing that "subject to approval by the Secretary of Agriculture", such a company as that referred to may deal in futures in such amount of such commodity "the purchase of which for future delivery would be a reasonable hedge against the estimated manufacturing or milling requirements of such person during an operating period of not more than 6 months, based on actual past experience."

We may assume that the Quaker Oats Co., desiring to exceed the limitation as it shall be fixed by the Commission, will have to satisfy the Secretary of Agriculture that there is a legitimate business need for such action; and that is all the amendment seeks to do. The company will have to satisfy the Secretary. The presumption is it will have to do that with evidence of sales in the last preceding 6 months or year, and the evidence of a reasonable anticipation of an increase in business.

If any further questions occur to the Senator from Oregon with respect to the proposed amendment, I shall be very glad to attempt to answer them.

Mr. McNARY. Mr. President, I am curious to know what the attitude of the Department of Agriculture is with respect to the amendment. I do not recall that the amendment was discussed while I was present at any committee meeting, and I wondered whether it had been submitted to the Department of Agriculture or to any of the representatives of the farm organizations, and whether they had an opportunity to study it and pass upon it and give their judgment as to its workability, practicability, and fairness.

Mr. MURPHY. Mr. President, I have no specific knowledge of farm organizations having been counseled with in respect to the amendment. All my counseling has been done with the Grain Futures Administration. The matter was thoroughly discussed and thoroughly aired in the subcommittee hearing.

Mr. McNARY. Is the Grain Futures Administration in accord with the purposes of the amendment?

Mr. MURPHY. It is in accord with the purposes of the amendment if it is the judgment of the Senate that we should make some provision for legitimate business, enabling it to exceed the limitations that will be fixed by the Com-

mission, if legitimate business needs to exceed such limitations.

Mr. POPE. Mr. President, will the Senator yield?

Mr. MURPHY. I yield.

Mr. POPE. I am opposed to this amendment for the reason that it extends the power to hedge far beyond the definition contained in the original act. It will be recalled that under that act orders may be hedged to the extent of the actual grain that one owns or may raise on one's own land within 12 months, and also the products and byproducts of the commodity.

Mr. McNARY. Mr. President, may I interrupt to ask a question there?

Mr. POPE. I yield.

Mr. McNARY. Is the Senator referring now to the original act creating the Grain Futures Administration?

Mr. POPE. I now refer to the hedging provision contained in the bill, in addition to the provision in the pending amendment, whereby a large industry—the Quaker Oats Co., for instance, which uses about 10,000,000 bushels of oats a year—may hedge not only against the actual oats and the products and byproducts in its possession, but also for a 6 months' requirement, which would be some 5,000,000 bushels additional; and then, in addition to that, such a company would have the limit on speculation or on speculative trading which any other person would have.

For instance, suppose the Secretary of Agriculture or the Commission should fix a 2,000,000-bushel limit to purely speculative transactions; the Quaker Oats Co. would have that 2,000,000-bushel limit. It could hedge to the extent of all the oats it owns, as well as its products and byproducts and, in addition to that, hedge to the extent of some four or five million bushels more of oats. That would apply to the industries which deal in packages or sell their goods in package form.

I will say that the Grain Futures Administration is opposed to the amendment. The original form of the amendment which was submitted to the Grain Futures Administration was different; and the present amendment was substituted, as giving to the Secretary some power to pass upon the amount of additional hedging.

According to the information I have, the Grain Futures Administration is opposed to the amendment, and farm organizations also are opposed to it, in that it gives the large industries great power of dealing in futures which they might use for speculative purposes, and the amount involved is so great that in some instances they could even corner the market. That is the reason why I oppose the amendment. That is the reason, as given to me, why the farm organizations oppose it, and why the Grain Futures Administration opposes it.

Mr. MURPHY. Mr. President, the design and purpose of the amendment is to restrict speculation. The design and purpose is specifically to avoid interference with legitimate business. We have no right here to hamper unjustly the operations of a processor of grain commodities. The question presented by the objection to the amendment is whether we wish to hamper legitimate industry.

As the bill stands, a legitimate industry having no desire to gamble, having no desire to exceed its legitimate needs in any trading on the grain exchange, but having an actual need in protection of itself to exceed the limitation as fixed by the Commission, yet may not exceed the limitation. The pending amendment does not propose to make the company the judge of the circumstances under which it may exceed that limitation; not at all. It comes to Washington, and it says to the Secretary of Agriculture, under the terms of the amendment: "We want to exceed this limitation as fixed by the Commission. Here is the evidence in support of our request to you to permit us to exceed it." Having satisfied the Secretary of Agriculture in reason that the company ought to be permitted to exceed the limitation, it is granted permission to do so; not otherwise.

I think we owe that in fairness to industry which does not wish to be subject to the hazards of the market, which does not wish to have those hazards reflected in its balance sheets, which desires to do business on a legitimate basis, reassured as to the cost of its raw material and reassured as to the cost of putting its product on the market.

Mr. McNARY. Mr. President, will the Senator yield in order that I may ask him a question?

Mr. MURPHY. I yield.

Mr. McNARY. From the Senator's own remarks, I assume he believes there are only a few industries which could avail themselves of the benefits to be derived from the language proposed in the pending amendment. Is it calculated to help only a few industries in the country?

Mr. MURPHY. Yes, Mr. President; it fits only a few industries in the country.

Mr. McNARY. Is the Senator from Idaho [Mr. POPE] correct in stating that the amendment has met with the disapproval of the Department of Agriculture?

Mr. MURPHY. I thought I had stated the attitude of the Department, but I will restate it as I understand it.

The Department is not sympathetic with the amendment, but the Department submits that it is not a matter for its judgment; that if it shall be the judgment of Congress that we should permit this consideration of legitimate business, then the language of the amendment suits the Department of Agriculture.

Mr. NORRIS. Mr. President, I do not think it is a fundamental matter whether the pending amendment shall be agreed to or rejected. I shall be satisfied with the bill whether or not it contains the amendment. The Senate, however, should know the attitude of the Department of Agriculture with respect thereto.

I do not believe the Secretary of Agriculture or the representatives of the farm organizations or the Grain Futures Administration are bitterly opposed to the amendment. If I am correct in my judgment, I believe they all prefer that the amendment be rejected. The amendment puts it within the power of the Secretary to grant the proposed extention or not to grant it; and, as I understand the attitude of the officials of the Department of Agriculture, they feel that while they prefer not to have the amendment in the bill, yet if it shall be put in the bill, and Congress thinks it ought to go in the bill, they will approach the subject in a friendly attitude, and if Congress thinks it ought to be the policy they have no objection to administering. It will not be difficult for the Department of Agriculture to administer it. However, so far as those in the Department of Agriculture who have to deal with it are concerned, they have a prejudice against the amendment. There are not very many institutions which could avail themselves of it. In a measure, it presents a contest between the larger corporations and the smaller ones. I do not think the amendment will do any harm if adopted, although, under all circumstances, I am going to vote against it.

Mr. LA FOLLETTE. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER (Mr. MINTON in the chair). Does the Senator from Nebraska yield to the Senator from Wisconsin?

Mr. NORRIS. I yield.

Mr. LA FOLLETTE. Mr. President, I understand that under the terms of the bill, without the amendment, any concern is permitted to hedge on its entire requirements of a commodity for a year and on the byproducts thereof. Is that correct?

Mr. NORRIS. I think that is substantially correct.

Mr. POPE. Mr. President, will the Senator yield?

Mr. NORRIS. Yes.

Mr. POPE. Not only on its requirements for a year but as against any grain that may be grown on land owned by the person who desires to hedge for its requirements for a year.

Mr. LA FOLLETTE. That is what I meant; perhaps I did not properly state it. What I cannot understand—and I wish the Senator would explain it to me—is why that is not a sufficient permission to protect them so far as hedging operations are concerned.

Mr. NORRIS. My judgment is that it is sufficient. The Senator from Iowa thinks there ought to be a little greater latitude extended to large organizations which have very extensive operations, and he has very carefully guarded his amendment so that they may not get the extension except with the permission of the Secretary of Agriculture. My judgment is, however, that the amendment is entirely unnecessary.

Mr. MURPHY. Mr. President, in reply to the Senator from Wisconsin, hedging against grain actually bought is not sufficient for the purposes of the corporations affected.

Mr. FRAZIER. Mr. President, as I remember the hearings on this measure, the Quaker Oats Co. were the only ones who asked for an amendment of this kind. The Quaker Oats Co. and other breakfast-food companies make a fair profit on the processing of grain. Oats sell ordinarily at the present time for less than a cent a pound, and very seldom for more than 2 cents a pound. The Quaker Oats Co. charge from 10 to 15 cents per pound for their rolled oats after they have gone through their mills and their factories. So the Quaker Oats Co. and other breakfast-food companies make a fair profit on their handling of the farmer's product in processing breakfast foods, and if there are any concerns on earth that deal with grain that do not need any special protection, it is the breakfast-food manufacturers. Under the requirements of the bill they are entitled to any kind of legitimate bona-fide hedging in their transactions.

So it seems to me that the amendment is entirely unnecessary, and while the Department, of course, would accept it if the Senate and House insist on its going into the bill, I do not believe it is necessary. The representatives of the farm organizations were all opposed to it. I think that the amendment should be rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

The PRESIDING OFFICER. The clerk will state the next amendment reported by the committee.

The LEGISLATIVE CLERK. On page 11, line 20, after the word "such", it is proposed to strike out "person or" and insert "person, or"; at the beginning of line 22, to strike out "contracts as" and insert "contracts, as"; and in line 23, after the word "shall", to strike out "not" and insert "be separately accounted for and shall not be commingled with the funds of such commission merchant or", so as to read:

(2) Such person shall, whether a member or nonmember of a contract market, treat and deal with all money, securities, and property received by such person to margin, guarantee, or secure the trades or contracts of any customer of such person, or accruing to such customer as the result of such trades or contracts, as belonging to such customer. Such money, securities, and property shall be separately accounted for and shall not be commingled with the funds of such commission merchant or be used to margin or guarantee the trades or contracts, or to secure or extend the credit, of any customer or person other than the one for whom the same are held.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 12, line 4, after the words *"Provided, however"*, to strike out:

That such money, securities, and property may be deposited or pledged separately and apart from, or commingled with the deposits and pledges of such futures commission merchant with any bank or trust company and that such share thereof as shall be necessary to margin, guarantee, or secure the contracts or trades of such customer carried with the clearing house organization of such contract market or with a member of such contract market, may be deposited or pledged with such clearing house organization or with such member.

And in lieu thereof to insert:

That such money, securities, and property of the customers of such futures commission merchant may, for convenience, be commingled and deposited in the same account or accounts with any bank or trust company or with the clearing house organization of such contract market, and that such share thereof as in the normal course of business shall be necessary to margin, guarantee, secure, transfer, adjust, or settle the contracts or trades of such customers, or resulting market positions, with the clearing-house organization of such contract market or with any member of such contract market, may be withdrawn and applied to such purposes, including the payment of commissions, brokerage, interest, taxes, storage, and other charges, lawfully accruing in connection with such contracts and trades: *Provided further*, That such money may be invested in obligations of the United States, in general obligations of any State or of any political subdivision thereof, in obligations fully guaranteed as to principal and interest by the United States, and in "investment securities" as defined in and under authority of section 5136 of the Revised Statutes, as amended, and, subject to approval by the Secretary of Agriculture, may be loaned on the security of negotiable warehouse receipts conveying or securing title to readily marketable commodities to the extent of the current loan value of such receipts, such investments and loans to be made in accordance with such rules and regulations and subject to such conditions as the Secretary of Agriculture may prescribe.

Mr. COPELAND. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. COPELAND. I inquire where the clerk is reading?

The PRESIDING OFFICER. The clerk is reading in the committee print or new print of the bill on pages 12 and 13.

Mr. McNARY. What happened to the amendment on page 9?

Mr. SMITH. That was agreed to.

The PRESIDING OFFICER. That amendment, as amended, was agreed to this morning.

Mr. McNARY. When?

The PRESIDING OFFICER. That was the amendment offered by the Senator from South Carolina [Mr. SMITH] yesterday, and, as amended, was agreed to this morning.

Mr. McNARY. Mr. President, may I ask the Senator from Iowa is it a committee amendment which has just been read by the clerk? Has the Senator offered it on behalf of the committee?

Mr. MURPHY. Yes; it is an amendment offered on behalf of the committee.

The PRESIDING OFFICER. The question is on agreeing to the amendment which has been stated.

Mr. COPELAND. Mr. President, I have taken pains this morning to ask a dozen Members of the Senate what this bill was about, and I have not been able to find out. I venture to ask the chairman of the committee what the reason is for this bill? Is the country going to the bow-wows if we do not have it? Why do we need it? What is the shouting about?

Mr. SMITH. Mr. President, I would much rather the Senator would ask me an easy question; I am a little weary this morning. Really and sincerely, however, I think that this bill was drawn for the purpose of correcting or regulating certain abuses that had become disastrous in our great exchange places. It will be recalled that just a few years ago, a very few, a certain trader on the wheat exchange, "on a shoestring," nearly succeeded in cornering all the wheat in America, and when there was a slip in the cog the entire trade was demoralized. And as to the cotton market, it was testified under oath, that one firm had 2,600,000 bales of actual "spot" cotton which it had hedged on the market. It was also testified that some of the big traders would sell Europe and buy America, which is called a straddle. The same thing was done in the grain market. Not only would they sell Europe, or buy, as the case might be, to their advantage, and sell America, a straddle, as it is called, but they would have enough of the commodity and enough money to put one down and the other up, and then reap the reward of the manipulation. It went so far that they would straddle from one month to another month; that is, they would buy one month and put the price for that month out of all relation to the price of a near month, and then they would put in their "spot" wherever they had created an advantageous place to put it. These are some of the "high spots." Whether we can meet the situation by legislation remains to be seen.

I wish to state frankly, Mr. President, and let it go in the RECORD, that I have pled with members of the exchange with which I am familiar so to adjust their rules and regulations that there would be a free and open market, for the reason that once we legislate and crystallize a practice or a principle or a policy into legislation, when conditions change, as they do very often, the only way legislation which does not then

apply can be gotten rid of is to go through all the legislative processes over again.

I gave the exchanges all the time they might need. Two or three years have elapsed and conditions have gotten worse instead of better. For that reason I have thought that it might be wise to adopt this plan. Whether or not we should put it under a political subdivision of our Government is a question that ought to be considered. I have thought that if provision could be made for the appointment of a commission, composed of men in whom the Congress had confidence and who could carry out the purposes of the legislation in a manner to meet the exigencies which arise from time to time, it would be better than trying to crystalize all the details into a legislative enactment.

Mr. COPELAND. Mr. President, will the Senator give me a little more information? I take it from what he says that we really ought not to pass the bill. He did not say that directly, but I infer it from his remarks.

Mr. SMITH. We can get a great amount of conjecture out of very little fact.

Mr. COPELAND. As a member of the committee which was appointed to investigate crime conditions, I heard much testimony about how a great moral respect for righteousness may be instilled into a child, but the testimony was that we cannot teach morals by precept. I should like to ask the chairman of the committee, the Senator from South Carolina, about the provision on page 8, for instance. Why is it necessary to enact a new law to provide that in the transactions covered by the bill it shall be unlawful "to cheat or defraud, or attempt to cheat or defraud", or "willfully to make or cause to be made * * * any false report or statement", or "willfully to enter or cause to be entered any false records"; and on page 9, "willfully to deceive or attempt to deceive by any means whatsoever." Do we have to enact new laws to keep people from cheating and defrauding and falsifying and all that sort of thing?

Mr. SMITH. Have we not already such laws?

Mr. COPELAND. Yes; and I thought we had enough. Do we need any more such laws?

Mr. SMITH. I take it that the provision referred to applies to the particular kind of cheating and defrauding of which the public is not generally advised and which goes on within the sacred precincts of the exchanges to which the bill relates.

Mr. COPELAND. As a member of the public I am anxious to know to what it all relates. That is the reason why I am asking the Senator these questions.

Mr. LEWIS. Mr. President, may I interject an interrogations? Do the "sacred precincts" to which the Senator refers exist within the great exchange located in the city which I have the honor to represent in part? Surely no such condition there exists as would justify the necessity for any such enactment as is here proposed.

Mr. SMITH. Mr. President, I am afraid the facts belie the intimation as to the sweet odor arising from the institution to which the Senator refers. He will have to readjust his facts.

Mr. LEWIS. I shall overcome that statement by having the Senator from South Carolina invited by the board of trade to come and sit with them and among them.

Mr. SMITH. O Mr. President, I have enough sins now to answer for. [Laughter.]

Mr. COPELAND. Mr. President, other Senators may know what it is all about, but I declare I do not. I cannot get head or tail to it.

Mr. NORRIS. Mr. President——

Mr. COPELAND. I am going to resume my seat and let the Senator from Nebraska enlighten me.

Mr. NORRIS. Let me ask the Senator if he was present yesterday?

Mr. COPELAND. No; I am sorry I was not. I was engaged in a committee meeting.

Mr. NORRIS. Was the Senator here several days ago when the Senator from Idaho [Mr. POPE] explained the bill section by section, from one end to the other?

Mr. COPELAND. No; I am sorry I was not here then, either. I was engaged in a committee meeting at that time, too.

Mr. NORRIS. As to the language the Senator read, unless the Senator from New York or some other Senator makes the motion, that language is not in controversy at all. The committee has not suggested any such thing. The Senator was reading from a part of the bill which, so far as the committee is concerned, is not in controversy at all.

Mr. COPELAND. Then, am I to understand the remainder of the bill is recommended by the committee as 24 carat and all right?

Mr. NORRIS. So far as I know, it is 24 carat and all right; but if the Senator from New York never attended a committee hearing and was not in the Senate when explanation was made of the particular amendment upon which the Senator stopped the proceedings when he made his inquiry, I do not wonder that he does not understand it.

That is a very important amendment. It applies to an operator on the board of trade who is using a client's money for investment. Complaint has been made, and often demonstrated in the past to be justified, with reference to a misuse of funds which are often trust funds. The law has not always been such that the operators could be punished for abuse and misuse of trust funds. The pending amendment is to rectify that situation and was suggested by the experts who have been studying the question ever since we enacted the original law. It is intended to protect properly the money of the customers and to provide some limitation under which the commission men may use that money to invest.

Heretofore a great many frauds have been committed and a great many things have occurred by which the customer, innocent of all wrong, has been robbed of his funds which he has given to a commission agent for investment and which the agent has invested in some other enterprise. The amendment in particular is one on which the committee had a great many hearings and to which it devoted a great deal of time. While it may not be perfect, it was the best judgment of all the members of the committee, so far as I know, that it would rectify the evils which have heretofore existed in relation to the investment of money coming from clients of members of the boards of trade.

Mr. SMITH. Mr. President, may I suggest to the Senator from Nebraska that one instance which was brought out was that of the broker using the money of his patron or client for the purpose of financing himself or someone else.

Mr. NORRIS. Yes; often.

Mr. SMITH. He put it right into his personal bank account and used it very often, as the testimony disclosed, for purposes which were contrary to the interests of his client.

Mr. NORRIS. I think that is true.

Mr. SMITH. That was brought out in the testimony.

Mr. NORRIS. The only purpose of the amendment is to protect money that is really a trust fund, sent to a commission agent and kept on deposit with him; to protect the margins of the customer and to prevent illegal use of the money for some other purpose. That is all the amendment undertakes to do, as I understand.

Mr. COPELAND. Mr. President, will the Senator yield?

Mr. NORRIS. I yield the floor.

Mr. COPELAND. I am considerably out of patience with people who want to get rich in 24 hours by any system of gambling.

Mr. NORRIS. The amendment is not to help the gambler but is to prevent the use of trust funds perhaps for gambling or for any other improper purpose.

Mr. COPELAND. If such use is being made of the money, improperly and indecently and unlawfully, is there not a way now to reach the guilty broker?

Mr. NORRIS. He could be prosecuted under the law possibly, but it would not save the poor devil whose money had been wasted. He would be bankrupt and gone.

Mr. COPELAND. Who is that "poor devil"?

Mr. NORRIS. He may be a miller. He may be a manufacturer of some product derived from wheat or from corn or from some other commodity that is bought and sold on the board of trade. I think all students of the subject recognize that within certain limits hedging is not only justifiable but necessary. The amendment undertakes in a small way to stop some of the gambling which has disgraced various boards of trade.

This is one of the amendments which we think would prevent the use of the funds of clients, which have been deposited with commission men, for some other purpose than that for which they were deposited, perhaps for gambling, and from being used as money belonging to the commission men instead of using it for the purpose of protecting the client's hedge. It may be a large milling concern that may have large deposits to protect the hedges it has on the market, which have been honestly purchased for the sake of protecting itself in the manufacture of wheat into flour.

Mr. COPELAND. I know that a small miller who, in advance of the season, buys wheat for grinding, and who has a storage capacity, has to protect himself against fluctuations in the market.

Mr. NORRIS. That is legitimate hedging.

Mr. COPELAND. Yes; that is legitimate hedging.

Mr. NORRIS. But he would have some money on deposit with his agent in Chicago, we will say; and the object of this amendment is to protect that money so that the agent may not take it and use it for some other purpose, to pay his own private debts with it; or, as the chairman of the committee has said, sometimes it happens that the agent uses the money for the purpose of gambling on the very products in which his client is interested, in which case it would sometimes have a tendency to injure the interests of his own client. In other words, the amendment is to prevent a misuse of funds that have been deposited to protect a legitimate hedge, such as the Senator mentions.

Mr. COPELAND. I can sympathize with the miller in what the Senator has called the legitimate hedge. I have not any sympathy with the man who sends his money forward expecting to make a lot of money in the next 6 weeks through a gambling process; but I suppose the money of the legitimate hedger and the money of the deliberate gambler are so much on the same plane that to protect one it is necessary to protect the other.

Mr. MURPHY. I ask for the adoption of the committee amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

SUGGESTED METHOD OF PAYING DEBTS DUE THE UNITED STATES BY FOREIGN GOVERNMENTS

Mr. LEWIS obtained the floor.

Mr. BONE. Mr. President, is it the purpose of the Senator from Illinois to make some remarks at this time? I have sought the floor to make a few comments on the naval appropriation bill.

Mr. LEWIS. I shall take but a few moments to speak on the subject which I now desire to discuss. I welcome the observations of the able Senator from Washington relative to the naval appropriation bill.

Senators, I take occasion to avail myself of this intrusion to again suggest a subject with which I fear many Members of the Senate have grown sensitive and their patience more or less drawn by me to an extreme point of indulgence.

Mr. President, there is either an honest undertaking on the part of our foreign debtors now to come to some terms with the United States looking to the payment of the debts or the adjustment of them; or there is a deliberate gesture, with its skirmishing for winning the good will of the United States of America, looking to further applications for new loans desired and for further favors to be advanced.

I will not charge the foreign governments who are making the efforts—and I hope sincere efforts—with any other motive than that of an honest undertaking to renew friendships and revive confidences.

However, Mr. President, I cannot overlook, having so often brought this subject to the Senate, what appears to be a new phase constantly and publicly heralded. We are all attracted by the fact that in the late election in France there have arisen new leaders who are asserting to the world that one of the very first undertakings in their behalf is to do something—I quote the exact language as reported—

> To do something to restore the confidence of America by reaching an adjustment of the debt due by France to the United States.

At the same time, Mr. President, there comes from the distinguished head of the great banking institutions at Paris the statement that there are two ways in which this money can be paid. One is by some adjustment looking to advancing the products of France as payment, and that in proportion as we could accept. The other is in obtaining from the United States such loans by France from which a portion of the debt may be paid.

At this moment I advert to the suggestion from the financiers at London in behalf of England. The proposition is based upon the assumption that the United States make a proposal which will embody some suggestion—I quote again, sir—

> That will not disturb the exchanges in money or injuriously affect the pendency of or the tendering of the trade treaties—

I pause to say I could not myself understand the cable line, whether the word was "pendency" of or the "tendering" of the trade treaties. I give it to the Senate exactly as it is sent in to me.

Mr. President, I am alarmed by the fear that there are certain lands in the world that have newly embarked on imperial tendencies and are conscious that if something is not done looking to reviving friendship with the United States, and having behind them the credit of this great land through its confidence, bankruptcy or anarchy will fall to them as the inheritance from that which they themselves have planted. We in America are very fortunate and should, indeed, compose ourselves with great consolation that by our policy, which is an American policy, we have withheld from associations, far from connection, with these foreign countries as have imperialistic policy or disclose purpose of conflict for financial profit or for territorial acquisition.

At this time I am not breaking into the discussion of the measure pending before us to indulge generally in any disquisition upon the affairs of the world such as I will do at some other time, and endeavor to impress upon the Senate my point of view, but I intrude into the debate at this point only to say that I regard the present situation as exceedingly dangerous to the financial security of foreign lands, and to that of our country; also, sir, to what might be called the credit of the treaties which we are making; more disturbing are the evidences of conflict which will surely follow between these lands if the present conditions of conflict, lack of confidence, and want of honor shall continue between them as exhibited in their daily procedures, one with the other.

Mr. President, I turn for the moment to the affairs of the United States in the matter to which I allude—the debts which are due us.

It is intimated from high sources in behalf of two of these large debtors that if some proposal can be made that can be viewed as not disturbing to the exchanges in money nor interfering to the point of disrupting the proposed trade treaties now pending that the proposition will be promptly considered as something that might be availing in result. There is no suggestion that the proposal in any form will be adopted, and I am not here to intimate that there has been any statement that such will be accepted merely because it is suggested; but I am flattered, sir, and may I say here I am complimented that there is allusion in the speeches of these honorable gentlemen of foreign lands and in some of the statements that have come to high departments of this Government to what is designated as constant contention that I, as a humble Member of this body, have assumed to urge in behalf of collecting these debts? I deplore to say that I am held up by one as one who continuously

"irritates the friendship" between the nations. I am charged by another with being "unconscious of how disturbing to the whole world it would be should an attempt be made to pay these debts in money", and that I am giving evidence constantly either of my ignorance or my perversity in not realizing that the payments, if made in the manner such as I have in speeches set forth would be so much more destructive to my country than beneficial. That it all discloses my lack of understanding of this very serious situation—balancing of accounts in gold—I have no comment to make other than to say I naturally would deplore that they should view me in that light, if such there be, but I must insist that the subject cannot be disposed of by merely alluding to those of us here who are insisting upon these debts being paid as lacking in understanding of the form and manner in which such could be done and at the same time preserve what is called the integrity of international finance.

Mr. President, therefore, I accept the suggestion made by the eminent spokesman concerning which the late newspapers and some other sources have brought to us, conscious as we are, on the eve now, sir, of negotiating treaties which will extend our goods to other countries in turn for their goods being extended to us or which will be in a form which will enable any one of the other countries to avail themselves of all the favor and benefit that is granted to some other country by special treaty; conscious as I am, sir, that the money must be paid by the United States in the usual method for some of these products and in other instances, sir, that there are products which we do not produce at all and which we cannot do otherwise than purchase if our need is to be supplied, I propose and tender the suggestion for my own Government, as well as the debtors, that the committee that is now contemplated, the committee supposed to be made up of all the debtors—I think the words are "the principal debtors"—consider the issuing of a joint form of bonds; that such bonds represent the debt according to the amount which in justice may be determined by the representatives of the United States, the creditor, and those who are representing the debtors. As to the exact amount, of course, I can only speculate. I have no assurance as to what may be admitted and what may be adopted. I therefore add the suggestion that these bonds be so constructed in phraseology that if it becomes necessary, as it will, for the United States of America to obtain goods and products which we do not produce but which are necessary to the welfare of our country, instead of paying the money by the United States for such products or exchanging our goods for them, the bonds which I describe shall be receivable as payment for such products as we desire or do obtain from the debtor nations who have that which we need but which we do not produce.

Mr. WALSH rose.

Mr. LEWIS. Does the Senator from Massachusetts desire to interrupt me? If so, I yield.

Mr. WALSH. Mr. President, will the Senator be kind enough to amplify his statement as to the form or character of the committee that is to issue the bonds referred to by him?

Mr. LEWIS. I take the liberty to say that I was suggesting that the committee when it meets should make the suggestion to other countries as to the form of a bond.

Mr. WALSH. The committee itself, then, would not issue the bonds?

Mr. LEWIS. The committee itself would not be the body which would issue the bonds, nor would the bonds issue from the committee as such.

Mr. WALSH. The bonds would be issued by the several nations that are indebted to our country.

Mr. LEWIS. Exactly. I am submitting that the committee should consider the question as to the method and propose to the several debtor countries the form of a bond which I feel would be acceptable to us and would be available.

Mr. WALSH. Let me inquire how the committee is to be organized. I must ask the Senator's pardon, because I was not in the Chamber until a few moments ago.

Mr. LEWIS. I am now referring, I may say to the able Senator from Massachusetts, to a committee of the debtors. The proposition has come to us that the debtors—I think the words are "principal debtors"—shall each designate a committee; that committee shall have a joint meeting; and, in behalf of all the debtors, make some proposition to the United States looking to what they call the adjustment of these debts on the basis of the revival of confiding friendship.

Mr. WALSH. In other words, the State Department might suggest to the debtor countries that such a committee be organized and that representatives be sent by our Government for the purpose of conferring along the line suggested by the Senator from Illinois.

Mr. LEWIS. I may say, if such were done, it would not meet disapproval on my part. I may say, however, to the able Senator that the suggestion does not come from our State Department, but from those who are assuming, in behalf of France and England, to revive the whole subject, so that there will be no longer suspicion on the part of the United States of what they call their honor and their intention to pay, but, to the contrary, something that may revive the friendship between the United States and again resume the mutual confidence of the old friendships as they existed previously to the World War.

I will say to my able friend if my country could consider the proposition, if it should emanate from such a committee, it would not be bad, and it would meet my approval if some committee on our own part were also assembled at the same time in order to reach some concurring action that would be the joint action of them all.

Mr. WALSH. In other words, a joint conference or joint committee of various countries such as come together from time to time for the purpose of studying and considering naval disarmament?

Mr. LEWIS. Something similar to that, it being, from my point of view, desirable that the committee should meet and consider not whether they should pay or what they should pay but that they consider the mere method of payment.

Mr. WALSH. While I am on my feet, I want to express my admiration for the study and thought and enthusiasm which the Senator has given to this important subject, and I sincerely hope his efforts to bring about a solution of this problem and a settlement of the debt question may be amply rewarded.

Mr. LEWIS. I appreciate to a very great degree the approval of the Senator of my efforts to bring about a payment of these debts.

Mr. President, I would ask that these bonds, therefore, not only be acceptable as the payment for the produce or the imports of the other countries, thus saving us the payment of our money or the delivery, sir, of our goods which we may need at home, but again, sir, I would propose that these bonds be so conditioned that whoever shall possess them shall have the privilege, as stated in the bonds, to tender them for taxes; that the owner of the bonds should be able to tender them in payment of taxes due our own Government or such other obligations as are due any other government by any American or any American interest.

Mr. President, I do not know, sir, as my able friend from Massachusetts has well stated, how far our Government will dare to go until some meeting shall have been brought about on the part of the debtors and a proposition from the debtors tendered that we may know the amount they offer or whether the payments are to be by installments or whether they are to be offered in goods or whether there will be a mere matter of exchange accepted between the countries limited to the mere interest that is due.

I cannot gather from the statement the exact limitations and I tender the proposition that it may be considered by my own Government and that of the debtors looking to an

adjustment that may continue the friendship of nations, but above all that they shall discharge the just demands due the United States, that the United States may proceed to discharge its own obligations, meet the heavy taxes about to be laid upon us, pay the debt of the soldier, and there be discharged that debt of honor which those countries owe to us and which we owe to fulfill to our fellow citizens and America. For this object I tender the proposal, hoping the result will fulfill the adage—"all's well that ends well."

NAVAL PREPAREDNESS

Mr. BONE. Mr. President, I have now and sincerely hope I always shall have an intense and wholesome respect for the opinions of others, and particularly the opinions of Members of the Congress of the United States. So what I shall say in commenting on one small phase of the naval appropriation bill is not said in a captious spirit or in a spirit of criticism, but rather is my view and my hope expressed here with the thought that perhaps in the future we may be able to correct a rather unhappy situation.

When the naval appropriation bill came to us from the House and we contemplated the fact that this was probably the largest peacetime naval appropriation in the history of the Republic, my attention was challenged by one brief provision in the bill.

On page 43 of this, the largest peacetime appropriation bill in the history of the Republic, occurred this language:

> That no part of this appropriation shall be used for the construction of a factory for the manufacture of airplanes or for the construction or manufacture in a Government-owned factory or plant of airplane engines other than experimental engines, or airplanes other than airplanes for primary training purposes.

In 1934, after something of a long discussion on the floor, provision was made whereby the President of the United States might allocate, and he did allocate, to a naval airplane factory in Philadelphia a certain definite amount of money to expand that plant, which had gone into disuse long years before and which, so far as the information I have discloses, appeared to be wholly incapable at that time of producing airplanes of the type the Government might have to have.

My purpose in making the fight on the floor of the Senate at that time was to make available to that airplane factory the funds wherewith to expand it to a point where the Government might conduct experiments to determine the primary cost of airplane engines, fuselages, and other materials and equipment which go into completed airplanes.

It was my fortune to serve on the Munitions Committee of the Senate. A number of gentlemen came before that committee one day and there told a story which was merely an amplification of the picture presented to the American people in 1932 and which helped to destroy the Republican Party at that time. It was one of those things which was outrageously scandalous and smelled to high heaven. These amiable gentleman testified that, as I recall, that in a period of 6 years they had rolled up in accomplished profits 1,142,000-percent profit; that is, 11,420 times the capital of their business reflected in profit; and that company made airplane engines used in part by your Government.

There was not a member of the Munitions Committee of this body, and there certainly could not be a Senator here who thinks along straight lines, who would not have been deeply resentful of the fact that any private business enterprise in the country doing business with the United States Government could roll up an 11,000-percent profit, in no small part out of the Government, in 5 or 6 years. If anyone thinks that is good business, he differs from my conception of what constitutes fair business profits; and to him I would say that such men sow the wind and we must reap the whirlwind in public condemnation for allowing it.

We all know, and certainly must feel keenly about the airplane frauds in this country. Almost overnight certain men became multimillionaires out of the airplane business. I doubt if there has been a picture presented to the American people more redolent of excessive profit and reflecting more upon this Government of ours in permitting such things to proceed than some of the activities in certain fields of the airplane industry. I have no objection to men making a legitimate profit, but I would object to men becoming multimillionaires overnight out of the United States Treasury without a murmur of protest from a Democratic Congress representing the New Deal. That is not too harsh a suggestion, because the people sent us here contemplating the fact that we would in reality give them a new deal. I am jealous of the good name and the good intentions of my party.

In 1934, I suggested to the Senate, and the Senate was kind enough to follow the suggestion at times, that we give to this little Government airplane factory in Philadelphia enough money to expand itself to the point where the Government might make a few of the needed airplane engines, just a few of them. The commercial airplane group in this country, for some obscure reason, is more potent than the voice of protest against grave abuses, and so we find in the naval appropriation bill, as it came from the House, a restriction upon even that dinky little factory, set up not necessarily as a yardstick, but just as a signpost, just as a warning to these gentlemen that if they continued this conduct, Uncle Sam might be constrained to manufacture a few airplane engines just to show what it would really cost to manufacture them.

To be sure, the conferees changed the House provisions, but leave in the bill the provision that none of the funds made available shall be used to build a new airplane factory. There is no prohibition against using some of the funds for the Philadelphia factory. That is not the precise point at issue. My complaint is that we have to fight, in conference or otherwise, to protect this small Government airplane factory, each session, against extermination. It is the sentiment reflected in the House provision to which I draw attention. It reflects a studied attitude of hostility to any effort on the part of the Government to protect itself by having this little yardstick wherewith to measure, in a slight degree, the cost of airplane manufacture.

We find these six or seven lines in the House bill, striking out of this, the largest appropriation we have ever made for the Navy in peacetimes, any possibility of Uncle Sam defending himself from practices of profiteering reflected in the example I have given.

I do not believe we can walk away from moral responsibility for this situation. I do not want to do it. I want to face it squarely. I deeply resent the fact that this Government seems to put itself in the position of cringing like a whipped spaniel before our war profiteers. The great mass of the people are going to know about it, because some of us are going to tell them about it. There is no excuse for this Government being rooked. I say that with full recognition of the fact that the men who do this kind of war business with the Government are entitled to a fair profit, but not to 11,000 times their capital in 5 or 6 years.

If we open the doors to that sort of a superglorified raid on the Treasury, which we are here presumably to protect—and certainly that is a violent presumption, if we are going to permit this thing to go on—then every special interest which thinks it can get away with it is going to come here and with every justification in the world say, "You let this other gang get away with this sort of business, and there is no reason why we should not be permitted to do the same thing."

We have presented to the Senate evidence that for approximately $24,000,000 we can expand the Government navy yards to a point where, with new machinery, new dies, new devices of every kind, the Government can handle the entire naval building program contemplated under the naval bill, which involves possibly the naval race contemplated by these larger expenditures.

Yet for some obscure reason, gentleman of the Senate, the very people who protest most vociferously, who are the most highly vocal in protesting that we need preparedness of an order the like of which we have never yet contemplated, object to the United States Government—your Government and my Government—taking out a little insurance against some

of the monstrous failures we had during the war, like the Hog Island scandal up here and other things of that kind. Those gentlemen, breathing fiery imprecations against pacifists on the one hand, breathe almost the same fiery imprecations against those of us who want the Government to prepare as fully and completely as it is possible to prepare by getting its navy yards in complete shape to fully take on this great burden, if it should come suddenly.

Government navy yards of ours, with an expenditure of some twenty-three or twenty-four million dollars, will be able to handle our whole new program. What is wrong with that? How can the most ardent exponent of preparedness object to that? And yet, gentlemen of the Senate, for some obscure reason some professed exponents of preparedness do not want preparedness if Uncle Sam himself stands ready to do it. Therefore, despite an innate desire on my part to be absolutely and wholly fair to all those who may differ with the friends of public building, I am sometimes tempted to question whether these critics would rather not have full preparedness than to have it if it means preparing the Government to do its own work.

For $24,000,000 every exponent of preparedness in this country may know in his heart that this Government will be made ready to build all the warships necessary to meet the naval race that appears to be coming on. I say again—I am not going to talk much longer—that I cannot understand why these gentlemen present to the country this constant, unending demand for preparedness, and yet come down here and object to the efforts of those of us who are trying to put Uncle Sam in a position where he can fully defend himself and can fully prepare on short notice.

On the Pacific coast and on the Atlantic coast are great navy yards that can be expanded with this twenty-three or twenty-four million dollars to do all our naval work. They can announce to the world that Uncle Sam tomorrow, or as soon as those plants are expanded, stands ready to build every ship of his, if need be, rapidly and under the stress of a great naval race. Yet if you tried to get through Congress a bill definitely appropriating $24,000,000 for that laudable purpose, you would run into a fight—a fight from whom? A fight from the very men who assure us of full and undivided allegiance to the theory of national preparedness.

I think there is something unhappy about that attitude of mind. It does not square with professions of loyalty to a preparedness program. The thing that I have adverted to here, the fact that the House has seen fit to interpolate into this bill these four or five lines trying to kill this tiny Government airplane plant up in Philadelphia, is an evidence of the fact that the men who roll up private war profits are determined that this Government shall not fortify itself.

I want to see my Government in position to defend itself, and I feel that it is incumbent upon me to rise and challenge the philosophy which seems to be reflected in this provision bringing death to this Government plant. I do not want my Government to cringe like a whipped spaniel at the very feet of private airplane companies and private naval builders. I would have it say to these men, "when you build these instrumentalities of war we are willing that you should make a legitimate profit, but we are not willing to be rooked by you." I think that those who have respect for good business practices may agree with me.

Why should we demean ourselves by putting in a bill of this character, words of this type, that are in themselves pathetic in their expression of a defeatist philosophy—just smashing at a dinky little factory up there in Philadelphia lest that little thing be used as a yardstick, as a barometer, to measure real values in the airplane world? Men here have seen these airplane-company owners make fortunes out of this war game. You have seen what this subsidy business did, and you have seen a growth of this subsidy program until finally, gentlemen of the Senate, you have seen as an outgrowth other groups come down to Washington and say, "Well, you have been doing it for less worthy folks and we want you to do it for us."

I think the time has come to serve notice here that this Government from now on intends not to be a Hungarian helot, and cringe like a yellow dog every time one of these outfits cracks its whip, but that from now on it is going to stand up in the majesty of Government and tell this crowd that no longer are we going to permit them to come down here and tell us that we cannot create any of our own instrumentalities of war.

I have no quarrel with preparedness; but I do have a quarrel with the men who would not willingly permit us to appropriate one dollar of Government money to make the Government self-sufficient in time of war.

Mr. BYRNES. Mr. President, will the Senator yield to me?

Mr. BONE. I am very glad to yield to the Senator from South Carolina.

Mr. BYRNES. I have been out of the Chamber. Is the Senator under the impression that the conference report on the naval bill as agreed to would prevent the Philadelphia factory from continuing the construction or manufacture of airplanes for the Navy?

Mr. BONE. The Senator, I am sure, has misunderstood the purport of my remarks.

Mr. BYRNES. I was out of the Chamber.

Mr. BONE. I was merely calling attention to the fact that this factory in Philadelphia existed, and that for some obscure reason an effort was made in the naval bill to destroy it, and I am protesting the spirit which seems to animate us in dealing with this matter, rather than with what was done with it.

Mr. BYRNES. I desire to say to the Senator that while it is true that the House inserted the language to which he objects, the Senate struck it out, and in conference the position which the Senator favors was sustained by the conferees; so that under the language of the report, as finally agreed upon, the Philadelphia factory will be permitted to continue to manufacture not only engines but airplanes.

Mr. BONE. I am fully aware of that. The Senator from South Carolina was absent while I was speaking.

Mr. BYRNES. Yes.

Mr. BONE. I am fully aware of that; but what I am pointing out now is that even with a little, dinky appropriation for this little, dinky factory—if I may use that vulgarism—we have this fight each time. I thought in 1934 that we had gotten to a point where we had served sufficient notice on the world at large that Uncle Sam intended to do a little something in the way of protecting himself. I am not criticizing the attitude of my colleagues who were on the committee. I am fully aware of what was done with the bill, because I have it in front of me; but I was trying to point out, in my brief remarks, that in this preparedness program I cannot understand the attitude of public officials who object to this Government fortifying itself by getting ready to build its own equipment. Why do we always appear to very assiduously lick the boots of private naval builders and private airplane companies? Perhaps that is too harsh an indictment; but year in and year out, if we raise a demand here for a dollar of further activity in the direction of public building, we meet this sort of criticism; and next year when the naval bill comes over, or the military bill, we shall have the same little jokers in it that we shall have to fight and try to get out.

Mr. BYRNES. Mr. President, with reference to the remarks of the Senator, I only wish to call the attention of the Senator to the fact that while it is true that in the House language was inserted in the naval appropriation bill which would have discontinued the manufacture of airplanes and of airplane engines at the Philadelphia factory, in the bill as it has passed the Senate and in the conference report the position which the Senate favors is sustained, and there is no prohibition against the Philadelphia factory continuing the manufacture of planes and engines.

Mr. BONE. Again at the expense of being a bit tedious, I may say to the Senator that I raise no issue of that kind. I never raised that issue. I merely am commenting on the fact that those of us who believe in adequate preparedness

find ourselves confronting, right here in the Congress of the United States, under a so-called New Deal, the same peculiar kind of loyalty to the men who, by their extreme conduct—that is a rather mild way of putting it—brought about the revulsion of feeling that put Franklin D. Roosevelt in the White House. These ship subsidies and air-mail subsidies were a stench; and yet, when we try to lay hands on this sort of business, we meet with objections, and I think it does not square with our professions of loyalty to a new deal.

I am not insisting here that the Government manufacture everything it uses; but certainly the small amount of money necessary to expand our naval and military facilities ought not to be challenged as something un-American. The peculiar part of it, I will say to the Senator from South Carolina, is that there is a certain type of mind that sees nothing wrong in a private outfit building a military airplane or a naval airplane engine but sees something sinister, un-American, and corrupt in the Government doing it for its own protection. I cannot follow that kind of philosophy.

Mr. BYRNES. I agree with that. We cannot regulate all kinds of minds; but so long as the majority of the minds are right, the country is safe, and the Senator, I know, will be satisfied.

REGULATION OF COMMODITY EXCHANGES

The Senate resumed the consideration of the bill (H. R. 6772) to amend the Grain Futures Act to prevent and remove obstructions and burdens upon interstate commerce in grains and other commodities by regulating transactions therein on commodity futures exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes.

Mr. MURPHY. Mr. President, I ask to have the next amendment stated.

The PRESIDING OFFICER. The next amendment will be stated.

The LEGISLATIVE CLERK. The next amendment appears in the committee print on page 14, line 24, after the word "issued", to insert certain words, so as to read:

All registrations shall expire on the 31st day of December of the year for which issued, and shall be renewed upon application therefor unless the registration has been suspended (and the period of such suspension has not expired) or revoked after notice and hearing as prescribed in section 4g of this act.

The amendment was agreed to.

The LEGISLATIVE CLERK. On page 15, line 14, it is proposed to strike out the word "hereunder" and insert "thereunder", so as to read:

SEC. 4g. If any person registered hereunder as futures commission merchant or floor broker shall violate any of the provisions of this act, or any of the rules or regulations of the Secretary of Agriculture thereunder, or shall fail or refuse to make any report required by the Secretary of Agriculture regarding the transactions of such person, or the transactions of the customers thereof—

And so forth.

The amendment was agreed to.

The LEGISLATIVE CLERK. On page 16, line 12, it is proposed to strike out "delivery that" and insert "delivery, that", so as to read:

SEC. 4h. It shall be unlawful for any person—

(1) to conduct any office or place of business anywhere in the United States or its territories for the purpose of soliciting or accepting any orders for the purchase or sale of any commodity for future delivery, or for making or offering to make any contracts for the purchase or sale of any commodity for future delivery, or for conducting any dealings in commodities for future delivery, that are or may be used for

(A) hedging any transaction in interstate commerce in such commodity or the products or byproducts thereof, or

(B) determining the price basis of any such transaction in interstate commerce, or

(C) delivering any such commodity sold, shipped, or received in interstate commerce for the fulfillment thereof—

And so forth.

The amendment was agreed to.

The LEGISLATIVE CLERK. On page 18, after line 7, it is proposed to insert:

SEC. 4j. Nothing herein contained shall be construed so as to prevent the suspension or expulsion of any person from membership, or membership privileges, in any exchange or board of trade, or similar institution.

Mr. MURPHY. Mr. President, this amendment is presented by the Senator from South Carolina; and I should like to invite his attention to it.

Mr. SMITH. Mr. President, I wish to say just a word in reference to the amendment, and then I shall have concluded.

Reading the context carefully, my first impulse when I drew this amendment was that it might be possible for someone so to abuse his privileges that the exchange or the board of trade might expel him for good and sufficient reasons; but it has been brought to my attention that this provision would give them power to expel those whose membership in other organizations might not be acceptable.

In view of the fact that the expulsion and license and registration are safeguarded, I have no objection to the amendment being rejected.

Mr. MCNARY. Mr. President, will the Senator yield, that I may suggest the absence of a quorum? A number of Senators on this side have expressed a desire to be present when this amendment was brought up.

Mr. MURPHY. I may say to the Senator that the amendment has been withdrawn.

Mr. MCNARY. Withdrawn temporarily, or permanently?

Mr. SMITH. Permanently.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was rejected.

The PRESIDING OFFICER. The clerk will state the next amendment.

The LEGISLATIVE CLERK. It is proposed, on page 19, line 21, to strike out the words "when so directed by the Secretary of Agriculture", so as to read:

(3) require the operators of warehouses in which or out of which any commodity is deliverable on any contract for future delivery made on or subject to the rules of such contract market, to make such reports, keep such records, and permit such warehouse visitation as the Secretary of Agriculture may prescribe. Such books and records shall be required to be kept for a period of 3 years from the date thereof, or for a longer period if the Secretary of Agriculture shall so direct, and such books, records, and warehouses shall be open at all times to inspection by any representative of the United States Department of Agriculture or United States Department of Justice.

The amendment was agreed to.

The next amendment was, on page 21, line 2, after the word "congestion", to insert a colon and the words "*Provided, however,* That such order shall not apply to then existing contracts", so as to read:

(4) when so directed by order of the Secretary of Agriculture, provide for a period, after trading in contracts of sale of any commodity for future delivery in a delivery month has ceased, during which contracts of sale of such commodity for future delivery in such month may be satisfied by the delivery of the actual cash commodity. Whenever, after due notice and opportunity for hearing, the Secretary of Agriculture finds that provision for such a period of delivery for any one or more commodities or markets would prevent or tend to prevent "squeezes" and market congestion endangering price stability, he shall, by order, require such period of delivery (which shall be not less than 3 nor more than 10 business days) applicable to such commodities and markets as he finds will prevent or tend to prevent such "squeezes" and market congestion: *Provided, however,* That such order shall not apply to then existing contracts.

The amendment was agreed to.

The next amendment of the committee was, on page 21, line 9, after the word "of", to strike out the words "delivery, at least 3 business days prior to such date" and to insert in lieu thereof the words "delivery at least 1 business day prior to such date of delivery"; and on line 20, after the word "unfair", to strike out the words "practices; and" and to insert in lieu thereof the words "practices: *Provided, however,* That such order shall not apply to then existing contracts", so as to read:

(5) require the party making delivery of any commodity on any contract of sale of such commodity for future delivery to furnish the party obligated under the contract to accept delivery, written notice of the date of delivery at least 1 business day prior to such date of delivery. Whenever, after due notice and opportunity for hearing, the Secretary of Agriculture finds that the giving of longer notice of delivery is necessary to prevent or diminish unfair practices in trading in any one or more commodities or markets, he shall by order require such longer notice of

delivery (which shall be not more than 10 business days) applicable to such commodities and markets as he finds will prevent or diminish such unfair practices: *Provided, however,* That such order shall not apply to then existing contracts.

Mr. McNARY. Mr. President, I do not understand the full meaning of the amendment on line 20. Is it a committee amendment?

Mr. MURPHY. Yes; it is a committee amendment.

Mr. McNARY. Very well.

Mr. MURPHY. The amendment also has the approval of the Secretary of Agriculture, and was suggested by him. It gives warehouse receipts issued by a Federal warehouse the same standing as those issued by a State warehouse.

Mr. McNARY. It places both the Federal and State warehouses on a parity?

Mr. MURPHY. Yes.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The next amendment was, on page 22, line 2, after the word "officially" to strike out "promulgated." and to insert the following:

promulgated; and

(7) require that receipts issued under the United States Warehouse Act (U. S. C., 1934 ed., title 7, secs. 241–273) shall be accepted in satisfaction of any futures contract, made on or subject to the rules of such contract market, without discrimination and notwithstanding that the warehouseman issuing such receipts is not also licensed as a warehouseman under the laws of any State or enjoys other or different privileges than under State law: *Provided, however,* That such receipts shall be for the kind, quality, and quantity of commodity specified in such contract and that the warehouse in which the commodity is stored meets such reasonable requirements as may be imposed by such contract market on other warehouses as to location, accessibility, and suitability for warehousing and delivery purposes.

The amendment was agreed to.

The next amendment was, on page 26, line 11, after the words "board of trade", to insert the following proviso: *"Provided, however,* That if any such association or corporation shall fail to meet its obligations with any established clearing house or clearing agency of any contract market, such association or corporation shall be ipso facto debarred from further trading on such contract market, except such trading as may be necessary to close open trades and to discharge existing contracts in accordance with the rules of such contract market applicable in such cases", so as to read:

SEC. 9. The Grain Futures Act is amended by adding after section 6 (U. S. C., 1934 ed., title 7, secs. 8, 9, 10, and 15) the following new sections:

"SEC. 6a. (1) No board of trade which has been designated as a 'contract market' shall exclude from membership in, and all privileges on, such board of trade any association or corporation engaged in cash commodity business having adequate financial responsibility which is organized under the cooperative laws of any State, or which has been recognized as a cooperative association of producers by the United States Government or by any agency thereof, if such association or corporation complies and agrees to comply with such terms and conditions as are or may be imposed lawfully upon other members of such board, and as are or may be imposed lawfully upon a cooperative association of producers engaged in cash commodity business, unless such board of trade is authorized by the Commission to exclude such association or corporation from membership and privileges after hearing held upon at least 3 days' notice subsequent to the filing of complaint by the board of trade: *Provided, however,* That if any such association or corporation shall fail to meet its obligations with any established clearing house or clearing agency of any contract market, such association or corporation shall be ipso facto debarred from further trading on such contract market, except such trading as may be necessary to close open trades and to discharge existing contracts in accordance with the rules of such contract market applicable in such cases. Such Commission may prescribe that such association or corporation shall have and retain membership and privileges, with or without imposing conditions, or it may permit such board of trade immediately to bar such association or corporation from membership and privileges. Any order of said Commission entered hereunder shall be reviewable by the circuit court of appeals for the circuit in which such association or corporation, or such board of trade, has its principal place of business, on written petition either of such association or corporation or of such board of trade under the procedure provided in paragraph (a) of section 6 of this act, but such order shall not be stayed by the court pending review."

The amendment was agreed to.

The next amendment was, on page 27, after line 6, to strike out the following:

(2) No rule of any board of trade designated as a "contract market" shall forbid or be construed to forbid the payment of compensation on a commodity unit basis or otherwise by any such cooperative association to its regional or local member associations for business received by such cooperative association, provided no part of any such compensation other than amounts paid as dividends on capital stock is returned to producer patrons of such regional or local member associations otherwise than on a patronage basis and not more frequently than annually; nor shall the governing body of any board of trade designated as a contract market exclude from membership in, and all privileges on, such board of trade any duly authorized representative of any cooperative association as herein defined, which is otherwise qualified, because of the payment of such compensation.

And to insert in lieu thereof the following:

(2) No rule of any board of trade designated as a contract market shall forbid or be construed to forbid the payment of compensation on a commodity-unit basis, or otherwise, by any federated cooperative association to its regional member-associations for services rendered or to be rendered in connection with any organization work, educational activity, or procurement of patronage, provided no part of any such compensation is returned to patrons (whether members or nonmembers) of such cooperative association, or of its regional or local member-associations, otherwise than as a dividend on capital stock or as a patronage dividend out of the net earnings or surplus of such federated cooperative association.

Mr. McNARY. Mr. President, this language plainly modifies the Grain Futures Act as enacted some years ago. Will the Senator explain the reasons for the modification of the existing act with respect to the contract markets?

Mr. MURPHY. Mr. President, under the original language of paragraph 2 of section 6a on page 27, a central cooperative association might contract with a local member association for business received on a bushelage basis, providing no part thereof was returned to producer patrons of such local association. The Secretary of Agriculture considered this to be a violation of exchange rules against rebating and suggested the substitute language commencing in line 22, on page 27. The only change made by the committee was the insertion of the word "federated" on line 9, on page 28, the effect of which now is to authorize the central cooperative association to contract with its regionals on a bushelage basis for services rendered, but prevents the refunding of such moneys to either the regional organizations or local organizations, except as a result of a duly declared dividend on the capital stock or on patronage out of the net earnings of such cooperative association.

Mr. McNARY. Mr. President, I believe I am correctly informed that the grain cooperatives ask for a modification as specified in the pending language.

Mr. MURPHY. I am sorry there is so much confusion, I cannot hear the Senator.

Mr. McNARY. I am advised that the cooperatives dealing in grain have asked for a modification of the provision of law as contained in this specific language.

Mr. MURPHY. My understanding is that they give agreement to this amendment, except that I think there was one exception. If my memory serves me correctly, the National Grange protested against it, but everybody else seemed in agreement in its acceptance.

Mr. NORRIS. Mr. President, my impression was that all the cooperatives desired to have this provision inserted. There had been disputes between the board of trade and certain cooperatives, the charge being made that rebates had been allowed, and it was claimed they could not operate with that practice in vogue. This amendment is proposed in order to correct that situation. The general cooperative can pay to the regional cooperative for services rendered, and that is made a legitimate operation of a cooperative organization. In fact, this is necessary, unless we would prohibit the cooperative from doing some of the things which are absolutely necessary to be done in order that there may be cooperatives.

Mr. HATCH. Mr. President, I believe I am correct in saying that this is the amendment which was presented by the cooperatives, who stated it was a compromise. It is not

all they desired, but it is the best they could get. They do not think it covers the situation as fully as they desire, but it does represent a compromise among all parties. Is not that correct?

Mr. MURPHY. Mr. President, I have no recollection on that point.

Mr. POPE. Mr. President, I think the statement of the Senator from New Mexico [Mr. HATCH] is entirely correct. It is the desire of the board of trade that the practice of granting rebates by the regionals to their members be stopped, and that has been attempted by the pending amendment. There are some regionals which were opposed to it but the Secretary has reported this as being a fair compromise, a fair provision as between the contentions of the board of trade and certain regionals, and it appears to me to be perfectly fair. It does not seem to me to be fair that a regional may pay out what amounts to a rebate, contrary to the rules of the board of trade, and thus undermine the whole market condition.

Mr. VANDENBERG. Mr. President, not with particular reference to the pending amendment, but more particularly with reference to my colloquy yesterday with the able junior Senator from Idaho [Mr. POPE], I desire to ask either the Senator from Idaho or the Senator from Iowa [Mr. MURPHY] for one further and perhaps final interpretation respecting the general effect of the bill.

I am referring to the right of legitimate hedging. It is quite plain what the bill does in respect to contract markets, floor brokers, commission merchants, and so forth. What I wish to know is, What happens to the little flour miller, of whom there are thousands across the country, who finds it necessary to hedge his wheat purchases? There is no argument anywhere as to the legitimacy of such an operation; and it is my understanding that the bill undertakes definitely, specifically to recognize his right to proceed with legitimate hedging. My question is, What happens in respect to the individual miller if one of his hedging operations is questioned as to its bona fides? What then happens?

Mr. POPE. Mr. President, will the Senator yield?

Mr. MURPHY. I yield.

Mr. POPE. Since yesterday I have studied that matter rather carefully and have come to the conclusion that whether or not the small miller who desires to engage in hedging operations is a member of the board of trade, he may hedge to the full extent of the definition contained in the bill; but if he exceeds in his purchase or sale of futures, the amount or value of the actual grain against which he is hedging, nothing will be done until he exceeds the limit which may be fixed by the Commission—say, 2,000,000 bushels a day—as the amount to which one who is operating on the market may engage in speculative transactions.

If he exceeds the limit fixed by the Commission, he may be punished in two ways, which are provided in the bill. The Commission, after full hearing, and with a right to judicial review, may withdraw from him or deprive him of his privileges to trade on the exchange. Then I find that there is in the bill a general provision which requires that such a man be also prosecuted criminally in the courts. So this is what will happen: If he merely exceeds his right to hedge under the definition in the bill, but does not exceed the limit which may be fixed, nothing, of course, will be done, because he has a right to engage in purely speculative trading, beyond hedging, up to whatever limit may be fixed by the Commission; but when he exceeds that limit he will be subject to the penalties of the statute.

Mr. VANDENBERG. Mr. President, then, from the Senator's statement, I should think that in practical effect there probably could not be any embarrassment or difficulty for the average small miller who is attempting legitimately to hedge, and who might merely miss the limitation by some casual miscalculation.

Mr. POPE. Exactly so. After coming to this conclusion I conferred with the Grain Futures Administration and with their attorney, and found that their judgment confirms the statement I made—that no attention would be paid or could be paid to trading in futures beyond legitimate hedging until the limit that might be fixed for speculative trading should be reached.

Mr. VANDENBERG. I thank the Senator for his statement.

MISSISSIPPI RIVER FLOOD CONTROL

Mr. CLARK. Mr. President, yesterday I entered a motion to reconsider the vote by which the House amendments to the so-called Overton bill, being the bill (S. 3531) to amend the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes", approved May 15, 1928, had been disagreed to, and the bill sent to conference. I did that for two reasons: Because I am very much in favor of the House amendment to the Overton bill providing for certain dams on the White River in Arkansas and Missouri; also, because I personally could not see any reason on earth why the principle of local contribution and State contribution which has been applied in the case of the omnibus flood-control bill should not be also applied to the Overton bill.

After conferences with the majority leader and other Senators very much interested in the measure, I have come to the conclusion that the whole project might be forwarded very much by sending this bill to conference. I therefore desire to withdraw the motion which I entered yesterday for the reconsideration of the vote by which the House amendments were disagreed to and a conference asked with the House.

Mr. NORRIS. Mr. President, a parliamentary inquiry. As I understand the rules of the Senate, the Senator from Missouri may not withdraw his motion to reconsider except by unanimous consent. I have no objection to his doing so, but I desire to have the record correct.

Mr. CLARK. My understanding is that within the 2-day limit the Senator who enters such a motion may withdraw it. I purposely came over to take up the matter this afternoon for that very reason.

Mr. NORRIS. There is a positive inhibition in the rules against the withdrawal of a motion to reconsider except by unanimous consent.

Mr. CLARK. Then I will ask unanimous consent to do so; but I understood that it was the privilege of any Senator within the time limit to withdraw a motion to reconsider, so that he should not preclude any other Senator from entering it.

Mr. NORRIS. But some Senator might be absent, and not be aware of what was done.

Mr. CLARK. Then, to obviate any dispute about the matter, I ask unanimous consent to withdraw the motion to reconsider the vote by which the House amendments to the so-called Overton bill were disagreed to and the bill was sent to conference.

The PRESIDING OFFICER (Mr. MURRAY in the chair). Is there objection? The Chair hears none, and the motion to reconsider is withdrawn.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries.

REGULATION OF COMMODITY EXCHANGES

The Senate resumed the consideration of the bill (H. R. 6772) to amend the Grain Futures Act to prevent and remove obstructions and burdens upon interstate commerce in grains and other commodities by regulating transactions therein on commodity futures exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes.

Mr. MURPHY. Mr. President, the following provision appears in the bill at page 10, line 21:

> Nothing in this section shall be construed to prevent the exchange of futures in connection with cash commodity transactions or of futures for cash commodities, or of transfer trades or office trades if made in accordance with board of trade rules applying to such transactions and such rules shall not have been disapproved by the Secretary of Agriculture.

So that the small individual for whom the Senator is solicitous would suffer no embarrassment at all under the bill. It is primarily designed to cure excessive speculation, whatever that may be determined to be.

The PRESIDING OFFICER. The question is on agreeing to the amendment on page 27, line 7.

The amendment was agreed to.

Mr. MURPHY. Before proceeding with the next amendment, on page 31, dealing with cotton, I suggest that on page 2, line 14, there is an amendment which was passed over, to strike out "butter, and eggs." My understanding is that it is the purpose of one of the Senators to take that up.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. In section 3, on page 2, line 14, it is proposed to strike out "butter, and eggs."

Mr. AUSTIN. Mr. President, if the pending legislation is to be enacted, and the commodities which dairymen have to buy from other sections of the country and obtain in interstate commerce are to have their prices fixed by a centralized authority such as that to be established by the proposed legislation, all of which I must confess I am not in sympathy with, I think it is economically fair that butter in particular should be included among the commodities comprehended by the bill, because the price of butter affects directly, and almost immediately, the price of fluid milk and of cream. I am informed that if there is need for the proposed legislation on account of speculation in the other commodities mentioned in the bill, by the same token there is need for it with respect to butter.

I am not personally familiar with the facts. Therefore, I rely upon a statement prepared by the National Cooperative Milk Producers' Federation, Charles W. Holman, secretary, 1731 I Street, NW., Washington, D. C., which represents to me with respect to dealing in futures substantially as follows:

Most of the future trading in butter is done on the Chicago futures market. Taking the year 1932 as an example, we find that 400,000,000 pounds of futures were sold on the Chicago market. This represented approximately 25 percent of the total production of creamery butter in the United States for that year. Most of the future trading in butter is done in connection with the storing and holding of butter from the summer to late fall and winter. The maximum amount of butter in storage in the four principal markets of the country in any one month during that year was 49,306,000 pounds. It is reasonable to assume, therefore, that speculative trading was at least nine times more than was necessary to cover legitimate hedging operations. This was approximately the same amount of speculative trading that is found on the wheat and cotton markets.

Mr. President, assuming that statement to be true, it occurs to me that the same objective which the bill apparently has for other commodities should be applied to butter, in order that there may not be a dislocation of the economic rights in the market of those whose principal occupation is dairying, and those whose principal occupation is raising food for dairy cattle, among other things.

I ask unanimous consent to have printed in the RECORD, in connection with my remarks at this point, the entire memorandum to which I have just referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

The memorandum is as follows:

MEMORANDUM RE PLACING BUTTER IN THE COMMODITY-EXCHANGE BILL

The commodity-exchange bill, H. R. 6772, as adopted by the House of Representatives, proposes to regulate speculative trading, not only in grain, cotton, and other similar commodities, but also in butter.

This bill was reported out by the Senate Committee on Agriculture and, after being placed on the calendar, a hearing was granted to certain interests opposed to the bill.

After this hearing, the Senate Committee on Agriculture voted to strike butter and eggs out of the bill.

At the hearing on the bill, Donald Kane, representing the National Cooperative Milk Producers' Federation, a federation of 55 dairy cooperative-marketing associations having a farm membership of more than 360,000 dairy farmers, appeared in support of having butter covered by the bill. The members and submembers of this federation market every kind of dairy products, and their operations cover the whole of the United States.

His appearance was also made specifically for the butter members of the federation, all of whom requested that butter be covered by the commodity-exchange bill, including Land O'Lakes Creameries, Inc., of Minneapolis, a farmers' cooperative organization having 400 local cooperative creamery associations as its members, located largely in Minnesota, Wisconsin, North Dakota, and South Dakota; Challenge Cream & Butter Association, a farmers' cooperative association having a membership of 18 local cooperative creameries in California, Idaho, Wyoming, Colorado, Nevada, and Utah; United Dairymen's Association, a farmers' cooperative association having 12 local cooperative creamery members in the States of Washington and Idaho; the Interstate Associated Creameries, a farmers' cooperative association having a membership of eight cooperative creameries located in the State of Oregon; Dairy & Poultry Cooperatives, Inc., a farmers' cooperative association having a membership of 50 local cooperative creameries in Iowa, Nebraska, North Dakota, and South Dakota; and Mid-West Producers' Creameries, Inc., a farmers' cooperative association having a membership of 19 local cooperative creameries in Indiana and Michigan.

According to a recent report of the Farm Credit Administration, approximately 36 percent of the creamery butter sold in the United States is marketed by cooperative creameries, and of this 36 percent, over 60 percent is marketed by the associations represented by the National Cooperative Milk Producers Federation, and who requested the inclusion of butter in the Commodity Exchange bill.

The inclusion of butter in the bill was opposed by representatives of the organized produce exchanges of New York and Chicago.

In addition to the request that butter be included in the bill on the part of the National Cooperative Milk Producers Federation, the committee was urged to retain butter in the Commodity Exchange bill by representatives of the American Farm Bureau Federation, the National Grange, and the National Farmers' Union.

Accordingly, the issue is clearly drawn. The farmers of the country practically unanimously requested that butter be included in the Commodity Exchange bill. Representatives of the produce markets of Chicago and New York, who make their living out of handling our farmers' butter, are opposed to any regulation. The question involved is a simple one. Will the Senate follow the wishes of the farmers of America in this connection, or follow the wishes of the organized produce exchanges?

It is obvious to anyone who studies a chart of butter prices throughout the year, that the violent fluctuations in butter prices cannot be accounted for in any reasonable manner by long-time supply and demand conditions.

The lowered prices of butter in the flush period when production is heavy and when butter is being put in storage is easy to understand, and is probably economically justifiable. Fluctuations in prices, however, during the winter months when production is at its lowest and when the purchasing power of the public is relatively stable, cannot be justified by normal economic factors. There can be no question but that these price changes in the winter months are occasioned, at least in part, by speculative manipulation on the butter exchanges.

On April 16, just barely a month ago, the price of butter in Chicago dropped 4 cents in 1 day. Although a part of this drop might be attributed to the fact that we are approaching our flush season, the full drop of 4 cents cannot be accounted for in this manner. Speculative influence had their part in causing this terrific 1-day smash which meant thousands of dollars in lower returns to every dairy farmer in the country on the following day when he was delivering his butterfat to his local creamery.

Much is made of the fact that no abuses have been proven relative to speculative operations in butter futures. This is due largely to the fact that up to the present time there has been no power in any Federal agency to require reports and to obtain statistics relative to the operation of speculators in the butter markets. On the other hand, nowhere in the evidence presented by opponents of having butter in the Commodity Exchange bill is any real evidence produced as to why butter should not be in the bill. The representatives of the produce exchanges apparently proceed on the theory that since there is no definite statistical data available relative to the operations of the speculators in the butter market that the speculators are entitled to some God-given right to gamble in the products of dairy farmers without any regard to the effect that it may have upon the prices that our farmers receive for butterfat on the farm.

Not only does the speculative influence of gamblers on the butter market affect the farmers who are delivering their butterfat to creameries, but it likewise affects every dairy farmer, whether he is selling his milk for fluid-milk purposes, for cheese, or for any other manufactured dairy-product purpose. Butter is the fundamental factor involved in the price of all dairy products. The price for other dairy products, including fluid milk and cheese, go up and down as the butter market goes up and down. The influence of butter prices on fluid-milk prices and other dairy-product prices is not felt as rapidly as it is felt by farmers delivering to creameries, but the result over a long-time period is identical.

In addition to the influence of butter prices on fluid-milk prices, i. e., on bottled milk sold for consumption, butter prices have a substantial effect on all fluid-milk areas in their influence on the price of cream for consumption as such and also where used in the manufacture of ice cream. In practically every milk market in the country the price of cream is fixed by a formula based on the price of butter, either at New York or at Chicago; thus the returns to dairy farmers in the fluid-milk areas depends to a considerable extent on the price at which butter is sold.

With all of the dairy farmers of the country so vitally interested in butter prices and with the provision in the bill which exempts legitimate hedging from operations of the bill, it is difficult to see how the Senate committee could vote to take butter out of the commodity exchange bill, with the resultant benefit accruing only to a few speculators whose only interest in the

butter market is the amount of money they can make through their speculations.

Briefly, as far as butter is concerned, the effect of the bill would be as follows:

1. Every commission merchant or broker dealing in butter futures would be required to register with the Secretary.

2. A system of reporting is definitely set up which would enable the Secretary of Agriculture to compile information not now available with respect to speculative holdings, both long and short, in butter.

3. If, under the reporting section mentioned above, evidence becomes available indicating that limits should be fixed on the amount of speculative trading which should be permitted in the butter market, the Commission which is provided for in the act, after due notice and opportunity for hearing, may fix limits on the amount of speculative trading which will be permitted.

4. Certain unfair and illegal practices are prohibited.

5. The bill provides definite protection for farmers' cooperative associations on their operations on the butter exchanges so that they cannot be unfairly discriminated against by private handlers of butter.

There is not one section of the bill which will work a hardship of any honest, legitimate concern, whether it is a cooperative or a private organization.

If the contention of the butter exchanges is correct, that no evil practices are being engaged in, the sole result of the bill will be to require that commission men and brokers register and that they report their speculative trading to the Secretary of Agriculture.

So long as the marketing system of the country permits speculative trading in farm commodities the speculators should have no objection to having some reasonable degree of governmental supervision over their speculation.

The Supreme Court of the United States has said that the future markets of the country are vested with a public interest, and if it is sound and wise governmental policy to exercise this supervision over speculative trading in grain and cotton, it is likewise sound that such governmental supervision be extended to cover butter, which is the cornerstone of the whole dairy industry, an industry which in dollars and cents is more important to the farmers of this country than either the cotton industry or the grain industry.

As far back as March of 1932 Secretary Hyde, the then Secretary of Agriculture, in writing to Senator MCNARY relative to a bill introduced by Senator CAPPER to regulate the future sales of butter and eggs on commodity exchanges, indicated that the Department of Agriculture felt that because of the wide public interest in the operation of future exchanges, legislation covering the future sales of butter and eggs on commodity exchanges should be enacted by Congress. We believe that this opinion is also the opinion of the present Secretary of Agriculture.

Most of the future trading in butter is done on the Chicago futures market. Taking the year 1932 as an example, we find that 400,000,000 pounds of futures were sold on the Chicago market. This represented approximately 25 percent of the total production of creamery butter in the United States for that year. Most of the future trading in butter is done in connection with the storing and holding of butter from summer to late fall and winter. The maximum amount of butter in storage in the four principal markets of the country in any one month during that year was 49,306,000 pounds. It is reasonable to assume, therefore, that speculative trading was at least nine times more than was necessary to cover legitimate hedging operations. This was approximately the same amount of speculative trading that is found on the wheat and cotton markets.

In addition to the reasons which we have set out in this memorandum, a very substantial reason for including butter in the commodity exchange bill is found in the fact that if the speculative operations of gamblers is restricted on the grain and cotton exchanges and the produce exchanges are left open and free from any control, we can expect a substantial influx of speculators in the butter market. Here they will find a fertile field for their operations when such operations become difficult on the grain and cotton exchanges because of the provision in the commodity exchange bill.

Many of our member associations have indicated to us that already many of the speculators who formerly operated in the grain market in Chicago have changed the field of their operations to the butter market to avoid the necessity of placing their speculative operations under the scrutiny of the Secretary of Agriculture. With this situation already existing, we may confidently expect substantial increases in the speculative element on the butter exchanges unless the same checks on speculative operations on butter are imposed as are placed on grain, cotton, and other commodities covered by the bill.

We therefore respectfully request that the Senate defeat the amendment proposed by the Agricultural Committee to strike butter out of the commodity exchange bill.

MAY 20, 1936.

Mr. AUSTIN. Mr. President, I am opposed to striking the words "butter, and eggs" from the bill.

Mr. SCHWELLENBACH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. SCHWELLENBACH. Is a motion to divide the question as between "butter, and eggs" in order?

The PRESIDING OFFICER. The Chair will state that such a motion is in order.

Mr. SCHWELLENBACH. I make that motion, Mr. President.

Mr. MURPHY. Mr. President, what is the motion of the Senator from Washington?

Mr. SCHWELLENBACH. My motion is to divide the question as between "butter, and eggs", so that first vote will be with reference to butter and then with reference to eggs.

The PRESIDING OFFICER. The question is on the motion of the Senator from Washington to divide the amendment in section 3, page 2, line 14, so as to take separate votes on "butter, and" and "eggs."

The motion was agreed to.

The PRESIDING OFFICER. The question is on the amendment in section 3, page 2, line 14, to strike out the words "butter, and."

Mr. NORRIS. Mr. President, I inquire if any Senator has the floor?

The PRESIDING OFFICER. The Senator from Iowa [Mr. MURPHY] has the floor.

Mr. NORRIS. Very well.

Mr. MURPHY. Mr. President, in connection with the remarks of the Senator from Vermont [Mr. AUSTIN], I may say that the committee in reporting the bill struck out the words "butter and eggs" because there was no adequate showing of any abuses in the trading in futures in those commodities, and the committee felt that, in the absence of a showing of abuse, it was not justified in intruding the hands of the Federal Government into a private business which heretofore has been free from any governmental interference.

Mr. WALSH. Mr. President, will the Senator yield?

Mr. MURPHY. I yield.

Mr. WALSH. Is there any appreciable trading in futures in butter and eggs?

Mr. MURPHY. There is.

Mr. WALSH. But the Senator says the committee found no abuses existing.

Mr. MURPHY. We found no abuses; at least, there was no testimony adduced showing that there was any particular abuse, no such comparable testimony as was piled up in the case of trading in grain futures.

Mr. WALSH. I assume there is a likelihood of some abuses in connection with the other commodities mentioned?

Mr. MURPHY. I think that is the apprehension that suggested the inclusion of those commodities in the bill.

Mr. MALONEY. Mr. President, will the Senator yield?

Mr. MURPHY. I yield.

Mr. MALONEY. Was there any outside suggestion that that portion of the bill as written by the House be stricken out?

Mr. MURPHY. Yes, very clearly so. There was outside suggestion that it be left in, and there was outside suggestion that it be stricken out. There were, as I recall, three witnesses representing the egg industry before the committee who asked the exclusion of eggs.

Mr. MALONEY. I should like to say to the Senator in that connection, if I may, that those engaged in the poultry industry in my neighborhood, insofar as I have been able to ascertain their attitude, favor the inclusion of eggs.

Mr. MURPHY. I may say further that we have had a much closer touch with people engaged in the industries since the amendments of the committee were reported than we had during the time the bill was being considered by the committee.

Mr. WALSH. Mr. President, will the Senator yield further?

Mr. MURPHY. I yield to the Senator from Massachusetts.

Mr. WALSH. If I understand the Senator correctly, his position and that of the committee is that when private business behaves itself the Government should not undertake to regulate it?

Mr. MURPHY. That is the belief I have expressed, and it is my own individual view. I am perfectly willing to have

any industry regulated when it is shown that it has made a license out of liberty, but the testimony submitted to the committee in this case did not establish anything of the kind. For that reason, I was influenced to advocate the elimination of butter and eggs.

Mr. POPE. Mr. President——

Mr. MURPHY. I yield to the Senator from Idaho.

Mr. POPE. Mr. President, I desire to read two paragraphs from a memorandum which I asked the Grain Futures Administration to prepare in connection with this amendment. I shall read the two paragraphs and content myself with the statement contained in them. The paragraphs read as follows:

A study of the record of the hearings before the Senate Committee on Agriculture and Forestry shows very clearly that the Chicago and New York Mercantile Exchanges don't want to submit to regulation as provided in this bill. The four representatives who appeared for these two exchanges made a strong effort to show that trading in butter and egg futures differs materially from the trading in grain for future delivery and contended that if legislation was enacted, butter and eggs should be dealt with in a separate measure.

* * * * * * *

The trading in futures in butter and eggs does not differ from the trading in wheat or any other commodity covered by this bill. Future trading in butter and eggs is subject to the same abuses and the same speculative and manipulative influences that apply to wheat and in the interest of the producers of butter and eggs they should be included and such exchanges should be regulated.

The inclusion of butter and eggs was approved by the Department of Agriculture and was strongly supported by the farm groups who appeared before the Senate Committee on Agriculture and Forestry.

I think that is a fair statement of the situation.

Mr. NORRIS. Mr. President, I inquire if an amendment is pending to the committee amendment?

The PRESIDING OFFICER. The committee amendment was divided. The first vote will be taken on striking out the words "butter and".

Mr. NORRIS. Then, there will be two votes on the amendment?

The PRESIDING OFFICER. The Senator is correct.

Mr. NORRIS. Mr. President, I wish to say just a few words about the pending proposal.

In my opinion, it is not a fundamental amendment. There never has been as much evil connected with the future trading in butter and eggs as there has been in the grain future trading, but the principle, so far as I can see, is exactly the same. Very little evidence was adduced before the committee on the subject. The Senator from Iowa and the Senator from Idaho have stated the facts as they appeared there. The fear was expressed by some that after the passage of this bill for regulating future trading in grain there would be an increase of future trading in butter and eggs and that all the evils found to exist in the past in connection with trading on the grain futures market would come into being in the trading in butter and eggs. Some evils do now exist, but I do not claim, and I think no one else claims, that the evils are to be compared with those which have grown up on the grain futures trading market.

However, I do not see, in the first place, how anyone will be harmed by the inclusion of butter and eggs in the bill, and it seems, unless they are included, that there will be an increase in gambling operations in them on the two great mercantile exchanges, in Chicago and New York, which are practically the only ones existing now so far as butter and eggs are concerned, although others will probably spring up.

It is said, with some degree of reason I think, that we should not legislate on this subject until there shall have been complaint made and agitation for legislation. So long as no injury can ensue, so long as fundamentally the same principle is involved, I do not believe it is wise, Mr. President, for us to fail to legislate on this subject, and to insist that before legislation is enacted those interested in butter and eggs will have to agitate and make a showing. If they shall have to follow the same proceeding that the grainmen have had to follow, it will be years before they will get any legislation that will rectify the evils which I think will creep into the business to a greater extent than now exists after gambling is prohibited in grain operations by the passage of this bill.

On this proposition I agree with the Senator from Vermont, and I think the butter producers in the main also agree. The grainmen see the necessity of this proposed legislation. The buttermen, especially the leaders in the great farm organizations that have come in contact with the evils that have existed incident to the gambling in futures on the grain exchanges, so far as I know, are all favorable to keeping butter and eggs in the bill, because from their experience they realize that, while the evils are not nearly so great, they do exist now in some minor form, and they fear an increase of those evils if we do not keep butter and eggs in the bill. While it is not necessary to keep butter and eggs in or to keep butter and eggs out to make a good bill of it, it seems to me to round out the bill we ought to keep them in. I myself am opposed to striking either one out.

The PRESIDING OFFICER. The question is on the amendment proposing to strike out the words "butter and."

Mr. COPELAND. Mr. President, may I ask if there was a hearing on the matter of the inclusion or exclusion of butter and eggs?

Mr. MURPHY. The committee held long hearings on the bill, and I think approximately 45 minutes were devoted to witnesses who protested against the inclusion of butter and eggs.

Mr. COPELAND. The information I have from my section of the country is that it is not the desire to have butter and eggs included in the bill. Their feeling is that these commodities, being perishable, are entirely different from cotton, wheat, and other products, but, in any event, they are desirous, before butter and eggs shall be included, that there should be a hearing in order that the view which they hold might be represented. So I hope the amendment will be rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment striking out the words "butter and."

Mr. COPELAND. How will the vote be taken? How should Senators vote who desire to strike butter and eggs from the bill?

The PRESIDING OFFICER. Those in favor of striking out "butter and" will vote "yea", and those opposed will vote "nay." The question is on the amendment proposing to strike out the words "butter and."

Mr. FRAZIER. Mr. President, in the hearings before the committee the cooperatives representing dairy products and poultry products protested against the striking out of the provision relating to butter and eggs. They were in favor of keeping butter and eggs in the bill.

I have a letter from Mr. Charles W. Holman, secretary of the National Cooperative Milk Producers Federation, with an office in Washington, enclosing a copy of a letter written to the clerk of the Committee on Agriculture and Forestry of the Senate under date of April 17, from which I wish to read just one paragraph:

Our federation, representing more than 360,000 dairy farmers who are engaged in marketing their milk, butter, cheese, and other dairy products through 55 cooperative marketing associations, desires to enter an appearance at the hearing and present evidence giving reasons why we feel that butter should be kept in the commodity exchanges bill.

Representatives of the federation came before the committee and presented statements along that line.

Mr. COPELAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from New York?

Mr. FRAZIER. Certainly.

Mr. COPELAND. I understood the Senator from Iowa [Mr. MURPHY] to state that those who appeared were in opposition to this provision of the bill.

Mr. MURPHY. Mr. President, perhaps I overlooked the attorney for the National Milk Producers Federation, who did suggest the inclusion of these items.

Mr. COPELAND. But with the exception of the attorney the testimony was in favor of striking them out?

Mr. MURPHY. That is the fact, as I recall.

Mr. FRAZIER. Mr. President, I have before me a copy of the hearings held by the Committee on Agriculture and Forestry, at page 189 of which appears the statement of Donald Kane, attorney for the National Milk Producers' Federation. He told how many organizations he represented at that hearing. He said he spoke for a large number, indeed practically all, of the coperative organizations in the country. He made a very strong statement in favor of keeping butter and eggs in the bill. He said trading is going on and there is no way of knowing how much that trading will increase in the future. For the protection of those who produce dairy products and poultry products this provision should be retained in the bill in order to protect them.

In my State the farmers' union organization have a number of cooperative poultry associations which are very strongly in favor of keeping this provision in the bill. The dairy organizations hold the same view. The attorney to whom I refer represents, among others, the Land O'Lakes organization of Minnesota, with over 400 cooperative creameries, all in favor of keeping butter and eggs in the bill.

Mr. President, there are a number of Senators interested in the amendment who are not on the floor at this time. Therefore, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Clark	King	Radcliffe
Ashurst	Connally	La Follette	Reynolds
Austin	Coolidge	Lewis	Robinson
Bachman	Copeland	Lonergan	Russell
Bailey	Couzens	Long	Schwellenbach
Barkley	Davis	McAdoo	Sheppard
Benson	Donahey	McGill	Shipstead
Bilbo	Duffy	McKellar	Smith
Black	Fletcher	McNary	Steiwer
Bone	Frazier	Maloney	Thomas, Okla.
Borah	George	Metcalf	Thomas, Utah
Brown	Gerry	Minton	Townsend
Bulkley	Gibson	Murphy	Truman
Bulow	Glass	Murray	Tydings
Burke	Guffey	Neely	Vandenberg
Byrd	Hale	Norris	Van Nuys
Byrnes	Hatch	Nye	Wagner
Capper	Hayden	O'Mahoney	Walsh
Caraway	Holt	Overton	Wheeler
Carey	Johnson	Pittman	White
Chavez	Keyes	Pope	

The PRESIDING OFFICER. Eighty-three Senators having answered to their names, a quorum is present.

Mr. DAVIS. Mr. President, I am opposed to the committee amendment. Pennsylvania is the second largest egg-producing State in the Union. It ranked first in 1935.

I desire to present for the RECORD a telegram from the Tri-County Producers' Cooperative Association of Montgomery County, Pa., having a membership of more than 400 poultrymen, and marketing nearly 1,000,000 dozen eggs per year; also a telegram from the Bradford County Egg Producers' Association, and a telegram from J. A. Supkan, president of the Lehigh Valley Egg Producers' Cooperative Association with a membership of 400, expressing their opposition to the proposal to strike eggs from the commodity exchange bill.

I urge the Senate to reject the committee amendment and, in support of my position, ask that the telegrams to which I have referred may be printed in the RECORD at this point.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

CENTERPOINT, PA., *May 12, 1936.*

Hon. JAMES J. DAVIS:

An amendment to the Grain Futures Act, known as the commodity exchanges bill, is about to come before the Senate. This bill is designed to control speculation in and manipulation of grain, butter, and eggs by traders. This cooperative, composed of 405 poultrymen, is marketing nearly 1,000,000 dozen eggs per year. Any effort to strike out eggs from this bill would reflect a hardship to the poultry industry. Your support of this bill will be greatly appreciated by this organization.

TRI COUNTY PRODUCERS COOPERATIVE ASSOCIATION,
WORCESTER, MONTGOMERY COUNTY.

ATHENS, PA., *May 11, 1936.*

Hon. JAMES J. DAVIS,
Senator:

On behalf of our association and all other poultrymen of the second largest egg-producing State, demand that you make every effort to retain the amendment to the Grain Futures Act of the commodity exchanges bill, as designed to control speculation and manipulation of grain, butter, and eggs by traders. We shall expect to hear from you just what stand and efforts you have taken relative thereto.

BRADFORD COUNTY EGG PRODUCERS,
CHARLES ZIMMERMAN, *Secretary.*

COATESVILLE, PA., *May 11, 1936.*

The Honorable JAMES J. DAVIS,
United States Senate:

This exchange, representing five hundred-odd members, seriously opposes the striking out of eggs from the commodity exchanges bill. We solicit your support in this matter.

S. S. BUPENMYER EGG PRODUCERS EXCHANGE.

CATASAUQUA, PA., *May 12, 1936.*

Senator JAMES J. DAVIS.

To the honorable Senator: From Lehigh Valley Egg Producers Cooperative Association of 400 producers, urge and pray you to oppose striking out of eggs from commodity exchanges bill designed to control speculation of same. Might we remind you of the fact that Pennsylvania ranked first in production of eggs for 1935 and should therefore ask for adequate protection. May I expect a favorable reply?

J. H. SUPKAN, *President.*

Mr. LA FOLLETTE. Mr. President, it is my understanding the amendment has been divided, and the question will come first on the recommendation of the committee to strike out the words "butter and." Is that correct?

The PRESIDING OFFICER. That is correct.

Mr. LA FOLLETTE. I hope the Senate will not adopt the committee amendment. So far as I know, all the representatives of the farmers who produce butter have advocated that it be included as a commodity subject to the regulations provided in the bill.

Furthermore, it seems clear to me that the fluctuations in the prices of butter cannot be accounted for purely on the basis of the operation of the so-called law of supply and demand. Granting that there are bound to be fluctuations in price as between the flush season of production and the season when production diminishes, I contend that a survey will indicate that there is a speculative factor involved in the prices of butter.

Therefore, in view of the fact that all the representatives of the producers of this farm commodity are appealing to the committee and to the Congress for the inclusion of butter in this measure, I sincerely hope that the Senate will not deny them the protection to both the producer and the consumer, which I believe will be accorded by its inclusion.

So I trust the committee amendment will be rejected.

The PRESIDING OFFICER. The amendment having been divided, the question is on striking out the words "butter and."

Mr. SMITH. Mr. President, I think there is some misapprehension as to the manner in which the question is to be voted upon. I think the Chair should explain what an affirmative vote would mean and what a negative vote would mean in perfecting this amendment.

Mr. McNARY. Mr. President, did the Senator from New York request a division of the vote as between butter and eggs?

The PRESIDING OFFICER. The Senator from Washington [Mr. SCHWELLENBACH] requested it.

Mr. McNARY. Very well. Then the question arises on the adoption or rejection of the committee amendment?

The PRESIDING OFFICER. The part of it affecting butter.

Mr. McNARY. The part of it affecting butter. Those who desire butter to be included in the bill should vote "no" on the committee amendment?

Mr. NORRIS. Yes.

The PRESIDING OFFICER. Those in favor of the amendment striking out the words "butter and" will vote "aye", and those opposed to striking them out will vote "no." [Putting the question.] The noes have it, and the first part of the amendment is rejected.

The question now is on the second branch of the amendment, striking out the word "eggs." [Putting the question.] By the sound the noes seem to have it. The noes have it, and the second branch of the amendment is rejected.

The clerk will state the next amendment.

The LEGISLATIVE CLERK. The next amendment appears on page 31, after line 13, where it is proposed to insert a new section, as follows:

SEC. 12. The Grain Futures Act is further amended by adding at the end thereof the following new section:

"SEC. 13. (a) The provisions of this section shall apply only with respect to cotton and cotton-futures exchanges or similar institutions.

"(b) Notwithstanding the foregoing provisions of this act, the trading limits on the amount of trading in cotton under or with respect to contracts of sale for future delivery on or subject to the rules of any cotton-futures exchange shall be fixed by the commission with respect to any one person trading either directly or indirectly for his own account at a total of not more than 100,000 bales for delivery in any one delivery month with respect to all exchanges and at a total of not more than 600,000 bales for delivery in any 12 consecutive months with respect to all exchanges (said bales being of the approximate weight of 500 pounds each). Such trading limits shall apply to all types of futures-trading transactions, including bona-fide hedging transactions, and shall also apply to both 'market position' and 'market interest' as herein defined. For the purpose of this section, the term 'market position' means a contract of purchase or sale made on any cotton-futures exchange which has not been fulfilled or completed either by actual delivery of cotton or by an offsetting contract of sale or purchase on the same exchange prior to the time specified for delivery; and the term 'market interest' means any outstanding contractual obligation relating to cotton, which is or may be affected in any manner by the advance or decline in the price on any exchange of cotton futures for delivery in some specified month, and such 'market interest' shall be deemed to be held in the month so specified. In computing any such market position or market interest there shall be included therein any market position on or any market interest held with respect to any and all foreign exchanges.

"(c) All trading in cotton futures on any exchange shall cease as to each delivery month on a day not later than the last business day of the preceding month, after which the seller shall have 10 business days within which to give to the buyer written notice of the date and place of delivery, and the buyer shall have 5 business days after receipts of such notice in which to take delivery and make payment. The Secretary of Agriculture, in his discretion, may extend the time to the seller for giving notice of delivery and to the buyer for taking delivery and making payment whenever in his opinion such action is warranted. In making payment in settlement of any contract of sale for the future delivery of cotton in any delivery month the actual commercial differences above or below the contract price which the receiver shall pay for cotton or grades above or below the basis grade shall be determined as of the day on which trading ceased with respect to such delivery month and in accordance with the provisions of section 6 of the United States Cotton Futures Act, as amended.

"(d) All charges and expenses incident to any delivery of cotton in fulfillment of any contract of sale made at, in, or on any exchange shall be borne by the seller.

"(e) Any person who shall purchase, sell, or carry any cotton futures for any other person on any exchange or pursuant to any contract made at, on, or in such exchange for the account of such other person, shall demand and receive from such other person as a minimum margin an amount equal to at least 10 percent of the current market price of such cotton, but in no case less than $5 per bale, which minimum margin shall be maintained at all times with such reasonable allowance for price fluctuation as may be prescribed by the commission. In computing such minimum marginal requirements, all fractions of a dollar shall be brought to the nearest full dollar.

"(f) Each cotton-futures exchange shall make available to the public each day the volume of trading in cotton futures for each delivery month and the total volume of trading in cotton futures for all delivery months, and shall also make available to the public at least once each month the total of all open and outstanding contracts of sale of cotton for future delivery in each delivery month, made at, on, or in such exchange.

"(g) All cotton which shall have been inspected, graded, classed, and certificated as tenderable under the provisions of the United States Cotton Futures Act, as amended, shall be deliverable, on any contract of sale made at, on, or in any cotton-futures exchange, at and for the grade and staple thus certificated: *Provided*, That when such cotton is removed from certificate the final receiver thereof on a contract made at, on, or in a cotton-futures exchange may, if he so desires, call for a review by the United States Department of Agriculture, and in the event such cotton shall be found to be of a lesser grade or staple and of a lesser money value than the certified grade and staple, such final receiver on contract may make claim for any monetary loss so found, and all such claims shall be made on and against a guaranty fund which shall be established and maintained by each exchange by adding to the original inspection fees such amount per bale as in the opinion of the Secretary of Agriculture may be necessary for the purpose of such fund, such additional amount to be held and retained by the exchange on which the original inspection is applied for, and to be paid out only on claims passed on and approved by the United States Department of Agriculture or its duly authorized representative."

WORKS PROGRESS ADMINISTRATION IN WEST VIRGINIA

Mr. HOLT. Mr. President, I have spoken a number of times on the floor of the United States Senate about the political set-up of the Works Progress Administration. I have shown the different parts of the set-up and how it was to operate. Today I hope to show those present how it actually did operate in the State of West Virginia.

First, let me go back to the original letter which I read some time ago about the W. P. A., in which it was said:

The time to correct mistakes is before they are made, if possible; consequently we don't want anyone on these jobs who is not right. These hundreds of applications going in should be taken around to the "designated" leaders in each county and sorted; then the local leaders can't blame the personnel office if the right boys are not on. This to my mind is paramount if this organization is to accomplish what it has to do in the next year.

They wanted the "right boys", and the "designated leaders" were to determine whether the proper set-up was made.

I showed on a previous occasion who actually appointed the W. P. A. officials in the State of West Virginia. I showed who they were and how they got their jobs. This afternoon I wish to show whether they delivered the goods after they did get their jobs, and I wish to produce a number of letters and affidavits to prove it.

In the first place, I desire to read part of an affidavit from a man in Huntington. In his affidavit he says:

I myself was compelled to deliver a certificate for the registration books certifying that I was registered as a Democrat and was required to state under oath that I would vote and work for the election of Senator NEELY in the 1936 campaign.

Let me go a little bit farther and tell you that in the State of West Virginia we have a public registration system. Anyone may check the registration books to find out the party affiliations of any voter. So if a person did not register as a Democrat, and was a W. P. A. worker, he may be in danger of losing his job, and not only losing his job but at a later time being punished by those in control. Not only were the W. P. A. workers told that, but the foremen and bosses went around to the different ones and said, "You know, the registration is being taken now, and we are checking up on the registration to determine the party affiliations of the different ones"; and, of course, a good many whose jobs were between them and hunger, whose job made the difference between starvation and livelihood, changed their registration from one party to another.

I should like to see more Democrats, but I want Democrats by conversion and not Democrats by coercion. There is a difference. I want Democrats who believe in the principles of Democracy, and are willing to go at their own wish and change the registration, rather than changing it for fear of losing their jobs or being punished.

Now let me read another affidavit from the city of Huntington. This Mr. Blank upon his oath deposes and says that as he was leaving the office of the W. P. A., where he was employed, about 5 o'clock on May 8, 1936, Mr. Blank, office manager of the said office, standing in the hall of the building where said office was located, stopped this affiant and asked this affiant to wait a few minutes, as someone in his office wanted to see this affiant, which he did. A few minutes later he called affiant in his office, where affiant met Mr. Blank, former office manager of the W. P. A., and said Blank asked affiant how much he wanted to be put down for; and affiant replied, "Put down for what?" Blank replied, "Put down for contribution to campaign fund"; and this man said he had to see 65 more men to determine how much was to be contributed to the campaign fund.

Here is another signed statement that I should like to read:

On Saturday, April 9, 1936, there was a man on the Sixth Street and Third Avenue project by the name of Blank—

I shall not say who he is, because if I should say, he would immediately lose his job—

who got some blank notes from the Twentieth Street Bank and was going around to all the men on this project and asked for money to buy gasoline to haul voters to the polls on election day. There is a rumor going around that if you did not give anything you would be so messed up—

I am quoting the exact language of this man—

you would wish you had gave.

The man said "had gave" instead of "had given", but, nevertheless, he worked for a living.

Let me go ahead a little bit further:

The man had blank notes, and said when a man would give anything, he would give out the note and make the men sign it.

Of course, there was not any politics at all to that; and day after day, and day after day, the foremen and timekeepers would go around to the workers and say, "Well, you know, we don't actually tell you who to vote for, but nevertheless it is advisable to contact and see that the right men are put into office. Of course, you would not lose your job if you should not vote for our men because of politics, but because there are so many other things that you can lose your job for, we do not have to say that you are losing it for politics; we can state that you did not do your work right"; and, of course, the men were very fearful that that would be the case.

Let me read what a woman down at Charleston said in a statement to me. Of course, Harry Hopkins says there is not any politics in the W. P. A.—none at all—and not only that but there seems to be no investigation of the W. P. A.; but let me read the letter from this lady, in which she says:

I am employed on the W. P. A. in the sewing room of ———. They say there is no politics in the W. P. A. Then why did Mrs. ———, on May 4, dismiss four Republican women from the room and give us this sample ballot marked up, who we must vote for, to take it home and see that we did, under the threat of losing our jobs * * * and that was all between us and our God.

I show the Senate the actual ballot which was marked by the W. P. A. officials, so that anyone can see the W. P. A. slate in West Virginia. The letter proceeds:

Mrs. ——— searched everybody's machine drawers and pocketbooks to see if she had any Republican cards. The next day, four women had their work cards taken from them. * * * What I have wrote you, I can raise my hand to my God above, to be the truth.

O Mr. President, there is no politics at all in the W. P. A. I should like to show the Senate two more marked ballots, from other parts of the State of West Virginia, and I have many more where they are marked for certain people in the W. P. A.

When I said the W. P. A. was a political machine, I did not know it was going to function as smoothly as it did. It certainly delivered in the State of West Virginia.

After they had set up all this political background, on the day of election, the State administrator issued a statement: "Vote as you please." But he issued that only on Tuesday morning, the day of the election, after many of the employees had voted, and after many of them had decided that they were going to vote as they deemed advisable.

Let me read now from a Democratic paper, the Parkersburg Sentinel, in which it is stated:

W. P. A. MONEY IS PAID TO VOTERS—W. P. A. LABORERS INSTRUCTED TO VOTE FOR NEELY AND VIA OR LOSE THEIR JOBS

Persons working about the polls in Parkersburg today declare that W. P. A. officeholders are openly violating the spirit of the law in the interests of the candidacies of Neely and Via. They say that W. P. A. officials send word to W. P. A. workers to come to the polling places to get their pay checks, and when the workers get there they are instructed to vote for Neely and Via or else they will lose their jobs. All W. P. A. offices were closed today and all W. P. A. employees were given a holiday in order that they could get out and work for the nomination of Neely and Via.

They had to go to the place where they would vote before they were to be paid for the work they had done. Then they say there is no politics in it!

I should like to have the expense accounts of these W. P. A. officials in the various districts checked. They became very much interested about projects in the few days before election. They went into the counties and inspected projects, or at least they said they inspected projects. It was strange that they did it on Friday, Saturday, Sunday, and Monday before election, and it is strange that they called upon the various foremen and the various political leaders in inspecting those projects. Of course, we are told again that there is no politics at all in that.

Harry Hopkins ought to be able to find out about it, because he has 118 people to look into it for him. I quote from the Baltimore Sun, which is a Democratic paper, an editorial:

DETECTIVES ON RELIEF

Until last week Harry Hopkins, the Works Progress Administrator, had 98 investigators on his pay roll. Now he has 20 more. It is explained that these investigators are now devoting themselves chiefly to the investigation of charges that the W. P. A. is in many States being used mainly for political purposes. It is further explained that the reinforcements were needed because an election is drawing near and the number of such charges is increasing.

So now Mr. Hopkins has 118 detectives with which to ferret out the political scandals in the W. P. A. But are these sleuths finding any such scandals? That is rather hard to say, though it seems that they are having the devil's own time detecting evidence of political manipulation. To date, according to Roger Bound, the chief sleuth, "we have uncovered only two or three widespread cases of political solicitation and activity and a scattering number of cases involving minor officials." In the remaining cases the charges somehow always turn out to be "unsubstantiated."

This is all very strange, for there are plenty of people, without detective training of any kind, who have been able in recent weeks to turn up quite a bit of evidence pointing to the existence of more than two or three cases of widespread political scandals in the W. P. A. They have found such evidence in New York, Pennsylvania, West Virginia, North Carolina, Indiana, Illinois, Missouri, and several other States. More than that, they have not stood upon mere hearsay but have supplied names and places and dates and have offered documentary material in support of their charges. Yet the evidence they have assembled appears not to be substantial enough for the hard-working detectives the W. P. A. has hired to investigate the W. P. A.

Arthur M. Curtis, Republican national committeeman from Missouri, has come forward with new evidence to show how the Pendergast machine in Missouri has taken "complete control of the W. P. A. organization in that State." He also gives names and places and dates, while he describes in detail the several methods used by the Pendergast machine in coercing W. P. A. workers into supporting the Democratic Party. To be sure, Mr. Curtis is a Republican, and so is not wholly without self-interest in the matter. Yet it can hardly be argued that the facts he has to present miraculously become something other than facts because they have been brought to light by one who is not a member of the Democratic Party. Certainly Mr. Hopkins, that earnest seeker after truth, will not contend that he and his political associates have a monopoly on truth.

It is curious, to say the least, that in the face of this great and growing accumulation of evidence the W. P. A. detectives should have such difficulty finding proof of the manner in which the politicians are using the W. P. A. for their own ends. There is a saying that "none are so blind as those who will not see." But one hesitates even to imply that Mr. Hopkins is using his investigators to cover up the political scandals instead of to uncover them. It is possible that the fault lies with the detectives themselves. Perhaps Mr. Hopkins had better hire, not more detectives, but a whole new set of sleuths.

I wish to read excerpts from a number of letters to show how the political set-up of the W. P. A. in West Virginia works. These are actual statements from W. P. A. workers in the State of West Virginia. Listen to this:

We were told that they were going to lay off a number of men and that if they did not come across at the primary election, that it would be easy to designate those men to go.

As the Members of the Senate know, they were cutting down the forces of the W. P. A. Of course, under the guise of economy they could cut the men off.

We were informed that it would be easy to find some other excuse than politics to dismiss a worker.

Here is another letter which I should like to have go in the RECORD:

We were told who was friendly to the W. P. A. and that it would be advisable to vote that way.

Here is another letter:

I was told that I should be busy Tuesday morning as soon as the polls opened, and if I was not there working for the W. P. A. slate of candidates, I need not report for duty Wednesday morning, and not try to fool them, because they would know who was for them and who was against them. They said that the election clerks were with them.

In other words, if a W. P. A. worker went there and tried to vote the way he desired, they told him that the election clerks on the inside were watching how he voted and would nod to the man on the outside; and if he did not vote the way the W. P. A. crowd wanted him to vote, immediately he might lose his job.

Here is another letter:

They said that they could check every way to see how many votes were cast in any precinct, and, if the result is not there, no excuses would be taken.

Here is another letter. Let me read what a writer at Wheeling said:

They said, "You ought to realize what happened to RUSH HOLT's friends, and, if you do not think more of your jobs than that, anything may happen."

In other words, if a person professed any friendship, they would show what happened to men who had been friendly to me. Of course, they have practically eliminated all those.

I am glad to say that I have nothing to do with the W. P. A. patronage in West Virginia, and that if anyone does not get a job I am not responsible. Before very long, when I go back to West Virginia after the session of Congress adjourns, I intend to let the people know who have gotten the jobs and why they got them.

Here is another letter I should like to read into the RECORD:

Another man wrote me and said that he was called in after the election, and his salary was cut approximately $40 per month, and they told him, "Well, you are still a pal of RUSH HOLT, are you?"

In other words, his family would suffer, his wife and children would suffer, because that man professed friendship toward me at election time.

Harry Hopkins says these charges of politics are not true. Yet there seems to be no investigation. No doubt we are spending between a third of a million and a half million dollars a year to pay the salaries and expenses of these 118 Secret Service men Hopkins has employed, and they cannot find anything wrong with the W. P. A. political machine, though everyone else can. I think they either ought to get a new bunch of detectives, or prod the detectives they have to a little actual determination to find out the facts.

Another man writes me this letter:

I have a marked ballot in my possession which one of the W. P. A. boys gave me and can get an affidavit to the effect that he was told to vote accordingly or not report for work Wednesday morning. I talked to dozens of them and in 90 percent of the cases they were eager to vote for Mr. Hiner but had been told that if they voted different from the marked ballot that the clerks would notify their superiors and their vote would not only be void but they would be fired.

If that fellow had exercised his great constitutional right, the right to vote, and had voted the way he desired to vote, against the people who are in control of the W. P. A., which was keeping him and his family from starvation, that man would go hungry, and would have to find some other employment.

These people realize that in the State of West Virginia 38,000 persons have asked for and been denied work in the W. P. A., and have been told there is no work for them, and many of them have seen this person and that person who has tried to challenge the authority of the W. P. A. lose his job.

Another man writes:

I have a marked ballot in my possession which one of the W. P. A. boys gave me and can get an affidavit to the effect that he was told to vote accordingly or not report for work Wednesday morning. I talked to dozens of them and in 90 percent of the cases they were eager to vote for Mr. Hiner but had been told that if they voted different from the marked ballots that the clerks would notify their superiors and their vote would not only be void but they would be fired.

Mr. President, this is what happened in the election in the State of West Virginia. When I said they set up the W. P. A. for politics, I did not know how well they could set it up. I did not know how perfect they were in setting it up. They not only did this in the district offices but later they went out into the county offices and then the precinct organizations. Then they gave them all the information possible, so that they could work for the proper people on election day.

They say, "Don't say anything about it. This is election year, and nothing ought to be said." I believe it is our duty, as I said before, to clean up those things. I think it is a disgrace that a person cannot vote as he deems advisable without fear of losing his job, under the control of some ward heeler. I think it is a shame that some ward heeler can come in and threaten a woman who is working to save her children from starvation, and tell her that if she does not vote a certain way she will lose her job.

I condemn that sort of practice. I want to tell the Senators that if they do not think the W. P. A. is a political machine, let them just wait until election time comes around. It is the greatest, best oiled political machine this country has ever seen. That is why those in authority do not want the P. W. A. instead of the W. P. A. The P. W. A. is different. They do not get their checks direct from the Government, even though they may be employed. That is why they are fighting anything that would touch the original plan. They can say, "Boys, we are giving you the jobs. Mr. So-and-So in the county recommended you, and therefore you should follow our dictates." Their slogan is "Vote or starve", and that slogan was used in the primary election in the State of West Virginia.

REGULATION OF COMMODITY EXCHANGES

The Senate resumed the consideration of the bill (H. R. 6772) to amend the Grain Futures Act to prevent and remove obstructions and burdens upon interstate commerce in grains and other commodities by regulating transactions therein on commodity futures exchanges, to limit or abolish short selling, to curb manipulation, and for other purposes.

The PRESIDING OFFICER (Mr. THOMAS of Utah in the chair). The question is on agreeing to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. ROBINSON. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Adams	Clark	King	Radcliffe
Ashurst	Connally	La Follette	Reynolds
Austin	Coolidge	Lewis	Robinson
Bachman	Copeland	Lonergan	Russell
Bailey	Couzens	Long	Schwellenbach
Barkley	Davis	McAdoo	Sheppard
Benson	Donahey	McGill	Shipstead
Bilbo	Duffy	McKellar	Smith
Black	Fletcher	McNary	Steiwer
Bone	Frazier	Maloney	Thomas, Okla.
Borah	George	Metcalf	Thomas, Utah
Brown	Gerry	Minton	Townsend
Bulkley	Gibson	Murphy	Truman
Bulow	Glass	Murray	Tydings
Burke	Guffey	Neely	Vandenberg
Byrd	Hale	Norris	Van Nuys
Byrnes	Hatch	Nye	Wagner
Capper	Hayden	O'Mahoney	Walsh
Caraway	Holt	Overton	Wheeler
Carey	Johnson	Pittman	White
Chavez	Keyes	Pope	

The PRESIDING OFFICER. Eighty-three Senators having answered to their names, a quorum is present.

The question is on the amendment offered by the Senator from South Carolina [Mr. SMITH].

Mr. SMITH. Mr. President, I think it is necessary for me to make an explanation of the amendment. It is not at all out of harmony with the purpose and intent of the bill.

After long experience, those of us who have studied the question closely have been led to a belief in the necessity for limiting the quantity of cotton that any one firm, corporation, or individual may deal in on the exchange within a month, and the aggregate open position, as it is called, for the 6 active months of the year. There are but 6 active months in cotton trading.

It was testified before the Committee on Agriculture and Forestry that one firm at one time held 2,500,000 bales of actual spot cotton, and had hedged both at home and abroad

to that amount, which gave that firm alone a practical monopoly of futures and spot trading. The amendment is proposed in order to check, curtail, and regulate such excesses, which have all the elements of monopoly and the effect thereof, to the point where those who are qualified may stand a chance of having an opportunity to engage in legitimate trading.

The only difference between the amendment and the terms of the bill is that in the amendment we have specified the quantity which may be handled by any one firm for a month or for a year. That means that at no time may what are called open positions be taken, actually to hedge and control more than 100,000 bales. What does that mean in money? It means $6,000,000 of trading in a month and $36,000,000 in the 6 months of active trading. If that is not enough for one individual, what in the name of reason would be? There is not a mill in the country, there is not a single manufacturing establishment, which handles 100,000 bales of cotton a month.

Objection has been made to the amendment on the ground that it may result in limiting the amount a mill may have. What mill is there which spins 600,000 bales of cotton a year? Yet under the terms of the bill a mill would be allowed to hedge in the 6-month period to that total amount. If in any one month in which the 100,000 bales were hedged the 100,000 bales were liquidated, the one engaged in the operation might buy another 100,000 bales in that time. It means that at any one time he might hedge 100,000 bales.

It is said that there has been a great deal of opposition to the amendment. Yes, Mr. President, the opposition has come from those who desire to and who do dominate our cotton market to the point where the small men are actually afraid to send in protests. I have before me not all the telegrams and letters I have received, but typical telegrams and letters from those who have dared to face this great octopus.

As I said, the amendment alone does not interfere with so-called call cotton. If a broker or a mill should decide to deal in call cotton, nothing in the amendment would prohibit such dealing to the extent of the limit of 100,000 bales. There is nothing in the amendment that would limit anyone up to that amount.

The remainder of the amendment—it seems to be somewhat lengthy—simply changes the basis of the present law in reference to the cotton exchange from the tax provision to the interstate-commerce clause of the Constitution. In a decision of the Supreme Court, in the case of Secretary of Agriculture against Olsen, the legality of the constitutionality of regulation of the exchanges was established upon the basis of the commerce clause, and so the remainder of the amendment is to accommodate its provisions to the spirit of the prior act. That is all.

Every Senator who is acquainted with the cotton business knows that the amount specified in my amendment is sufficient, in all conscience, for anyone to deal in in any one month. We are trying to curb monopoly and to restrict the domination of our markets. It is proposed to do it through this bill, but on account of the difference in character between cotton and wheat the limitation on wheat is placed in the discretion of the Secretary of Agriculture. Those of us who have the direct proof of the monopolistic condition under which the market is today operating have placed the limit at a point which practically 90 percent of trade thought was sufficient. Of course, the proposal is being fought by those who testified before the committee that they made $13,000,000 in 6 years through their monopolistic power.

All I am asking of the Senate is to adopt this one restriction in order that a definite limit may be established and that others may have an opportunity to enter the market and not be crowded out, domineered, and controlled by at most three firms.

I have gone along with the committee. I have asked Senators to study this amendment. It was the result of 90 days' investigation; and every legitimate trader in the market is in favor of it. I will guarantee that the telegrams and propaganda that have come here can, to the extent of 90 percent, be traced to one source.

Mr. President, as I have said, the remainder of the amendment proposes to do nothing but change the basis of the law from the tax provision to the interstate-commerce clause of the Constitution. It does not propose to change anything else, but simply accommodates the language to the interstate-commerce clause rather than to the taxing provisions.

Mr. NYE. Mr. President, will the Senator yield?

Mr. SMITH. Yes; I yield.

Mr. NYE. Referring again to the restriction of holdings by an individual, let me inquire if those restrictions would be equally binding upon a cooperative? They would be, would they not?

Mr. SMITH. They would be under the text of the proposal.

Mr. NYE. Does the Senator feel that there is any occasion for an exemption so far as cooperatives are concerned?

Mr. SMITH. I do not believe the cooperatives would ever handle in any one month over 100,000 bales of cotton. I have worked and fought for the cooperatives, as the Senator knows, ever since I have been a Member of the Senate, and I do not want to do anything that would limit their operations, and yet, in exempting them, I do not want to open the door for other abuses.

Mr. NYE. I am wholly unprepared to state what the holdings of cooperatives for any single month may be, but I have been advised that their total holdings have been at times in the neighborhood of or beyond 600,000 bales.

Mr. SMITH. That may be true, and, without too great danger, an amendment might be added to this provision to the effect that it shall not apply to bona-fide cooperatives, as was done just a while ago in a provision affecting cooperative organizations where the words "in good faith" were inserted.

Mr. NYE. I suggest to the Senator that he do that. I think the precaution would be worth while.

Mr. SMITH. So far as I am concerned, I would have no objection to that at all; but I want it understood that they will have to be bona-fide cooperatives, as the Senator from Tennessee [Mr. McKELLAR], I believe, provided in an amendment offered by him a while ago to another provision. I wish to say, however, that somehow or other I cannot exactly understand why the cooperatives should use the future market. But I will not question that. If they will help the farmer and the producer to get control of the market to the extent that they can share in the wealth they produce, I will gladly accept an amendment of that kind.

Mr. McKELLAR. Mr. President, the Senator may accept it, but I wish to say to him that it is going to be fought as vigorously as I know how to fight such an amendment.

Mr. SMITH. I predicated my acceptance upon an amendment offered by the Senator from Tennessee under which cooperative associations of producers must have 75 percent of their membership "bona fide" producers.

Mr. McKELLAR. That was offered and adopted, but I do not think that covers this case. In my judgment, the so-called cooperative, the A. C. C. A., as it is called, is nothing in the world but another cotton merchant; it has not the slightest semblance of cooperation; and I intend, before this bill shall be passed, if any such amendment as that is insisted upon, to give the facts as they have been developed after a hearing which I held in Memphis last year. I intend to let the Senate know what it will be doing if it shall vote a special privilege to this monster cotton-cooperative association which does nothing else in the world but, with the help of the Government, to merchandise cotton against other cotton merchants. I wish to explain to the Senate what the actual facts show, and if the Senator from South Carolina will excuse me, I will give an illustration right here and now.

Mr. SMITH. Let me make a statement first. The Senator need not take his seat, because I will yield to him in a moment.

Mr. President, I am afraid there is a misapprehension that the limit of 100,000 for 1 month means for the year. If I had a hundred thousand bales open in May or March

or October and I liquidated them before that fiscal year was out, I could put another hundred thousand bales in, but I could not have at any one time in any one month exceeding 100,000 bales.

To illustrate, suppose any Member of the Senate were on the market and had a hundred thousand bales each of May, March, July, and October. That would be 400,000 bales. Suppose he were to liquidate three of those months; he could then have another hundred thousand bales in 1 month; so that if he should liquidate his position, that is, sell or buy—and if he were short he would sell—1 month and have no accumulation in any other month, then he could either buy or sell to the amount of a hundred thousand bales, but at no time could he have an outstanding open position of more than 600,000 bales or 100,000 bales in any one month. In the name of reason and conscience that would be enough. Does the Senator understand that?

Mr. NYE. Yes.

Mr. SMITH. Very well. I cannot understand how the cooperatives could ever handle more than 600,000 bales at any one particular time. The minute they liquidate a given month, they could put another hundred thousand in; but it is notorious that some months one firm may buy 500,000 bales and in another month sell 400,000 or 500,000 bales. They buy one month until they put up the price to their advantage, and then sell another month in order to take advantage there. It is known as a "straddle." Not only is that true of the month, but it is true of this market and of any market.

Mr. THOMAS of Oklahoma. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Oklahoma?

Mr. SMITH. I yield.

Mr. THOMAS of Oklahoma. I desire to invite the attention of the chairman of the committee to page 31, line 24, being part of section 13. The section now before the Senate refers to "any one person"; in other words, a limitation is placed upon "any one person either directly or indirectly trading." As I read the language, this limits and applies to the individual trading on the exchange, but in no sense applies to a firm, or an association, or a corporation. I desire to submit an amendment, adding the following words at the end of the section:

Provided, That the term "person" as used in this subdivision shall be construed to mean person, firm, association, or corporation.

Otherwise the section, as I understand it, is meaningless. It limits persons trading to 100,000 bales during the month and to 600,000 bales during the year, but in no sense would it place any limit upon a firm, an association, or a corporation trading, either monthly or yearly.

I ask the chairman of the committee if he will be willing to agree to my interpretation and accept the amendment in the form of a proviso.

Mr. SMITH. Mr. President, I think the Senator's suggestion ought to be incorporated in the bill. The ordinary definition of what constitutes a person is not in the bill. I think it was the intention of all who had to do with the bill that the word "person" should be defined in the way the Senator from Oklahoma has suggested, which is the definition that generally accompanies provisos of this sort.

Mr. THOMAS of Oklahoma. In order to make it definite and certain I submit the amendment and ask consideration for it at this time.

The PRESIDING OFFICER. The Senator from Oklahoma offers an amendment to the amendment of the Senator from South Carolina which will be stated.

The LEGISLATIVE CLERK. In the new print of the bill, in the amendment of the Senator from South Carolina, on page 32, line 24, it is proposed to insert at the end of the line the following proviso:

Provided, That the term "person" as used in this subdivision shall be construed to mean person, firm, association, or corporation.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oklahoma to the amendment of the Senator from South Carolina.

The amendment to the amendment was agreed to.

Mr. THOMAS of Oklahoma subsequently said: Mr. President, earlier this afternoon I offered a suggestion in the form of an amendment to be added at the end of the paragraph at the bottom of page 9 of the new print of the bill. Since offering that amendment and since it was adopted by the Senate I have made further investigation. I find that this section is an amendment to the Grain Futures Act. By checking with the Grain Futures Act I find in section 2 the term "person" is defined, and is defined in the original act in a broader way than I defined it in my amendment. I desire to read paragraph (a) of section 2 of the original law:

The word "person" shall be construed to cover the plural or singular, and shall include individuals, associations, partnerships, corporations, and trusts.

Mr. President, the definition in the original act is broader than in the amendment suggested by myself. In order that the broader definition may prevail and that there may be no misunderstanding, I ask unanimous consent that the vote by which my amendment to the amendment on page 9 of the new print of the bill may be reconsidered.

The PRESIDING OFFICER. Is there objection to the reconsideration of the vote by which the amendment of the Senator from Oklahoma to the committee amendment on page 9 was agreed to? The Chair hears none, and the vote is reconsidered.

Mr. THOMAS of Oklahoma. I now withdraw the amendment to which reference has just been made.

The PRESIDING OFFICER. The amendment of the Senator from Oklahoma is withdrawn. The question is on agreeing to the amendment as amended.

The amendment as amended was agreed to.

Mr. WHITE. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Maine?

Mr. SMITH. I yield.

Mr. WHITE. I have just received a telegram which states that almost in the first line there are three new amendments to the cotton-exchange features of the bill now before the Senate. Are there three amendments other than the amendments which appear in the print of the bill?

Mr. SMITH. They have all been acted upon. They were minor, because they did not affect the bill very materially. One of them was a question of terminology as to cross sales in the interest of the brokers on the exchange. I think that is about the only one that really affected the market. There was another providing that the exchanges should have the right to expel a member under the new set-up of the Grain Exchange Act. I withdrew that because of the fact that it might have given them an arbitrary power after the Secretary had given them a license to trade.

Mr. WHITE. What was the third amendment?

Mr. SMITH. The Senator has the third amendment in his hand now.

Mr. WHITE. That is the amendment which appears in the bill?

Mr. SMITH. Yes, in the last part of the bill.

Mr. ROBINSON. Mr. President, recently, but not since the bill was brought forward for consideration, there was discussion of an amendment which was said to have the effect of abolishing what is known as southern delivery. Has that amendment been abandoned?

Mr. SMITH. It has been abandoned. It is not in the bill, nor is there any reference to what is known as call cotton. We contented ourselves with the idea that this monopolistic thing was enough and that if we could get that taken care of we would take our chances with the balance of it.

Mr. ROBINSON. With respect to the amendment now under consideration, the one imposing a limitation of 100,000 bales per month or 600,000 bales per year on both speculative and hedging transactions, under the Grain Futures Act there is no limitation on hedging at all, I understand.

Mr. SMITH. No; that was to take care of the cooperatives directly. May I explain to the Senator from Arkansas that if that provision should remain in the pending bill, then all of our efforts to curb the enormous amount of actual cotton and hedges that any one firm could have would be abortive.

Mr. ROBINSON. What is the object of imposing a limitation on hedging transactions?

Mr. SMITH. Enough wheat was actually bought and enough contracts sold against it to demoralize and destroy the market. It is a notorious fact that two concerns in the cotton trade had enough spot and enough hedges to take up nearly 40 percent of the entire cotton crop. The consequence was that nobody else need apply. They were dominating the market, just like the steel people had all the steel and the oil people had all the oil. The consequence was that they dictated the terms of the market to everyone. This is an effort to curb the monopoly of the cotton market through the purchase of the actual cotton and through the hedging consequently.

Mr. ROBINSON. If there were no cotton that could be bought or sold outside of the cotton that is bought and sold by the large dealers to whom the Senator has referred, I would understand that statement. But I do not see that anyone should be prevented from buying cotton and hedging the transaction. I do not see—at least, it has not been made clear to me—why the buying or the hedging should be restricted.

Mr. SMITH. We have already adopted the limitation which shall be imposed by the Secretary of Agriculture, not only by the month but by the day. We have provided that at his discretion he shall limit the amount that any one individual or corporation or concern may have. We have made this liberal for the reason that we thought perhaps it would be almost unlimited in a way if they should liquidate their positions; that is, really buy and sell, but not monopolize the market.

Mr. COPELAND. Mr. President, if the Senator will yield, what effect will this amendment have upon the exchanges? I have in my hand a telegram from a member of the New York Cotton Exchange protesting against this amendment, which limits legitimate hedging.

Mr. SMITH. Yes, sir; that is, so-called legitimate hedging; and the whole bill limits it. If this provision is left in the bill and the bill passes, the Secretary may bring down the amount to 50,000 bales, if he sees fit.

Mr. COPELAND. I ask unanimous consent to have printed in the RECORD two or three of these telegrams.

The PRESIDING OFFICER. Without objection, it is so ordered.

The telegrams are as follows:

NEW YORK, N. Y., *May 25, 1936.*

United States Senator ROYAL S. COPELAND:

My firm, Dyer, Hudson & Co., are members of New York Cotton Exchange. We earnestly ask that you vote against Senator SMITH's amendment to commodity exchange control bill, which limits legitimate hedging.

R. V. WHITE.

NEW YORK, N. Y., *May 25, 1936.*

Senator ROYAL S. COPELAND:

Earnestly urge you support Smith cotton amendments to commodity exchange bill. It means a broader market for the farmer.

J. L. JULIAN.

NEW YORK, N. Y., *May 25, 1936.*

Senator ROYAL S. COPELAND:

Will greatly appreciate your support of Senator SMITH's cotton amendments to commodity bill, as believe they are constructive. Will greatly benefit the cotton exchange, the cotton and textile trade, and the producer.

W. S. R. BEANE.

NEW YORK, N. Y., *May 25, 1936.*

Senator ROYAL S. COPELAND,
United States Senate:

Suggest you support the Smith amendments to the commodity bill, as result will broaden the cotton market and bring about higher prices for the farmer.

W. N. SCHILL.

POUGHKEEPSIE, N. Y., *May 11, 1936.*

Senator ROYAL S. COPELAND:

Speaking for 1,000 farmer members of the Mid-Hudson Cooperative G. L. F. Egg Auction, we urgently request your support in the opposition of striking out eggs from the commodity exchanges bill.

MID-HUDSON COOPERATIVE G. L. F. EGG AUCTION,
H. W. BERMENDER.

BUFFALO, N. Y., *May 13, 1936.*

Senator ROYAL S. COPELAND,
Senate Office Building:

Several hundred poultry producers in western New York shipping eggs to their cooperative egg auction are of the opinion that eggs should be included in H. R. 6772. We sincerely hope that you may see your way clear to use your influence toward this end.

CHARLES H. WILLIAMS, *Chairman.*

NEW YORK, N. Y., *May 18, 1936.*

Senator ROYAL S. COPELAND,
Care United States Senate, Washington, D. C.:

I believe that the new amendments the commodities exchange control bill H. R. 6772 will restrict the free movement of our cotton crops and undoubtedly add to the cost of handling, and will therefore be detrimental to interests of both consumer and producer. I urge you to oppose these new Smith amendments and insist that cotton be reinserted as a commodity subject only to original resolution.

JOHN J. SAMPLE.

NEW YORK, N. Y., *May 18, 1936.*

Hon. ROYAL S. COPELAND:

In my opinion the new amendments proposed by Senator SMITH to H. R. 6772, the commodities exchange control bill, would restrict the free movement of the cotton crop, at times adding to the cost of handling, and is therefore detrimental to interests of both producer and consumer. I urge that you oppose the new Smith amendments and insist that cotton be reinserted as a commodity subject to the provisions of the original resolution.

WILLIAM C. POTTER.

HOBART, N. Y., *May 11, 1936.*

Senator ROYAL S. COPELAND,
Washington, D. C.:

On behalf of the organized poultrymen of New York State I am respectfully requesting that you use all possible influence to oppose the striking out of eggs from the commodity exchange bill now pending. This protection is needed, and your efforts will be appreciated by all members of our State-wide organization.

WALLACE H. RICH,
President, New York State Cooperative,
Official Poultry Breeders, Inc.

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the RECORD telegrams coming from the exchanges and from individuals.

The PRESIDING OFFICER. Without objection, it is so ordered.

The telegrams are as follows:

MEMPHIS, TENN., *May 20, 1936.*

Senator E. D. SMITH,
Chairman of the Senate Agricultural Committee,
Washington, D. C.:

We approve and highly recommend your amendments to the commodity exchange bill, and honestly believe it will do the greatest good for the greatest number.

Frierson & Co., Inc., Memphis, Tenn.; Horace B. White & Co., Memphis, Tenn.; Wm. Hulsey & Co., Memphis, Tenn.; M. E. Hill & Co., Memphis, Tenn.; Austin Bros., Memphis, Tenn.; C. E. Tucker & Co., Memphis, Tenn.; J. Dickens, Memphis, Tenn.; Alex Bernstein, Memphis, Tenn.; Barnwell & Hays, Memphis, Tenn.; Lacy Bros., Memphis, Tenn.; Dairymple Cotton Co., Memphis, Tenn.; C. M. Owen & Co., Little Rock, Ark.; S. R. Nichols, Desark, Ark.; Henry Walkins & Son, Hope, Ark.; J. E. Atkins, Fort Smith, Ark.; Lipscomb & Vaughan, Henning, Tenn.; Ashley Downing, Dyersburg, Tenn.; Rosedale Cotton Co., Memphis, Tenn.

NORFOLK, VA., *May 15, 1936.*

Hon. ELLISON D. SMITH,
Chairman, Senate Agricultural Committee,
Senate Office Building, Washington, D. C.:

We, the undersigned, urgently request that the commodity exchange bill be amended with suitable, sane, and binding legislation for strict Government regulation of all cotton future exchanges. We not only urge this for the protection of ourselves as merchants but for the protection as well of the southern cotton grower to prevent any further exploitation and raids on the price of cotton by manipulations of the future markets which we consider has been proven beyond a shadow of doubt as a result of

recent investigation of cotton business by the Senate Agricultural Committee.

HUNTER A. HOGAN,
RALPH K. DAWSON.
T. RALPH JONES.

DALLAS, TEX., *May 17, 1936.*

Hon. ELLISON D. SMITH,
United States Senate, Washington, D. C.:

As the owner and operator of several Texas cotton farms, I wish to express to you my hearty appreciation and endorsement of your amendments to the commodity exchange bill now before Congress. I am today wiring the President, Secretary Wallace, and both Texas Senators to this effect.

Best regards,

EUGENE BRAGG SMITH.

DALLAS, TEX., *May 20, 1936.*

Senator ELLISON D. SMITH,
Senate Office Building, Washington, D. C.:

Greatly in favor your amendments to the commodity exchange bill, as we think this only salvation to producers and small cotton buyers; also should restore confidence in cotton market.

L. T. Robertson, W. H. Hammond, A. C. Musgrove, W. R. Rutland, A. C. Russell, Harry P. Savage, Lee Skaggs, J. C. Spittlehouse, Harold Cole, L. C. Davis.

GREENWOOD, MISS., *May 20, 1936.*

Senator ELLISON D. SMITH,
United States Senate Office Building:

We emphatically endorse your cotton amendments to the commodity exchange bill as the only cure and salvation for the smaller buyer and merchant who are faced continuously with harrassing by several larger firms.

GREGROY CUMMINGS COTTON CO.

OKLAHOMA CITY, OKLA., *May 21, 1936.*

The Honorable Senator ELLISON D. SMITH,
Washington, D. C.:

We, the undersigned, favor your amendments to the commodity exchange bill.

Guthrie Cotton Oil Co., of Guthrie, Okla.; Anadarko Cotton Oil Co., of Anadarko, Okla.; Lyon Gin Co., of Geary, Okla.; A. G. Powers and Keith Miller and Bob Loveless and Porter Windaham and Gen Dumas and Quint Warren and Edward O'Brien and Harold Cook and Harold O'Brien, of Chickasha, Okla., and Oklahoma City.

The above ginning companies and handlers of cotton represent and handle about 50,000 bales cotton for many hundred farmer customers. Thanks.

HOBART, OKLA., *May 21, 1936.*

Hon. ELLISON D. SMITH,
United States Senate, Washington, D. C.:

Strongly favor Smith amendments to commodity exchange bill. Believe their enactment prove beneficial very large majority cotton trade.

W. E. LAMPKIN.

NEW YORK, N. Y., *May 19, 1936.*

Senator ELLISON D. SMITH,
Senate Agriculture Committee:

In all history there is no record of permanent settlement of a fundamental issue behind closed doors. Your amendments strictly enforced bespeak life, liberty, and pursuit of happiness for the entire South, as well as the cotton farmers. Nothing is ever settled until it is settled right.

WILLIAM LOWNDES WALTHOUR.

BRENHAM, TEX., *May 22, 1936.*

Senator ELLISON D. SMITH,
Washington, D. C.:

We highly endorse your amendments to commodity exchange bill.

Willie Henske, Kenney, Tex.; Carl E. Schaer, Sealy, Tex.; Joe Cherkas, Sealy, Tex.; J. Will Tate, Giddings, Tex.; W. H. Werchan, Gayhill, Tex.; Ed Schmidt, Brenham, Tex.; W. A. Weimann.

CORSICANA, TEX., *May 21, 1936.*

Senator ELLISON D. SMITH,
United States Senate:

We favor your amendments to commodity exchange bill as think will go a long ways in restoring confidence in cotton market.

D. POINDEXTER.
LOUIS SHWARTS.

DALLAS, TEX., *May 16, 1936.*

Senator ELLISON D. SMITH:

Your many friends here favor your amendments to commodity bill.

LEWIS P. GRINNAN.

SWEETWATER, TEX., *May 24, 1936.*

Senator ELLISON D. SMITH,
Washington, D. C.:

We favor strongly your amendment to commodity exchange bill, and hope that you can have the united support of all Senators in its passage.

DR. JAMES T. MCKISSICK.

SAN ANTONIO, TEX., *May 20, 1936.*

Senator ELLISON D. SMITH:

I am heartily in favor of the passage of your bill, H. R. 6772, as no doubt this bill, after enactment, will aid greatly in the stabilization of farm products such as cotton and grain, because it will eliminate the rank manipulation that has been allowed to stifle all cotton and grain interests which has been carried on by one or two large concerns who have taken advantage in creating such tactics.

J. SELIGMANN.

SWEETWATER, TEX., *May 24, 1936.*

Senator ELLISON D. SMITH,
Washington, D. C.:

Your amendment to the commodity exchange bill finds very favorable comment, and all feel that its adoption will go far toward restoring confidence in the cotton market, and will allow the small operators a more even break with the larger interests. I feel that you should have the full support in your efforts at passage.

MILLARD L. COPE, *Publisher.*

TERRELL, TEX., *May 21, 1936.*

Hon. ELLISON D. SMITH:

Your amendments to commodity exchange bill is favored by big majority, and will restore confidence in cotton market.

W. P. ALLEN.

SULPHUR SPRINGS, TEX., *May 21, 1936.*

Senator ELLISON D. SMITH:

Heartily in favor of your amendments to commodity exchange bill.

W. C. PAYNE.

SWEETWATER, TEX., *May 24, 1936.*

Senator ELLISON D. SMITH,
Washington, D. C.:

Farmers and merchants of this area are in full support of your amendments to the commodity exchange bill.

W. R. JOHNSON.

SWEETWATER, TEX., *May 24, 1936.*

Senator ELLISON D. SMITH,
Washington, D. C.:

We feel that your amendments to the commodity exchange bill will be the salvation of the small merchant and should have the support of all who have a vote in its passage.

S. LELAND GLASS.

TERRELL, TEX., *May 21, 1936.*

Hon. ELLISON D. SMITH:

Your many friends this section favor your amendments to commodity exchange bill.

W. H. MURPHY.

THE JOE TOM WOOD WAREHOUSE,
By JOE T. WOOD.

SULPHUR SPRINGS, TEX., *May 21, 1936.*

Senator ELLISON D. SMITH:

Favor your amendments commodity exchange bill; helps small cotton men.

MANN WOOD.

Mr. ROBINSON. Mr. President, I have a number of telegrams advocating the Smith amendments, and about an equal number, or more, opposing the Smith amendments. Nearly all the telegrams I have received are from persons whom I know, and it is amazing to take note how radically different are the viewpoints of the authors of these telegrams. One group insists that the adoption of the Smith amendments means the ruin of the cotton trade, and the other group insists that the adoption of the Smith amendments means the betterment of the cotton trade.

I do not know how it happens that there can be such marked diversity of opinion on a subject of this character. The viewpoints are so radically and notably different that it makes one wonder whether the opinions of the authors of the telegrams are to be relied on as helpful.

Mr. WALSH. Mr. President, will the Senator yield?

Mr. ROBINSON. I yield to the Senator from Massachusetts.

Mr. WALSH. Mr. President, I have had the same experience. I made an investigation, and I find that nearly all the telegrams I have received in opposition to the Smith amendments were instigated by a few dealers whom this bill is directed against, on the theory that they constitute a monopoly.

While the opposition to the amendments at first impressed me very much, I found upon analysis that it had been promoted by the few large brokers, who, at times, it is alleged, have controlled 35 or 40 percent of all the spot cotton and the cotton on the exchanges. I understand that there are about 3,000 other brokers who are in favor of the Smith amendments.

I will say to the Senator from Arkansas that I have found, from my own inquiries—and my position on the bill has changed upon investigation—that most of the telegrams in opposition to the amendments have been instigated by the groups whom the amendments seek to check from possible attempts to control the cotton market.

Mr. SMITH. I do think the Senator is correct, and I think if other Senators would use the same diligence they would find the same facts.

Mr. COPELAND. Mr. President——

Mr. WALSH. Permit me to say to the Senator from Arkansas, furthermore, that two of the proposals which the original senders of the telegrams opposed have been removed by the pending amendment; and there is now only one objection, the very one we are now discussing. When some of these telegrams were sent they were protests against three proposed amendments; but we are now dealing with only one amendment that they are protesting against; all the other objectional amendments having been rejected by the committee and not now before the Senate.

Mr. ROBINSON. Mr. President, in connection with my remarks on the subject, I am going to have printed in the RECORD the telegrams to which I have referred. There is a considerable number of them, but they are not so numerous that they will very greatly encumber the RECORD. I can understand how one interested in the subject matter of legislation may prompt others to send a message to a representative in Congress urging a viewpoint touching proposed legislation.

There are other telegrams on the same subject in my office. I have not them at hand, and I shall not, therefore, ask to have them published in the RECORD; but, as illustrative of how good people may differ about a proposition, I request that these telegrams be printed in the RECORD. Some of them say that the adoption of the amendments will simply ruin the cotton trade of the South. Others declare that the adoption of the amendments is necessary for the protection of every interest that mortal man should hold dear.

The PRESIDING OFFICER. Without objection, the telegrams referred to by the Senator from Arkansas will be printed in the RECORD.

The telegrams are as follows:

LITTLE ROCK, ARK., *May 26, 1936.*

Senator JOE T. ROBINSON,
Senate Office Building:

Senator SMITH's amendments to commodity exchange bill introduced Monday are objectionable to the cotton trade wherein cooperative associations are eliminated from on-call sales restrictions. See MCKELLAR's report on cooperatives. Increase margin requirements are also much opposed.

W. S. TURNER,
Secretary Arkansas Cotton Trade Association.

LITTLE ROCK, ARK., *May 26, 1936.*

Senator JOE T. ROBINSON,
Senate Office Building:

Senator SMITH Monday introduced amendments to the commodity exchange bill which are objectionable to cotton trade. Increased margin requirements are much opposed. Elimination of cooperatives from on-call sales objectionable. McKellar investigation shows they are merchants and dealers in cotton not representing the farmer. I strongly urge your vote against amendments.

W. A. THOMPSON.

FORDYCE, ARK., *May 26, 1936.*

Senator JOE T. ROBINSON:

Friend in Bank of New York & Trust Co. solicit that you see personally telegram sent you this morning by Perry E. Moore regarding commodity exchange bill. Thank you.

A. B. BANKS.

NEW YORK, N. Y., *May 26, 1936.*

Senator JOSEPH T. ROBINSON,
Senate Office Building:

(Personal.)

This is in reference to commodity exchange bill (H. R. 6772) and Smith amendments and is important and should be given your immediate earnest consideration. How can you in any way justify placing cotton, the South's greatest commodity and the country's greatest export commodity, under legislation designed entirely for grain trade, and how can you justify regulation and administration of the product of your farmers' labors by grain administrators who are entirely unfamiliar with cotton problems and problems of the South? The present Secretary of Agriculture is a grain man and naturally favors the commodity exchange bill. This bill gives Secretary of Agriculture blanket powers, but what assurance have you that at some future date we may not have a Secretary who will be hostile to southern cotton producers, and then how will these discretionary powers work out? Think it important that you and your associates have cotton deleted from this bill and vote down Smith amendments, as this legislation destroys the buying power afforded to the farmers and so restricts their outlets and markets that low prices are inevitable to them. How can you justify your position to your constituents in view of the above facts?

PERRY E. MOORE.

FORREST CITY, ARK., *May 26, 1936.*

Senator JOE T. ROBINSON:

Senator SMITH's new amendments to the commodities exchange control bill practically same as his previous amendments. We consider them as dangerous and strongly oppose same.

RAY F. PRICE,
L. R. MULLIKIN.

BLYTHEVILLE, ARK., *May 25, 1936.*

Senator JOE T. ROBINSON,
Washington, D. C.:

Notice H. R. 6772 up today in the Senate; new amendments proposed by Senator SMITH against the best interest of the cotton farmer and cotton merchant. Solicit your opposition to these amendments.

JESSIE TAYLOR.

BLYTHEVILLE, ARK., *May 25, 1936.*

Senator JOE T. ROBINSON,
Washington, D. C.:

Notice H. R. 6772 up today in the Senate; new amendments proposed by Senator SMITH against the best interest of the cotton farmer and cotton merchant. Solicit your opposition to these amendments.

H. J. HALL.

BLYTHEVILLE, ARK., *May 25, 1936.*

Senator JOE T. ROBINSON,
Washington, D. C.:

Notice H. R. 6772 up today in the Senate; new amendments proposed by Senator SMITH against the best interest of the cotton farmer and cotton merchant. Solicit your opposition to these amendments.

J. H. CRANE.

MEMPHIS, TENN., *May 25, 1936.*

Senator JOE T. ROBINSON,
Care of J. R. Brewer, 1722 Nineteenth Street, Apartment 615, Washington, D. C.:

My wire of today is regarding today's amendments of Senator SMITH. They are the same amendments he has been talking about all the time, though they may have on different dresses, and the protests various Senators have received surely apply to them just as much as when their verbiage was different; though understand he says nobody can have received protests, for they are new and any wires received before today consequently out of order. Your remarks that unfortunate to bring them in at such a late date surely true. Hope you can kill them. Regards.

SID Y. WEST.

CAMDEN, ARK., *May 25, 1936.*

Senator JOE T. ROBINSON,
Washington, D. C.:

We, the Camden Chamber of Commerce, wish to register violent opposition to Smith amendment to commodity control bill, which we consider highly discriminatory; is obviously aimed at Anderson Clayton Cotton Co. This company is of great value to all south Arkansas in providing cotton market. This company has best facilities for handling South's export cotton. Why penalize them when we need their facilities and ability to sell American cotton abroad? We enjoy navigation on Ouachita because of cotton movement of Anderson Clayton. We urgently request your active opposition to Smith amendment.

CAMDEN CHAMBER OF COMMERCE,
S. D. HOLLAND, *Manager.*

BALDKNOB, ARK., *May 26, 1936.*

Hon. JOE T. ROBINSON,
United States Senator, Washington, D. C.:

New amendment proposed by Senator SMITH, House bill 6772, very objectionable to cotton trade, detrimental to producers. Hope you will oppose and vote against it.

B. L. OLIVER.
CUL L. PEARCE.
R. G. DEENER.
R. H. DEENER.
L. A. PRYOR.
J. E. LIGHTLE.
HUBERT SMITH.
JOHN CROCKETT.

DARDANELLE, ARK., *May 26, 1936.*

Senator JOE T. ROBINSON,
United States Senate:

Use influence defeat amendment H. R. 6772, proposed by SMITH yesterday.

F. D. MAJORS.

RUSSELLVILLE, ARK., *May 26, 1936.*

Senator JOE T. ROBINSON,
United States Senate:

Please use your influence and vote to defeat new amendment H. R. 6772 as proposed by Senator SMITH Monday.

C. R. LINTOR.

LITTLE ROCK, ARK., *May 25, 1936.*

Senator JOE T. ROBINSON:

Will appreciate your support of Smith amendment to cotton bill.

W. L. MAGNESS.
H. WORLEY.
J. B. HILZHEIM.

LITTLE ROCK, ARK., *May 25, 1936.*

Hon. JOE T. ROBINSON,
United States Senator:

Trust you will support and vote for Smith amendments commodity exchange bill.

R. A. POWELL.

LITTLE ROCK, ARK., *May 25, 1936.*

Senator JOE T. ROBINSON:

For the benefit of cotton producer as well as cotton trade, appreciate your support of Smith amendment.

OLIVER O. SCROGGIN.

LITTLE ROCK, ARK., *May 25, 1936.*

Senator JOE T. ROBINSON:

Believing passage of cotton bill with Smith amendment will be beneficial, entire cotton industry urgently ask your support.

LEO HAMBURG.

LITTLE ROCK, ARK., *May 25, 1936.*

Hon. JOE T. ROBINSON,
United States Senator:

Please use your influence favor Smith amendments commodity exchange bill. Will consider it personal favor.

LUCIEN E. FARRELL.

LITTLE ROCK, ARK., *May 25, 1936.*

Hon. JOE T. ROBINSON,
United States Senator:

Your influence in favor Smith amendments commodity exchange bill will be appreciated.

CHAS. L. HOLLOWELL.
JOE MILLER.

Mr. COPELAND and Mr. SHEPPARD addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Arkansas yield; and if so, to whom?

Mr. ROBINSON. I yield first to the Senator from New York.

Mr. COPELAND. Mr. President, I should like to say to the Senator from Arkansas that I am not so much disturbed about the telegrams, because I have had the same experience—I have received a great many one way, and a great many the other way—but what disturbs me is that I find, in conversation with Senators on the floor of the Senate, that almost with one accord they say they do not know what the bill is about.

Mr. SMITH. Does the Senator mean the whole bill?

Mr. COPELAND. The whole bill. Now, that may be our fault; but here we are, at the end of the session, crowded with work, anxious to get away, and a bill is brought before us that is so important that, as the Senator from Arkansas says, one group assert that the future of the Nation depends upon its passage, and the other group assert that if it shall be passed the Nation will go to the bow-wows. My contention is that we are not well enough informed to pass judgment upon the bill.

Mr. WALSH. Mr. President, I was not informed on the subject until I gave it some study; and I must frankly say that at first the bombardment of telegrams that I received directed me toward favoring the opposition to the amendments, and in opposition to the position of the Senator from South Carolina. When I analyzed the amendments, however, and found out their purpose and objective, I came to the conclusion that they ought to be approved, that they are reasonable amendments and in the public interest.

Mr. CONNALLY. Mr. President, the Senator has explained his reaction to the telegrams he received from those who originally opposed the amendments, and said he had a large number of telegrams from other interests favoring them.

Mr. WALSH. But most of my telegrams have been in opposition. Nearly all of them have been in opposition.

Mr. CONNALLY. Would the Senator mind stating what the other class of people were who favored the amendments?

Mr. WALSH. I should say that about 9 out of 10 telegrams I have received have been in opposition to the amendments; but I have talked to people who have made a study of the bill, and I find that most of them, and particularly some who represent what I may call the independents, the small brokers—there are 3,000 of them—are for the amendments. As I understand this amendment, this one

and some of the others are an attempt to give the small, independent companies a chance to do business on the exchange, and to sell spot cotton, and not to let two or three who have control of the market, and who at one time controlled 30 percent of all the cotton in the country, monopolize the cotton business.

Mr. SMITH. Why, certainly. The purpose and object of the whole bill is to give a free, open market, without the whole business being concentrated in a few hands.

Mr. WALSH. I come from a section of the country where it is desired to have a free sale of cotton, and to have as few barriers as possible, and where cotton is processed into textiles; and I certainly should not favor these amendments if I were not convinced that they are sound and helpful to the producer of cotton, helpful to the manufacturer, and helpful to the broker who is honest and does not want a monopoly.

Mr. COPELAND. Mr. President, I will say that I was called from the floor a little while ago by one of the independents spoken of by the Senator from Massachusetts.

Mr. CONNALLY. Independent of what?

Mr. SMITH. Independent of these three big concerns.

Mr. CONNALLY. I wish to know whether the Senator means a spinner, a broker, a merchant, or a cotton grower.

Mr. COPELAND. A broker. He gave me the same impression that the Senator from Massachusetts has expressed—that the small dealer, the small man, is for the bill, and the big one is against it. Now we have to choose between the big ones and the little ones, and, in my judgment, we are not prepared to do so.

Mr. WHITE. Mr. President, this question as to big and little people prompts me to go on and read a bit more from the telegram to which I made reference a moment ago. I may say that this is a telegram from Boston. The entire telegram is as follows. I will omit the signature:

> Understand three new amendments cotton commodity exchange regulation bill now before Senate. Proposed stringent limitations will, in my honest opinion, prove harmful to all manufacturing concerns, large merchants, and producers.
>
> Protect manufacturer from rising costs of operation unless definite benefits accrue to others. From study of amendments, unable to see benefits to anyone except New York brokerage houses.

Mr. SMITH. It does not affect them at all. What has New York to do with it?

Mr. WHITE. That is what I do not know. Like the Senator from Massachusetts, I have received a great many telegrams, most of the senders insisting that I oppose these cotton amendments; but in no instance have I had a clear explanation as to how the amendments would adversely affect the cotton industry of New England. I have received some telegrams, at least one or two, urging me to support the amendments. I am in a hopeless state of confusion as to what one desirous of being of assistance to an industry of his section, and having due regard to all other interests, ought to do.

Mr. SMITH. Mr. President, let me explain to the Senator that the present monopolistic arrangement puts into the hands of a few the power to dictate the terms upon which the mills and all others have to trade in cotton. I do not want to go into personalities and minute details, but if my colleagues will excuse the personal allusion, my whole living has depended upon the cotton fields of my plantation, outside of the salary I receive as Senator. I have had opportunity not only to grow cotton but to handle it for a farm organization, both for export and on the import side. I think I know the cotton business from beginning to end, and the New England States have petitioned me to see that they get some cotton stored there, and they did not get it. Just follow that out.

I have devoted my whole political life to cotton, and it is a matter of tremendous importance, and I state here today, as one man in the Senate who has devoted his life to cotton, that the hope of the mills, and the hope of the farmers, the hope of the small dealers and of the small cotton merchants lies in this limitation. I make this statement as the result of a lifetime study of this question.

Mr. WHITE. Then, the Senator is in complete disagreement with the manufacturers of New England who think the proposed action would be harmful to them.

Mr. SMITH. Yes; I think they are laboring under a misapprehension.

Mr. WALSH. Mr. President let us consider this matter from the very foundation. I have a letter stating the objections to the amendments originally presented by the Senator. They are three:

> 1. The abolition of southern delivery.

That is out, as I understand. It was originally proposed but it is not now included in the committee amendments?

Mr. SMITH. It is not in now.

Mr. WALSH. The second objection is:

> Arbitrary statutory limitations upon the amount of business that might be handled by any one cotton firm.

That is covered in the amendment now pending before the Senate?

Mr. SMITH. That is correct.

Mr. WALSH. The third objection is:

> The abolition or restriction of buying and selling cotton "on call."

That is not included. That has been removed by the committee, and there is no amendment dealing with that?

Mr. SMITH. The Senator is correct.

Mr. WALSH. So that two-thirds of the objections mentioned in this letter have been met. Am I correct?

Mr. SMITH. The Senator is correct.

Mr. WALSH. There is one objection about which this correspondent and several others have written, which is involved in the amendment now pending. The committee, in its investigation, found that two or three of the large brokers, or possibly four, so manipulated the market that they controlled 35 or 40 percent of spot cotton and of cotton credits on the exchange, which the committee found to be detrimental to the producer, detrimental to the manufacturer, and detrimental to the small broker; and the committee seeks to put this limitation into the bill in order to curb what they think is an abuse in the hands of a few people who control the business on the cotton exchange.

Mr. SMITH. That is correct.

Mr. WALSH. That is all there is to the pending amendment. I understand that the other amendments are largely administrative amendments by which the administrators of this law seek to correct some of the abuses which exist. Only one objection is left so far as I understand the original protests.

Mr. WHITE. Mr. President, will the Senator from Massachusetts yield?

Mr. WALSH. I yield.

Mr. WHITE. Is it to be understood, from what the Senator says, that the pending amendment will give to the cotton manufacturers in New England an opportunity to purchase in a free market?

Mr. WALSH. Yes.

Mr. WHITE. As against a restricted market?

Mr. WALSH. Absolutely.

Mr. SMITH. Absolutely free. Anyone may buy, and one can deal with whom he pleases.

Mr. WALSH. I expect that if we asked the manufacturers of New England what they thought of this amendment those who were customers of the concerns against which this amendment is aimed would protest. I find that all the independents, all the small-business men, think this change will mean a freer market. It is just the same as with grain.

Mr. SMITH. Precisely the same.

Mr. WALSH. Why did we pass a law for the regulation of the grain exchange? It was to prevent the grain of the country being controlled on the exchange by two or three people. Is that not correct?

Mr. SMITH. That is correct.

Mr. CONNALLY. Mr. President, that is already the law. Cotton has been included along with grain, but this amendment makes an exception as to cotton—takes it out of the measure regulating grain.

Mr. SMITH. Oh, no.

Mr. CONNALLY. There is no occasion for amending a law which is already on the books unless we expect to change it.

Mr. WALSH. Mr. President, we had before us for a few days the Federal Trade Commission bill, designed to fill up gaps in that law. The Commission pointed out abuses which had grown up, and they desired to have additional power. We had before us yesterday a bill along the same line. The bill before us now has practically the same object. The Department of Agriculture found that in the administration of the grain-futures law there were certain abuses, that efforts had been made to get around the original law, and, as I understand it, the pending bill is designed to curb what the Department of Agriculture believes to be growing abuses.

Mr. CONNALLY. Mr. President, the Senator says the Department of Agriculture found that there were abuses. The particular amendment before us provides for the limitation of hedging operations. This is what the Secretary says about that:

> The Department has definitely approved the limitation of speculative accounts, but it does not favor limiting legitimate hedging.

And that is what the amendment proposes to do.

Mr. WALSH. Perhaps I should not have said the Department of Agriculture, but I understood the committee of the Senate investigated this very question. Did it or did it not?

Mr. SMITH. It did.

Mr. WALSH. Did the committee unanimously agree that there were abuses?

Mr. SMITH. Yes.

Mr. WALSH. And the committee reported this amendment to correct one of those abuses?

Mr. SMITH. We did. Now, let me explain this "legitimate hedging." That was incorporated in the bill to take care of cooperatives. What is legitimate hedging? Suppose I had money enough to go out on the market and buy up the entire cotton crop, and then, if I saw fit, hedge it. That would be legitimate hedging. The abuse came because of the extent to which it went, just as in the grain trade.

If one gets money enough and corners the cotton market and then insures it with the hedges, he has the cotton market, both on the speculative side and on the spot side. There is legitimate hedging, and the provision as to that was inserted in the bill for the purpose of taking care of the cooperatives.

Mr. SHEPPARD. Mr. President, I desire to ask the Senator from South Carolina to comment upon the position of the Department of Agriculture in this matter. The Department says:

> The objections to this amendment are:
> 1. It would in effect destroy the cotton cooperatives, because the limits are so small that their growth would be so limited that they could not successfully operate. This would be the most important factor in the market, and the producers of cotton would suffer.
> 2. It would unnecessarily limit legitimate trading particularly when one considers both foreign and domestic markets.
> The Farm Credit Administration has loaned many millions of dollars to the cooperatives, and have invested in facilities. This would seriously jeopardize the interests of the Government in these associations.

I think it is both fair and helpful to state the position of the Department of Agriculture at this time, and I should like to have my colleague from South Carolina comment upon these objections.

Mr. SMITH. Mr. President, as I said a moment ago, I could see the necessity for such action if the farmers themselves were handling their cotton, but I never could understand how they could pool their cotton for better prices and then hedge it, for the minute the cotton is hedged the price is frozen until the hedge is lifted.

Suppose today you desire to buy 1,000 bales of cotton. You are in the cotton business. A seller desired to sell the cotton to you, and you bought it. The New York and the New Orleans exchanges are always open and ready to take the risk. Suppose you pay 10 cents a pound for the cotton and the seller brings you the cotton. Immediately you sell a thousand bales at the same price in New York. Now your cotton is hedged.

Let us see how nicely it works. If cotton goes up a cent a pound, you have sold in New York at 10 cents a pound, and it is now 11 cents. You sell your spots at 11 cents and take the $5 extra and send it to New York to make payment there. Let us say that cotton goes down a cent a pound, or $5 a bale. It has been bought in New York at 10 cents a pound; you can sell yours at 9 cents a pound, and the New York firm sends you $5. It is an insurance of the price, and that is called hedging. However, a large concern may pick off its hedges at any minute. It may sell its cotton and transfer its hedges, as was done in the case referred to with respect to pool cotton. In that case the pool representative sold the farmers' cotton and got the money. He bought a like amount on New York. That was not hedging. That was pure speculation. He had disposed of the spots and bought the futures.

Mr. WALSH. Mr. President, the next question, if I may interrogate the Senator, is: Is the limitation in question reasonable, assuming that it was found to be desirable to put a limitation in the amount that one person should directly or indirectly buy? I understand the bill fixes the limitation at 100,000 bales for delivery in any one delivery month with respect to all exchanges, and at a total of not more than 600,000 bales delivery in any 12 consecutive months in respect to all exchanges.

I should like to say that I have reached the opinion that the limitation is reasonable, if any is to be made, because I find from investigation that the number of bales of cotton consumed in all the textile mills in New England is about 70,000 bales. The bill allows one person to handle 100,000 bales in 1 month, when all the consumption of that section of the country is only 70,000 bales per month. Furthermore, the whole consumption in New England for a whole year is only about 600,000 bales, which is the amount any one broker may buy. As the Senator's amendment makes it possible in his limitation that one man may buy and sell all that the textile mills of one section use, I think the limitation is desirable and reasonable.

Mr. SMITH. Mr. President, I wish to state to the Senator what the value of the limitation is. One hundred thousand bales under the present value of cotton amounts to $6,000,000. One man may deal in cotton to the value of $6,000,000, or if he handles 100,000 bales in each of the 6 months, $36,000,000. If he were to liquidate those holdings, then in 90 days he could repeat the operation, and within a year he could handle four or five times that amount. But he must liquidate his monthly holdings, if they are 100,000 bales, before he can put in another 100,000 bales, or if he were to sell 50,000 bales in any one month he could put in another 50,000 bales. The purpose of the provision is to make him turn over his holdings of cotton, and not to monopolize the market by freezing it in the amount of four or five hundred thousand bales in 1 month.

I maintain that the cooperatives would not in any sense be jeopardized by my proposed amendment for the reason that if they had 1,000,000 bales they could put 600,000 bales on the futures market, and then liquidate it from month to month, and handle half the crop within a year.

Mr. WALSH. In a later amendment I understand the situation will be corrected by a requirement for actual deliveries within each month.

Mr. SMITH. Yes. Mr. President, I positively cannot understand how anyone among the Members of this body who favors antimonopoly and free trade can object to the proposed amendment.

Mr. BILBO. Mr. President, if I am to keep the resolution made when I entered the Senate, I shall not attempt to discuss any question of which I have not made a study. As a member of the Committee on Agriculture and Forestry, it has been my pleasure for the past 4 or 5 weeks to take part in an investigation of the cotton situation; and I rise

on this occasion to endorse the position taken and amendments which are being sponsored by the Senator from South Carolina.

Every person who knows anything about the cotton business knows that something is wrong with it. I am persuaded to believe that no matter what we do we cannot make conditions much worse. Congress will convene again in January 1937. If the proposed legislation shall be passed, there will be a try-out of between 6 and 7 months; and I appeal to the Senators who hail from the other sections of the United States to give some consideration to the wish and desire of the Senators from the cotton-producing States who have attempted to find a solution for the trouble that has confronted the cotton growers of the South.

Mississippi is the second largest cotton-growing State in the American Union; and in supporting the amendments offered by the Senator from South Carolina I am persuaded that I am representing the best interests of my constituents.

I, too, have been flooded during the past few days—yea, for several weeks—not only with personal visits but with telegrams and letters from those engaged in the cotton trade, urging me to oppose the pending amendment and the position taken by our veteran leader in the interest of cotton. The more of these telegrams I received, and the more I investigated the source of their inspiration, the more I became convinced that we are on the right track to get relief from a condition which for a number of years has been intolerable.

I trust that Senators from other sections of the United States who are not especially interested in the welfare of the cotton producers, because they have no such constituents, will give our appeal the same consideration that I am inclined to give to those Senators who represent the grain-growing sections of the United States as they seek relief for their constituents.

I shall not undertake to discuss the technical details of cotton manipulation on the cotton exchanges and the boards, but merely content myself with saying that I know something is wrong. I have not had the opportunity of participating in the 90-day hearings to which reference has been made, but from a partial study of the hearings I believe we are on the right track. I appeal to Senators to give the plan proposed a 6 months' trial. If what we believe to be right shall prove to be wrong, then when we return next January I shall be found among the first to present measures of correction.

Mr. McKELLAR. Mr. President, I wish to ask the Senator in charge of the bill if he would be willing to return for a moment to page 9 of the new print of the bill, line 22, and accept an amendment to insert after the word "executed" the words "at public outcry across the ring"?

Mr. SMITH. I have no objection. It intensifies what I am trying to do, and that is to provide that all tradings shall be in the open.

The PRESIDING OFFICER. It will be necessary first to reconsider the vote by which the committee amendment as amended was adopted. Without objection, the vote is reconsidered.

Mr. McKELLAR. I now offer my amendment which I send to the desk.

The PRESIDING OFFICER. The amendment to the committee amendment will be stated.

The LEGISLATIVE CLERK. On page 9 of the new print of the bill, in line 22, after the word "executed", it is proposed to insert the words "at public outcry across the ring", so as to make the paragraph read:

Nothing in this section or in any other section of this act shall be construed to prevent a futures commission merchant or floor broker who shall have in hand, simultaneously, buying and selling orders at the market for different principals for a like quantity of cotton for future delivery in the same month, from executing such buying and selling orders at the market price: *Provided*, That any such execution shall take place on the floor of the exchange where such orders are to be executed at public outcry across the ring, and shall be duly reported, recorded, and cleared in the same manner as other orders executed on such exchange.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee on page 31 of the new print of the bill, proposing to insert certain new sections.

Mr. McKELLAR. Mr. President, it is almost 5 o'clock. I inquire of the Senator in charge of the bill if we may not suspend until tomorrow. I desire to discuss that part of the pending amendment which it is claimed affects cotton cooperatives. I understood the Senator from South Carolina to say he was willing to accept an amendment excepting the cotton cooperatives?

Mr. SMITH. "Bona fides", as the Senator will remember.

Mr. McKELLAR. I cannot agree to that. For that reason I hope the Senator will let us take a recess at this time until tomorrow, when I should like to explain to the Senate exactly the situation as it relates to cotton cooperatives.

Mr. SMITH. I shall be glad to hear that discussion.

Mr. ROBINSON. Mr. President, as I recall from reading the newspaper reports, the investigation to which the Senator has referred produced one impression on his mind and a radically different impression on the mind of his colleague on the committee, the Senator from Alabama [Mr. BANKHEAD].

Mr. McKELLAR. Not radically different, but somewhat different in one respect. Since that time I have received a copy of the report of the investigation by the Department of Agriculture. I shall have that report with me tomorrow. It contains every fact that was reported by the committee.

Mr. ROBINSON. I had earnestly hoped that the bill might be disposed of today. However, I am reluctant to resist the request of the Senator from Tennessee.

May I ask the Senator from South Carolina whether he would like to conclude consideration of the bill this afternoon, or what is his desire?

Mr. SMITH. Mr. President, I had hoped we might get through with the bill today. I am very much encouraged over the aspects of the situation. The one remaining amendment is an accommodation of the Cotton Futures Act to the commerce clause of the Grain Futures Act.

Mr. McKELLAR. Let me say to the Senator that if the cotton cooperatives were included in his amendment I should have no objection.

Mr. SMITH. I have no objection to that.

Mr. CONNALLY. Mr. President, the Senator from Texas has some views to submit on that matter even if the Senator from Tennessee has not. They are not in agreement with his views. I should like to have the matter go over until tomorrow.

Mr. SMITH. Very well.

NATIONAL FLOOD CONTROL

The PRESIDING OFFICER laid before the Senate the action of the House of Representatives disagreeing to the amendment of the Senate to the bill (H. R. 8455) authorizing the construction of certain public works on rivers and harbors for flood control, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. COPELAND. I move that the Senate insist on its amendment, agree to the request of the House for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. COPELAND, Mr. FLETCHER, Mr. SHEPPARD, Mr. MCNARY, and Mr. JOHNSON conferees on the part of the Senate.

EXECUTIVE SESSION

Mr. ROBINSON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDING OFFICER (Mr. THOMAS of Utah in the chair) laid before the Senate messages from the President

of the United States submitting several nominations (and withdrawing a nomination), which were referred to the appropriate committees.

(For nominations this day received and nomination withdrawn, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

Mr. WALSH, from the Committee on Naval Affairs, reported favorably the nominations of several officers and sundry midshipmen for appointment as officers in the Marine Corps.

Mr. McKELLAR, from the Committee on Post Offices and Post Roads, reported favorably the nominations of sundry postmasters.

The PRESIDING OFFICER. The reports will be placed on the Executive Calendar.

If there be no further reports of committees, the first nomination in order on the calendar will be stated.

RURAL ELECTRIFICATION ADMINISTRATION

The legislative clerk read the nomination of Morris L. Cooke, of Pennsylvania, to be Administrator of the Rural Electrification Administration for a term of 10 years.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

POSTMASTERS

The legislative clerk proceeded to read sundry nominations of postmasters.

Mr. McKELLAR. I ask unanimous consent that nominations of postmasters on the calendar be confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations of postmasters are confirmed en bloc.

IN THE ARMY

The legislative clerk proceeded to read sundry nominations in the Army.

Mr. SHEPPARD. Mr. President, I ask unanimous consent that nominations in the Army be confirmed en bloc.

The PRESIDING OFFICER. Without objection, nominations in the Army are confirmed en bloc.

That completes the calendar.

RECESS

Mr. ROBINSON. I move that the Senate take a recess until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 5 p. m.) the Senate took a recess until tomorrow, Wednesday, May 27, 1936, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 26 (legislative day of May 12), 1936

DIPLOMATIC AND FOREIGN SERVICE

Eugene H. Dooman, of New York, now a Foreign Service officer of class 2 and a secretary in the Diplomatic Service, to be also a consul general of the United States of America.

UNITED STATES DISTRICT JUDGE

John W. Holland, of Florida, to be United States district judge, southern district of Florida, vice Halsted L. Ritter, removed by impeachment.

APPOINTMENTS IN THE NAVY

MARINE CORPS

The following midshipmen to be second lieutenants in the Marine Corps, revocable for 2 years, from the 4th day of June 1936:

Frederick R. Dowsett
Ted E. Pulos

CONFIRMATIONS

Executive nominations confirmed by the Senate May 26 (legislative day of May 12), 1936

RURAL ELECTRIFICATION ADMINISTRATION

Morris L. Cooke to be Administrator of the Rural Electrification Administration.

APPOINTMENTS IN THE REGULAR ARMY

Richard Henry Jordan to be assistant to the Quartermaster General with the rank of brigadier general.

Charles Harden Schutt to be first lieutenant, Medical Corps.

Walter Richard Cook to be first lieutenant, Medical Corps.

APPOINTMENTS, BY TRANSFER, IN THE REGULAR ARMY

Capt. Claude Bayles Mickelwait to Judge Advocate General's Department.

Capt. Thomas Russell Howard to Quartermaster Corps.

Capt. Eggleston Westley Peach to Quartermaster Corps.

Capt. Willis Arthur Platts to Quartermaster Corps.

First Lt. Whitside Miller to Cavalry.

PROMOTIONS IN THE REGULAR ARMY

Albert Whitney Waldron to be lieutenant colonel, Field Artillery.

William Oliver Reeder to be major, Signal Corps.

POSTMASTERS

ALABAMA

Mack Karrh, Berry.
Jennings B. Key, Parrish.

ARIZONA

S. Paul Shoemaker, Buckeye.
Peter Riley, Clifton.
Bertha L. Hastings, Hayden.
George L. Noel, Holbrook.
Vernon Hubbs, Kingman.
Floyd H. Miller, Tempe.
Lee B. McAleb, Willcox.
George T. Stevens, Winslow.

ARKANSAS

William Earl Polk, Corning.
William B. Martin, Mena.
Fred Smith, Stephens.

CALIFORNIA

Jeremiah P. Shields, Bakersfield.
Edith Irvin, Clearwater.
Margaret A. Brophy, Hughson.
Cortez B. Combs, McFarland.
Clarence N. Hamblet, Oildale.
Alva Millard Smith, Parker Dam.
George F. Erwin, Sanitarium.
Elizabeth C. Bavier, Truckee.

IDAHO

Robert J. Wood, Weiser.

ILLINOIS

Pearle Paxton Bruner, Augusta.
Harry Bruns, Camp Point.
Raymond O. Huffman, Catlin.
Guy E. Ferree, Sr., Hamilton.
Mildred Conwell, La Harpe.
George A. Kreuter, Livingston.
Alice C. Nichols, Plymouth.
Guy George Gillespie, Pocahontas.
Rufus B. Grissom, Toledo.
Esper Ziegler, Warsaw.
Edward C. Jobusch, Waterloo.

INDIANA

Jack Dolan, Hartford City.
Fred Porter Rensberger, Lakeville.
Vance E. Worrell, Orleans.
Ivan Dale Watson, Russiaville.

IOWA

Charles J. Cash, Jr., Anamosa.
Albert C. Peterson, Corning.
Frank Howard Garrett, Council Bluffs.
John L. McLaughlin, Guthrie Center.
Harold E. Maffett, Murray.
John H. Gribben, Newton.
Ruth M. Pedersen, Pierson.

Charles E. Hudson, Pomeroy.
Henry J. Kelley, Shannon City.
Walter L. Hurd, Stanhope.
George W. Trowbridge, Stuart.
Ella M. Hames, Williams.

MARYLAND

Edgar R. Twilley, East New Market.
Ellwood E. Matthews, Pocomoke City.
Elliott W. Marshall, Snow Hill.
George R. Bromley, Stockton.

MASSACHUSETTS

Edward F. X. Jalbert, Grafton.

MICHIGAN

Regina W. Cleary, Escanaba.

MINNESOTA

WITHDRAWAL

Executive nomination withdrawn from the Senate May 26 (legislative day of May 12), 1936

APPOINTMENT IN THE NAVY

MARINE CORPS

Midshipman Marvin C. Clayton to be a second lieutenant in the Marine Corps.

HOUSE OF REPRESENTATIVES

TUESDAY, MAY 26, 1936

The House met at 12 o'clock noon.

Rev. William Andrew Keese, minister, Metropolitan Memorial Methodist Episcopal Church, Washington, D. C., offered the following prayer:

Almighty God, by whose grace our fathers laid firmly the foundations of this Republic in liberty and equality, grant unto us, their children, we beseech Thee, Thy continued favor, that we may always seek to know Thy will and to walk in Thy laws.

As our forbears subdued the wilderness and conquered the natural frontier, so may we, led by Thy spirit, transform the social frontiers of our times, that out of misunderstanding and inequality we may build the fair city of brotherhood and good will.

Lend encouragement to the strong phophetic voices which challenge us to prepare in our land a highway for our God; send wisdom and strength to all those who have the responsibility of government; and, above all, grant Thine enlighten-

ing spirit to the rank and file of our people to the end that, discerning truth from error and permanent good from temporary expediency, they may follow that manner of life which leads to security and justice for all.

Preserve in us those ancient integrities of the soul which make for peace in our borders and friendship with all the world.

In the day of our opportunity, guide Thou us to create the agencies of cooperation which shall make us all one happy nation in a family of nations. May each home be hallowed by the honor of Thy name; may the humblest of our citizens have a sense of kinship with the highest. Under the fatherhood of God, may the brotherhood of man be attained. And grant that the light of our land, shining through all the world, lead the nations to peace and prosperity, to righteousness and true success. We pray in the spirit of Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Latta, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and joint resolutions of the House of the following titles:

On May 18, 1936:

H. R. 10589. An act to amend section 32 of the act entitled "An act to authorize the construction of certain bridges and to extend the times for commencing and/or completing the construction of other bridges over the navigable waters of the United States, and for other purposes", approved August 30, 1935;

H. R. 10847. An act to authorize the acquisition of land for cemeterial purposes in the vicinity of New York City, N. Y.;

H. R. 12183. An act for the relief of Gladys Hinckley Werlich;

H. J. Res. 538. Joint resolution to provide for participation by the United States in the Ninth International Congress of Military Medicine and Pharmacy in Rumania, in 1937, and to authorize and request the President of the United States to invite the International Congress of Military Medicine and Pharmacy to hold its tenth congress in the United States in 1939, and to invite foreign countries to participate in that congress;

H. J. Res. 547. Joint resolution providing for the importation of articles free from tariff or customs duty for the purpose of exhibition at Great Lakes Exposition, to be held at Cleveland, Ohio, beginning in June 1936, and for other purposes; and

H. J. Res. 569. Joint resolution to authorize an appropriation for the expenses of participation by the United States in a conference at Brussels to revise the Convention for the Protection of Literary and Artistic Works concluded at Bern, September 9, 1886, and revised at Rome, June 2, 1928.

On May 19, 1936:

H. R. 2119. An act for the relief of Mrs. E. L. Babcock, mother and guardian of Nelson Babcock, a minor;

H. R. 8089. An act for the relief of Joseph J. Baylin; and

H. R. 12162. An act to create an additional division of the United States District Court for the Southern District of Mississippi, to be known as the Hattiesburg division;

On May 20, 1936:

H. R. 2467. An act for the relief of Holy Cross Mission Hospital;

H. R. 5058. An act to convey certain lands to Clackamas County, Oreg., for public-park purposes;

H. R. 7110. An act to authorize the President to bestow the Navy Cross upon Brig. Gen. Robert H. Dunlap, United States Marine Corps, deceased; and

H. R. 8506. An act for the relief of Oliver Faulkner.

On May 21, 1936:

H. R. 9370. An act for the relief of Frank Cordova;

H. R. 9373. An act for the relief of H. L. & J. B. McQueen, Inc., and John L. Summers, former disbursing clerk, Treasury Department;

H. R. 9455. An act for the relief of Robert J. Mann;

H. R. 10308. An act to amend article 3 of the "Rules Concerning Lights, etc.", contained in the act entitled "An act to adopt regulations for preventing collisions upon certain harbors, rivers, and inland waters of the United States", approved June 7, 1897;

H. R. 11036. An act to amend section 4321, Revised Statutes (U. S. C., title 46, sec. 263), and for other purposes;

H. R. 11302. An act to authorize the Secretary of War to lend to the reunion committee of the United Confederate Veterans 3,000 blankets, olive drab no. 4, 1,500 canvas cots, to be used at their annual encampment to be held at Shreveport, La., in June 1936; and

H. R. 11346. An act for the relief of H. R. Heinicke, Inc.

On May 22, 1936:

H. R. 1398. An act to provide for the establishment of a Coast Guard station at or near Crescent City, Calif.;

H. R. 8370. An act to provide for the establishment of a Coast Guard station at Port Washington, Wis.;

H. R. 10321. An act to amend section 4 of Public Act No. 286, Seventy-fourth Congress, approved August 19, 1935, as amended; and

H. R. 10544. An act authorizing the erection of a memorial to those who met their death in the wreck of the dirigible *Shenandoah*.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Horne, its enrolling clerk, announced that the Senate had passed without amendment a bill of the House of the following title:

H. R. 11454. An act to incorporate the Veterans of Foreign Wars of the United States.

The message also announced that the Senate had ordered that the Secretary be directed to request the House to return to the Senate the bill (S. 4100) to incorporate the Veterans of Foreign Wars of the United States.

The message also announced that the Senate had passed a joint resolution of the following title, in which the concurrence of the House is requested:

S. J. Res. 262. Joint resolution granting the consent of Congress to the States of New York and Vermont to enter into an agreement amending the agreement between such States consented to by Congress in Public Resolution No. 9, Seventieth Congress, relating to the creation of the Lake Champlain Bridge Commission.

The message also announced that the Senate agrees to the amendments of the House to a bill of the Senate of the following title:

S. 4023. An act to provide for the continuation of trading in unlisted securities upon national securities exchanges, for the registration of over-the-counter brokers and dealers, for the filing of current information and periodic reports by issuers, and for other purposes.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12527) entitled "An act making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1937, and for other purposes."

The message also announced that the Senate insists upon its amendment to the bill (H. R. 7736) entitled "An act to provide for the establishment of the Whitman National Monument", disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. MURRAY, Mr. BENSON, and Mr. NYE to be the conferees on the part of the Senate.

The message also announced that the Senate disagrees to the amendments of the House to the bill (S. 3531) entitled "An act to amend the act entitled 'An act for the control of floods on the Mississippi River and its tributaries, and for other purposes', approved May 15, 1928", requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. COPELAND, Mr. FLETCHER, Mr. SHEPPARD, Mr. OVERTON, Mr. MCNARY, Mr. JOHNSON, and Mr. VANDENBERG to be the conferees on the part of the Senate.

The message also announced that the Vice President had appointed Mr. BARKLEY and Mr. NORBECK members of the joint select committee on the part of the Senate, as provided for in the act of February 16, 1889, as amended by the act of March 2, 1895, entitled "An act to authorize and provide for the disposition of useless papers in the executive departments", for the disposition of executive papers in the Interior Department.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 11418) entitled "An act making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1937, and for other purposes."

The message also announced that the Senate had passed the following resolution:

Senate Resolution 304

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. RANDOLPH PERKINS, late a Representative from the State of New Jersey.

Resolved That a committee of two Senators be appointed by the Presiding Officer to join the committee appointed on the part of the House of Representatives to attend the funeral of the deceased Representative.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect to the memory of the deceased Representative the Senate do now take a recess until 12 o'clock meridian tomorrow.

DISTRICT OF COLUMBIA APPROPRIATION BILL, 1937—MOTION TO INSTRUCT CONFEREES

Mr. BLANTON. Mr. Speaker, I offer a motion of the highest privilege, to instruct conferees under clause I 1–2a, rule XXVIII, section 910, of the rules of the House of Representatives, which I send to the Clerk's desk.

The SPEAKER. The Clerk will report the motion.

The Clerk proceeded to read the motion.

CALL OF THE HOUSE

Mr. SNELL (interrupting the reading of the motion). Mr. Speaker, as this is a very important matter, I think we should have a quorum present. Mr. Speaker, I make the point of order there is not a quorum present.

The SPEAKER. Evidently there is not a quorum present.

Mr. BANKHEAD. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 108]

Adair	Costello	Hoeppel	Powers
Andrew, Mass.	Crowther	Huddleston	Robinson, Utah
Andrews, N. Y.	Curley	Jenckes, Ind.	Rogers, N. H.
Bacon	Dear	Johnson, W. Va.	Ryan
Barden	Dietrich	Kee	Schaefer
Berlin	Ditter	Kennedy, Md.	Schuetz
Binderup	Dockweiler	Lanham	Shanley
Brennan	Driscoll	Lewis, Md.	Smith, Conn.
Brewster	Duffey, Ohio	Lundeen	Thom
Brooks	Dunn, Miss.	McFarlane	Tobey
Buckley, N. Y.	Fenerty	McGehee	Treadway
Bulwinkle	Ferguson	McGroarty	Turpin
Caldwell	Frey	McLean	Utterback
Carmichael	Goodwin	Marshall	Wearin
Cartwright	Green	Montet	Werner
Cary	Greenway	Murdock	Wigglesworth
Casey	Gwynne	Norton	Wilcox
Cavicchia	Hancock, N. C.	Oliver	Wood
Chapman	Harlan	Patton	Zioncheck
Claiborne	Hennings	Peterson, Fla.	
Connery	Hill, Samuel B.	Plumley	

The SPEAKER. Three hundred and forty-three Members are present, a quorum.

On motion of Mr. BANKHEAD, further proceedings under the call were dispensed with.

PORT NEWARK ARMY SUPPLY BASE—VETO MESSAGE (H. DOC. NO. 497)

The SPEAKER laid before the House the following message from the President of the United States:

To the House of Representatives:

I return herewith, without my approval, H. R. 9042, "An act to provide for the sale of the Port Newark Army Supply Base to the city of Newark, N. J."

The land on which this base is located was acquired from the city of Newark in 1918 for the storage and shipment of overseas supplies at its then value of $1,330,000. The original outlay of the Government for construction was more than $10,000,000. Since 1924 it has been under lease, chiefly for the purpose of preserving the plant in a saleable condition.

H. R. 9042 extends a very liberal option to the city of Newark to acquire the base for what purports to be $2,000,000, but which is in fact a donation after 20 years, with annual payments by the city of no more than reasonable rent, or 5 percent interest on the arbitrary valuation. This is a departure from previous legislation under which States, counties, and municipalities have been given preferences to acquire surplus military reservations by paying the appraised value in cash. When such properties have been sold at public sale, a down payment of 25 percent has generally been exacted with interest on the unpaid portion of the purchase price.

That part of section 1 which implies an additional consideration moving from the city in the form of maintenance of the inshore channel furnishing ingress and egress to the base is not regarded of any legal effect, as the city has previously bound itself to maintain this channel and such work will inure to the city if it becomes the owner of the base.

Section 4, which is intended to authorize the sale to others if the city does not exercise its option, is open to several objections, the more important being:

It does not give the Secretary of War any discretion in the way of terms of sale, but requires the purchase price to be paid in cash, thereby confining competition to a limited number of bidders.

Disappointed bidders are encouraged to attack any sale.

Repeated offering of the property at public sale under identical conditions is required, irrespective of the success of preceding efforts or the prevailing market, thereby creating an uncertain situation which would seriously interfere with any temporary use of the property pending its permanent disposition.

In general, the bill, in addition to being unduly liberal to the city, establishes an undesirable precedent, and its restrictions, in the event of a public sale, render an advantageous disposition improbable.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *May 26, 1936.*

The SPEAKER. The objections of the President will be spread at large upon the Journal.

Mr. McSWAIN. Mr. Speaker, I move that the bill, together with the message of the President, be referred to the Committee on Military Affairs and ordered printed.

The motion was agreed to.

Mr. BLANTON. Mr. Speaker, there are several Members present who desire to submit conference reports. With the understanding that it shall not take me off the floor or be taken out of my time, I am willing that these bills be sent to conference; but with the understanding that my rights are still preserved.

The SPEAKER. It will not interfere with the gentleman's rights.

FLOOD CONTROL

Mr. WILSON of Louisiana. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 8455) authorizing the construction of certain public works on rivers and harbors for flood control, and for other purposes, with Senate amendments, disagree to the Senate amendments, and ask for a conference thereon.

Mr. SNELL. Mr. Speaker, reserving the right to object, is the gentleman's purpose merely to ask that the bill go to conference?

The SPEAKER. That is all.

Is there objection to the request of the gentleman from Louisiana? [After a pause.] The Chair hears none, and appoints the following conferees: Messrs. WILSON of Louisiana, WHITTINGTON, GRISWOLD, RICH, and ENGLEBRIGHT.

COLLECTION OF REVENUE ON INTOXICATING LIQUOR

Mr. DOUGHTON. Mr. Speaker, I ask unanimous consent that the Speaker be authorized to appoint three additional conferees on the bill (H. R. 9185) to insure the collection of the revenue on intoxicating liquor, to provide for the more efficient and economical administration and enforcement of the laws relating to the taxation of intoxicating liquor, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina? [After a pause.] The Chair hears none, and appoints the following conferees: Messrs. DOUGHTON, VINSON of Kentucky, and REED of New York.

INTERNAL-REVENUE LAWS

Mr. DOUGHTON. Mr. Speaker, I ask unanimous consent that I may have until midnight tonight to file a report on the bill (H. R. 12793) to amend certain administrative provisions of the internal-revenue laws, and for other purposes.

Mr. SNELL. Will the gentleman tell us what bill that is?

Mr. DOUGHTON. That is the bill providing for refund of taxes paid under the A. A. A.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

DEPARTMENT OF AGRICULTURE APPROPRIATION BILL, 1937

Mr. CANNON of Missouri submitted a conference report and statement on the bill (H. R. 11418) making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1937, and for other purposes.

NAVY DEPARTMENT APPROPRIATION BILL, 1937

Mr. UMSTEAD submitted a conference report and statement on the bill (H. R. 12527) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1937, and for other purposes.

DISTRICT OF COLUMBIA APPROPRIATION BILL, 1937—MOTION TO INSTRUCT CONFEREES

The Clerk resumed and completed the reading of the motion to instruct conferees, which is as follows:

MOTION OF THE HIGHEST PRIVILEGE

Mr. BLANTON, under paragraph 1½a, of rule XXVIII, section 910, of the rules of the House of Representatives, offered the following motion to instruct House conferees, being a motion of the highest privilege, to wit:

Moved, That managers on the part of the House, who, at the request of the Senate, were appointed by the Speaker on April 24, 1936, for a conference with the managers on the part of the Senate, who were appointed by the Senate on April 23, 1936, respecting the disagreeing votes of the two Houses relative to 87 amendments placed by the Senate on the House bill (H. R. 11581) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of such District for the fiscal year ending June 30, 1937, and for other purposes, have been in conference more than 20 days without avail, said House conferees having been appointed more than 20 calendar days, and have made no report to the House, that they, the said managers on the part of the House be, and they are hereby, instructed as follows:

First. The House instructs its managers to insist on the disagreement of the House to Senate amendment no. 1, which proposes to appropriate $5,700,000 out of the United States Treasury as a Federal contribution on the local civic expenses of the District of Columbia, and to insist on the House provision appropriating $2,700,000, it being the position of the House of Representatives that inasmuch as the tax rate on the District of Columbia was lowered in 1928 from $1.80 on the $100 to $1.70 on the $100, which remained in effect up to and including 1933; that in 1934 such tax rate was again lowered from $1.70 on the $100 to $1.50 on the $100, which rate still prevails, being the lowest rate of taxation in any comparable city in the United States; and that said 1934 reduction in rate was a saving annually to local taxpayers of $2,445,000 in cash; that also in 1934 the Commissioners arbitrarily lowered the assessed values of real estate $80,000,000, which was an additional saving annually to property owners of $1,200,000; that in 1935 the Commissioners again arbitrarily lowered the assessed values of real estate $50,000,000, which was an additional saving annually to property owners in a large amount; that in 1935 the Commissioners gave a 25-percent reduction in water rates and at the same time granted an increase in the metered allowance of from 7,500 to 10,000 cubic feet, which meant an additional saving to property owners of $600,000 per annum on water charges; that a discount of 10 percent also was allowed property owners on water bills for payment of same within 15 days after being due, which meant an additional saving to them of $100,000 per year; that the local tax rate on intangible properties is only one-half of 1 percent; that the local gasoline tax is only 2 cents per gallon, while in Maryland, just a few miles from the Capitol, it is 4 cents, plus a general sales tax; and in Virginia, just a few miles from the Capitol, and in Arizona, Georgia, Idaho, Kentucky, Louisiana, New Mexico, and the State of Washington it is 5 cents per gallon; and in the States of Alabama, Arkansas, Georgia, North Carolina, and South Carolina it is 6 cents per gallon; and in the States of Florida and Tennessee the gasoline-tax rate is 7 cents per gallon; and in the District of Columbia the tangible personal-property tax paid on many fine Packards, Cadillacs, and Pierce-Arrows, used family automobiles, is in instances as low as $2, $3, and $4 per car; and the annual registration and license-tag charge is only $1 per car, whether it is a Ford or a $12,000 Rolls-Royce; and the annual average charge for water per average family is only $6.60 per year; and each family has exempt from tax $1,000 of household furniture; and each citizen has exempt from tax his private library, whether worth $5 or $50,000; and each person has exempt from tax all wearing apparel, whether worth $5 or $50,000; and there is no charge made on residences for gathering ashes, or gathering trash, or gathering garbage; and no charge is made to contiguous property owners for repairing and repaving sidewalks or for repairing and repaving streets; and there is furnished without charge to all property owners shade and ornamental trees around their property, and the fencing that protect the first years of early growth, the pruning, caring for, spraying, and replacing of them; and there is no annual charge made for sewer service; and there is no local bonded indebtedness with annual interest to pay, because in years gone by the United States Government paid one-half of all the Capital construction expense of paving streets, building bridges, jails, penitentiary, courthouses, municipal buildings, water system, sewer system, 150 schools, parks, and playgrounds, hospitals, and other improvements; and after once paying it out of debt the United States has kept the District of Columbia out of debt; and that outside of the regular Federal taxes the people of all cities everywhere pay, there is in the District of Columbia no estate tax, no inheritance tax, no gift tax, no income tax, and no sales tax; and that in his testimony every fact hereinbefore asserted was admitted to be true by Commissioner Hazen, the President of the Board of Commissioners, who testified that the people of the District of Columbia are better cared for, are the least taxed, and have greater privileges than any other people in the United States; and the Washington Board of Trade having advertised in the Washington Star on April 26, 1936, that during the last 5 years visitors to Washington had spent in Washington the huge sum of $221,547,992, which resulted from the Government's institutions being located in Washington, and inures to the benefit of local residents here, it being the position of the House that under such circumstances, while citizens of Washington are taxed less than citizens of any other comparable city in the United States, it would be unjust and inequitable for the people residing in the States to be taxed to pay more than $2,700,000 as an annual contribution to the expenses of the taxpayers of the District of Columbia.

Second. The House instructs its managers to insist on the disagreement of the House to the amendment of the Senate appropriating $78,660 for so-called character education, the House having refused to allow same, and it being the position of the House that the $63,385 appropriated in the 1935 bill for so-called character education was wasted and perverted, and that the $89,540 appropriated in the 1936 bill has been wasted and perverted, there being no attempt to establish said character education in but 10 of the 175 schools of the District of Columbia, and that no good whatever but harm has been accomplished by the experiment, and as unanimously recommended by the subcommittee, which held an exhaustive hearing on the subject, the Committee on Appropriations in its bill and report refused to appropriate the $4,400 for an assistant superintendent in charge, $17,460 salaries for 12 clerks, and $56,800 salaries of 22 research assistants and counselors, and refused to appropriate said $78,660, and recommended the elimination of all funds for so-called character education, and said committee in its report unanimously recommended that the Board of Education should take immediate steps to eliminate from the public schools all communistic books and magazines.

Third. The House instructs its managers to insist on the disagreement of the House to Senate amendment no. 83, which struck from the House bill the following—

"SEC. 6. No part of the funds appropriated in this act shall be available for the payment of the salary of any officer or employee of the District of Columbia whose salary as such officer or employee is $2,400 or more per annum who is engaged in any outside business or profession in addition to his official duties,"—

and to insist on said House provision, it being the position of the House that judges getting salaries of $8,000, $10,000, and $12,000 per annum, and that attorneys getting salaries up to $8,000 per annum, and that doctors getting salaries up to $7,500 per annum, ought to apply themselves and give their time to their official duties, and ought not to neglect their duties by accepting outside employment.

Mr. SNELL (interrupting the reading of the motion). Mr. Speaker, a point of order.

The SPEAKER. The gentleman will state it.

Mr. SNELL. Mr. Speaker, I understand that the motion which the Clerk is reading is a motion to instruct the conferees. It seems to me that there is contained in this motion the argument on one side at least. Is that proper in a motion to instruct conferees?

Mr. BLANTON. Mr. Speaker, may I be heard?

The SPEAKER. The Chair will hear the gentleman.

Mr. BLANTON. Mr. Speaker, I may say this motion is drawn as the basis for the action of the House in instructing its conferees, to show that the House is not acting arbitrarily, but, on the contrary, has reason for thus instructing its conferees. If the gentleman from New York will listen to the next two instructions he will see they are very specific as to instructing the conferees, and the Clerk is about to read those two sections.

Mr. SNELL. Mr. Speaker, in order to get a ruling of the Chair, I make the point of order that the gentleman from Texas in his motion has gone far beyond what is intended to be placed in a motion to instruct conferees.

The SPEAKER. The Chair thinks the motion ought to be read first, so that the Chair may know the full context of the motion before a ruling is made. The Chair may say further that the rule under which this motion is offered would not ordinarily carry with it an argument.

Mr. SNELL. That is my point of order.

The SPEAKER. The difficulty is that one presiding officer may look at a certain motion in one way and another presiding officer look at it in another way. The Chair does not feel that he should be called upon to censor a motion offered by a Member of the House under the rules.

Mr. SNELL. Mr. Speaker, there can be no question in regard to this motion. The whole argument is being presented in the original motion.

The SPEAKER. If the Chair sustained the point of order made by the gentleman from New York, it would be necessary for the Chair to use a pencil and strike out the portion of the motion which occurs to the Chair as being argument; but, as previously stated, another presiding officer might take a different view of the matter. It seems to the Chair that, after all, it is a matter for the House to determine in the final analysis.

Mr. MAVERICK. Mr. Speaker, a point of order.

The SPEAKER. The gentleman will state it.

Mr. MAVERICK. When argumentation is included in a motion of this kind, if we vote favorably on it, we agree in effect to the various and sundry argumentative statements included therein. We are entitled to vote on a motion which clearly sets forth the instructions to the conferees and, when there is a large mass of argumentation in there, we are being placed in the position of agreeing to the argumentation.

The SPEAKER. The Chair may say to the gentleman from Texas [Mr. MAVERICK] that is a matter of argument.

Mr. MOTT. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MOTT. Inasmuch as we have listened to about 15 minutes of argument in this motion, may I inquire whether it would be proper in calculating the time of the gentleman from Texas to deduct this 15 minutes from his time?

The SPEAKER. No; it will not be taken out of his time. The gentleman is entitled to 1 hour when the reading of the motion is completed.

The Clerk concluded the reading of the motion.

Mr. BLANTON. Mr. Speaker, the conferees of the House are nothing in the world but the servants of the House, and as such servants of the House they do the bidding of the House and carry out the wishes of the House. That is all on earth the conferees in this case want to do. Whatever this House instructs them to do they stand ready and willing to accomplish.

Mr. Speaker, the District of Columbia appropriation bill, containing 83 pages, was before this House under general debate for 3 days. A motion was made on the floor to amend the provision having to do with the lump-sum feature of the bill enlarging it to $5,700,000. A vote was taken in this House, and only 11 Members, as shown by the RECORD, supported this motion. Out of a membership of 435 Members, only 11 voted for a lump-sum contribution out of the Federal Treasury of $5,700,000.

Mr. BOILEAU. Will the gentleman yield?

Mr. BLANTON. Permit me to finish my statement. I cannot yield now. If the gentleman will allow me to proceed I may yield later. Mr. Speaker, that motion failed, and that 83-page bill was not amended in a single particular. There was not one single amendment placed upon it. In order to register their opposition to the cut in the lump-sum and the other provisions some did not like in the bill, and to indicate the combined opposition as against all of its provisions, there was a roll call in the House on the passage of the bill, and upon that roll call there were only 26 Members who registered opposition to the bill in any particular.

The bill then went over to the Senate. There were 87 Senate amendments placed in the bill, some of them involving hundreds of thousands of dollars, and six legislative items. For instance, the House committee was convinced it was necessary to build a new Chain Bridge. The Budget had not authorized this item. But outside of the Budget the House committee voted unanimously to grant $350,000 to build a new Chain Bridge, which was exactly the amount the Commissioners asked for, and it was the amount the Commissioners said they needed. They did not need any more. The Senate added $100,000 to this item over the objection of the Commissioners. Colonel Sultan, Engineer Commissioner, said they did not want it and said they did not need it, but nevertheless the Senate added another $100,000.

There are six legislative items included in the bill that have not been sent to a legislative committee for consideration. For instance, there is a legislative amendment in there to establish pay parking meters all over the Nation's Capital. Whenever a person stopped an automobile on the public streets of the Nation's Capital they would have to dig up money to put into the slot of this parking meter.

This parking meter is owned by one big corporation of the United States. This is to make the people of the Nation who have automobiles every time they park their car pay tribute to one big corporation or monopoly in the United States.

Mr. MICHENER. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. In just a minute.

Mr. MICHENER. Is there anything like that in this motion?

Mr. BLANTON. Certainly, it is involved in the conference. If the gentleman will not interrupt me I think I can get along much faster.

The SPEAKER. The gentleman from Texas declines to yield.

Mr. BLANTON. There are 87 Senate amendments involved here in this conference. We are asking for instructions on three important ones, but all 87 are in conference. Before this House ever appointed conferees, Mr. Speaker—before the bill ever went to conference—a statement was in the press from the Senate chairman that this was one time that the House conferees would have to accede to every one of the propositions of the Senate or there would be no bill; and when your conferees went to conference the managers on the part of the House found that situation prevailed—that unless we would agree to all the Senate conditions there would be no bill. They said a continuing resolution would be passed giving them what they wanted in the way of a lump-sum appropriation and if we attempted to amend the continuing resolution they would make the President furnish funds out of relief—a ridiculous proposition.

Your House managers did everything in the world to try to get a bill. Under these circumstances we did not want to leave the District without funds. We knew there were needed projects there that ought to be built and in order to try to get a bill, although we knew that lots of these propositions were not sound and that they should not be passed, we proposed to the Senate that if they would recede on just

three amendments, the House managers would recede on 84; in other words, the House managers would bow down and recede on 84 Senate amendments if the Senate conferees would recede on just 3, and they would not do it. They would not accept our generous proposal. They demanded their pound of flesh and demanded that the House should knuckle down to them.

I now want to show, Mr. Speaker, that there is ample authority, justice, and basis for everything that is contained in this motion as read by the clerk.

Mr. BANKHEAD. Mr. Speaker, will the gentleman yield for just a moment in order that we may clarify the pending issue before the House?

Mr. BLANTON. I have this statement in my mind——

Mr. BANKHEAD. I have this in my mind, if the gentleman please, and I am trying to assist the gentleman.

Mr. BLANTON. I yield to my majority leader, whom I follow and try to help all the time.

Mr. BANKHEAD. The gentleman's resolution is rather lengthy and I thought rather argumentative, but despite that, kindly state what your instructions are in this resolution and on what particular issue.

Mr. BLANTON. We are asking first that the House give us instructions to insist on a disagreement to the Senate amendment no. 1 to take $5,700,000 out of the Public Treasury to give to the people of the District. That is instruction no. 1.

We are asking next that the House instruct us to stand by the House bill that was passed, with only 26 votes against it, not to allow $78,660 to be appropriated for so-called character education, which your committee, after hearings, unanimously decided was used wastefully, without any good cause, and used in a perverted manner to put communism in our schools. That is the second instruction we want the House to give us.

We are also asking the House to instruct us to stand by the House bill with respect to a provision which affects only the employees of the District who are paid out of this bill, instructing us to stand by the House action in preventing these little municipal and police-court judges who get $8,000 a year and these high-salaried prosecuting attorneys here who get as high as $8,000 a year, from taking outside employment in one, two, three, or four law schools here at a time lecturing at night, when they ought to be attending to their judicial duties. We are asking instructions on that point. These are the three items, and when we get definite instructions on them and when we go to conference with the Senate, we can tell the Senate something and we will not have to sit there like a bunch of helpless mockingbirds with the Senate telling us what we have to do in order to get a bill. We can then place the responsibility on the Senate.

Now, the papers here have misrepresented this whole matter. They misrepresented the Speaker the other day. They said the Speaker had suggested they could get rid of the House conferees by making a motion to discharge. The Speaker made no such suggestion to the press and the press knows it. They also said the President was going to take a dish in this and force us to give $5,700,000, when they knew the President had not done any such thing. Why, I am as good a friend as the President ever had, but if my President were to so far forget himself as to make an attempt to tell this Congress what it had to do about appropriations, I would quit him in a minute. I would not stand by a President who would invade the rights of this House when the executive and the legislative branches of Government are separate and distinct. Our President is too wise to make such a statement. The President did not make that statement and the press knows it.

This is an important matter and I want to call your attention to what Commissioner Hazen, who is the president of the Board of Commissioners, said about this tax matter.

Mr. MAPES, one of our splendid Members of Congress, diligent and efficient, after a long hearing and following a long investigation, as the head of a special committee of Congress, brought on this floor four bills known as the Mapes bills.

One was an increase in the tax on gasoline from 2 to 3 cents. Was that unreasonable? No. The other was an increase on the automobile charge where a Rolls-Royce costing $12,000 is taxed only $1 for license tax each year the same as a Ford, there being $1 tax on all automobiles. The bill provided for a proper tax on automobiles and trucks.

Another Mapes bill provided for an income tax on these rich millionaires who now put their money away in lock boxes in the banks and who evade their taxes by moving to Washington, escaping the taxes in the States.

These Mapes bills were passed unanimously by this House, not a vote against them. They went to the Senate and died there because of the fight the newspapers of Washington made in conjunction with the rich interests who joined the newspapers in the fight.

We have tried to get these Mapes bills passed every year, but we cannot get the District Committee to report them or any help from the Commissioners of the District.

We were greatly helped by one valuable Member from your side [Mr. DITTER], who asked Commissioner Hazen why he did not favor the Mapes bill increasing the tax on gasoline, and he said: "We don't need it. We have over $600,000 surplus from the 2-cent tax now."

Mr. DITTER called attention to the fact that over in Virginia, just 4 miles from the Capitol, the gas tax was 5 cents a gallon. In Baltimore and over in Maryland, just 4 miles from the Nation's Capital, the gasoline tax is 4 cents a gallon plus 5 cents sales tax on top of it.

Down in Tennessee, where our beloved Speaker lives, the gasoline tax is 7 cents a gallon, while here in Washington it is only 2 cents a gallon.

Mr. DITTER asked the Commissioner if he was going to help pass the Mapes bill and he said no, that the Commissioners were against it because they did not need the money.

They do not need the money because they have been getting the benefit of millions of dollars from the Treasury of the United States in big lump-sum appropriations every year, which the Senate has forced the House to appropriate.

Now, getting the low tax rate, the Commissioners reduced the tax rate from $1.80 to $1.70 in 1928, and then to $1.50 per $100. Then the chairman of the Senate committee, who is making this fight against us, Senator THOMAS of Oklahoma, made the suggestion one summer that one way to make the tax even less was to lower the assessed valuation, which the Commissioners immediately did. I will show you just what they did. I will show you from the hearings on the 1935 bill, held by my distinguished friend, Mr. CANNON, of Missouri, one of the finest Members of this House, and I will quote what Commissioner Hazen then said.

This is the voluntary statement of Commissioner Hazen to the committee without a question being asked by a member, and I read from page 5 of the hearings on the 1935 appropriation bill:

> Commissioner HAZEN. Before the auditor takes the stand, the Commissioners would like to call attention to the fact that in the fiscal year 1934, the tax rate of $1.70 on the hundred, which had been in effect during the fiscal years between 1928 and 1933, included, has been reduced to $1.50 per hundred. This reduction represents a saving to the taxpayers in the fiscal year of 1934 of $2,445,000.

A saving to the taxpayers of the District of Columbia, Mr. Speaker, at the expense of the taxpayers of New York, Tennessee, Oklahoma, Texas, and the other States.

Mr. GIFFORD. Mr. Speaker, will the gentleman yield? Is the gentleman going to take the whole hour or will he yield time to somebody?

Mr. BLANTON. I do not think the gentleman from Massachusetts could help me much on this matter which I have studied for years.

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. I am sorry, but I cannot yield just now.

The SPEAKER. The gentleman from Texas declines to yield.

Mr. BLANTON. I do not want to take up any more time than necessary, but I am going to present this matter in a

proper way, so that the responsibility for continuing to take the money in the Treasury, which was taken out of the pockets of the overburdened taxpayers of the United States, and give it to Washington, will be placed where it belongs, on the shoulders of those who want it done, and who furnish the votes to do it.

When I was on the District Committee some few years ago, then the ranking Democrat, a bill was brought in to appropriate a large sum to buy some park ends. I got me an automobile and one of the officials from the District office and went out there to see where the park ends were and what they looked like, and I found they were some little old pieces of swamp down under a bridge and nearby. They were not worth $5. We were asked to pay a big sum of money for them under the bill. The bill had been introduced by a Senator from Colorado, named Phipps. I looked up on the hill and I saw a fine residence there and said, "Whose residence is that?" The man with me did not know. I said, "Yonder is a policeman, we will call him down and find out." We called him down, and I said, "Whose residence is that?" "Why," he replied, "don't you know? That is the residence of Senator Phipps, of Colorado, and he is putting an addition up there." I came to town and got a photographer and had some big pictures taken of that situation, and when I presented those pictures on the floor, this House killed that bill as dead as could be. There has been too much of using the money of the people for individual interests here. [Applause.]

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. I am sorry, but I do not think the gentleman could help me now. He may later, if he will help me with his vote. I have the facts I believe better than he has. Listen again. Here is Commissioner Hazen talking further, from whose testimony I quote:

> Moreover, in the fiscal year 1934 the assessed valuation of real estate has been reduced by $80,000,000—

You see, he has taken up Senator THOMAS' suggestion that they should decrease the assessed value.

> Moreover, in the fiscal year 1934 the assessed valuation of real estate has been reduced by $80,000,000, a saving to the property owners of $1,200,000. The District budget for the fiscal year 1935 is based upon continuing the $1.50 tax rate in that fiscal year. It is also contemplated that a further reduction in the assessed valuation of real estate of approximately $50,000,000 will be made in 1935. The Commissioners also invite attention to the recommendation under the chapter for water service to a 25-percent reduction in water rates, for 1935, and an increase in the metered allowance of water from 7,500 cubic feet to 10,000 cubic feet. This means a saving to the water users of Washington of about $600,000 annually. In the fiscal year 1934 Congress allowed a discount of 10 percent on the amount of any bill for water charges paid within 15 days after the date of rendition, and it is estimated this will make a saving of another $100,000 to the water users of Washington.

Mr. Speaker, I ask leave to put in the RECORD the balance of the admissions made by Commissioner Hazen on these matters.

The SPEAKER. Is there objection?

Mr. GIFFORD. Mr. Speaker, I reserve the right to object, to ask if the gentleman is going to yield any time to anybody, or if he will yield for a question?

Mr. BLANTON. Gladly, if the gentleman will allow me to finish.

Mr. GIFFORD. The gentleman is asking to fill up the RECORD. We have listened for 15 minutes now to the reading of the motion, and we have now to listen to a whole hour of rehashing the matter on the floor.

Mr. BLANTON. I knew the gentleman was going to make that comment, and that is the reason I would not yield. Does he want his tax-burdened people in Massachusetts to help pay the taxes of the people in Washington?

Mr. GIFFORD. I want to say to the gentleman that we have been very loyal to him in backing him up on these propositions.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. GIFFORD. Mr. Speaker, I reserve the right to object, to ask the gentleman if he is going to yield any time.

[Cries of "Regular order!"]

Mr. BLANTON. Oh, let him ask his question.

The SPEAKER. Is there objection?

Mr. GIFFORD. Mr. Speaker, I object.

Mr. BLANTON. All right, I will take the time, then, to tell the facts about this situation. Commissioner Hazen admitted that all of the paved streets here in Washington in the years gone by had been paid for, one-half of the expense, by the taxpayers of the United States.

He admitted that all the fine bridges here, the Million Dollar Bridge on Connecticut Avenue and other fine bridges, had been paid for one-half by the people of the United States. He admitted that all of the 150 school buildings that had been built during that time, although there are 175 now, had been one-half paid for by the people of the United States. He admitted that the parks in Washington, big and little, 1,200 of them, had been all procured and paid for one-half by the people of the United States. He admitted that the original water system had been built here by the Government of the United States. The Government had paid for every dollar of it. The Government of the United States still owns the original conduit and has spent $20,000,000 since in helping to improve it; yet now they are asking the Government to pay for its own water from its own water system. They have a water rate here where he admitted that the average charge for the average family is only $6.60 per year, or about 50 cents per month. Some members have to pay twice that much some months for water around their residence in the States.

Commissioner Hazen admitted that the District Jail had been paid for one-half by the United States, that all the court buildings have been paid for one-half by the United States, that the Municipal Building was paid for one-half by the United States. He admitted that all the main improvements here had been paid for one-half by the United States.

Mr. MANSFIELD. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. I yield to my colleague from Texas.

Mr. MANSFIELD. I will ask my colleague if it is not a fact that the water system here was paid for altogether by the Federal Government?

Mr. BLANTON. Certainly. Yes; it was. The United States still owns the original water conduit. My colleague is correct. He knows the facts.

When the newspapers were harassing former Chairman Ben Johnson, of Kentucky, he made a statement concerning this Government taking the District out of debt one time, and he told of other amounts that the Government had let the District have. Ben Johnson contended back in that early day that if the District of Columbia paid the Government what it owed it, it would pay the United States over $56,000,000 for actual debts, advancements that the Government had made to it. Ben Johnson then was one of the hardest working men who ever served on the District of Columbia Committee.

Mr. Speaker, Commissioner Hazen admitted that the gasoline tax here is only 2 cents a gallon. It is 7 cents in Tennessee. He admitted that the automobile license tag, whether it was for a Ford or a $12,000 Rolls-Royce, was only $1 a year. Down in Oklahoma it costs you 10 or 15 times that much. In other States it is comparably higher. He admitted, Mr. Speaker, that the intangible tax was only one-half of one percent; that generally, until a man dies and his estate is probated through the court under the register of wills, his intangibles are not found. We showed a half-page list of people who had died the previous year and had passed their intangibles through the office of the Register of Wills, and there were some running up from $50,000 to as high as $1,200,000 of intangibles in one case. We made him admit, Mr. Speaker, that in Washington, all of the streets are repaired and are replaced without charge to abutting property owners. The paving in front of your property is repaired

and replaced without a dollar's charge to the contiguous property owner.

In other States when paving is done on streets you pay one-third or one-fourth of the paving charges in front of your property. In Washington when it is repaved it does not cost the people a cent. We made him admit that all the sidewalks in front of residences here are replaced and repaved without one dollar of cost to the people who own the contiguous property. We made him admit that to every family in Washington there is $1,000 household furniture exemption from taxes. You will not find it in my State. It is only $250 exemption in Texas on household goods. In Washington it is $1,000 exemption. We made him admit that here in Washington private libraries are exempt from taxes, whether they are worth $5 or $50,000. There are some private law and other libraries in Washington right now worth $50,000 which do not pay one cent of taxes. We made him admit that in Washington the wearing apparel of individuals is not taxed at all. By the law it has been made exempt from taxes, whether it is worth $5 or $50,000. We had some evidence, and I have it in my office now, where the wearing apparel of certain rich families will run up to a very large sum in value, absolutely exempt from taxes.

That is why our committee, when we printed the hearings, put into our hearings the actual tax that is paid by over 100 of the leading citizens of Washington who were drawing from $20,000 to $75,000 annual salaries, and showed that their property was assessed in instances at less than one-half its actual value. Then they were paying only $1.50 per hundred at that low assessment. For instance, we showed you that Mr. Eugene Meyer once had offered $5,000,000 for the Washington Post. We showed you that his offer was not accepted. Later on David Lawrence entered into a written contract to pay $3,000,000 for it, the Washington Post, and he was knocked out of it. Then Eugene Meyer got hold of a paper company that had a debt against the Post and had a receiver to sell, appointed in an equity proceeding, when there was no judgment, something unheard of in equity proceedings in the whole jurisprudence of the country.

Mr. SNELL. Mr. Speaker, I make the point of order that the matter which the gentleman is presenting to the House at the present time has nothing whatever to do with the motion before the House. The question of how Mr. Eugene Meyer bought or came into possession of the Washington Post has nothing to do with the question of instructing the House conferees.

The SPEAKER. The Chair trusts that the gentleman from Texas will proceed in order.

Mr. BLANTON. Mr. Speaker, I thought I was proceeding in order in trying to show the House a basis for instructions. We are not asking the House of Representatives to instruct us to stand by something without some basis for it. I am asking the House to instruct us on the facts that exist here. I am trying to show what the facts are as admitted by Commissioner Hazen.

Mr. SNELL. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. I always yield gladly to the minority leader.

Mr. SNELL. How does the question of the amount of money Eugene Meyer paid for the Post, whether he got it too cheap or paid too much for it, have anything to do with the question before the House at the present time?

Mr. BLANTON. I was coming to that. If I did not show what it was rendered at for taxes it would not.

Mr. SNELL. In my judgment it would not. I should like to have the gentleman tell us how it affects the motion.

Mr. BLANTON. I am going to show the gentleman that he renders it for taxes at way below 50 percent of its real value. In other words, Mr. Speaker, he got that $3,000,000 to $5,000,000 property at auction when it was under receivership, for $825,000, got it through a dummy. He immediately had it incorporated for $1,250,000. Then he had it improved, and he now renders the property for $438,120, and renders his intangibles at $218,456. He renders the whole property at only $656,576, about one-eighth of what it is worth, and on this he pays only $1.50 per $100. That is what it means to these big interests here to keep the tax rate low and make the people of the United States in the several States pay $5,700,000 of their expenses.

Mr. MAY and Mr. TABER rose.

Mr. BLANTON. I yield first to my friend the gentleman from New York [Mr. TABER], who has studied this question for years, if he desires any time.

Mr. TABER. Mr. Speaker, if the gentleman wants to yield I would suggest that he yield to some of those Members who care to say something against the resolution. I would be willing to take a little time later, but at the present time, I think those who are opposed should be heard.

Mr. BLANTON. If somebody here is opposed to the motion I am going to yield to him.

Mr. TABER. If there is going to be opposition, I think those opposed should be heard.

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. Is the gentleman in favor of having the people of this country pay $5,700,000 annually toward the local taxes of Washington people?

Mr. GIFFORD. That is not a fair question. I am opposed to the form of the motion, and I want to ask a question about what form the conference report will take.

Mr. BLANTON. There are just three matters on which the House insists.

Mr. GIFFORD. I understand that.

Mr. BLANTON. Whether the conferees are to be instructed to stand by the House bill on the $5,700,000 lump sum, on the $78,660 so-called character education, and on the restriction on certain officials and employees of the District taking outside employment.

Mr. GIFFORD. I understand that; the gentleman has been talking for years about the Washington situation and I have always backed him up, but I want to ask the gentleman a question, if I may.

Mr. BLANTON. Certainly.

Mr. GIFFORD. Did I understand the gentleman to say the House conferees agreed to recede on 84 points if the Senate would recede on 3?

Mr. BLANTON. In the final hopes of getting a bill; yes.

Mr. GIFFORD. That appeals to us as a sort of horse trading on matters that ought to be settled on their merits; and we feel, I am sure the gentleman will realize, that by reason of certain reports in the newspapers, that perhaps the gentleman may be a little stubborn by this time and that he would rather make a horse trade than to settle the matters on their merits.

Mr. BLANTON. That is so far from the fact that it is absolutely absurd.

Mr. GIFFORD. The gentleman cannot blame us for having a little feeling that the gentleman might feel a little hurt because of this newspaper criticism.

Mr. BLANTON. Oh, the newspapers do not bother me at all. They are wasting $5,000 to have a man try to beat me in Texas, but my dependable constituents are not going to let them beat me.

Mr. GIFFORD. Another question: Does the gentleman feel it is a fair way to settle things to make a horse trade giving way on 84 points?

Mr. BLANTON. The gentleman is trying to shoot a stiletto under my belt when he should be trying to help me. I thought the gentleman from Massachusetts was one of the best horse traders we had.

Mr. MICHENER. Mr. Speaker, will the gentleman yield me 5 minutes?

Mr. BLANTON. Yes; in just a minute. Let me finish this statement and then I will. I will save 5 minutes for the gentleman from Michigan.

Mr. Speaker, continuing the benefits the people of Washington receive, Mr. Hazen admitted in this document, in every hearing for 3 years, that the people of Washington, except the Federal tax everybody pays, do not pay any

estate tax, do not pay any inheritance tax, do not pay any gift tax, do not pay any income tax, do not pay any sales tax as they do over here in Maryland just a few miles away and as they do in many of the Western States; not a dollar of those extra taxes do they pay. They are not bonded, because the United States paid them out of debt and kept them out of debt. They do not pay any jail-bond tax, they do not pay any courthouse-bond tax, they do not pay any bridge tax, they do not pay any special water tax, they do not pay any special school tax. The have their ashes gathered free, they have all their trash gathered free, they have their garbage gathered free. The trees in front of their residences, shade and ornamental, are furnished without charge. They are planted without charge. They have fences built around them to protect their early growth without charge. They are cared for without charge. They are pruned without charge. They are sprayed without charge. They are replaced without charge.

Mr. Speaker, these are some of the benefits that the people of Washington receive because the Congress has been voting these large contributions each year from the people of the rest of the United States. If the House wants to keep on doing that, I am their servant and would be compelled to obey the orders of the House, but I hope the House will not order it done.

Mr. MAY. Will the gentleman yield?

Mr. BLANTON. I yield to the gentleman from Kentucky.

Mr. MAY. I want to get this perfectly clear, for the benefit of myself and some others who may not understand the situation. Under the existing system I understand the gentleman to say that in the city of Washington if property is of a fair and reasonable value of a million dollars and the tax rate is $1.50, the assessed value of the property is reduced to $500,000, which would make a tax rate equal to 75 cents on the hundred?

Mr. BLANTON. Yes; they have been doing that all the time.

Mr. Speaker, I want to call attention to one more thing, where the Senate tried to make us come over to their way of thinking. They got an absurd statement from a fellow named Parker that Washington was the third highest taxed city in the United States.

The President sent us a report last year which gave the tax rate in 15 comparable cities of the United States. In that report it was stated that Washington was the lowest taxed city of any which had been investigated. This man Parker gave a statement to the Senate which was ridiculous on its face, in which he stated that Washington was the third highest taxed city in the country.

In our conference with the Senate they wanted us to hear of Parker and Richards. We said, "All right. Get a stenographer and we will hear them in joint session." They said, "No; we do not want a stenographer." We said, "Well, we will not hear them without a stenographer. We want to know what they have said when their testimony gets cold." The Senate conferees would not agree to that, so we told them they could hold the hearing by themselves. After we left they immediately got a stenographer to take down what was said, but they did not prove by these gentlemen what we proved by them.

We sent for Parker and found out that this man Parker was drawing $9,600 a year from a joint committee of Congress, yet last October sold himself to the board of trade here in Washington, and they paid him $5,500 in cash for his statement.

Now, there is one thing funny about Richards.

Mr. SHANNON. Mr. Speaker, I make the point of order there is not a quorum present.

The SPEAKER. The Chair will count.

Mr. SHANNON. Mr. Speaker, I withdraw the point of order.

Mr. KNUTSON. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. KNUTSON. Was a quorum present?

The SPEAKER. The gentleman does not state a parliamentary inquiry.

Mr. BLANTON. Mr. Speaker, referring to Mr. Richards, may I say that he had reached the age for retirement. He had been paying into the retirement fund for 27 years and could have retired with a big retired pay for life, but he could not do that and at the same time accept employment from the board of trade; so in order to be able to accept employment from the board of trade when he left office, instead of retiring on a salary for life he resigned and had the Civil Service Commission pay him back all that he had paid into the retirement fund. He then got on the board of trade's pay roll and became the exemplar of the high-taxed District The Senate did not discover that.

It will be noted all through the hearings Chairman CANNON made him admit that every time we wanted to take a piece of property here we had to pay sometimes 10 times its assessed value before we could get it. When the new House Office Building and the Supreme Court Building were constructed, just note what we had to pay for the property under the testimony of the tax experts of Washington. We had to pay, in instances, as high as 10 times what the property had been assessed at.

Mr. Speaker, I now yield 5 minutes to the gentleman from Michigan [Mr. MICHENER].

Mr. MICHENER. Mr. Speaker, the gentleman from Texas brings this matter before the Members of the House in a very unusual way. I am happy to say that at times the gentleman from Texas makes constructive and lucid suggestions with reference to legislation for the District of Columbia, and I am always glad to follow him when he does make intelligent and constructive suggestions. However, he brings before us today a conference report under a method which has never been followed by the Congress—since I have been here at least. The Speaker, I think, will permit a division of the question when a vote is reached, but the Members cannot vote "yes" or "no" on any one of the propositions without approving, sanctioning, and saying "yes" to the conclusions and the stump speech which the gentleman has woven into every provision of the resolution.

Under the custom which has grown up in the Congress, if it is desired to explain the reasons for proposed legislation, a preamble is used, with the word "whereas." Then when a vote is reached on the legislation the vote is upon the substantive matter only, and the "whereas" and the explanatory matter is eliminated. In the pending resolution it is impossible to cut out the "whereases" and the gentleman's arguments and conclusions. While I might agree in many particulars with some of the gentleman's proposed instructions to conferees, I am not going to vote to approve of the quarrel which the gentleman from Texas has with the Washington newspapers or with the Washington people in any particular, because he has interwoven these stump speeches in a piece of constructive legislation.

Mr. Speaker, a point of order will be made that the resolution as presented is not in accordance with the rules of the House. I hope that the Speaker will hold that a Member cannot intelligently vote for a given specific thing by voting for this resolution.

If this is done, then the gentleman from Texas, who is a good parliamentarian and knows better, can retire, and inside of 10 minutes dictate just what he wants us to vote on. The astute, the discerning majority leader, the gentleman from Alabama [Mr. BANKHEAD], rose on the floor and asked the gentleman from Texas what this resolution meant. He asked the gentleman if he would try to explain it so that he, our majority leader, might know what he was asked to vote upon.

Mr. BLANTON. Mr. Speaker, will the gentleman yield?

Mr. MICHENER. Not now.

The real trouble is that the gentleman from Texas takes page after page of the RECORD, day after day and hour after hour of the time of the Congress fighting windmills and fighting the Washington newspapers and Eugene Meyer. Why, great Caesar, we have heard this time after time and day after day. His personal quarrel has nothing to do with what is before us. I think the time has arrived when the Speaker—and I hope he will do so—should exercise that fair

judgment that he always exercises and give those of us who want to vote for constructive things an opportunity to know what we are voting for, because if he does not, we are compelled to vote against this proposition, or we must put our stamp of approval upon the gentleman's modus operandi here, upon his tactics, and upon his conclusions so far as his various difficulties with the various agencies in the District of Columbia are concerned. The purpose of this proceeding is to instruct our conferees as to the position of the House on certain differences between the House and the Senate.

[Here the gavel fell.]
